EVALUATION

IMPATIENT FOR CHANGE

An exclusive interview with finance minister Manmohan Singh

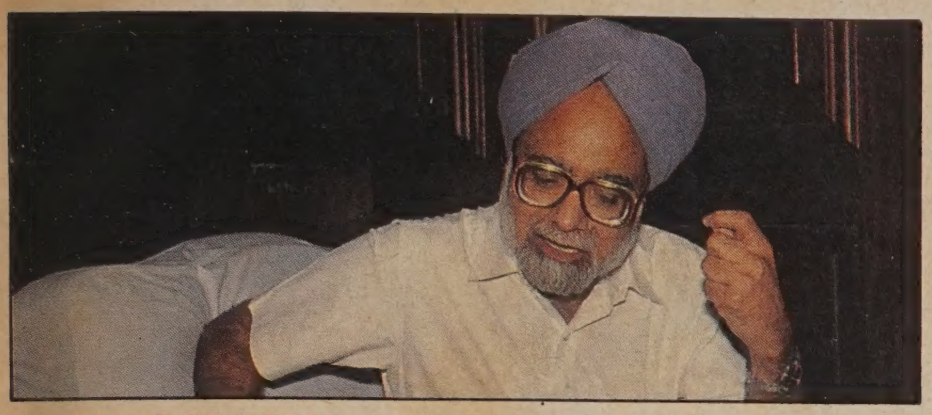
This week-end on business,
make memories together.
At the Executive Club.

*We'll fly your wife out to join you.**

When you jet out to the Executive Club at Delhi,
Bombay, Bangalore or Madras, we'll fly your wife out to join you.
For the week-end. At our cost.* So, now the two of you can
make memories... Together At the Executive Club.
The finest business address in town.

WELCOMGROUP

*We'll reimburse her actual travel fares to a maximum of Rs. 2000/- (depending on the length of week-end stay, and the city of visit.) This privilege is also available to husbands of travelling women executives.



Welcomgroup's special privilege for the discerning business traveller.

* For details and reservations, call Welcomnet, Welcomgroup Hotels' Instant Reservation Network:
Delhi 3014127, Bombay 6425454, 2042286, Calcutta 203222, Madras 473691, 452525,
Bangalore 268030, Hyderabad 825428, Coimbatore 22629,
Pune 661680, Baroda 323232, Ahmedabad 468603, Surat 53027.
Or the Reservations Office at any Welcomgroup hotel.

LETTER FROM THE PUBLISHER

The new finance minister Manmohan Singh (along with the new commerce minister P. Chidambaram) must be praised for the gutsy steps he has just announced. It is even more creditable that he chose to make tough changes in rapid fire succession, even before the government, which is a minority government, secured its vote of confidence.

In his exclusive interview with *Business India*, he said, "The people of India are impatient, angry and eager for change." This realisation is the key to the process of change.

It is clear to Manmohan Singh that the present crisis can also be seen as a historic opportunity. An opportunity to bring about long overdue structural changes that are necessary if we are not to be left behind by even the smallest countries in the world. In this context, there are two standard political myths that must be summarily disposed off. The first is that tough measures would somehow be politically unacceptable and that the people would reject them. The truth is that in India, like anywhere else in the world, the large majority of people prefer to be told the truth as it is, and are happier if correct decisions are taken in the national interest, even if they happen to be tough decisions. The tragedy is that for years our politicians and political parties only worried about vote banks and particular sections of the public. The public is fed up with this approach.

The second myth that must be destroyed is that a market economy is necessarily without a safety net for the poor. The economies of the West and Japan have shown for half a century now that rich market-oriented states on the contrary have large welfare programmes for the poor. In fact, poverty, as we know it in India, just doesn't exist. The finance minister has clearly seen through these myths.

Manmohan Singh can be faulted only in that not enough effort was made to build a political consensus on these issues. There is no question that an intensive exercise ought to have been made to inform the major political parties. At the same time a major effort ought to have been undertaken (or should be undertaken now) to explain to the public the implications of the changes.

We at *Business India* have long been arguing for such changes. In fact, the very concept of Exim Scrips as announced by P. Chidambaram, was first mooted in this magazine. We have long argued about the efficiency of markets in the allocation of resources. Of course, one of the main reasons why we have been confident of India's ability to compete internationally in a free play of market forces is our underlying belief that our economy is really much stronger than most people realise. As a people, we are talented and resourceful and able to compete fairly with the rest of the world and stand on our own feet.

Transfer Line — monocoque body shell welding.

Latest Mercedes Benz technology

That's what makes Tempo Traveller a world-class vehicle.

16 JUL 1991
C.F.T.R.I., MYSORE

Whatever it is you're looking for in a vehicle, you'll find that the Tempo Traveller is unmatched. Whether it's in terms of performance, passenger comfort, safety, ruggedness, ease of driving or economy.

Because, after all, the Traveller has been designed by Mercedes Benz. And manufactured in a plant that's as advanced as any Mercedes Benz plant in the world, using the very latest automobile manufacturing technologies.

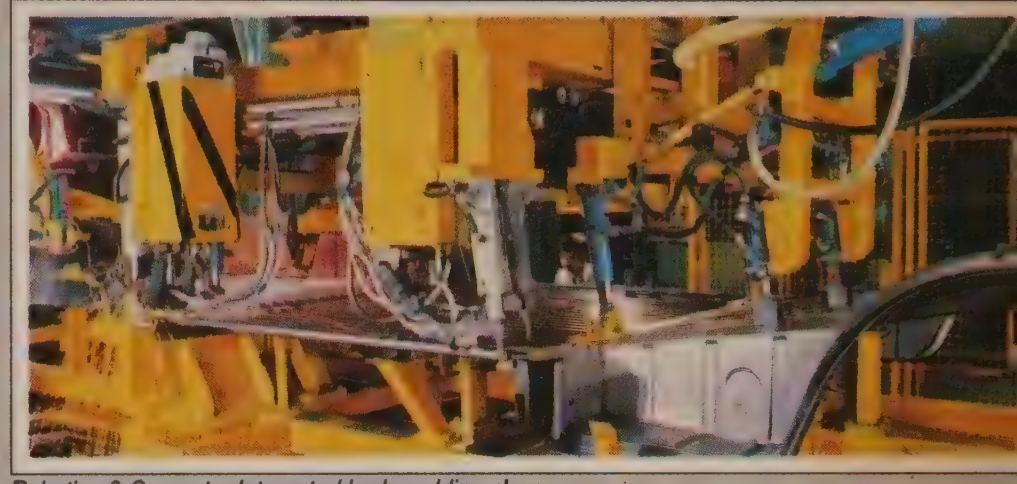
The fact is Tempo's state-of-the-art new plant at Pithampur has been set up at an investment of nearly Rs. 50 crores.

Extensive use of robotics and computer integrated manufacturing systems give the Traveller unparalleled welding precision and welding strength.

An electrophoretic dip process, immersion of full body, gives its monocoque body life-long protection against corrosion.

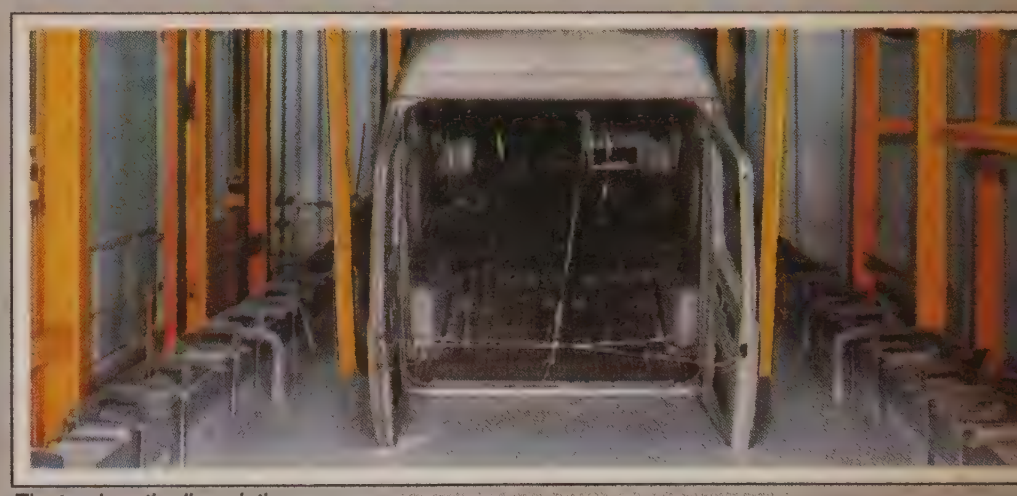
The Traveller plant's assembly environment is highly sophisticated. And its overhead conveyor system, synchronised with a revolving assembly carousel ensures a superb finish (as well as high productivity).

What's more, the Traveller is powered by a new 72 BHP Mercedes OM 616 engine which is extremely silent, extremely fuel-efficient, as well as extremely reliable. And its indirect injection system ensures low pollution.



The Traveller's gearbox too, is a result of high technology: a 5 speed full synchromesh gearbox which uses honed gears and a precise hypoid axle... to give you superb performance and longer component life.

Finally, driving the Traveller is as light and as much of a pleasure as driving a modern top-class car. (With a turning circle that is smaller than most Indian cars.)



Tempo Traveller. Whichever way you look at it, it's world class.

Modern conveyorised assembly lines.

Robotics & Computer Integrated body welding shop.

Electrophoretic dip painting process.

Tempo Traveller

Gives you the Mercedes Benz advantage.

BAJAJ Tempo LTD.

• Bold and innovative

Special Feature 'Animal Farm' (10 June) interested me a great deal. It is a just mimicry of the great satire 'Animal Farm' by George Orwell. The efforts made by Dhir are innovative and bold.

R.T. DESHPANDE
Belgaum

• A great shock

In a system created by politicians, hundreds of people are being killed daily while the creators of the scenes of crime watch from a distance, assuming that they will never be caught in the web. Politicians have provided respectability to criminals. In this kind of a situation nurtured by politicians nobody should expect anything else.

Why then panic? It is just another death like many others.

R.K. BANSAL
Noida (U.P.)

• The dastardly assassination of Rajiv Gandhi has come as a great shock — 'The tragedy and after' (27 May). Business prospects for India are not as bright now since Rajiv was seen as the best bet for a prosperous 21st century India. His death came at a moment when Indians realised that Rajiv was the only leader who could put India back on its feet.

K. CHIDANAND KUMAR
Bangalore

• It will be a distortion of history if due credit is not given to the greatness of Rajiv [illegible] brought lustre to India both in the national and the international arena. When V.P. Singh came to power we expected an *El Dorado*, but his reign was a disaster. We expected economic emancipation from Chandra Shekhar, but his outdated socialism flopped too.

Rajiv had vision but the implementation of his policies was vitiated by the usual errors. It has now been proved that the LTTE and the Sri Lankan Tamils in India are a liability to us.

U.S. IYER
Bangalore

• Exports hit

This refers to "RBI measures — A mood of uncertainty" (Special Report, 27 May) on the tough measures adopted by RBI to tackle the present foreign exchange crisis.

The foreign exchange crisis had been precipitating for long but regrettably, no concrete action was taken by the finance ministry to avoid the crisis, resulting in our present grim situation.

The measures recently adopted by RBI, although necessary in the crisis situation, have created a serious cash-flow crunch for a large number of industries and have also adversely affected our exports.

The new government can resolve the foreign exchange crisis only by maximising exports, curbing unnecessary imports and providing better schemes of investment to NRIs to attract foreign exchange.

It must formulate tough long-term fiscal policies based on economic considerations.

K.A. ANANTH
Bombay

• Basis for votes

Your Cover Feature 'The foreign exchange squeeze' (1 April) has rightly gone into issues deeply. While most corporate citizens are in favour of freeing import controls and improving the links of our country with the global economy, our economists still find it difficult to reach a consensus on the issue. This is not surprising as in our country it has become a fashion for politicians and economists alike to indulge in leftist rhetoric.

Even in countries like Japan, where the government has traditionally played an important role in economic activities, the stress has been on indicative planning and coordination as opposed to direct intervention. The irony is that we have politicians with little grasp of economic issues in the finance ministry. It is here that business dailies and periodicals have an important duty to discharge. To make the electorate more aware, they must dissect the economic policy statements outlined in election manifestoes and help the masses come to a balanced judgement.

A.V. VEDPURISWAR
Hooghly

• An adverse balance of payments position has been the bane of our developing economy (Cover Feature, 1 April). Around the time countries like Japan and Germany were recovering from devastating destruction at the end of World War II, India became independent. While these two countries recovered remarkably at an enviable pace, we still limp woefully, having put our nation at the mercy of corrupt politicians and inefficient bureaucrats.

Militant trade unionism, unstable governments, lack of dedication and sincerity in the public sector and government organisations, and a complete absence of diplomatic sagacity ruined the country. How long can we afford to function like this? The so called credit trap is self created.

U.S. IYER
Bangalore

• A step to boost exports

I refer to the article on ISO 9000 "Where quality is all" (Feature, 27 May).

While the feature covers a few aspects of ISO 9000 quality certification, it does not highlight the infrastructural deficiencies that exist in our economy thus making it difficult for industries to widely top this system.

The feature mentions Sundaram Fasteners as the first Indian Company to get to ISO 9000 certification. Almost two and a half years before any of the engineering industries mentioned under the feature article committed themselves to working towards getting an ISO 9000 certification, Ralliwolf, Bombay got the certification from the British Standard Institute in August 1988.

Taking into account the current balance of payment position and the importance of earning hard currency foreign exchange to our country ISO 9000 certification would become the first stepping stone towards doing our bit to promote exports from India.

V.R. DAKSHINAMURTHY
Bangalore

• Misquoted

In your report on the lifting of the lockout at Hindustan Ferodo, the undersigned has been wrongly quoted as saying on behalf of the Engineering Workers Union (CITU) that "he was unable to assure the workers that the union would be able to help them to keep their jobs" (Labour, 27 May).

What I had said was that when, in 1985, the Ferodo workers were threatened with retrenchment and they rejoined our union, we made it clear that in the existing circumstances, if jobs were to be protected, our union would be unable to assure them further improvements in their service conditions until viability of the unit was achieved.

The report also contains other inaccuracies. It is suggested that the lock-out was declared as a consequence to an act of violence by the workers. Slogan shouting by workers, because they have not been paid a promised exgratia amount two days before Diwali, is not an act of violence.

V.C. MONTEIRO
Secretary
Engineering Workers Union (CITU)
Bombay

GROWING...

For the year 1990-91, we at LIC made it our business to insure more lives than ever before. To protect more futures than ever before.

As a result, we succeeded in bringing more than 1 crore people under the protection of life insurance.

Through 86,48,192 Individual Policies for a sum assured of Rs. 28,152.16 crore.
And 11,823 Group Insurance Schemes for a sum assured of Rs. 3,392.05 crore.

All this with the country going through a year of constant upheaval.

GROWING...

Furthermore, what makes LIC's growth so exceptional is that it's a growth over an ever-increasing base, year after year. Making LIC one of the largest financial institutions in India. But, as usual, we have set our sights even higher for the next year.

GROWING

LIC's new business reaches an all-time high of Rs. 28,152.16 crore. Insuring over 1 crore lives*.

योगक्षेमं वहाम्यहम्

Life Insurance Corporation of India

In the service of the people.

daCunha LIC 6 91

Tough people, tough choices

The economic duo of Manmohan Singh and P. Chidambaram has got off to a firm and quick start. That important decisions are being taken within a week of its assuming office shows that this government is willing to take the bull by the horns. This despite its status as a minority government yet to win the confidence of the Lok Sabha.

Given that the immediate crisis facing the country is in foreign exchange, the government's actions have naturally been in this area. In this context, a 20 per cent devaluation and the removal of export subsidies may partly offset each other but they mark an important change from a regime of discretionary controls to one of letting the price mechanism determine resource allocation. An easily tradeable replenishment licence earned from exports, through which imports will increasingly be financed, has also been proposed. This is intended to create an instrument for freer access to and market pricing of foreign exchange. It is a second-best solution to a floating currency, and it will take time to set up a liquid market for this instrument. Nevertheless, it could be viewed as a phasing-in of convertibility (planned by 1995) and is welcome in this context.

Speed and firmness do not necessarily mean that the right decisions are always taken. There will undoubtedly be mistakes down the line, particularly in the complex field of trade policy. Nevertheless, the broad direction of decontrol that the economy needs to take is obvious enough. There is no reason why there should be substantially wrong choices.

Even if the right decisions are taken, they are unlikely to be popular ones. The economy is burdened with an administered price regime which will be difficult to phase out quickly. While small importers will undoubtedly be hurt, a will the huge petrochemicals industry, the biggest risk is t agriculture. The rise in fertiliser production costs will eithe have to be met by higher subsidies, thereby adding to th government's deficit, or by a reduction in subsidies whic will raise the cost at the farm gate.

The point is that, like any economic problem, there is bit ter medicine to be taken if the country is to be nursed back t health. In this context, a political consensus to reform migh have made sense. As it is, almost all the opposition leader have reacted adversely — and, it must be stated, immaturely — to the new policies.

All this is not to say that there should be no safety net for the underprivileged. *Business India* has consistently advocated that the dismantling of administrative controls should be accompanied by infrastructural reforms in education, health and civic facilities in order to provide acceptable standards of living for the poor.

This illustrates another risk: that the right decisions need to be part of a comprehensive dismantling of controls rather than only politically painless ones. Even in the financial sector, liberalising interest rates by allowing depositors to get the benefit of tight money and allowing sick banks to close will require the co-operation of the hostile banking sector. Outside of finance, reform will need the co-operation of several other ministers, including several political appointees.

The new government has begun well, with Rao quietly letting Singh take the lead. Those who initially wrote the prime minister off as old wine in an old bottle are seeing an unexpected sparkle within.

A near-impossible task

It is certainly a record. The new chief minister of Tamil Nadu, Jayalalitha Jayaram, has literally swept away the opposition in the recently-concluded assembly elections. Now that the sole survivor from the decimated DMK party has resigned, she faces an assembly virtually without a worthy opposition.

A massive mandate is a dangerous thing, with levels of expectations reaching unnatural heights. The complete rejection of the DMK obviously means that the people want something more than what was offered by the previous government. The DMK lasted exactly two years and it is not possible to make a realistic assessment of its achievements. But the DMK is dismayed because its party leaders genuinely believe that they managed to fulfill most of their 1989 election promises.

To say that the sympathy wave that followed Rajiv Gandhi's assassination and DMK's known proximity to the LTTE was primarily responsible for the party's debacle would not be entirely right. Even before the Sriperumbudur tragedy, there were enough indications that the DMK was fighting a losing battle. Unlike during the last elections, the AIADMK and the Congress (I) were presenting a joint front and hence even the chances of a split vote benefiting Karunanidhi was ruled out.

To be fair to the DMK, while in power, there was action on several fronts, most notably in the industrial and economic sectors. The government announced an industrial policy, and activated many moribund joint-sector projects.

On the financial front, the DMK took corrective steps to build up a surplus exchequer though the route it took to do so did not appeal to the people. DMK scrapped prohibition which has had a chequered history in the state and introduced cheap liquor. This, with the increase in excise for liquor, made state finances look healthier.

But achievements like activating the industry and prudent financial management are not the stuff which win popularity for politicians. These are considered the everyday responsibility of the politician and nothing to get excited about. Meanwhile, the population of Tamil Nadu has got used to welfare schemes and government handouts ever since 1977 when M.G. Ramachandran came to power.

MGR's master stroke was the noon meal scheme, wherein all children upto class eight were given free and nutritious meals in government schools. Once the government goes on a welfare binge it is very difficult to curb it. Today nearly 26 per cent of the total financial outlay of the state is earmarked for social welfare schemes. There are subsidies for marriage for poor women, free distribution of tooth powder, free bus passes for children and so on.

In a state where the women's vote has always counted for a great deal, prohibition has always been a sensitive issue. Women do not see alcohol as a revenue producing source, but something which spells ultimate doom. Whoever introduces prohibition is viewed as a saviour. Usually chief ministers claim they are for prohibition but eventually scrap it at various levels to raise resources. But Karunanidhi scrapped it from day one. The women never forgave him.

Ultimately Karunanidhi tried to outdo his predecessor in welfare schemes. But, in the public mind, it never registered. They wanted the MGR era back, when welfare became the rule of the day, rice and kerosene were freely available in ration shops (at least in public perception) and free sarees and dhoties were thrown in for all occasions.

Jayalalitha has a near-impossible task. She wants to put Tamil Nadu on the industrial map again. But that is not going to win her popularity. It is the eager expectation of the free goodies which await them which has made the people elect her with a massive mandate. It is going to require extraordinary skill not just to let down these expectations, but also to build up a work culture.

Women and development

A recent Unicef report titled 'Women and Children in India' and a nearly simultaneous World Bank report on 'Indian Women — their health and economic productivity' highlight the international importance being given to the problem of the progress of Indian women.

Unfortunately, both reports fail to either convey a fresh understanding of the issues or to suggest innovative and workable approaches for womens' development. The former is because the reports restrict themselves to old statistics. For example, we are told (once again) that the ratio of women to men remains below its natural level and that it is related to other parameters, such as the level of literacy and the availability of primary health care.

The failure to suggest a fresh approach is less understandable given that a variety of approaches to women's development have been tried out all over the world. In India, the state has made a strong political and economic commitment to women. In 1990, the National Commission of Women was established. In 1989 two major policy documents were released, the National Perspective Plan for Women and the Report of Self Employed Women and Women in the Informal Sector. Ever since the Sixth Five-year Plan there has been a special section on socio-economic programmes for women. A Department of Women and Development has also been established which is the nodal agency in the Government, guiding, co-ordinating and monitoring the efforts of both governmental and non-governmental organisations in women's development. Poverty alleviation programmes have a 30-per-cent target for women. Special programmes like DWCRA (Development of Women and Children in Rural Areas) have also been started.

These governmental and other approaches have had mixed results. For example, SEWA's (Self Employed Women's Association) and WWF's (Working Women's Forum) approach of using bank credit to organise self-employed women has worked well. So also women's literacy programmes in Kerala. On the other hand, some legislated social reform — such as the Dowry Prohibition Act — has not worked. In fact, the issue of whether women should be identified as separate participants in the development process is also controversial.

In this context, it is disappointing to read (as in the Unicef report) that one of the government's targets for 1991-95 ought to be to foster "an ethos of caring in the community — not to let a child go to bed hungry, be subjected to a preventable disease or remain without learning opportunity — (this) could mark the beginning of a social process towards a more humane order". Is the report saying, then, that Indians do not love their children as a matter of cultural practice?

Both reports are likely to be highly influential on opinion leaders and policy makers. It is unfortunate that neither has taken a sufficiently serious and analytical approach.

Pity VSNL

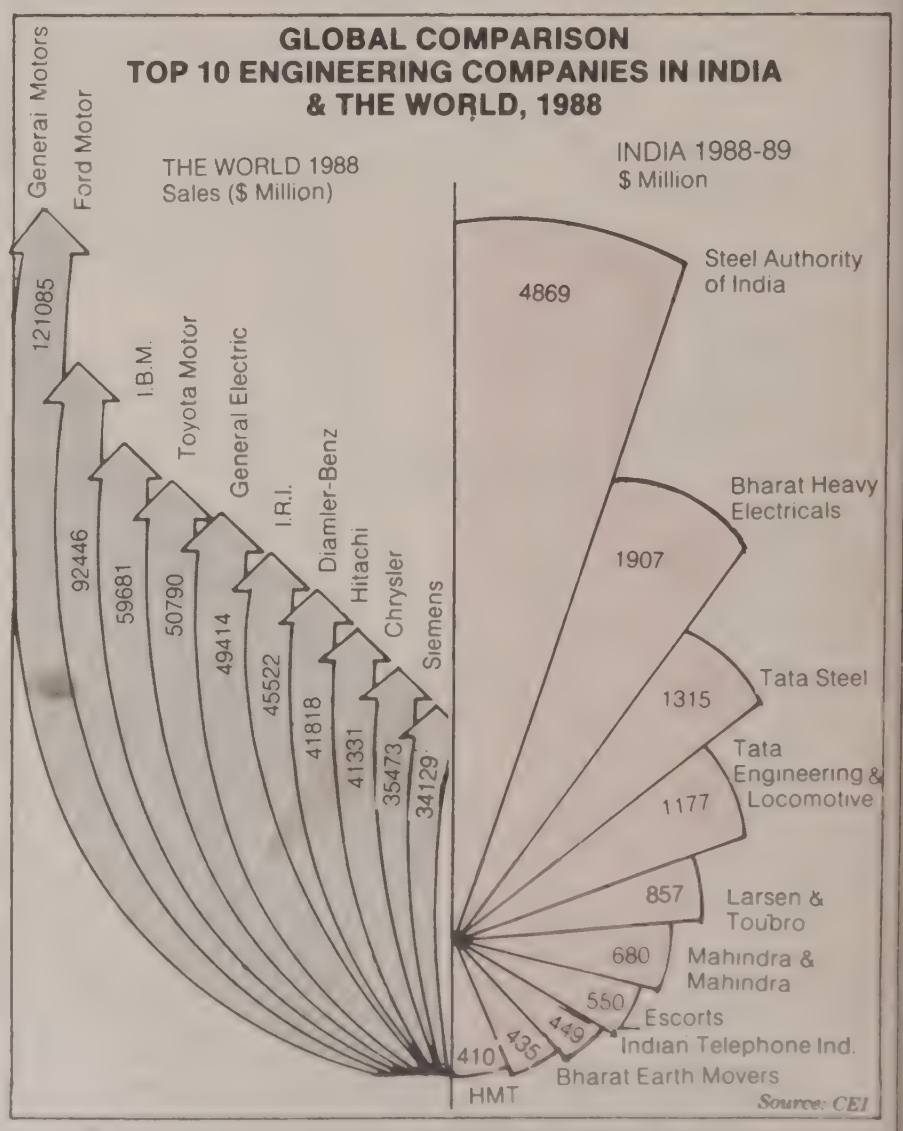
Guess who profits most from an overseas call? Apparently the Department of Telecommunications (DoT) and the Mahanagar Telephone Nigam Ltd (MTNL), in Bombay and Delhi, rather than the Videsh Sanchar Nigam Ltd (VSNL) through whom overseas calls are technically made.

The cost of an overseas call works out to Rs.60 per minute of a metered call. Of this, VSNL gives MTNL Rs.30 and Rs.22 to the overseas telecom authorities. The internal cost works out to Rs.7. And VSNL's profit is Re.1 per minute of overseas telecommunication.

Of the Rs.30 given to the MTNL, Rs.15 goes to the DoT, Rs.10 goes towards subsidising of the capital infrastructure in remote areas, and Rs.5 is written off as MTNL's profit on every minute of effective overseas call. So whereas DoT makes Rs.15 and MTNL Rs.5, VSNL makes only Re.1.

SC
Bombay

Work and health don't mix



Bernardino Ramazzini (1633-1714), the Italian scientist, is known as the father of occupational health. He published his first famous treatise on occupational health problems in the year 1700 and said that every doctor should ask the patient 'What is your occupation?' A question that is apparently still not generally asked by medical practitioners.

The World Health Organisation describes health as a way of functioning within one's environment, comprising not only the one he or she lives in but also the one he or she works in. It not only means freedom from pain or disease, but also freedom to develop and maintain one's functional capacities.

The work environment constitutes an important part of man's total environment; so health is, to a large extent, affected by work conditions. In a work environment, health indicators may be evaluated quantitatively by indices of absenteeism, job satisfaction and work stability.

Giants and the Pipsqueaks

A comparison of the top 100 world engineering companies with the top 100 Indian engineering companies indicates vast differences in size. The sales turnover of the top world engineering company — General Motors — ($121 billion) was over 24 times the sales turnover of India's top company, SAIL ($4.9 billion) in 1988. Even the 100th world engineering company, Matsushita Electric Works of Japan, was 1.2 times the size of the top Indian company, SAIL.

Friend or foe

The ISI mark will now have company. The ministry of environment and forests has decided to institute a scheme for labelling environment-friendly products ECOMARK.

The testing and certifying authority of ECOMARK will be the Bureau of Indian Standards and the criteria for the mark will include production process, likely impact on environment, energy conservation and production, effect and extent of waste arising from production process, disposal of the product and its container, utilisation of waste and re-cycled materials, bio-degradability of products, etc.

Product categories to be taken under the scheme in the first phase include soaps and detergents, plastics, food items, pesticides, drugs and also electrical and electronic goods.

The sterling dollar

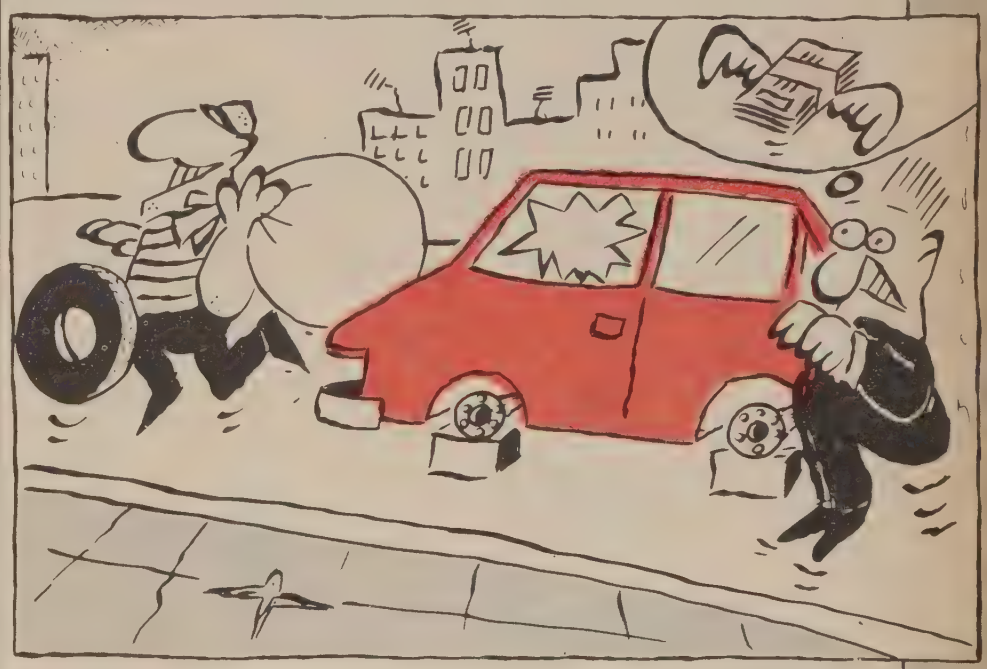
The disembarkation card handed over to tourists arriving in India by the tourism ministry has 'Welcome to India' printed on the front side and printed on the reverse are a set of instructions, including how much foreign exchange one can carry. Strangely enough, however, the disembarkation card says "If you are carrying notes, bank notes or travellers cheques of value exceeding US £ 1,000 or its equivalent please declare to customs on a currency declaration form to be attested by the customs officer".

Given the fact that the currency of the US is the dollar ($) and not the pound sterling (£) one wonders what impression it makes on foreigners.

AMIT BAGARIA
Calcutta

Information technology grows on

The Delhi-based Manufacturers Association of Information Technology (MAIT) recently published an analysis of the Indian information technology industry's performance. The analysis reveals that:

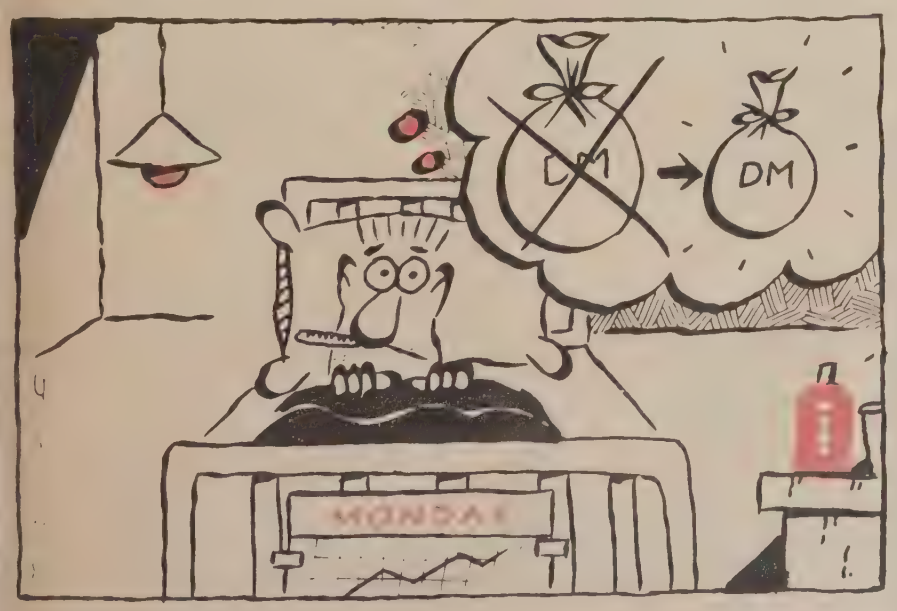


- Production of computers in value terms went up from Rs.700 crore in 1989 to Rs.800 crore in 1990. The computer industry which formed a meagre 10 per cent of the entire electronics industry in 1989-90 has risen to about 12 per cent in 1990-91 and is today about 0.25 per cent of the GNP. By 1995 it is expected to rise about 15 per cent of electronics and 0.75 per cent of the GNP.
- The share of the top 25 has been slowly eroding from 99 per cent in 1986-87 to 67 per cent in 1990-91.
- Compared internationally, the share of the Indian information technology (IT) industry is miniscule: a mere 0.35 per cent of the world IT market in 1990-91; 0.09 per cent of the US market; 0.1 per cent of the European market and 1.8 per cent of the Japanese market.
- In the year 1990-91 nearly 300 new computer institutes opened up taking the total number of institutes in India to over 700 in 1990-91 from 400 in 1989-90. These are apart from the over 250 franchises and centres associated with the top five computer training institutes in India.
- The share of the top five training institutes exceeds 52 per cent of the training industry revenue. Corporate training accounted for 15 per cent of the revenue amounting to Rs.13 crore while the balance Rs.72 crore belonged to the education segment.
- Approximately 12 per cent of the total IT sales were made through dealers.

Maruti blues

If you were to purchase a new Maruti from the showroom it would cost you Rs.1.5 lakh while a Maruti 1000 would cost Rs.4.50 lakh. But that is only the tip of the iceberg.

Most of the car's accessories, being detachable, are an easy target for petty thieves. And these would include the front and rear indicator lights, the glass windows on the four doors and the rear glass (the rubber lining can be easily removed). Replacement cost of each light works out to Rs.1,800, the rear glass costs anywhere between Rs.800 to 1,000 and each window glass costs Rs.700 to 800.



The stolen parts find their way into the black market and the owner after having learnt a bitter lesson gets grills fixed over the indicator lights and screws down the rubber lining on the side of the windows (secured with a steel strip in the older models but done away with in the new ones) at an extra cost.

Fakers all?

Reduction of wage payments in cases of sick leave extending up to three days, an issue raised by Klaus Murrmann, president of the employers' association of Germany has started a controversy. Murrmann's reasons may well have been based on a survey of 295 companies.

According to the survey, Mondays and Fridays were found to be the favourite sick days. Taken as a percentage of the total, 31 per cent of sick leave was taken on Mondays and 37 per cent on Fridays compared to 10 on Tuesdays, six on Wednesdays and 16 on Thursdays.

All work and no play

According to the *Boston Sunday Herald* of October 1958, a Boston office manager, cleaning out a file in preparation for his firms move to a new location, came across these office rules for 1872. He wanted to read them to his office force, but the members were out on one of the day's several coffee breaks.

The office orders in 1872 were as follows:

- Office employees each day will fill lamps, clean chimneys and trim wicks. Wash windows once a week.
- Men employees will be given an evening off each week for courting purposes, or two evenings a week if they go regularly to church.
- After 13 hours of labour in the office, the employee should spend the remaining time reading the Bible and other good books.
- Every employee should lay aside from each payday a goodly sum of his earnings for his benefit during his declining years so that he will not become a burden on society.
- Any employee who smokes Spanish cigars, drinks liquor, frequents pool and public halls or gets shaved in a barber shop, will give good reason to suspect his integrity and honesty.
- The employee who has performed his labour faithfully and without fault for five years, will be given an increase of five cents per day in his pay, providing profits from business permit it.

PICUP IS KNOWN BY THE COMPANIES IT KEEPS

You can be a part of this highly professional assemblage. Join PICUP, the No. 1 State Industrial & Investment Corporation of the country and avail of rare support by way of project identification, term loans, equipment finance loans, leasing, seed capital, escort services and total project support. And PICUP's participation in Joint/ Assisted sector has led to the arrival of many mega hitech projects in Uttar Pradesh with reputed industrial houses of the country.

PICUP — creating a whole new world of industrial investment

Tatas' new acquisition

Tisco has recently invested Rs.50 crore to acquire state-of-the-art computerised technology for automation. It has just acquired an IBM ES/9000 mainframe to be installed at its Jamshedpur plant. The ES/9000 is part of the series 3090 family of mainframes. The cost of the entire system is about Rs.50 crore, and it comes with 500 terminals running under the MVS operating system — the DB2 database system. IBM had earlier picked up an order for Vizag Steel Plant. Its main strength lies in the software available on mainframes for the steel industry.

Going on a privatisation binge

One of the measures the new state government headed by Jayalalitha in Tamil Nadu is supposed to be considering is privatisation of passenger bus transport. Of the 15 transport corporations in Tamil Nadu, the Pallavan Transport Corporation in Madras and Nesamani Transport Corporation in the Kanyakumari district enjoy total monopoly in passenger transport. All the other districts have private transport companies operating in some segments at least.

Jayalalitha: new policy

Today, in spite of there being a few private bus owners, the state transport corporations enjoy a near monopoly in the field. Interestingly, while the government-owned bus companies in most states lose money, at least two of the Tamil Nadu corporations are making profits. Will there be any takers for such companies, and if so, at what price?

Is it in time?

Videocon Appliances Ltd, the second largest company in the Videocon group, has finalised the details of its next rights-cum-public issue. The total size of the issue is Rs.80 crore. Each fully convertible debenture of Rs.200 will be converted into four equity shares of Rs.10 each at a premium of Rs.40. The issue is scheduled to open by end August this year. Since the company's share is now quoted in the market at Rs.115 each, the issue looks quite attractive. But if the fall in the market continues in the coming weeks, the gap will be greatly reduced, making it difficult to sell the issue.

Victim of excise hike

The latest casualty of the last hike in excise duty on polyester staple fibre (PSF) is the Baroda-based Ahmedabad Manufacturing and Calico Printing Co, popularly known as Calico and once the proud flagship of the Sarabhai group. The Baroda-based PSF plant owned by Calico is the third unit on the selling block, after ICI's Thane plant and RPG group's India Polyfibres. The plant, one of the oldest in the industry, has a capacity of 8,000 tonnes per annum.

In addition to the existing plant, a new PSF plant bought five years ago by the company is also up for sale. The new plant, which has a capacity to make 7,500 tonnes of PSF per annum, is lying in the company's warehouse in a packed condition. In 1989-90, the unit sold Rs.28 crore worth of PSF while the company's total sales was Rs.60 crore. Given the slack conditions in the PSF market, these two plants will probably be sold for a song.

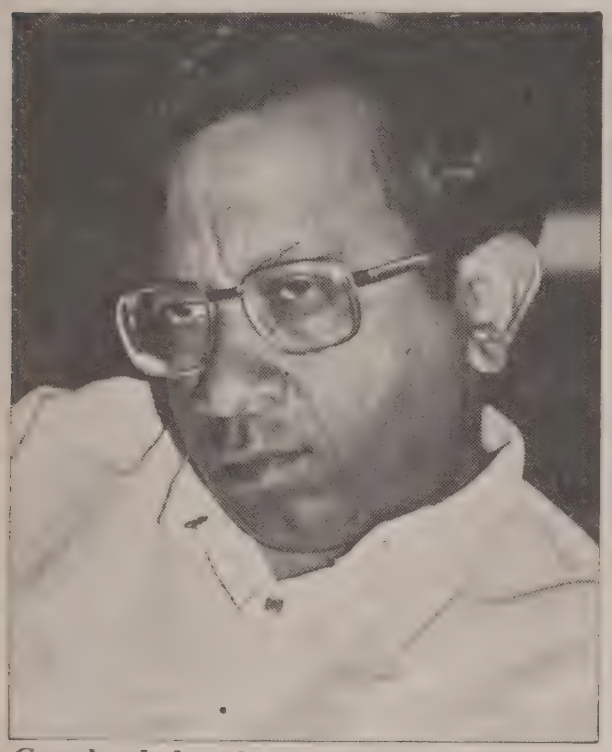
Meanwhile, Calico is once again looking for a buyer for its subsidiary company, Ilac Ltd. Earlier, Abhay Oswal of Oswal Agro had agreed to pay Rs.50 crore for the company which has a caustic soda and PVC plant at Chembur, Bombay. Now that Abhay Oswal has backed out, the search is on for a new buyer.

A change of face

The Bangalore-based liquor giant, Khodays, will soon invest Rs.9.5 crore in a tissue-culture project. It will be a 100-per-cent EOU and should go on stream in December 1991. To be located near Khoday's brewery at Kanakapura in Bangalore, the project will aim at exporting 50 million tissue culture plants to France every year. The greenhouses for this project will be provided by a Dutch company, Geerlefs. Khodays is also planning to grow flowers at this project-site and later, vegetables.

The company is also toying with the idea of exporting diamonds. It plans to take a quarter million diamonds every year, polish and export them. Incidentally, the chairman of the Khoday group, Ramachandra Khoday, has gained an NRI status.

An ambitious Africa plan



The Taj group has drawn out an ambitious plan to run hotels in African countries like Zambia, Morocco and Zimbabwe. While the Moroccan resort, being set up on a 2,000-acre estate, will open for business in January 1992, talks are on with tourism authorities in the other two African countries for taking up management contracts to run some existing hotels there. The three hotels which the Taj is to run in USSR — in Uzbekhistan, Samarkand and Bukhara — will also become operational in a year's time.

SREE RAYALASEEMA PAPER MILLS

Back to the drawing board

On 18 June, Duncan Agro, the G.P. Goenka flagship company, was supposed to formalise its takeover of the sick Sree Rayalaseema Paper Mills, based in Kurnool in Andhra Pradesh (see *Business India*, 13 May 1991).

Instead the meeting ended with the Board for Industrial and Financial Reconstruction (BIFR) asking for bids from those interested in taking over the company: Duncan Agro, the Thapar's Ballarpur Industries and J.K. Straw Products.

Goenka: belated discovery

The reason was that Duncans had asked for a Rs.30 crore addition to the existing Rs.30.09 crore draft rehabilitation scheme.

Says G.P. Goenka, "I have not changed my mind at all. What I have done is to ask for some changes — may be quite drastic — in the draft scheme." Four factors, three of which can be quantified and which will cost Rs.10 crore each, led him to ask for this upward revision. They are: the cost of paying back wages to labour, restoring power to the factory and repaying a portion of the debts the company incurred. Yet why Goenka found all this out so late in the day remains mysterious.

Yet the factor which could jeopardise the takeover most is that of shareholding. According to Goenka, T.G. Vasantha Gupta, the original promoter, has said that he could deliver only 14 of his original 42.84 per cent holding. "I believe that Vasantha Gupta sold the bulk of his shareholding to Ballarpur Industries. A small part may be lying with some agents and middlemen," claims Goenka.

A spokesman for Ballarpur Industries denies the charge. Though he does confirm that Ballarpur is once again bidding for the company. What transpires next remains to be seen.

■ KAVERI MITTRA

AIR ASIATIC

Grounded

The Madras-based private air taxi service, Air Asiatic (AA) (see *Business India*, 15 April 1991) is without an aircraft following the deregistration of its only aircraft by the director general of civil aviation (DGCA). Earlier, *Business India* had quoted industry sources as saying that the company was facing a financial crisis, but K.C.G. Verghese, its chairman, had denied this.

Early trouble. Apparently, AA's troubles started from the time operations commenced, when Verghese and his NRI partner, Thomas George, developed differences. George, it is learnt, wanted considerable control in the affairs of the company as he held nearly 30 per cent of the shares, though Verghese brushed this aside as merely a board problem which would be amicably settled later.

Operations of AA came to a standstill from 4 June, nearly eight months after it went into business. The plane had developed a snag in one of the engines and needed major overhauling.

As things stand, Asiatic has asked the lessor, International Air (IA) to replace the engine or bear the cost of repair. The latter has refused to do so on the ground that there is no provision for repair or replacement in any of the contract clauses. Marketing director Richard L. Brown who is in the country to reclaim the plane says that Air Asiatic owes them around dollars 6,00,000 towards lease fees plus interest, spare parts worth dollars 3,00,0 and maintenance fees. However, Verghe denies this and says that the lessor fai to provide a satisfactory maintenan backup.

International Air then requested t DGCA to deregister the aircraft followi non payment of dues though Verghe claims that he sought the deregistrati of the plane as IA didn't honour t agreement to repair the aircraft.

■ A.S. PANEERSELV

ESSEN COMPUTERS

Caught in a jam

On 21 February, 1991 Essen Computer the Gandhinagar-based manufacturer personal computers was raided by the D rectorate of Revenue Intelligence. Esse Computers is one of the four companie belonging to the Essen group (see *Bus ness India*, 18 February 1991). The arti cle projected Essen as a winner bu events proved us wrong.

Today, four months after the raid, show cause notice is yet to be issued t Essen. Company sources claim they ca release no figures about the company's performance as all the relevant papers were seized in the raid. However indications are that this year's would be about Rs.12 crore, against Rs.27.3 crore last year.

Demand for the company's machines already in a slump because of low sales to the government sector, has been further hit by the beating Essen's image has taken because of the raid and because of the recession in the computer industry.

No production. Although senior managers claim not a single employee has been fired, indications are most of the employees have been sent on a couple of months compulsory leave and production has ground to a halt. The company's chairman, Apoorva Parikh, was in Dubai exploring possible export markets for the company and was unavailable for comment at the time this report was filed. Senior managers say the company will target more exports to general currency areas.

Chameleons let loose in Synthetic Fibre Plant
Traitor detected within 45 seconds.

Training Centres: Bombay, Pune, Delhi, Calcutta, Bangalore, Madras, Baroda, Goa, Nagpur, Ahmedabad, Indore, Noida, Kanpur,Lucknow,Varanasi, Kota, Jaipu
Cochin, Mangalore, Mysore, Bhavnagar, Calicut, Rourkela, Kakinada, Durgapur, Kottayam, Nasik, Jammu, Aurangabad.

Quick action. Quicker solutions. From Datapro. In action.

For a company like Konkan Synthetic Fibres (a division of Century Enka Ltd) dyeing 100 tonnes of yarn each week is more than a question of high turn over. It's a matter of life and death.

One small mistake. And the dye could totally change colours. Making it seem as if hoards of chameleons were running about the place.

To avoid this, every process requires constant supervision and undivided attention. Possible only through a highly sophisticated control system. Which, besides monitoring operations, also takes necessary corrective action.

So when it came to adopting a highly sophisticated control system, the company naturally chose Datapro. Consenting that the technological standards maintained, were, without any doubt, unmatched. And their experience diverse. From executing various projects in software and hardware for Blue Chip companies like Hindusthan Organic Ltd, Bajaj, Godrej, Phillips ... to training teams and teams of personnel to use these systems rightly.

The same standards achieved in training the industry are maintained right through to training the common man.

Training best suited to meet the Industry needs. And yours.

From such a company that has virtually turned the wheels of progress, could one expect anything less than an Industry-relevant Training.

Industry-relevant. Because the training you get comes to you from the company that is experienced with every facet of the Industry.

Industry- relevant. Because the subjects you choose to learn are the subjects that meet Industry standards.

Industry-relevant. Because the credentials you receive are the credentials that are demanded by the Industry.

To give you training with real-life experience.

ECONOMY

Disclosure exercise begins

The development finance institutions (DFIs) are in the process of incorporating major changes in the accounting policies on their balance sheets. The changes have been demanded by the World Bank as a condition to sanctioning a loan to the financial sector. This will involve a proper disclosure of their sick industries' portfolio and bad debts, besides, a change in the accounting from accrual basis to cash basis.

Swiss credit for India

Switzerland will extend a mixed credit line of Rs.140 crore for financing the import of capital goods and services of Swiss origin. This advance is for the execution of high priority development projects. The credit will be concessional, with 40 per cent as grant and 60 per cent as export credit, financed by a consortium of Swiss banks. The funds will be available to both the private and public sectors.

Export strategy shift likely

The commerce ministry is expected to draft the export strategy paper afresh. This will be done taking into consideration the views of the other ministries concerned. Issues like exchange rate policies, REP licences, depreciation of the rupee to push exports and budgetary allocations will be seriously considered in the new paper.

Another downgrading

Moody's Investors Service, a leading US credit rating agency, has further downgraded India, from the investment grade to the speculative or non-investment grade.

More gold swaps

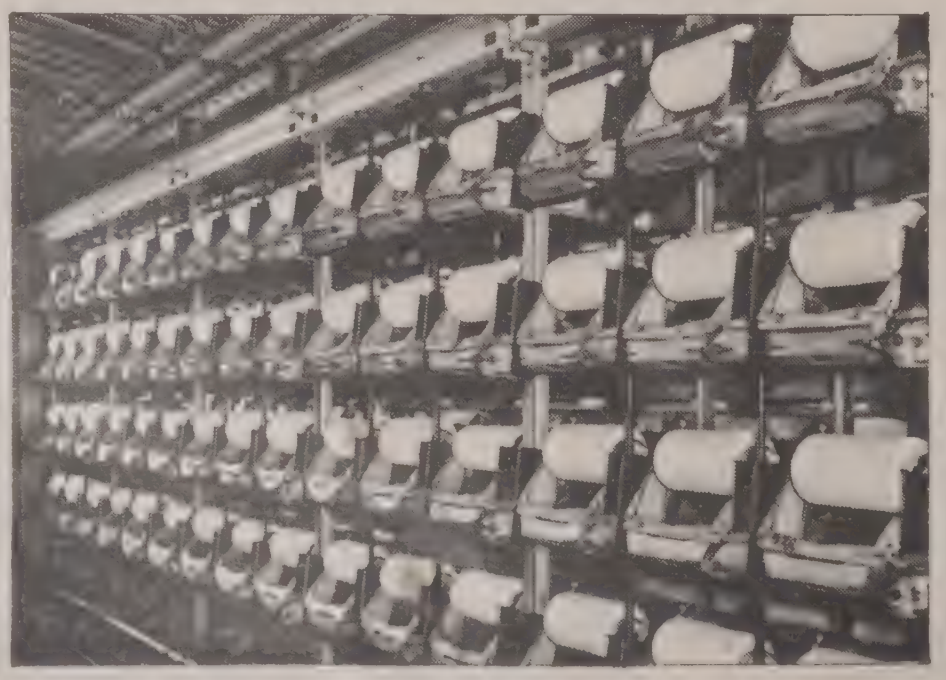
The Indian government is likely to make further gold swaps up

to 30 tonnes, as against the earlier 20 tonnes. Actual sales also cannot be ruled out in view of the foreign exchange shortage.

Banks to enter capital market

The government is seriously considering a proposal to allow public sector banks to enter the capital market to improve their paid up equity base. In the Eighth Plan, banks will require almost Rs.3,000 crore to augment their capital base.

No advance licences for PSF



The Union government has stopped issuing advance licences for the import of polyester staple fibre for export production. Instead the government has begun issuing advance release orders for the supply of fibre from indigenous producers.

Loan for oil imports likely

The World Bank is likely to extend a $300-million loan to finance India's oil import bill. The loan is to be the first instalment of a larger loan. Though the World Bank has finalised its negotiations, the loan can be approved only as a supplement to the IMF loan.

Privatisation of NTC and CCI

Preliminary inter-ministerial discussions have started on privatising the National Textile Corporation (NTC) and the Cotton Corporation of India (CCI). The heavy loss of Rs.3,000 crore incurred by the NTC in running 125 mills is believed to have been the main factor which influenced the finance ministry to start the process of privatisation.

CORPORATE

L&T makes reactors

Larsen and Toubro has manufactured the country's first hydrocracker reactors. These reactors, used in hydrocracker plants, have been delivered to Gujarat Refinery, a subsidiary of Indian Oil Corporation Ltd. Each of the two reactors manufactured at L&T's Hazira Works in Gujarat is 23m long, 3.35 m in diameter and weighs 430 tonnes. The reactors were manufactured using high-strength

materials like chromium and molybdenum alloys, critical welding and cladding equipment and skills and specialised heat treatment.

They will be used for converting low-value heavy residues into valuable middle distillates like kerosene and diesel.

DEIL gets Unilever contract

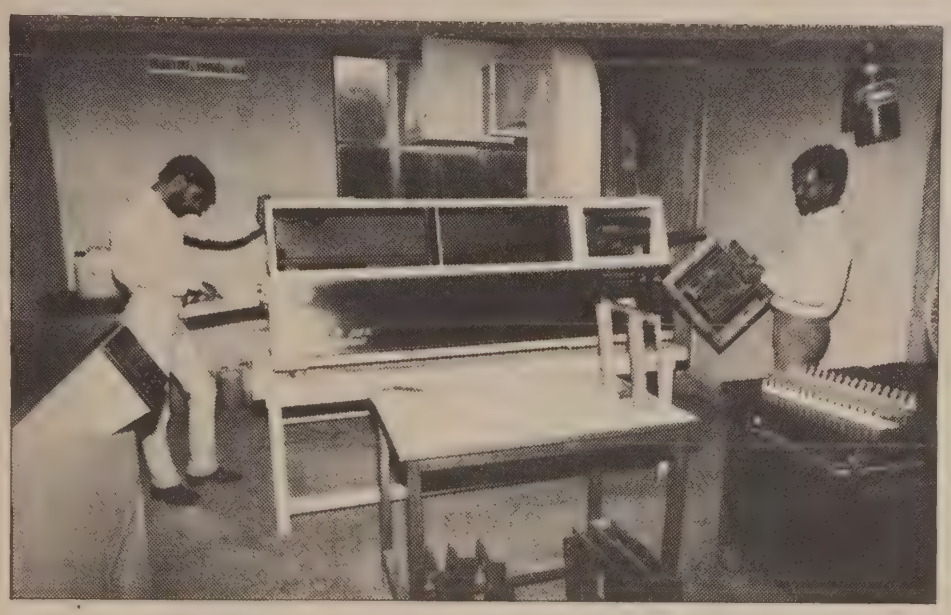
Bangalore-based Digital Equipment India Ltd (DEIL) has signed an MoU with Unilever of India for the implementation of Unilever's national computerisation programme. DEIL will provide hardware, software, training and related support services for the implementation of the group's information technology plans in India over the next five years. DEIL bagged this contract despite strong

competition from Hewlett Packard.

Pilot implementations will begin later this year. Although the project covers all companies of the group, the first phase of implementation will cover only Hindustan Lever, Lipton, Ponds and Brooke Bond and their over 76 plants, 40 branch offices and 2,000 depots.

Nestle-Khaitan tie-up

Calcutta-based B.M. Khaitan group has tied up with Nestle S.A, Switzerland to set up a



joint-venture project for manufacturing soyabean-based products. The Khaitan group will hold 24 per cent while the Swiss company will hold 40 per cent of the Rs.30-crore paid-up share capital of the company. A new company, Nutritional Food Products India Ltd has been promoted for the project.

Total project cost is expected to be Rs.60 crore. The unit will be set up at Samalkha in Haryana with commercial production commencing by mid-1992.

Defective exports by HCL

Hindustan Cables Ltd (HCL) is spending nearly Rs.20 lakh to take back consignments worth Rs.1.53 crore rejected by the Singapore Telecom Authority (STA) after carrying out quality checks. The two-month deadline

which the STA had given HCL to clear the defective cables expired on 15 June. The STA is expected to charge a further penalty to compensate for this delay.

The total value of the STA order was Rs.2.6 crore. HCL had already paid Rs.28 lakh as liquidated damages to STA for late delivery and replacement of defective cables.

Revival of Kothari General Foods

The Industrial Credit and Investment Corporation of India (ICICI) has recently worked out a detailed package for the revival of Kothari General Foods (KGF). The total cost of the package is expected to be Rs.43.91 crore. At the outset, the package has okayed the takeover of KGF by the cash-rich multinational Brook Bond India Ltd (BBIL). The exchange ratio recommended by the Board for Industrial and Financial Reconstruction (BIFR) is one equity share of BBIL for 22 of KGF.

TOMCO's ceramic venture

Tata Oil Mills Company Ltd is entering into a collaboration with a British company to manufacture bone china mixed tableware. A new company, Tata Ceramics Kerala Ltd (TCKL) has been incorporated for this purpose and a 100 per cent export-oriented unit will be set up at Cochin Free Trade Zone.

TOMCO will invest 50 per cent of the equity in TCKL with the foreign collaborators investing 30 per cent. The balance will be invested by a Kerala government undertaking, Kerala Ceramics Ltd, and financial institutions.

WIMCO to shut down unit

WIMCO Ltd has decided to shut down its Port Blair manufacturing unit from 1 August. The 62-year-old unit employing 250 workers is the company's largest match splint manufacturing unit. The unit supplies match splints to all the five factories of the company which have an estimated annual requirement of 55,000 million splints.

The unit's operations have become unviable due to operational costs and the government's recent restrictions on felling trees by private parties.

Thapars VSF project okayed

Andhra Pradesh Rayons Ltd, a Thapar Group company promoted by Ballarpur Industries Ltd has obtained central government clearances under the MRTP Act for setting up a 25,000 tonne capacity viscose staple fibre project in Andhra Pradesh. The AP-based project is estimated to cost Rs. 85 crore.

WB aid for ONGC project

The World Bank has cleared $450 million assistance for the $2.8-billion Oil and Natural Gas Commission's (ONGC) gas flaring reduction project. Of this, $50 million is expected to be disbursed immediately.

The bank has laid down two conditions for disbursement — announcement of revised natural gas prices and fourth round of bids by foreign companies for oil exploration.

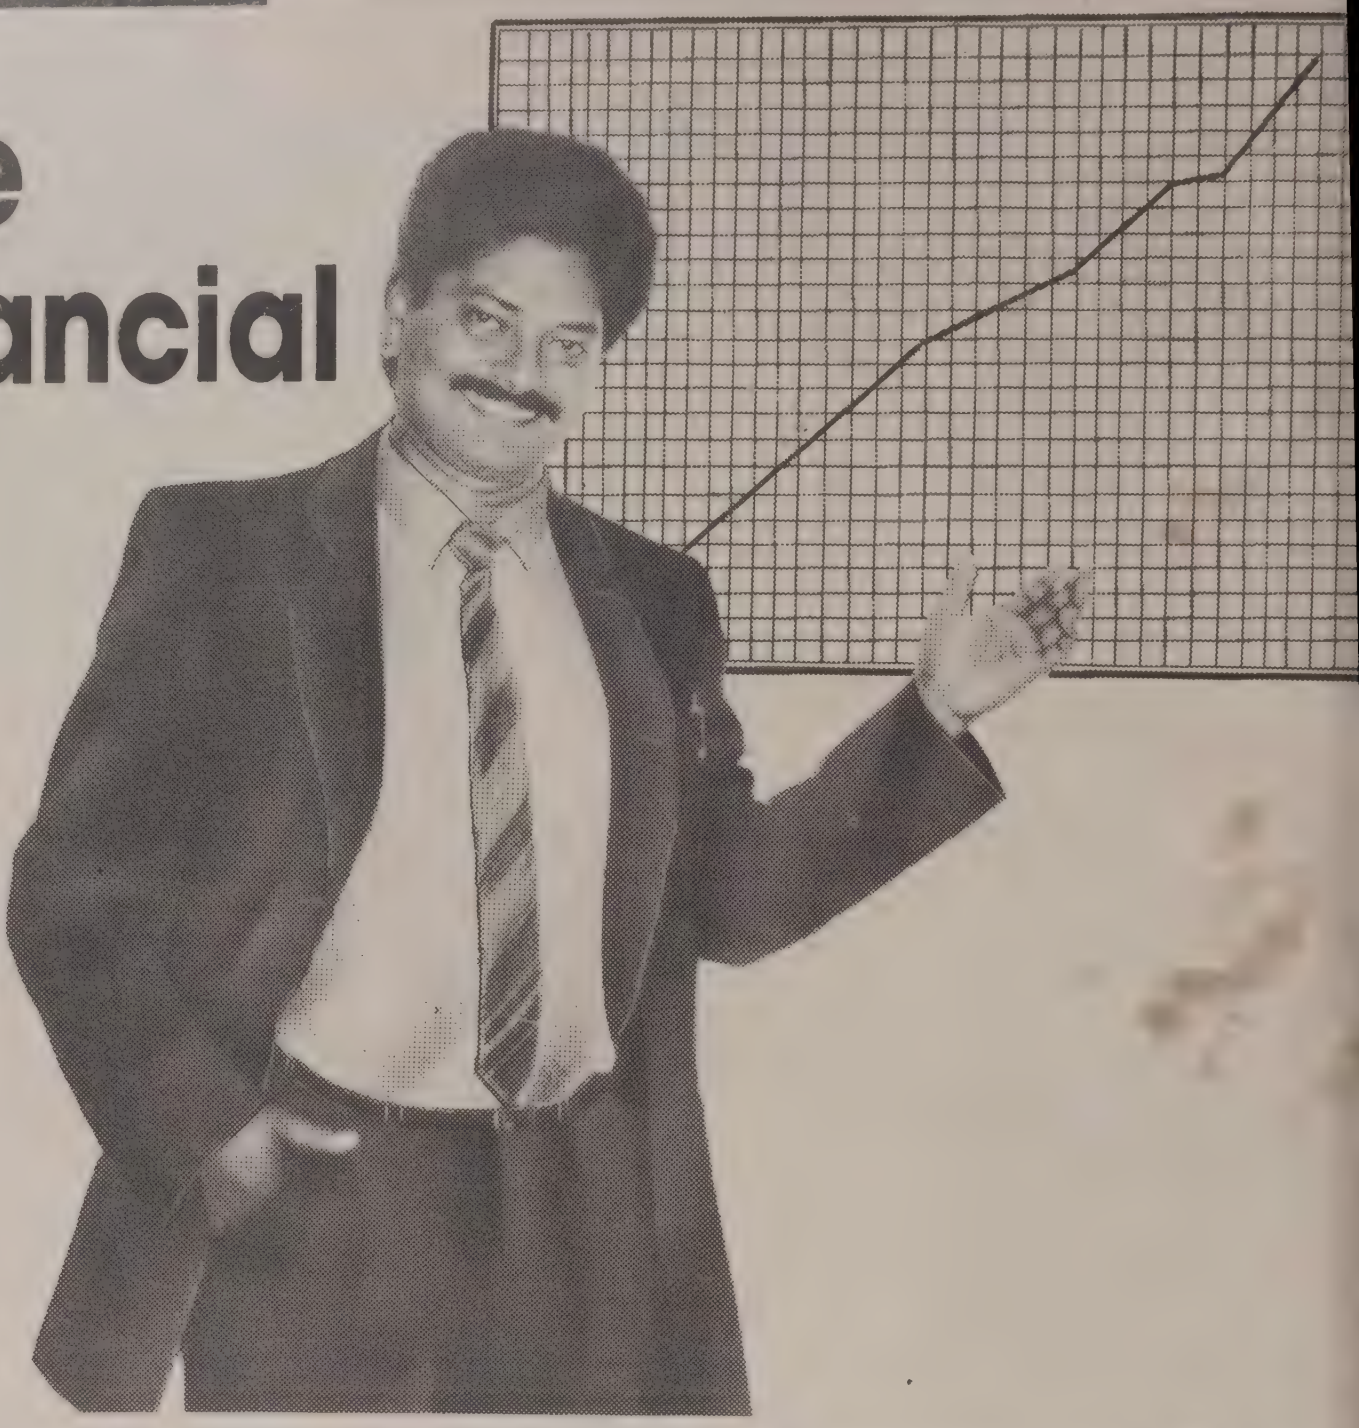
ECIL exports mainframe

Electronics Corporation of India Ltd (ECIL) has exported its first mainframe computer to Thailand where it will be used for census operations. The state-owned company has a technical collaboration with CDC of the US for production of 830 and 930 series mainframe computers.

Mothercare enters Gulf

Mothercare India, which retails childrenswear and other items through its chain of stores in the country, has tied-up with a leading group in the UAE to set up a franchise chain of 'Little Kingdom' departmental stores in the Gulf. Initially, three stores will be opened in Dubai, Sharjah and Abu Dhabi.

TELCO for passenger cars



Tata Engineering & Locomotive Ltd (TELCO) plans to manufacture a new medium-sized passenger car in the next three or four years. The car, to be powered by a 2.3 litre petrol engine, will be targeted at the premium-end of the market. It will be similar to the Toyota and Hyundai models but developed indigenously.

TELCO proposes to make around 30,000 to 40,000 cars per annum. Meanwhile two new models are expected to be marketed from next month.

Bengal Lamps takeover stalled

Philip India's bid to take over Bengal Lamps Ltd has been stalled following the banks, fi-

Meet the Non-Financial Wizard

The Marketing Manager trained in Finance by ICFAI

FINANCE FOR NON-FINANCIAL EXECUTIVES

Nature	Self-study at nome and week-end workshops.
Duration	6-8 months
Core Modules	• Financial Statement Analysis • Management Accounting & Control • Working Capital Management • Project Finance & Appraisal
Elective Modules Any Two	• Marketing Finance • Production Finance • Project Management • Financial Services • Personal Finance & Investments • Management Control & Reporting System • Financial Management in Public Enterprises
Examinations	At 25 centres, once in 6 months

Over 1,400 non-financial executives sponsored by reputed companies such as Voltas, ITC, Berger Paints, India Cements, Abbott Laboratories, Hindustan Ciba-Geigy, Mather & Platt, Asian Hotels, Madura Coats, HCL, CMC etc., are going through the DBF (Diploma in Basic Finance) Programme, specially designed by ICFAI for the benefit of non-financial managers. Basic knowledge in finance and skills in using financial tools can put you on a faster path to the top.

The executives learn about the magic world of finance through structured self-study at home and by attending week-end workshops. You will enjoy the entire process. A new learning experience. A fantastic voyage of discovery!

If you are interested, please write today for a copy of the prospectus enclosing a demand draft for Rs. 60 drawn in favour of "DBF A/c ICFAI" payable at Hyderabad.

The DBF Programme
Finance for Non-Financial Executives

nancial institutions and workers' unions deciding to support the revival of the sick unit. The two dissenting factions within the management have overcome their differences and mutually consented to work together. In view of these developments, the Appellate Authority has decided that there is no need for a new management to take over.

The Board for Industrial and Financial Reconstruction had earlier declared the company sick and had appointed the Industrial Reconstruction Bank of India (IRBI) as the operating body to prepare a rehabilitation scheme.

INDUSTRY

Textile exports up

Exports of synthetic and rayon textiles have increased from Rs.600.87 crore in 1989-90 to Rs.630.87 crore in 1990-91, an increase of 5 per cent. Of the total exports, fabric exports accounted for 50 per cent at Rs.346.35 crore. The target for export of synthetic and rayon textiles for the current year has been set at Rs.850 crore.

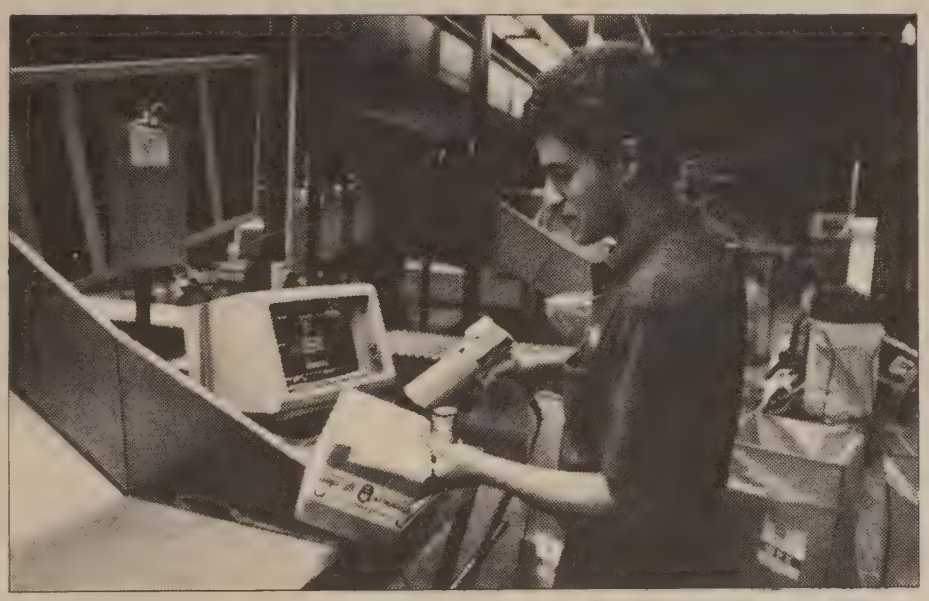
Less coal for textile mills

Textile mills in Madhya Pradesh are facing a shortage of coal as a result of a recent ban by the Railway Board on movement of coal from the South Eastern Coal Fields Ltd to non-core sector consumers, and the concentration on supplies to core sector consumers like power houses and cement factories.

V. Chaudhary, secretary, M. P. Textile Mills Association says that the supply to non-core sector consumers has come down substantially since April.

Cotton policy reviewed

The cotton advisory board (CAB) has agreed to adopt a more cautious policy with regard to the release of export quotas for the new season. Quota releases will be coordinated with the quantity of cotton cropped in the first few months of the 1991-92 season.



The current policy of releasing indiscriminate quotas has, according to the textile mill owners, resulted in a 60 per cent rise in prices of some varieties of cotton between September 1990 and April 1991.

Air cargo exports down

Export figures from the Indira Gandhi airport at Delhi show that air cargo export in terms of tonnage has dropped by 11.9 per cent in January, 14.5 per cent in February, and 7.9 per cent in March this year, as compared to the same period last year. Airline officials say that many international flights are therefore operating at 60 to 65 per cent capacity.

Craft training in Kashmir

The government has, to date, set up 152 handicraft training centres in Kashmir to train about 4,000 weavers every year. While Rs.22 lakh has been alloted to continue the training facilities, Rs.18.60 lakh has been sanctioned for the current financial year for holding exhibitions outside the state by Kashmir-based organisations.

Sugar output up

Production of sugar has gone up by 1 million tonnes (mt) during the first seven months of the current sugar year (October 1990 to September 1991) as compared to the same period last year, that is from 9.7 mt to 10.7 mt.

Dyestuff exports down

Exports of dyestuffs, intermediates, and associated chemicals during 1990-91 were Rs.506 crore, as against a target of Rs.875 crore. In fact, a review of export targets and achievements released by the Basic Chemicals, Pharmaceuticals and Cosmetics Export Promotion Council (Chemexcil) says that this is even less than last year's exports of Rs.529.80 crore.

Engineering goods exports up

Exports of engineering goods in April 1991 was Rs.175 crore as against Rs.120 crore in April 1990, an increase of 46 per cent. The export target for 1991-92 is valued at Rs.4,100 crore while exports in 1990-91 were worth Rs.3,250. Though this figure was achieved in spite of the Gulf war and the RBI import curbs, it fell short of the Rs.3,400-crore target which had been revised from the earlier target of Rs.3,100 crore.

Powerloom units

An SBI report says that the small scale sector powerloom units have given the large textile mills a run for their money in the past few years because of certain incentives available to them. As a result, these large mills are moving towards separate spinning, weaving, and processing units rather than the traditional composite mills. Of

the 1,100 textile mills, there are about 650 spinning units, 150 weaving units, and 300 composite mills.

LABOUR

Strike called off

The Bombay-based J.B. Chemicals & Pharmaceuticals Employees Committee has called off the hunger strike following the intervention of A.I. Pathan, Maharashtra's additional commissioner of labour. Pathan assured the union that the labour department would take necessary steps to redress the employees grievances. The company representatives did not participate in the meeting.

According to K.R. Aiyar, general secretary of the National Federation of Sales Representatives Union, though the strike has been called off, the union will pursue other matters of victimisation with the government.

Bill on workers' welfare mooted

The new minister of state for labour, K. Ramamurthy said that the pending bill on workers' participation in management will be passed soon. Moreover, another proposed bill on the welfare of construction workers will be placed before Parliament. According to Ramamurthy, the bill on industrial relations, which was withdrawn due to difference on various issues like secret ballot, would be reviewed by the Indian Labour Conference.

Government prohibits MSEB strike

The state government has prohibited the proposed strike by the subordinate engineers of the Maharashtra State Electricity Board (MSEB). The strike has been prohibited under the Essential Services Maintenance Act 1981 as the MSEB is an establishment dealing with essential services of production, supply and distribution of power. According to a spokesperson of the MSEB subordinate engineers' association, by prohibiting the strike, the government was trying to clamp down on them instead of solving their problems.

Goa's new employment policy

As part of a strategy of providing employment to all Goans, the state law minister, Luizinho Faleiro, announced a new employment policy with a package of legislations and directives to various departments. The new policy will make 15 years' domicile in Goa and working knowledge of the official language — Konkani — compulsary for the candidates to get any job in Goa.

Metal Box unit for sale

The workers' union of the Faridabad unit of Metal Box has withdrawn its appeal against the BIFR decision to sell the eight factories of the company. The union's appeal against the BIFR decision was to be heard by the Authority for Industrial and Financial Reconstruction (AIFR).

BIFR has decided to sell the eight units of the company separately as it had been unable to find a buyer willing to take over the company as a whole.

IDL's one-day lock-out

Hyderabad-based multi-crore company IDL Chemicals Ltd avoided a prolonged industrial dispute when it lifted lock-out barely 24 hours after it was declared on 25 June. According to a company spokesperson, the company was prepared to negotiate with the workers rather than to keep the shutters down. The workmens' union affiliated

to HMS agreed to resume duty and also make up for the loss in production caused by the lock-out.

Wage guarantee fund for workers

The International Labour Organisation (ILO) has suggested setting up a wage guarantee fund to help the workers affected by bankruptcies in the industrial sphere. According to a spokesperson from ILO, insolvencies are a daily occurrence in any open market economy system. The Indian industrial sector has been witnessing an increasing number of sick units, affecting both jobs and service conditions of lakhs of workers which eventually end up being insolvent.

LANDMARKS

Kidnapped, K. Doraiswamy, executive director of Indian Oil Corporation (IOC), by militants in Kashmir. Doraiswamy, who was on an official tour to Kashmir to inspect IOC installations, was accosted by the militants at Zewan near Srinagar. Meanwhile, officers and employees of IOC have appealed to the abductors to release Doraiswamy so that the corporation could continue its task of building additional storage facilities for the state.

Awarded, former prime minister Rajiv Gandhi and Sardar Vallabhbhai Patel, known as the Iron Man of India, the Bharat Ratna posthumously. Patel has been bestowed this honour nearly 41 years after his demise on 15 December 1950. Patel, who handled the home portfolio and later India defence, is chiefly remembered for his role in the integration of the princely states to the Union.

Appointed, A.N. Varma, member-secretary, Planning Commission as principal secretary to the prime minister. An IAS officer of the 1956 (Madhya Pradesh) cadre, Varma had earlier held several important positions including the most recent as secretary, industrial development.

Beaten, Tisco, for the first time since 1983, by its Bombay House brethren Telco in the race to be the country's largest company in the private sector. At Rs.2,600 crore, Telco's sales for 1990-91 was Rs.269 crore higher than Tisco's.

Died, Raman Kant Munjal, managing director, Hero Honda Motors Ltd, of a

massive heart attack in Delhi. He would have been 42 on 2 July. Munjal, the eldest of Hero group chairman Brij Mohan Lall Munjal's four sons, and a mechanical engineer from the Manipal Institute of Technology, established Hero Honda in 1984.

Died, Govind Pandurang Kane, industrial advisor to the government of India in the ministry of industry. Son of Bharat Ratna P.V. Kane, an eminent Sanskrit scholar, he contributed much to the formation of the chemicals and fertiliser industries during his tenure at the DGTD. Kane was also a director and consultant to several companies.

Swissair Customer Portrait: Harry Singh and family, Industrialist.

Holidaying in Europe, the Singhs are happy to discover that memories are made on the wings of Swissair. Harry Singh's family vacation gets off to a flying start with Swissair. Opening up the picturesque Europe via Zurich. Quite naturally, even when business demands, Harry insists on Swissair. With prompt connections to over fifty European business centres, seven gateways to the U.S.A. and two to Canada. As the Singhs would tell you, business or holiday, Swissair is the finest way to get carried away.

everest/90/SW/36 R1

RATAN TATA

While presenting Telco's financial report card for 1990-91 last fortnight, chairman Ratan Tata looked relaxed and confident. He had every reason to be. In a year of economic roadblocks, the country's largest truck manufacturer managed to speed ahead, whizzing past even Tisco, to become the country's largest company in terms of turnover. Sales rose by almost a third to Rs.2,600 crore and profit before tax by 58 per cent to Rs.235 crore. The production level of 81,931 vehicles was 26 per cent higher than last year. On the tax front Telco forked out a whopping Rs.92.5 crore, bringing post-tax profits to Rs.142 crore.

Next year, says Tata, they expect to sell 10,000 more vehicles. Part of the increase will be accounted for by new launches.

The much awaited Tata Estate, a station wagon, and Tata Sport, a sports vehicle (both priced at Rs.3.5 lakh) are due on the roads in July. The project with Daimler Benz to manufacture a world concept truck is off. Instead, Telco will concentrate on improving engine designs with outside help (from Ricardo of UK, for instance) and developing a "home grown, medium-size car" by 1995. At the moment there are no diversifications planned, for, as Tata admits in a moment of candour, "I've matured. I believe that now we should excel in what we're doing."

S.M. SUBRAMANIAN

Last month, financial circles were buzzing with excitement after Indian Bank Mutual Fund floated two new funds. The initial response to both schemes, Ind Sagar and Ind Moti, has been good and the bank is optimistic about the future. "We hope to mobilise Rs.200 crore under the new schemes," says S.M. Subramanian, executive trustee of Indbank Mutual Fund. While Ind Sagar offers 60 per cent tax benefits on capital gains, Ind Moti offers equity growth with annual dividend for over five years. Assured allotments, loans up to 75 per cent from all Indian Bank branches and special cash incentives for early subscribers are also offered.

K.V. RAO

Seven NRIs based in Pennsylvania, USA, are setting up a 100 per cent EOU to manufacture resin ophthalmic lenses, in collaboration with a leading lens company, Vesil spa, Italy. The new company, Techtran Polylenses Ltd, is located in Bonthapalli, Andhra Pradesh, and has an annual capacity of 5 million pieces. According to chief promoter K.V. Rao, the annual turnover of the plant in 1992-93 is expected to be around Rs.6.5 crore.

These seven highly trained technologists have together invested nearly Rs.2.23 crore in the plant and plan to raise another Rs.16 crore from financial institutions and Rs.3 crore through a public issue. The company has already entered into a firm sales agreement with their collaborator and two other leading Italian distributors.

JOSE PAUL

He is perhaps the only port official in the country who has successfully completed a thesis on port management. Now Jose Paul can boast of another achievement: turning around the New Mangalore Port Trust (NMPT). Before he took over as the deputy chairman of NMPT, its image in international shipping circles had sagged to such a low level that ships had started avoiding the port. Thanks to frequent labour troubles and intermittent disruption of work, the confidence of the shipping community had been badly shaken. After he took over, Paul helped NMPT repair the damage through a series of measures: bringing forwarding agents under management control; introducing attractive incentive schemes for cargo handling labour; changing traditional shift timings, etc. The result: productivity went up 25 per cent and traffic registered a substantial growth over the previous year. Says Paul, "NMPT has a bright future. By the year 2000, it will be considered one of the major ports of the country along with Bombay, Madras and Vizag."

T.K.K. BHAGAVAT

Bank of Maharashtra (BoM) became the latest bank to jump on the credit card bandwagon when its CMD, T.K.K. Bhagavat, signed an agreement with Bank of India. With this agreement, BoM has tied up with Indiacard as well as Mastercard International. Says Bhagavat, "The uniqueness of this tie-up is that although we are affiliated to Indiacard, we have total freedom to enrol our own member establishments. At the same time we have access to the infrastructure already created by Indiacard. This will not only be cost-effective, it will also help us take off faster." Indiacard al-

eady has 15,000 member es-ablishments and a host of ther nationalised banks asso-iated with it. BoM has set a tar-et of issuing 15,000 cards in its irst year in the card business.

J.C. BASU

Trinity Die Forgers is forging ahead with new expansions. Last fortnight, the company added two CNC machines at an investment cost of Rs.1.5 crore. Chairman J.C. Basu says this will not only increase the value added to the finished forgings by 50 per cent, it will also help his company meet the demands of Maruti Udyog for machined parts. Maruti has selected Trinity to be one of the suppliers for its new YE2 export model.

The new machining division will also help Trinity cater to the West German finished parts market. Trinity Die Forgers, which had sales of Rs.16 crore last year, exported forgings worth about Rs.2 crore.

H.C. CHUGANEE

"Suddenly, China has become a potential trade partner for India, "claims H.C. Chuganee, just back from that country. Chuganee, chief executive of Indofil Chemical Co and president of Indian Chemical Manufacturers Association (ICMA), had recently led a seven-member delegation to explore the opportunities for increasing bilateral trade in chemicals between the two countries. The trip turned out more fruitful than

expected as some members actually ended up signing the intent to co-operate through transfer of technology and joint ventures in the areas of engineering plastics, electronic chemicals and drugs and pesticides.

N. C. SINGHAL

Trust ICICI babies to sprout wings quickly. The shareholders of the Shipping Credit & Investment Corporation of India Ltd (SCICI) recently approved a resolution enlarging the company's objects to include energy, telecommunication and tourism. Says SCICI managing director, N.C. Singhal, "SCICI will now be able to assist enterprises related to conventional and non-conventional energy, infrastructure and equipment manufacturers in telecommunication and hotels and resorts." SCICI, which went public in February this year, notched up a profit before tax of Rs.34.27 crore in 1990-91 and declared a dividend of 15 per cent.

JACK CHANG

One of the four tigers is now eyeing India. Taiwan, which made its reputation as a world class supplier of various goods, is now finding it difficult to compete in international markets because of rising wages in its domestic market. So it is doing the next best thing: tapping suppliers abroad for its raw materials. That explains the recent visit of a Taiwanese delegation to Bombay. Led by Jack Chang, managing director, Onelong Corporation, an exporter of PV/PVC synthetic leather and importer of textiles, the delegation members met local businessmen and trade association leaders. "India can become a very good second base for Taiwan," said Chang at the conclusion of the visit. Sponsored by the China External Trade Development Council, the trade mission had two purposes: to look for sources of imports and joint venture opportunities for setting up factories in India.

KEN STRAIN

For Ken Strain, director of 12 Star Technologies, a company in the information technology business in UK, his fourth trip to India will be the most momentous. On this trip he will work out, with Tata Consultancy Services, the modalities for marketing TCS' latest business software product E-X in the UK. Says an ecstatic Strain, "This product has revolutionary features I have not seen anywhere. It should easily become the number one package in its slot." Strain is sparing no efforts in preparing to launch E-X in UK. But before that he will wing his way back to India for the product's formal launch in September.

KAMAL SINGH & LEROY COLE

Leroy Cole, director of manufacturing engineering at Integraph Corporation in the US, was in India for the inauguration of Rolta's workstation manufacturing facility at Andheri, a suburb in Bombay. Here a range of CAD/CAM workstations will be manufactured in technical collaboration with Integraph Corporation. "This facility will have the knowhow to manufacture Integraph's latest products within six months of their launch in the US market," says Cole. The unit will be the first outside the parent company to obtain the technology to manufacture the products.

On the performance of the company, says Kamal Singh, chairman of the company, "I expect to touch a turnover of Rs. 40 crore during the financial year ending 1992." He also hopes to declare a maiden dividend during the same period. Considering how workstations are the fastest growing segment in the industry, Singh might manage to do just that.

AI AIR HOSTESSES

Going on the war path

On 7 July 1991, 45-year-old Michiko Mochizuki, will file a writ against her employer Air India in the Tokyo district court, for the right to serve it as an air hostess, till she is 58 years old. In doing so, she will be spearheading the current agitation by the Air India Hostesses Association (AIHA). The agitation is being undertaken to force the airline to follow a directive issued by the Indian government in October 1989 that stipulated that the age limit be raised from the present 45 years to 58 years for the air hostesses on flying duties. Meanwhile, Dawn Biladvala, a Bombay-based air hostess, who turned 45 on 17 June, is appealing to the Supreme Court, against a Bombay high court verdict that was not in her favour.

Parliamentary enquiry. The government directive raising the age limit to 58 was issued to Indian Airlines and Air India on 16 October 1989, following an enquiry by the petitions committee of the Indian parliament on behalf of the air hostesses. The directive sought to do away with discrimination against women employees (air hostesses) and put them on a par with men (flight pursers). While Indian Airlines had promptly obeyed the government's directive, Air India has steadfastly ignored it for the last 20 months.

Air India's contention is that there was no government directive and that, "if there were one, the airline would promptly adhere to it". A significant point which may cause controversy in the Supreme Court would be the letter purported to have been received by Rajan Jetley, the then chairman and managing director of Air India, from the aviation under-secretary which, according to Air India, nullified the government directive. On the other hand, the statements of the minister for civil aviation, even after the date of the under-secretary's letter are in the air hostesses' favour.

There are at present 11 air hostesses above the age of 45 with the Indian Airlines who have been allowed to fly. "If they clear the medicals, we will allow them to fly," confirmed an airlines spokesperson. Air India's objection to air hostesses continuing to fly after 45 seems to be based on the conjecture that permitting them to fly beyond this age would not augur well for the airline's image, given the industry's intensely competitive environment. In fact, in a meeting with the civil aviation minister, Jetley had been quoted as saying that "the air hostesses will not look presentable enough once they cross a certain age."

Of the 970 air hostesses currently on AI rolls, at least 50 are due to retire by 1993 when they turn 45. However, the AIHA is determined to fight for the acceptance of the government's directive by the airline. "The air hostesses have always been discriminated against by the airline. When we are grounded, there is only a marginal raise in salary but the promotional avenues and the job functions remain despicable. In the past, whenever we fought for our rights and lost, we were dejected, but this time the fight will continue all the way," says Ruheen Khambatta, who took over as association president in 1988.

Bhiladvala, fearing the end of her air hostess days, had moved the Bombay high court in April this year. Her petition was accepted by the court on 11 June but the only relief offered was continuation of her salary while the court took a final decision.

Not binding. On Air India's part, its court affidavit says that Indian Airlines' accepting the government's directive is not binding on it. "The two jobs are not comparable. The two airlines operate in totally different environments. Indian Airlines has a monopoly of operations in the domestic sector. Air India does not enjoy a monopoly. The duties performed by its air hostesses are also different," says Jitender Bhargava, the Air India spokesperson, "the airhostesses only want to protect their allowances, which are very lucrative," he adds. The affidavit also cites various medical reasons for considering the air hostesses unsuitable to continue beyond the age of 45 years." Age takes its toll in terms of reflexes, and we are a service-oriented airline," says Bhargava.

An Air India airhostess: discriminated against?

However, Air India will now be in for a tough time with the All-India Cabin Crew Association, a recognised union, joining hands with the Air India Hostesses Association, which has not been recognised by the management. In Mochizuki's case, the Tokyo high court had earlier asked her whether she was satisfied with the raising of the age limit to 58 years, because Japanese regulations permitted them to continue till 62 years. In October 1989, the airlines had assured the court that she would be allowed to retain her present job. Though she was allowed to continue for five months, the airline reneged on its promise in March last year.

Will Air India now succumb? Or will it offer only contractual jobs to air hostesses in the future — a practice that is being successfully followed by other airlines in the Asia region? The verdict of the Supreme Court may, perhaps, settle the issue once and for all.

■ DEVENDRA TAK

LIFE INSURANCE

A new high

It was celebration time at the Life Insurance Corporation (LIC) last month when word got round that the monolith had created a new record in 1990-91 — it had insured 10 million lives under individual and group life insurance in that period. The corporation has a lot to boast about. It sold 8,648,192 policies for an assured sum of Rs.28,152.16 crore under its various plans for individuals. Again, as many as 11,823 new schemes covering 1,720,232 lives for a sum of Rs.3,392.05 crore were marketed by the corporation under the group insurance scheme.

Over the last 35 years, LIC's business has multiplied manifold, since starting with around 800,000 policies and an assured sum of Rs.283 crore. Today, it offers 25 kinds of policies in all, catering to different age and income groups. The corporation has expanded its network, both in the rural as well as urban areas. The growth rate in the countryside has increased by 35 per cent, while in the urban areas it is of the order of 20 per cent over the years.

Main thrust. Since rural areas form such an important market, 81.60 per cent of the total business in the Rs.5,000 or less category comes from the villages. "The corporation basically caters to the middle or lower middle strata of society and does not depend only on the affluent or the very rich for its business," says M.G. Diwan, the newly appointed LIC chairman.

According to Diwan, a growing number of people are using life insurance as a tax-saving instrument. "Compared to shares, debentures and company deposits, an LIC policy is not only a very secure investment, it also offers tax benefits," says Jyothi Gehaney, a development officer, who alone brought in business worth over Rs.1 crore in 1990-91.

Although this particular category — policy holders as tax savers — forms the bread and butter of the corporation's business, there are some who feel that this defeats the purpose for which LIC was established.

However, one really cannot deny the contribution of this segment of policy holders, as it is this group which has enabled the corporation to become a colossus. Opinions, however, are divided. Many feel that the corporation's progress has been very slow and it could have done a lot better since it has been in a monopoly business for over three decades. Diwan agrees that there is lot of scope for growth, but points out that the sluggish growth of the economy and political instability have prevented the corporation from growing faster.

Although, on the one hand, there has been a boom in business over the last couple of years, on the other, there has been a fall in LIC's share in the savings market. This is primarily due to the lucrative high interest rates offered by other financial schemes like units, the National Savings Scheme and bank deposits.

Diwan: "the concept is unique, different from normal investment"

Diwan agrees that of late the corporation has faced competition from other institutions which have mopped up a large share of the public's savings. But, he adds, "The concept of life insurance is unique. It is different from normal investment." The best recourse, he feels, is that an individual insures himself first and then invests his surplus funds in lucrative schemes.

■ MAHIRA SHEIK

BANK DEPOSITS

Growth rate down

The declining trend in bank deposits has finally become visible. According to the Reserve Bank of India, in 1990-91, although the volume of bank deposits collected in absolute terms has risen, the growth rate has dropped sharply — by 4.6 per cent. Compared to a growth of 19.1 per cent to Rs.1,66,959 crore in 1989-90, deposits have increased by only 14.5 per cent to Rs.1,91,189 crore in 1990-91. And given the successive deterioration in the growth rate of deposits — from an average 22.6 per cent in the seventies to 18.8 per cent in the eighties — the current decline is disturbing.

One reason offered by most bankers for this drop is the growing disintermediation in the financial system which started in 1985. Banks are no longer the sole intermediaries for mobilising money. With mutual funds, the stockmarkets, portfolio management schemes and company fixed deposits offering good returns (12 to 14 per cent), bank interest rates at 5 per cent on savings accounts naturally appear unattractive to say the least. The result has been a natural exodus of money to these new modes of investment, leaving the banking system in a tight spot.

More competition. Government schemes like the National Savings Scheme, National Saving Certificates and Indira Vikas Patras, also offer competition, effectively so, because they are tax-exempt and also offer higher rates of interest. Additionally, large-scale expansion of bank branches, which automatically opened up new areas, has been curtailed since 1985 as the banks moved towards consolidating their networks.

What can be done to correct things? R. Srinivasan, chairman and managing director of Bank of India, feels that banks must become more responsive to public

Srinivasan: deposits must be made more attractive

needs. "Service must be improved and tax and other fiscal concessions must be given to make deposits more attractive," says he.

While the decision to grant fiscal concessions rests with the government, bankers agree that part of the responsibilty to increase deposits is theirs as well. As K. Kannan, Bank of Baroda's general manager points out, "The growth, which was automatic before, is not there. So banks will now have to market themselves better."

Since the urban population already has a variety of investment options to choose from, the key markets to tap would be the rural and semi-urban areas, which have little access to alternative avenues of investment. Banks already have an established branch network in the rural areas (60 to 70 per cent of their total branches in most cases) and that must be utilised optimally. So far the emphasis in the rural areas has been on giving credit. The focus must now shift towards mobilising deposits by marketing schemes which meet the local needs.

Bankers are optimistic about the fact that, with higher investments planned by the centre for rural development, the savings potential in these areas will increase. In a bid to attract more customers, higher interest-bearing, longer maturity deposits are also in the offing. Further, under a recently issued RBI directive, banks will be allowed to open extension counters without the prior permission of the RBI, depending on viability. This will give customers easy access to bank facilities, auguring well for the banks' deposit mobilising efforts.

Ensuring more profits. Of course, by getting into related areas like mutual funds, leasing and factoring, banks have taken steps to ensure growth in profits. But at the end of the day, deposits are still the cheapest source for funds, and if that fund base of the banks is eroded, profits will be affected. If the deposit base is, therefore, to be maintained, banks will have to gear up with new marketing strategies. Otherwise, in a country with a high savings rate of 22 per cent, the average deposit growth rate could well plummet to 15 per cent in the coming years.

■ INDIRA KHANNA and SARAH ABRAHAM

ETHYLENE OXIDE

Good timing

Now that its mono-ethylene glycol (MEG) unit is all set to be commissioned, the Reliance Petrochemicals Ltd (RPL) plant at Hazira, Gujarat, will soon manufacture ethylene oxide (EO). The company has therefore informed dyestuff and dye-intermediates manufacturers in Gujarat that it will be in a position to supply EO from this month onwards.

At present, there are only two manufacturers of EO — Indian Petrochemicals Corporation Ltd (IPCL) and National Organic Chemicals Ltd (NOCIL). And these two can barely meet 50 per cent of the total market demand, which is about 30-35,000 tonnes per annum (tpa) and expected to increase by another 3,000 tonnes in the following year. NOCIL has a licensed capacity to produce 18,000 tpa and at a capacity utilisation of nearly 80 per cent, it produces about 10,000 to 12,000 tpa. IPCL produces about 5,000 tpa which is also its licensed capacity. And the remaining demand is met by exports.

Ethylene, one of the four products obtained after cracking naphtha (*see diagram*), is converted into ethylene-oxide

RPL plant: largest in the country

after direct oxidation. If further processed, it yields ethylene glycol, diethylene glycol and polyethylene glycol. Ethylene oxide is primarily used for manufacturing a wide range of products like pipes, sheathing for power cables, footwear, packaging material, containers and films. It is also used in the production of a wide variety of chemical products like glycol ether, ethanolamine and polyethylene glycol.

Stepping up capacity. Recently IPCL expanded its EO capacity to 5,000 tpa by building a petrochemical complex at Nagothane — the Maharashtra Gas Cracker Complex (MGCC). However, due to the outbreak of fire last November, operations at the plant have been suspended temporarily. But the company hopes to commission the plant soon.

RPL's EO plant is the largest in the country, with a capacity to manufacture 10,000 tpa of EO and about 60,000 tpa of MEG. Although RPL has plans to raise its MEG capacity to 100,000 tpa, whether it will also raise its EO capacity is still uncertain. Experts point out that RPL's sole purpose for setting up the plant is to produce MEG which is the basic raw material for the polyester industry.

Apart from RPL, SM Dyechem is also gearing up to commission its EO plant near Pune in the latter half of 1992. The company will produce about 10,000 tpa of EO which will be partly for captive consumption and partly for sale. According to senior manager (projects) D.B. Vaidya, once the plant is stabilised, the company plans to increase captive consumption and market more EO-based products.

Balance likely. With two new entrants in the industry, there could be be a glut in the market. But according to D.M. Balsaver, vice-president, marketing, NOCIL, "Now there will be an additional capacity of about 20,000 tonnes, taking the total capacity to about 38,000 tonnes in keeping with the existing demand. In fact it is likely to balance the situation."

Although dyestuff manufacturers hope that with RPL starting production, the market situation will even out, there are varying views on whether RPL will be in a position to start production from July. As one expert says, "Even if RPL is to supply EO in July, its MEG plant should have been commissioned by now."

Nevertheless, as far as the industry is concerned, RPL's move to get into EO production could not have been timed so well — though slightly delayed.

FOREIGN AIRLINES REMITTANCES

RBI softens stance

Following a meeting between the representatives of the foreign airlines and the Reserve Bank of India's (RBI) joint controller (foreign exchange) in Bombay earlier this month, the RBI acquiesced to relent on the four-month deference of remittances by the airlines, and instead agreed to permit remittances after only a four-week delay.

Normally, foreign airlines are allowed to remit 90-95 per cent of their surplus funds to their headquarters, but this time the airlines' banks had been ordered by the RBI in May to allow only half that amount, without explaining when permission would be granted to remit the balance. But now, all the major foreign airlines find that the RBI has indeed kept its word, and remittances for April have been concluded in the last week of May.

Singapore Airlines office: no adjustments in operations

Reason to worry. Since the foreign airlines remit an estimated $ 200 million annually, they had several reasons to be unhappy with the RBI's unprecedented decision to defer remittances. First, the steady devaluation of the rupee was a matter of concern for them. Second, the airlines were losing out on interest since the surplus funds do not earn any interest. And third, the RBI's sudden decision had led to cash flow problems since airlines like British Airways conduct their settlements on a monthly basis, and the worldwide recessionary situation only complicated the situation further.

Though no formal order was passe the RBI had, by word of mouth, indicate in end April that they would not allow a hoc remittances due to the balance payments crisis. They would, it wa stated, only permit half of the normal re mittances, which amount to 90-95 pe cent of the airlines' surplus. They had no mentioned when the remaining amount would be accommodated. The bigger ai lines such as Lufthansa had seriousl considered reducing their freight opera tions in India, since delayed remittance severely jeopardised their working style.

"Fortunately there has been an im provement in the situation," says a for eign airline source. "However, the good news will be when remittances are nor malised. But with a new government now having taken charge, there is hope that the situation will soon be remedied."

While airlines such as British Airways remit $20 million a year, smaller ones such as Singapore Airlines remit about Rs 60 crore a year. "Recent clearances show that the RBI is being true to its word," says Stephen S.W.Chu, general manager (India), Singapore Airlines. "Our feeling that this was a temporary phenomenon is therefore confirmed. Since we have long-term commitments here, we do not see any need to make adjustments in our operations. Though the 2-3 per cent weakening of the rupee in four weeks' time has been a prime cause of concern."

■ DEVENDRA TAK

MBATTUR INDUSTRIAL ESTATE

Plagued by problems

One of the largest industrial estates in South Asia, the Ambattur industrial estate, located in the suburbs of Madras, boasts an annual turnover exceeding Rs.1,000 crore. The 1,470 units located in the estate which have a 126,000 strong work force, paid Rs.50 crore as excise duty in 1990-91, an annual sales tax of Rs.80 crore and exported goods valued at Rs.60 crore.

Multiple problems. Yet, this 28-year-old industrial estate — which houses some large companies like Crompton Greaves, Indian Oxygen and Godrej Soaps, about 110 medium scale companies and about 1,250 small scale units — is plagued with multiple problems. In all, about 140 units have been declared sick and another 40 units have been closed down. Some of the problems faced by the units are common to medium and small scale industries all over the country, while others are peculiar to the estate.

More than 850 units in Ambattur are ancillary manufacturers and their fate is directly linked to that of the large units and public undertakings. Most of the latter, in turn, depend on the the automobile industry. These units, badly affected by the prolonged recession in the automobile industry and limping back to normalcy, are now hit once again by the credit squeeze. Most of the large units have suspended the clearance of bills due to paucity of funds. As a result, 70 per cent of the working capital of the smaller units is locked up.

The Small Industries Development Bank of India (SIDBI) has a plan to bail out the small sector. According to this plan, it has offered loans up to Rs.3 crore at a nominal interest rate of 6 per cent to large units to clear the bills of the small scale units. But the tenants of the Ambattur industrial estate maintain that no large unit has come forward to clear the backlog.

No raw material. A major problem in Ambattur is the nonavailability of raw material. The state owned Small Industries Development Corporation (SIDCO), which was entrusted with the job of procurement and distribution of raw materials, is merely handling materials that are already available in the market. It is alleged that SIDCO has failed miserably in its efforts to regulate the supply of scarce materials, the exclusive domain of traders.

Another problem faced by the entrepreneurs of the industrial estate is the constant harassment from the Ambattur municipality. This varies from non-cooperation (in the form of not cleaning the roads) to raking up issues (like pollution control which do not fall under the purview of the municipality). One solution suggested is that the state government declare the 473 hectares of land that form the estate as a separate township on the lines of Neyveli Lignite Corproation township. "Ours is a surplus economy and we can maintain the township with some assistance from the government," says one of the entrepreneurs.

Now that a new state government is in place, the entrepreneurs hope that it will be sensitive to their problems. Only then can the Ambattur industrial estate look forward to better times.

■ A.S. PANNEERSELVAN

PHOTOGRAPHIC GOODS

Worsening problems

Photography buffs have less reason to say cheese these days. Since March this year, the price of photo goods has risen substantially. Colour paper which used to cost about Rs.110 per sq metre, is now priced at about Rs.150 per sq metre. A Kodak Kroma camera that was selling at Rs.1,095 inclusive of taxes a few months ago, now sells at Rs.1,200 inclusive of taxes.

High costs. The cost of chemicals has risen by about 25 per cent and consequently, processing costs. For instance, a colour film developer that was priced at Rs.675 (for 50 litres), now costs Rs.793, while for developing black and white films, chemical costs have risen by 40 per cent — developer D-163, for instance, now costs Rs.48 for 3 litres as against Rs.32 earlier. Film and paper are completely imported, and cameras have a fairly high import content.

According to manufacturers, the reason for this increase is that the photographic goods industry is highly dependent on imports. The recent Reserve Bank of India (RBI) requirements of 200 per cent margin money, coupled with the already high import duty (of around 205 per cent), have led to an increase in costs. The situation is made worse by the fluctuating exchange rate which makes imports against every dollar that much more expensive.

Another problem faced by the industry is that the duty structure in the country being much higher than that in neighbouring countries, the inflow of smuggled goods increases in direct proportion to the increase in local prices. Says R.D. Desai, secretary of the All India Photographic Dealers Association, "Of the 32 million spools of colour film used every year, only 10 per cent are officially imported." The main sources for unofficial imports are Nepal, Singapore, Dubai, Bangladesh and Pakistan.

Outlook not good. For the industry, the immediate future does not look encouraging. There is no likelihood of indigenising production in the near future since this will be highly capital-intensive. Additionally, a plant that is set up would require to sell 100 million rolls of film a year to break even, whereas the entire requirement in the country is only around 30 million rolls. With photography goods being considered a luxury, relaxation of the duty structure does not seem possible either.

Photographic goods on display

This is not all. By October-November, the busy season for the photographic industry, the situation is expected to worsen. According to an industry source, "Although it is too early for an estimate, imports have definitely declined and inventories are slowly drying up. The impact of this situation will be truly felt later this year." So it looks like the photographic goods industry is likely to stay out of focus — for some time, at least.

Global parameters

It seems that the finance minister has his work cut out for him. Even though he is an accomplished economist, the task facing him is a daunting one. The economy is faced with a fiscal crisis. Government expenditure has outstripped revenue and the fiscal deficit in 1990-91 reached 8.59 per cent of gross domestic product. Excesses in government spending, coupled with extraneous factors that led to the hike in prices of petrol and petroleum products, had a cascading effect on prices in general. The wholesale price index on a point-to-point basis is up 11 per cent. The average family has been hit even more because the index for primary articles has risen by 15 per cent, while that of manufactured products by only 8 per cent.

To compound the problem, the country is faced with a balance of payments problem. (The trade deficit has soared to a recent Rs.10,500 crore, as against Rs.7,730 crore in the previous year.) To meet rising imports, the government had to draw heavily on the foreign exchange reserves which have depleted to around Rs.2,500 crore. Only last year (in June 1990), the reserves were Rs.5,800 crore. Thus, just within a year, the reserves have dwindled by over 50 per cent. This is despite the fact that India received $1.8 billion loan from the IMF.

Barriers to entry

The malaise is due to the fact that the country is not utilising its productive resources optimally. The finance minister realised this anomaly when he recently commented that "socialism cannot be built on waste, inefficiency and indifference to quality". There were never deliberate attempts to make the Indian economy uncompetitive and sluggish. It was the result of years of protection and controls.

The fetish for self-reliance prompted the planners to set up barriers to the entry of foreign investments and goods. Exports were never given the importance they deserved (until recently when all sorts of incentives were given) and imports were restricted to items that were essential. Domestic industry was and is still protected by tariffs that are around 146 per cent in the case of intermediate goods, 107 per cent for capital goods, 141 per cent for consumer goods and 138 per cent for manufactured goods. Even China, Bangladesh and Pakistan have lower tariffs.

A variety of controls were also devised under the guise of licences which restricted the creation of new industrial capacity. In fact, businesses were told what to produce, where to produce and in many cases at what price. This authoritative command industrial policy that was biased in favour of the monolithic public sector led to inefficient utilisation of the factors of production.

The incremental capital output ratio (ICOR) which is an overall productivity index of the utilisation of capital in India was around 5.8 per cent in 1983 which indicates low capital productivity. In the case of Singapore and Korea the ICORs were 4.6 and 4 respectively.

Labour productivity, measured as the gross domestic product per employed person, has also been rising very slowly. A survey, across 2,000 organisations, carried out by the National Productivity Council identified key factors that hindered productivity. Human related factors were the major cause accounting for 36.3 per cent of the total, followed by communication and control processes (27.1 per cent) and structure related factors (13.7 per cent).

Radical changes needed

Increasing productivity is easier said than done. It requires a holistic approach that concerns radical changes both at the macro and micro level. At the macro level, policies or processes have to be redesigned to encourage competition. Infrastructural facilities such as power, road, rail and air transportation would have to be strengthened. Labour legislation would need recasting.

At the micro level attitudinal changes, technological upgradation and an appropriate culture that is conducive to increasing productivity would have to be implemented. The emphasis would have to be on getting the process right.

From an inward looking policy India will have to slowly adopt an outward oriented policy that integrates it well into the global economy.

There is always a way where there is WIL

WALCHANDNAGAR INDUSTRIES LTD.
WALCHANDNAGAR : 413 114. MAHARASHTRA

Agricultural production during the Sixth and Seventh Plan period has increased by 3 per cent per annum. The value of output which was Rs.65,443 crore in 1984-85 has increased to Rs.123,390 crore in 1990-91, which is 24 per cent of GNP at current market prices.

Indian agriculture is still largely dependent on the efficacy of the monsoons. In 1960-61 alone, 18.3 per cent of the total cropped area was under irrigation. This increased to 28.8 per cent in 1980-81; currently it is around 34 per cent. Rice and wheat account for two-thirds of the total irrigated area.

Consumer price index: The consumer price index for industrial workers marginally declined by 0.5 per cent in March 1991. However, on a year-on-year basis the index was up 13.6 per cent as against 6.6 per cent during the corresponding period of the previous year.

	Mar '91	Feb '91	Mar '90	% change over month	% change over year
Industrial workers (1982=100)	201	202	177	–0.50	13.6
Urban non-manual workers (1984-85=100)	169	169	149		13.4

Money and banking (scheduled commercial banks): Broad money (M3) is up 16.2 per cent on a year-on-year basis, as against 18.4 per cent in the corresponding period of the previous year. With the slowdown in the growth of aggregate deposits, the increase in bank credit has declined to 14.1 per cent. Food credit has increased considerably during the month under review.

(Rs crore)

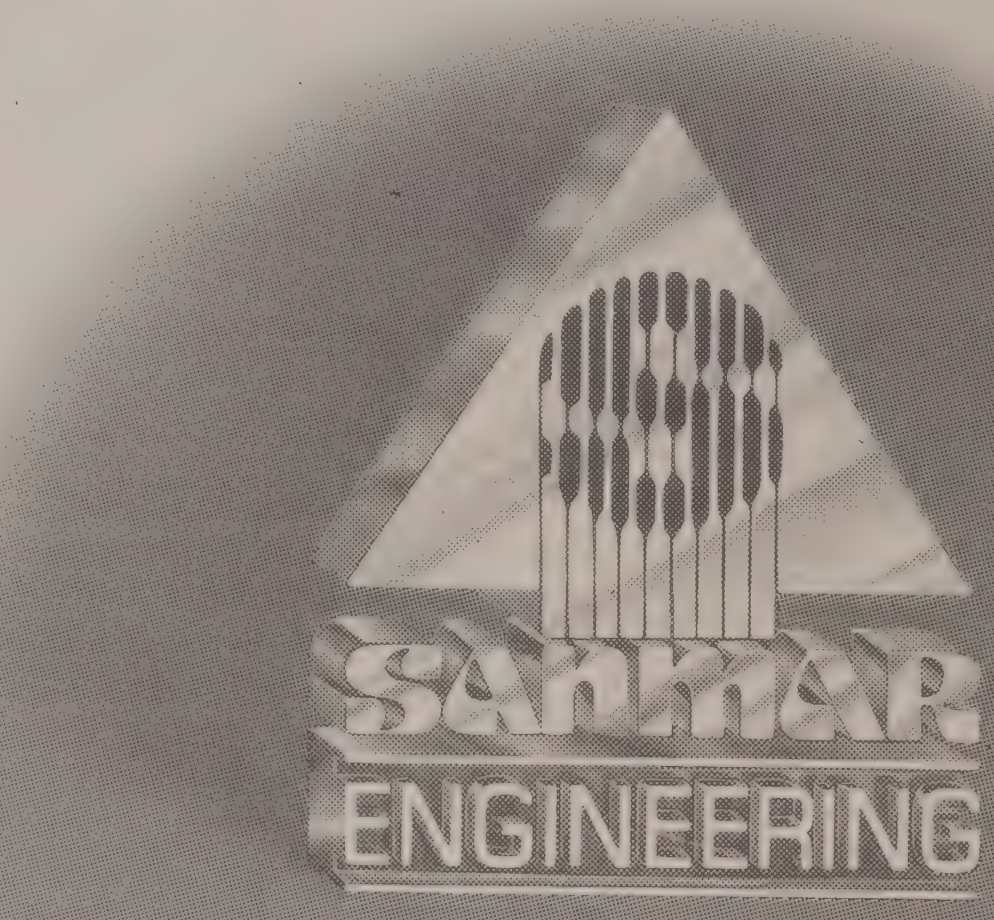
	31 May '91	3 May '91	1 Jun '90	% change over month	% change over year
Broad money (M3)	2,78,449	2,74,444	2,39,496	1.45	16.26
Aggregate deposits	1,98,480	1,97,099	1,70,618	0.70	16.33
Bank credit	1,18,840	1,17,782	1,04,069	0.89	14.19
Food credit	5,606	4,987	3,688	12.41	52
Credit/deposit ratio	59.88	59.76	61.00		

Bullion prices and stockmarket index: While the price of silver has been relatively steady, that of gold has been creeping up to cross Rs.3,700. The Bombay Stock Exchange index has been steady in view of the fact that the budget is just round the corner.

	28 Jun '91	30 May '91	29 Jun '90	% change over month	% change over year
Gold (Bombay)	3,731	3,632	3,260	2.73	14.44
Silver (Bombay)	6,874	6,819	6,646	0.80	3.43
BSE index (1978-79=100)	1,269.91	1,267.46	800.8	850.50	49.31

(Price of gold is in rupees per 10 gm and silver in rupees per kg)

Wholesale price index: The wholesale price index for all commodities has been decelerating over the last few weeks. In manufactured products sugar, *khandsari* and *gur* is up 5.6 per cent during the month under review. There has not been any appreciable rise in other manufactured products.



(1981-82=100)

	1 Jun '91	4 May '91	2 June '90	% change over month	% change over year
All commodities	194.3	192.8	175.2	0.77	10.83
Primary articles	200.2	198.4	176.0	0.90	13.75
Manufactured products	191.9	190.3	176.8	0.84	8.54

Industrial production and infrastructure: There has been a sharp rise of 24.4 per cent in the industrial production index for the month of March 1991. While crude oil production, power generation and cement production are up in May 1991, both coal and steel production have declined by 3.7 and 5.1 per cent respectively. On a year-on-year basis, steel production is up 24.3 per cent, mainly because of the better performance by SAIL.

	Month	Previous month	Year ago	% change over month	% change over year
Industrial production index 1980-81=100	277.1(3)	222.7	258.4	24.42	7.23
Railway freight (million tonnes)	28.76(12)	26.75	25.96	7.51	10.58
Crude oil production ('000 tonnes)	2734(5)	2668	2875	2.47	–4.90

BS&B
The PERFECT SEAL
DURAMETALLIC

A milestone for BS&B Safety Systems (India) Limited and Durametallic (India) Limited

BS&B Safety Systems (India) Limited and Durametallic (India) Limited, constituent companies of Sanmar Engineering Corporation, today (1st July 1991) complete 10 years and 15 years of service to the Indian Process Industry. Sanmar Engineering Corporation acknowledges their contribution with pride on this happy occasion.

10 years of grit and determination

BS&B Safety Systems (India) Limited was incorporated in 1981 in collaboration with BS&B Safety Systems Inc., of USA, who are the pioneers and undisputed world leaders in the field of Rupture Disks. Growing at a rapid rate in its first decade of operation, BS&B (India) is today the foremost manufacturer of Rupture Disks in the country.

BS&B's name is synonymous with Safety Devices in all process industries worldwide. The Indian industry acknowledges that the technology currently available with BS&B (India) is the state-of-the-art for Rupture Disks used as a safety device. In the 10 years of its existence, BS&B has played a crucial role in the import substitution endeavours of the nation.

15 years of surging ahead

Durametallic (India) in its second decade of operation, continues to surge ahead towards its goal for excellence, by its unmatched service to the Indian Process Industry in the field of Mechanical Seals and Sealing Systems.

Durametallic (India) is in the process of perfecting the concept of "Technology Management" — with continuous acquisition of the latest seal technology from its partners, Durametallic Corporation, USA, world leaders in sealing systems and adapting it creatively to the emerging needs of the Indian Process Industry.

Apart from direct import substitution, Durametallic (India) has contributed significantly to the foreign exchange reserves of the nation through its earnings from the joint venture that it has established in Singapore — Durametallic Asia Pte Limited. Durametallic Asia is one of the shining examples of successful export of Indian know-how and management.

A moment of celebration and pride for Sanmar Engineering Corporation

With 8 different units under its wings, Sanmar Engineering Corporation is one of the most diversified organisations in the process equipment market in India, offering a wide range of products such as Mechanical Seals, Rupture Disks, Fluro-Carbon Lined Valves, Control Valves, Flow Meters, Solenoid Valves, Safety Relief Valves, etc.

On this day of celebration, Sanmar Engineering Corporation salutes its international collaborators, all acknowledged world leaders in their chosen fields — ***Partners in the process of excellence:***

- **Durametallic Corporation, USA**
- **BS&B Safety Systems Inc., USA**
- **Xomox Corporation, USA**
- **Gulde Regelarmaturen GmbH, Germany**
- **Smith Meter Division, Moorco International Inc., USA**
- **Crosby Valve Division, Moorco International Inc., USA**
- **Automatic Switch Co., USA**

Sanmar Engineering Corporation also extends its warm gratitude to its customers, suppliers, bankers, work force, business associates and to each and everyone who has been associated with it since inception.

Armed with their continued goodwill, Sanmar Engineering Corporation on the completion of 15 years, rededicates itself to the Indian Process Industry.

Sanmar Engineering Corporation. *Constituents:* Durametallic (India) Ltd.

TISCO SELECTS INDOMAG

Indomag to design, engineer, supply and commission a 140 tonne ladle furnace for Tata Steel, Jamshedpur.

Indomag, the Indian arm of Mannesmann Demag now enjoys the confidence of TISCO.

A 140 tonne ladle furnace, with all auxilliary equipment, incorporating state-of-the-art Mannesmann Demag Hüttentechnik technology will be delivered in the next 18 months.

Engineered to MDH design, the ladle furnace features the patented Inert Gas Roof System. This will be the first ladle furnace which besides being a refining unit acts as a buffer between BOF and caster, in keeping with international trends.

The order coming soon after the Rs. 20 crore order for a complete steel mill from Indian Seamless Steels and Alloys Limited is another indication of Indomag's determination to serve the Indian steel industry. With this order, Indomag introduces state-of-the-art technology for Electric Arc Furnaces, Ladle Furnaces, Vacuum Degassing Units, Round Casters and Rolling Mill etc. And all this within the short span of its inception.

...we understand steel

From the ashes of Desert Storm

MIT MITRA

A short visit to the USA revealed to us the workings of two powerful forces which have arisen out of the ashes of Operation Desert Storm in Iraq. The first to hit us was the socio-psychological revolution of sorts sweeping the US. Patriotism and self confidence were back on saddle and 'Feeling good about America' had returned with a vengeance.

The second feature that could not be missed were the signs of a serious economic recession. Closed businesses, slow sales and deep apprehension about the economic future of the nation hovered like a pall around us. Contradictory in their vibrations, these two positive and negative elements lingered simultaneously in the homes, factories and farms of America, producing a strange chemistry that can only be noticed by outsiders who have not internalised these realities.

The big question

The big question is what will emerge out of these inner workings released by the heat and dust of the Gulf War. Will the psychological re-anchoring of America bring a major positive thrust to the long-term economic and technological growth path of the nation? Will the acute recessionary trends undo the new found self-confidence or will it bottom out soon and conquer new heights? With the world economy in the midst of a significant slowdown and Japan's growth rate slipping below 4 per cent, a major recession in the US could bring dire consequences for the developing nations of the world as well.

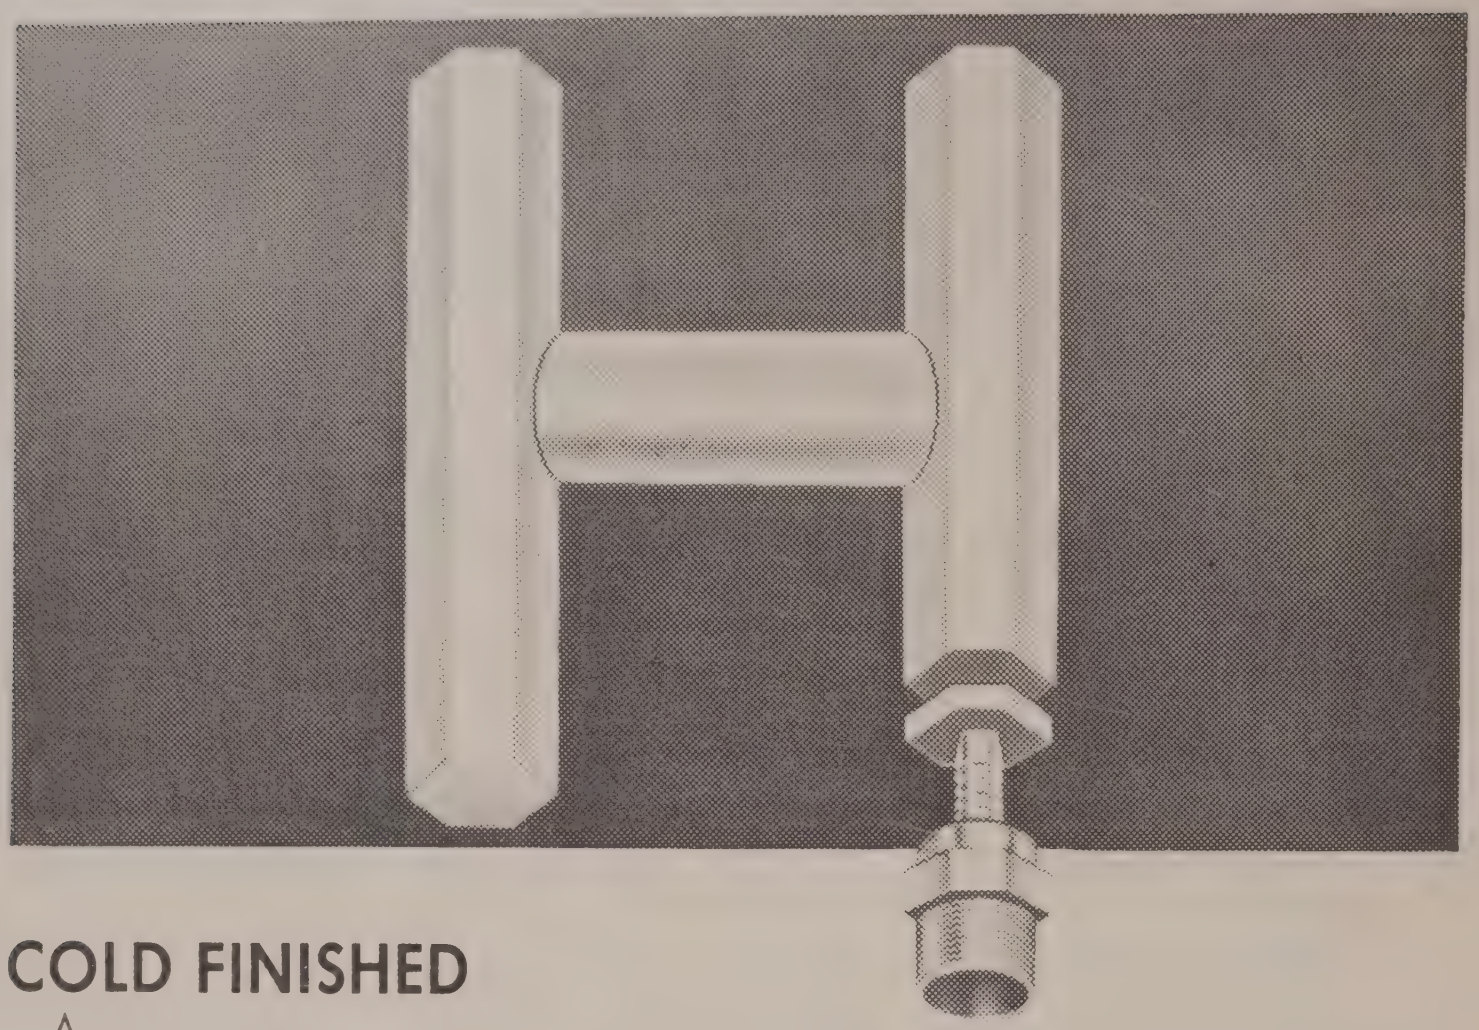
Ever since the TV screen brought into the living rooms of Americans the horror images of young men dying in the tropical jungles of Vietnam, something went awry in the soul of the US nation. Soon to follow were the humiliating images of blindfolded Americans dragged around by the Islamic revolutionary guards of Iran. And then came the footage of mangled bodies of American soldiers being pulled out of a military barrack in Lebanon — the work of a Palestinian suicide car bomber. Also recall how American helicopters collapsed in a desert in Iran in a bungled rescue attempt of the American hostages by President Carter.

However, Operation Desert Storm has changed all that with an on-screen magnum force that can match all of the past humiliations. The 'can do' space age technology and the enchanted performance of man and machine came alive on the very TV screen which had brought bad news all these years to American homes.

The resultant change in the American psyche was evident to us through the patriotic displays in shop windows, spirited etchings on tea shirts, tough words on bumper stickers and the millions of yellow ribbons placed in front of the homes of the rich and poor alike. The ghost of Vietnam seems to have at last descended from the soul of America and taken its place in the pages of history. However, we wondered as to what all this would mean for the economy and polity of America in the years ahead.

What will emerge out of these inner workings? With the world economy in the midst of a significant slowdown and Japan's growth rate slipping below 4 per cent, a major recession in the US could bring dire consequences for the developing nations of the world as well

Ironically, while spirits soared, the economy hurtled its way down from January to April. The latest release from the joint economic committee of the Senate and the Congress reveals that real GNP fell by 2.6 per cent during the first quarter of 1991. Gross domestic purchases fell by 42 billion real dollars and corporate profits before tax fell by 21.4 billion dollars (calculated on an annual rate). The unemployment rate climbed to 6.9 per cent in May, its highest level in four and a half years. Even more alarming has been the rate of business closures. Over 7,400 businesses closed their doors in the month of April, almost twice the number that closed in April of 1990.



Unpleasant comparison

Joseph Duncan, the vice-president of a major business-information marketing corporation, could not help but compare the current business closures to those during the deep recession of 1982. Once again, we could clearly sense the impact of the recession as we traveled through the towns and cities of America.

Yet, before we knew it, a series of counter-recessionary statistics had begun to surface from a variety of sources. Corporate payrolls had unexpectedly inched up in May after seven straight months of substantial declines. The stock market spurted to a record high on the last day of May, surprising all analysts. The index of leading economic indicators gained 0.4 per cent in April in the midst of other countervailing negative macro economic trends. This index which

HOT-SELLING BAR

COLD FINISHED

And that's no exaggeration. It's a fact that our Bright Steel Bars have been selling like hot cakes, for over three decades. On one hand, we have clients such as TVS Group, Lakshmi Machine Group, Kirloskars who have been with us for over 15 years. On the other hand, we have received certificates of Export Excellence for highest export performance, for the last 2 years, by the EEPC. The reasons are not far to see. World-class, cold-finished steel bars at competitive prices. Meeting all special requirements – ranging from Precision-ground Bars, Hardened & Tempered bars, Solution-treated & Cold-finished bars, Spherodised steel to special profile bars. Keeping to delivery schedule – always. And above all, guarantee of the material till the end of use. Little wonder then, Grand Foundry is today a name to reckon with in the Engineering Industry, in India and abroad.

The future is 'Steel Bright'

measures 11 components of economic vigour posted a gain in six of these. And to the joy of economists, we have just learnt that the same index has gained 0.8 per cent in the month of May, with 8 of the 11 components gaining in strength. Is the recession in America suddenly bottoming out? Which of the macro-economic statistics are we to rely on to make this judgement?

If all these countervailing and seemingly contradictory economic trends and statistics leave you confused and frustrated, you have just experienced what a modern macro-economic forecaster goes through on a daily basis. Once upon a time, armed with the new found knowledge of econometrics and charged by the super power of the modern computer, economists began to believe that they could forecast the economic future of nations with accuracy and ease. However, repeated falsifications of predictions of well known economists have humbled the tribe today. As Leonard Silk put it recently, ".....the best they (economists) can do (now) is to state what they think are the odds on various possible developments ('scenarios' in the current economic jargon)".

Very complex task

In other words economic forecasting is now a very complex task and economists must pay special attention to such elements like the psyche and the prevalent mood of the people. If the mood is buoyant and upbeat, the people tend to bear through the hardships of a recession with a smile. They tighten their belts willingly, so that they can build an economic future which they hope to cherish tomorrow. Ronald Reagan had finally succeeded in producing this kind of a psychological chemistry during the recession of 1982-84 and had, thereby, managed to carry the American economy to newer height in the following years.

It is in this context that the re-anchoring of America we saw and felt during our visit takes on a new economic meaning. After all, behind each inert machine is a human being who feels, thinks and dreams. The state of mind of these key actors at the assembly lines, plants and offices of America are joyful despite the economic hardships of the time. Economic forecasters should not underestimate this factor.

Based on this combination of an upbeat mood of the people and the sudden flow of optimistic economic statistics discussed earlier, one is convinced that the current recession in America is about to bottom out. Whether this will happen with a 'double dip' or a 'single dip' is still uncertain. But from the perspective of the world economy and the economies of developing nations, continued recession in America will generate shock waves with catastrophic effects on the growth potentials of those nations which badly need to increase the size of their pie. India falls certainly in this category.

If the American economy picks up and American consumers start spending their dollars once again, countries like ours stand only to gain. With a total export of three and a half billion dollars to the US in the year 1990-91, India already has a foot in the door. Further more, a bullish American economy would mean greater interest on the part of multinationals to explore investment opportunities overseas, and India could try and catch this wind.

Alarming situation

What we heard and saw in Washington was, however, quite alarming. A senior official from the office of the US trade representative who has dealt with India for the past 5 years wrung his hands in anguish. He said that he is totally frustrated with 'all talk and zero action' on the part of India towards liberalising its trade front.

From the perspective of the world economy and the economies of developing nations, continued recession in America will generate shock waves with catastrophic effects on the growth potentials of those nations which badly need to increase the size of their pie. India falls certainly in this category

Another senior official in the department of commerce revealed that their telephone hot lines on investment opportunities in India were ringing continuously after Ajit Singh's industrial policy initiative was announced in Delhi in May 1990. But, the initiative died soon and the phones have stopped ringing. According to him, there are very few serious takers for investment opportunities in India today. As American businesses adopt a 'wait and see' approach towards India, countries like Thailand, Malaysia and Indonesia bait them in every way with action and not just talk.

Thus, the ball is in our court now. If the American economy regains health, so will the European economies. The world economy could then move into high gear. New opportunities will open up everywhere in a hurry. But, if we refuse to liberalise radically, other nations waiting in the wings will grab the ensuing opportunities and we will sink into a deeper state of marginalisation.

A SIMPLE RATIO ANALYSIS SHOULD CONVINCE EVERY FINANCE PROFESSIONAL TO INVEST IN OUR SPECIALISED COMPUTER COURSE

work / time

If you were to divide the quantity of work you get done, by the amount of time you spend doing it, you'd probably be quite satisfied.

Until we tell you we can help you save time, energy and effort, and increase the efficiency of the way you work.

How ?

NIIT is introducing a course "Proficiency In PC Skills for Finance Professionals".

It's specially designed for finance experts to help them handle a whole range of vital jobs using a computer. From cash-flows, project planning & appraisal and Balance Sheet analysis, to keeping track of complex data, which would otherwise take hours of manual work.

(Incidentally, NIIT has around 10 years of experience in designing specialised courses — and has trained over 20,000 Executives and Professionals in India).

You'll also be trained to develop (and use) specialised packages to solve your own problems.

And finally, as you leave, we'll present you with a free software package, which you will find extremely useful in your work.

All of which will add up to help you save time, money and energy (a finance man's dream).

Now, for course details like convenient timings, extra computer time, and how to register, mail your visiting card to The Product Manager, Professional Education Division, NIIT, C-125, Okhla Ph I, New Delhi-110 020. Or, invest a little time and drop in at the nearest NIIT Centre.

NIIT EDUCATION

Contract NIIT 24251

Cheesed off?

Acting chairman and managing director of ITDC, K.B. Kachru, unexpectedly resigned from his post last fortnight. Kachru was senior vice-president of the hotels division and very much in the running for being confirmed in the top slot.

According to the ITDC grapevine, the tourism ministry had finalised someone else for the coveted post. Hence Kachru's decision to put in his papers. However, there are others who say that he got "an offer he could not refuse" from a prominent hotel chain. Meanwhile, senior vice-president, finance, N.N. Khetarpal has stepped into Kachru's shoes.

Super pressure

While a high level World Bank team is in India pressurising the government to open its doors to foreign investment a special team from the US Commerce Department is busy discussing the implications of Super 301. There is a major debate on in the US about whether India should be given the status of a most favoured nation. While the White House feels it is okay to go ahead with it, the House of Representatives is not agreeable.

However, in the devaluation of the rupee and amendments expected export-import policies, it seems probable that Super 301 will not be applicable to India. A final picture, however, is likely to emerge only after the Narasimha Rao government presents the budget.

A political minister

Whoever said that our politicians do not care for the people who elect them to office? Ask Santosh Mohan Dev, new minister of state for steel, and he'll tell you otherwise.

One of the first proposals that Dev has started considering in his new position envisages the setting up of a steel plant in Assam. The game plan is to ferry iron ore from West Bengal and Bihar by the riverine route through Bangladesh to Assam. And to goad Bangladesh to allow use of its waterways, part of the ore will be offered to that country so that it can set up their own steel mills.

The proposal is fine, except that it is a little hare-brained. But then Dev belongs to Assam, and he has to do his bit for his home state.

But this is not the only thing that the pipe-smoking, golfer minister is doing for his people. Though from Assam, Dev happens to be a Bengali. To be of help to that community he is frantically looking for a Bengali bureaucrat to draft in as his private secretary. Dev feels such a person will be able to serve his Bengali brethren better. Specially sought is an officer who is not only a Bengali but can also speak the Bengali dialect of the Silchar-Cachar area from which Dev hails.

Dev is credited with the view that he is a "political" minister. One supposes that gives him every right to act in this political fashion. At the time of writing, the hunt for a PS was still on.

And a non-political minister

If a political minister is hell bent upon taking political decisions, appointment of non-political ministers is not without its own share of apprehensions.

Rameshwar Thakur, who is the new minister of state for revenue in the finance ministry, is one of the leading chartered accountants of the capital. The firm, Thakur Vaidyanath Aiyer Co, of which he is the senior partner, does roaring business in New Delhi.

But this is precisely what is creating problems. Tax officials, habituated to pulling up chartered accountants, are a little uneasy these days. They cannot stomach the fact that one of those who call on them has become their boss. They fear that the CA's will now have a strong lobby.

But sources close to Thakur say that the tax officials really have nothing to fear. After all, Thakur has been a politician for quite some time now — having been elected to the Rajya Sabha a few years ago.

UN to PS

Remember Ramu Damodaran? He was one of the ablest newsreaders Doordarshan had uptil now. One does not see him on the idiot box anymore because Damodaran, being an IFS officer, is abroad serving a stint at the United Nations.

But he is coming to Delhi, to join prime minister Narasimha Rao as private secretary. That will take two months though. For the time being, Ashok Prasad, another IFS officer, has been appointed as PS to the prime minister.

Fractious, already

Narasimha Rao may have already begun to realise how difficult it is to run a cabinet of disparate forces. At a recent cabinet meeting, Ghulam Nabi Azad demanded Manmohan Singh's resignation for his "irresponsible statements at a press conference which damaged the image of the party". Singh had told the press that it would not be possible to bring down prices as promised in the Congress(I) manifesto within a 100 days in office. He had gone on to say that since he was not party to the formulation of the manifesto he could not be held responsible for adhering to it.

On another issue too, the cabinet was at loggerheads. Sitaram Kesari insisted that he would resign if the Mandal Commission report was not implemented. No one else was in favour of it. After a heated discussion, a decision was delayed for further consultation.

FINANCE MINISTER MANMOHAN SINGH

Impatient for change

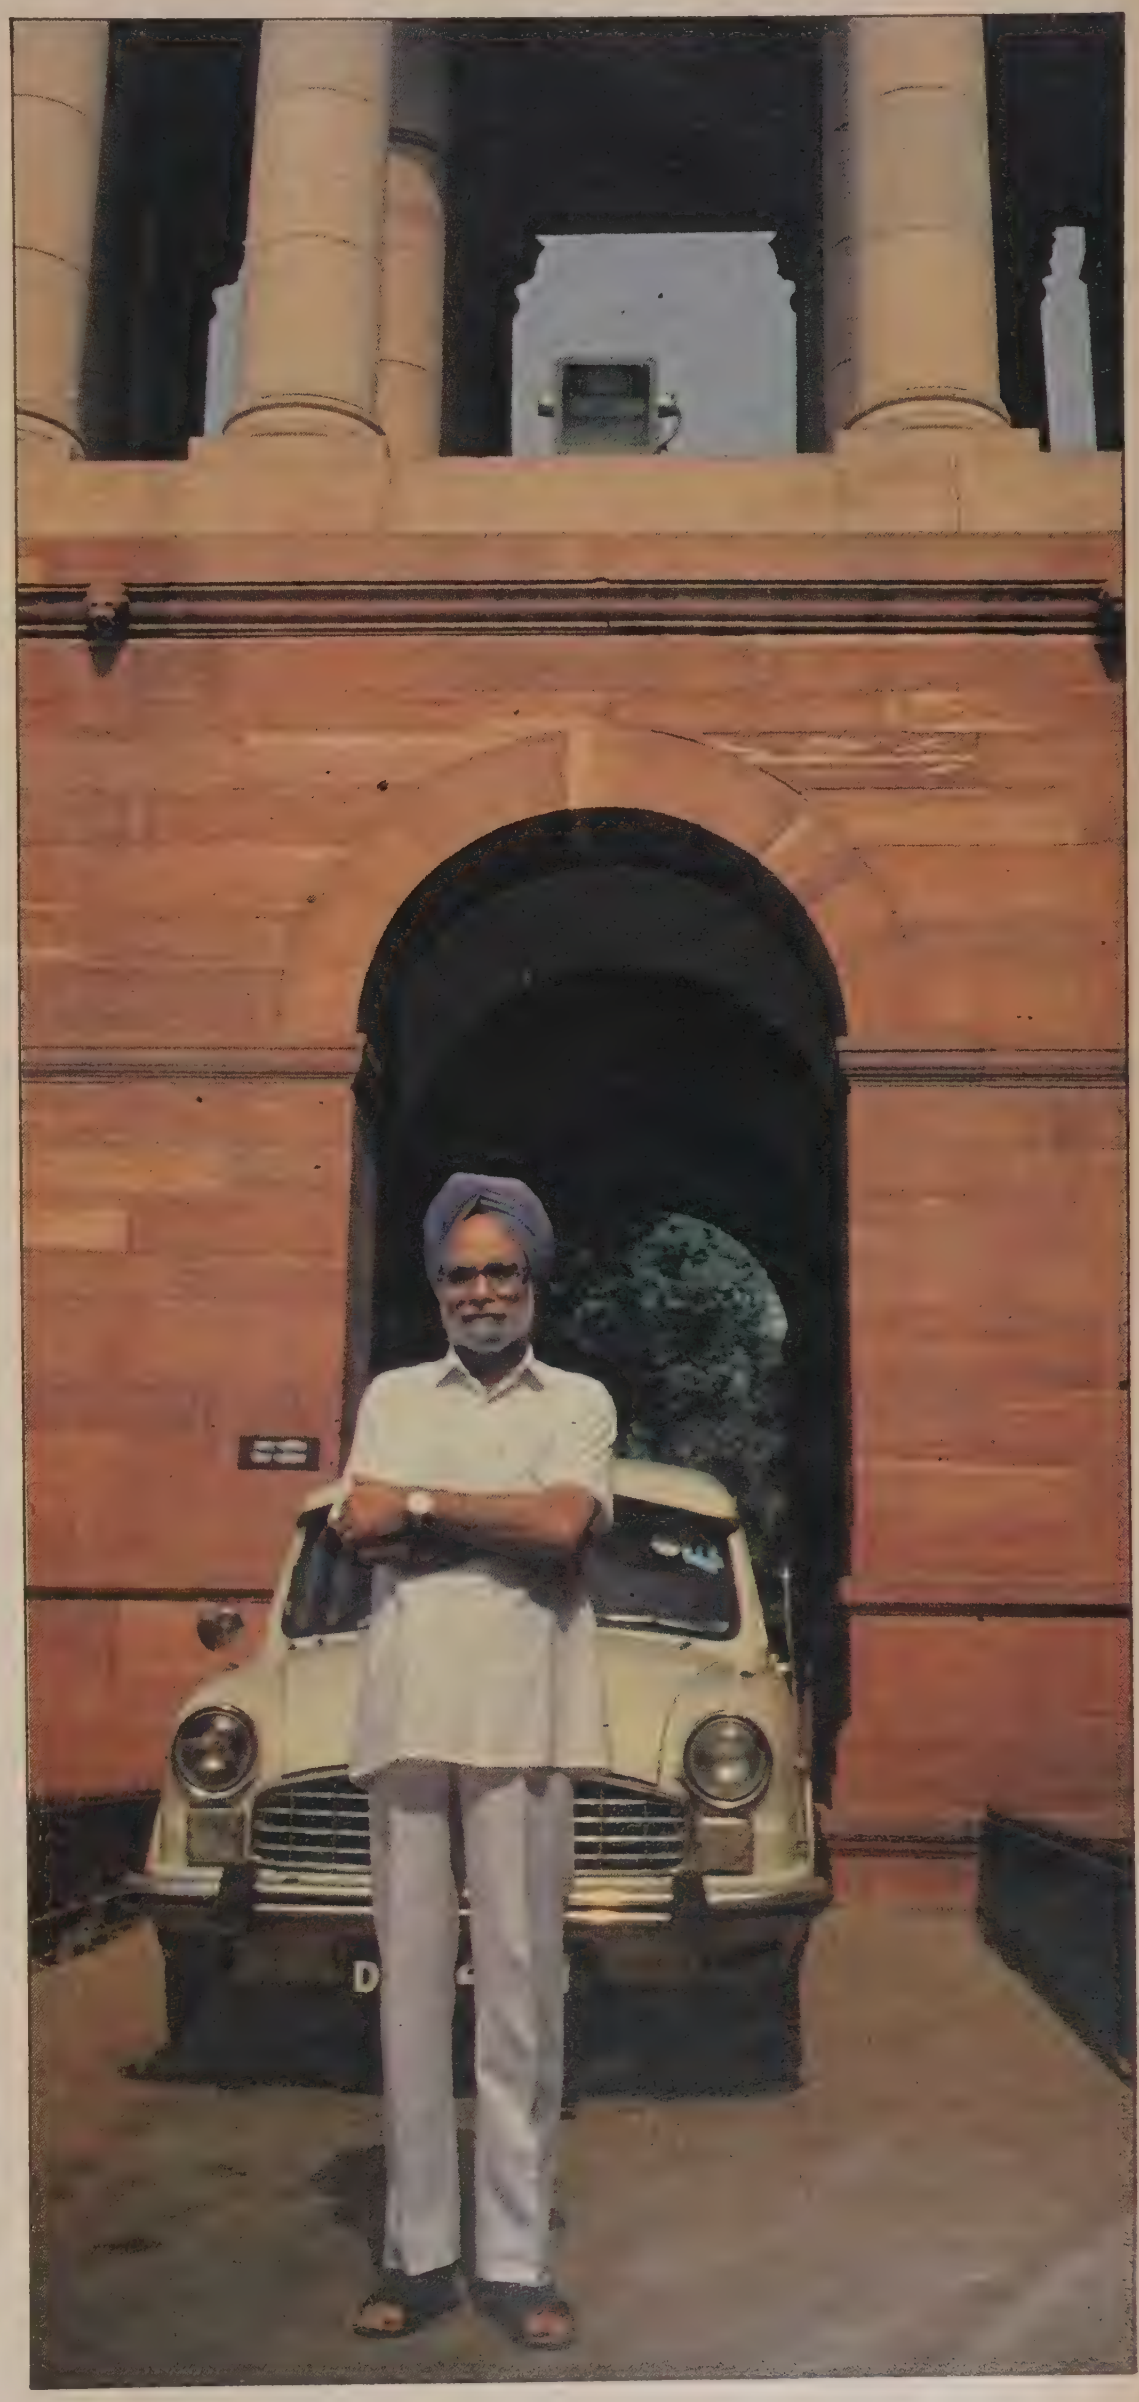
There was never any doubt that the new government, whatever its political hue, would have to take radical measures to prevent the country drifting further into economic chaos when it came to power in late June. And the already precarious state of the economy called for immediate action. The vital corollary being that the new finance minister had to have extraordinary skills to grasp the complex issues involved in restructuring a national economy at very short notice. P.V. Narasimha Rao, no doubt, had Dr. Manmohan Singh in mind for the job.

Though a few eyebrows were raised at Dr.Singh's appointment to the cabinet, his qualifications forestalled all premature criticism. He combines a deep knowledge of economics with the experience of a successful career as a bureaucrat based both in India and abroad. Born 59 years ago in Gah, Pakistan, Dr. Singh read economics first at the Punjab University and then at Cambridge. He was a particularly brilliant student in England: he received the Adam Smith prize for economics at Cambridge in 1956, and was elected Wrenbury scholar by the university a year later.

Back in India, Dr.Singh began his career as a lecturer in Punjab University in 1957. He joined UNCTAD in 1966 but returned to teaching, this time at the Delhi School of Economics, three years later. His first government job was as an adviser to the ministry of finance from 1972 to 1976 following which he was secretary in the same ministry till 1980. He was secretary, Planning Commission, for two years before filling a key post, that of Reserve Bank of

North Block, New Delhi: Dr. Manmohan Singh's place in the sun

India governor, in 1982 — a job he was to hold for three years. It was during his RBI years that the Indira Gandhi government negotiated the first IMF loan. Dr.Singh's experience with this first loan is seen by many as valuable now.



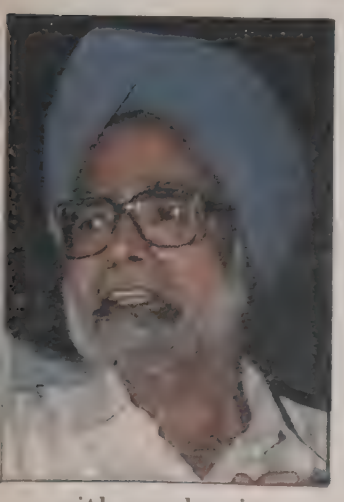
In 1986, he moved to Switzerland for three years as the member secretary of the South-South Commission. In December 1990 he was appointed special secretary to then prime minister Chandra Shekhar and later became chairman of the University Grants Commission, a post he held till moving to the finance ministry late last month.

Though known as a left-winger during his early days, associates say that Dr.Singh had turned into a closet liberal by the early eighties. This latter persuasion must have helped him a great deal to take the decisions that he did last week on the rupee devaluation and trade liberalisation. Judging from the pace at which he acted, there seems no doubt that prime minister Rao has given him a free hand to handle all central economy-related issues. And the fact that the industry portfolio is with the prime minister — and the commerce minister is only a minister of state — makes Dr.Singh the economics issues czar in the Narasimha Rao government.

Some of his friends say that he sees the current economic crisis as an historic opportunity to reform the country's four-decade-old economic policies. While many may agree on what needs to be done, whether the present government will have the courage to push ahead resolutely, only time will tell. He has certainly made a very promising and bold start. If he continues so, Dr. Singh will go down as the finance minister who had the courage to make the decisive break from the past, a past which ironically he helped preserve for many years as a loyal bureaucrat.

No doubt, his new-found boldness owes much to the fact that he doesn't have any narrow, sectarian political constituency to look after; nor does he have to worry about his own future. This is as far as a bureaucrat with virtually no political interest can get in a democracy. This is his moment in the sun and he seems to have seized it firmly.

Dr.Singh's enthusiasm for his new job was evident from day one. He began consultations with finance ministry officials even before the prime minister publicly announced his portfolio. He is in his office by 8 a.m everyday and works there till midnight. Last Sunday, after a particularly long day at his deserted North Block office, Dr.Singh found time late to talk to Business India *on the task ahead.*



Our effort will be to make it both profitable and rewarding for NRIs to come to India.

What sort of changes are you envisaging in the capital markets? While there is agreement on the need to have a regulatory framework within which market forces can have a free interplay, even the SEBI legislation has not come through.
I am yet to think in detail about this. I can't promise that the changes will be made in the budget. Our broad policy approach is that the business of the government is to govern. We must free our enterprises so that they can take their decisions themselves, reap the reward of good decision-making and suffer the consequences of faulty judgement.

As an alternative to the IMF loan will you not think of tapping other sources of finance, like the NRIs?
Yes, there are other sources of foreign exchange but in a short time we cannot mobilise enough money as may be required just now. Once the IMF loan comes through, others too will follow. They will consider India, once again, as a creditworthy nation.

What role do you see for market forces in India?
The vision that I have, is to make India a vigorously market economy with social consciousness. Unnecessary controls which stand in the way of growth of competition must go. 'Safety nets' are however required, because sometimes in the market-based economy the poor sections of the population may be adversely affected and undue burden may be placed on the poor. So we want to have a market-based economy built in with mechanisms to see that the poor are not hurt. Government must also play a major role by providing a first-class infrastructure of power, telecommunications and railways as well as decent social services because market forces cannot take care of these

All this cannot be done overnight and I will not promise you that this will be done in the budget. But the budget will indicate the broad direction that we want to move in. We will also lay down a time-table. We will also lay down the ' targets. You know that late Rajiv Gandhi used to say always that targets in terms of time should be set for everything. That is a better way of doing things.

Regarding our forex problem, do you think that we should go in for a dual rate of exchange?
I have not thought through this problem at all. However it is my personal belief that India must work towards a convertible currency. But it is not possible to make the currency convertible overnight, particularly in a country where there are so many administered prices. A reform of the price system must come before we can think in terms of a convertible currency in a world of floating currencies.

What are your views on financial liberalisation? Do you agree that it should precede industrial liberalisations?
There is a consensus today that premature and hasty financial liberalisations can be destablising. Even the World Bank has recognised this. So we have to be very careful and clear on this.

Do you believe that interest rates can be liberalised and freed quickly?
I think that at some stage interest rates can be liberalised. But I am not sure that we can start by freeing interest rates.

What have you to say about our commercial banks which are doing badly?
We will look at the structure of commercial banks and do something. But I must confess that I have no ready answer just now.

Will you allow non-government banks?
I have not thought of this also. But we already have a lot of non-government banks. We are already allowing foreign banks to operate in the country and open new branches. They are private banks.

What would your policy be towards private sector mutual funds?
I am not an expert on mutual funds. But I do believe that mutual funds have an important role to play in our country.

How do you see the government helping the poor? How do you ensure that government's scarce resources go only to the bottom third of the population?
I look upon education as the most important thing in helping the poor. Education is a thing whose acquisition "empowers our people". It allows them to think that change is not only desirable but possible too. It also equips them for work. So great stress has to be laid on the expansion and modernisation of our educational system, especially in areas like technical education and vocational studies.

We will have a comprehensive economic agenda which will tackle the problems of both the rural poor and the urban poor, including those in the informal sector in urban areas. In this connection I might also say that we will shed all controls which do not serve our goals.

The industrial sector accounts for just 15-20 per cent of our national income. Yet we have a whole paraphernalia of controls to police it. Now industry has come of age. It has acquired a certain degree of maturity. So we must reduce administrative controls on them, use the scarce administrative, technical, financial resources thus released to tackle the problems of the poor.

We in India have allowed our land and water resources to get progressively degraded. This is detrimental to growth and affects the poor the most. This is a priority area that needs serious thought and effective action.

What will be the impact of the cut of subsidy on the poor?
We will take care that the poor are not affected. The managing director of IMF is well known to me. I have got many friends in the World Bank. All of them agree that while India must initiate a process of adjustment, the adjustment process will have to have a human face, so that the poor are not adversely affected. I wish to emphasise that in the process of structural change we will ensure that the interests of the poor will be protected. That is part of our social commitment. At least this is what we owe to our people.

■ KINGSHUK NAG

Admirable performance

Our regular columnist Sudhir Mulji, who has known Dr. Manmohan Singh for many years, offers a personal viewpoint on the finance minister

I suppose every columnist has someone in mind for whom he is writing, and I am no exception. The target of my opinions has always been the finance minister; thus when V.P. Singh held that job I had no difficulty in writing Akbar-Birbal pieces because the Rajasaheb seemed to me like a Mogul emperor; he was no democrat and had no understanding of economics, but he did have an imperial sense of justice. So long as we did what he told us he would pat us on the head; otherwise he would use the stick. When S.B. Chavan held that post I had joined STC and I had fortunately stopped writing.

My next mark was the good Professor Dandavate; here was a familiar figure, the typical Fabian who would have been as much at home in the British Socialist Movement as he was in the Indian one. I expect he was a great friend of the late Ashok Mehta of the PSP and probably went to earnest meetings in Laburnum Road, Bombay 7, to talk about poverty and the wickedness of the rich.

Generous and humble. All these ministers had one thing in common: I felt I knew more about economics and commerce than they did. That no longer applies; with the new finance minister I am seriously stuck. The wind has been taken out of my sails. For one thing his ability as an economist is so much superior to mine that it will inhibit my writing. Secondly, as a human being, he is both generous and humble — a man I greatly admire — and therefore it will take away that intellectual acerbity which is the only characteristic that makes this column worth reading.

The one advantage I have is that the new finance minister will at least read anything that is written here. He is a man who will look for advice from all sources and, as his first press conference indicated, he will not be constrained by old ideology. Indeed, his performance thus far has been admirable. By moving as fast as he has done, Manmohan Singh is creating opportunities for the Indian economy that were unthinkable a few days ago. Thus far he is not doing anything new; but by devaluing the rupee he has immediately opened up the scope for economic manoeuvre.

Obviously, his next task will be to contain the budget deficit; in that battle the opening shots have been fired by the scrapping of the notoriously inefficient cash compensatory scheme. This was made possible because the devaluation itself will suffice to make up for cash compensation. He has also provided further incentives for exporters by an aggressive REP licensing scheme, which will enable them to make additional profits from the shortage of imported goods, but I expect he will remove some of the extraordinary tax incentives that exporters have enjoyed in recent years.

The pattern therefore is clear; everything will be done to ensure that the system of price incentives is established, but all subsidies that impinge on the government's finances will be abolished. In this strategy the great test will be in the area of food and fertiliser subsidies, and I imagine that he will do that in two stages. First there will be some reduction of subsidies this year, although I would be surprised if he completely abolished them; there will, however, be some advance warning that within the next two or three years all these subsidies will be abolished.

Now, among economists none of these steps are controversial. On the contrary, the moves that have been taken so far are completely orthodox and would have received the approval of Keynes or Marshall if they were alive; those who accuse the finance minister of doing it at the behest of the IMF are really being quite silly. You might as well charge him with receiving instructions in some sort of séance from economists who have long been dead and gone. However, while all that he is doing is in the right direction — and thank goodness he is doing it quietly enough — the real question is will it suffice?

Hurdles to be crossed. The ultimate hurdle the finance minister faces is the restoration of confidence in the Indian economy. To surmount it he will be pinning his hopes on getting certain figures right; he will hope that the present exchange rate can be more or less maintained, that his budget will be sufficiently balanced to inspire foreign lenders into believing that the government means business and so on and so forth. But the basic framework within which Manmohan Singh is operating is still within the economy of controls. Liberal controls, sensible controls, logical controls, but still controls. He has not yet taken the plunge into a market economy; he has not floated the exchange rate, he has devalued. He will not privatise to raise revenue — he will instead try to curb government expenditure.

And it is here that Manmohan's greatest pitfall lies. If he guesses the figures right — and they can be nothing but guesswork — he will succeed in directing the economy as no other policy maker could have dreamt was possible. He will truly be the economic tsar of India as Erhard was of West Germany. If, on the other hand, his estimates go awry, he and we will regret the consequences of his efforts. It is a risk I would not take. For I am only too aware of Keynes' dire warning about the flimsy base for our knowledge of the future. As the great economist wrote:

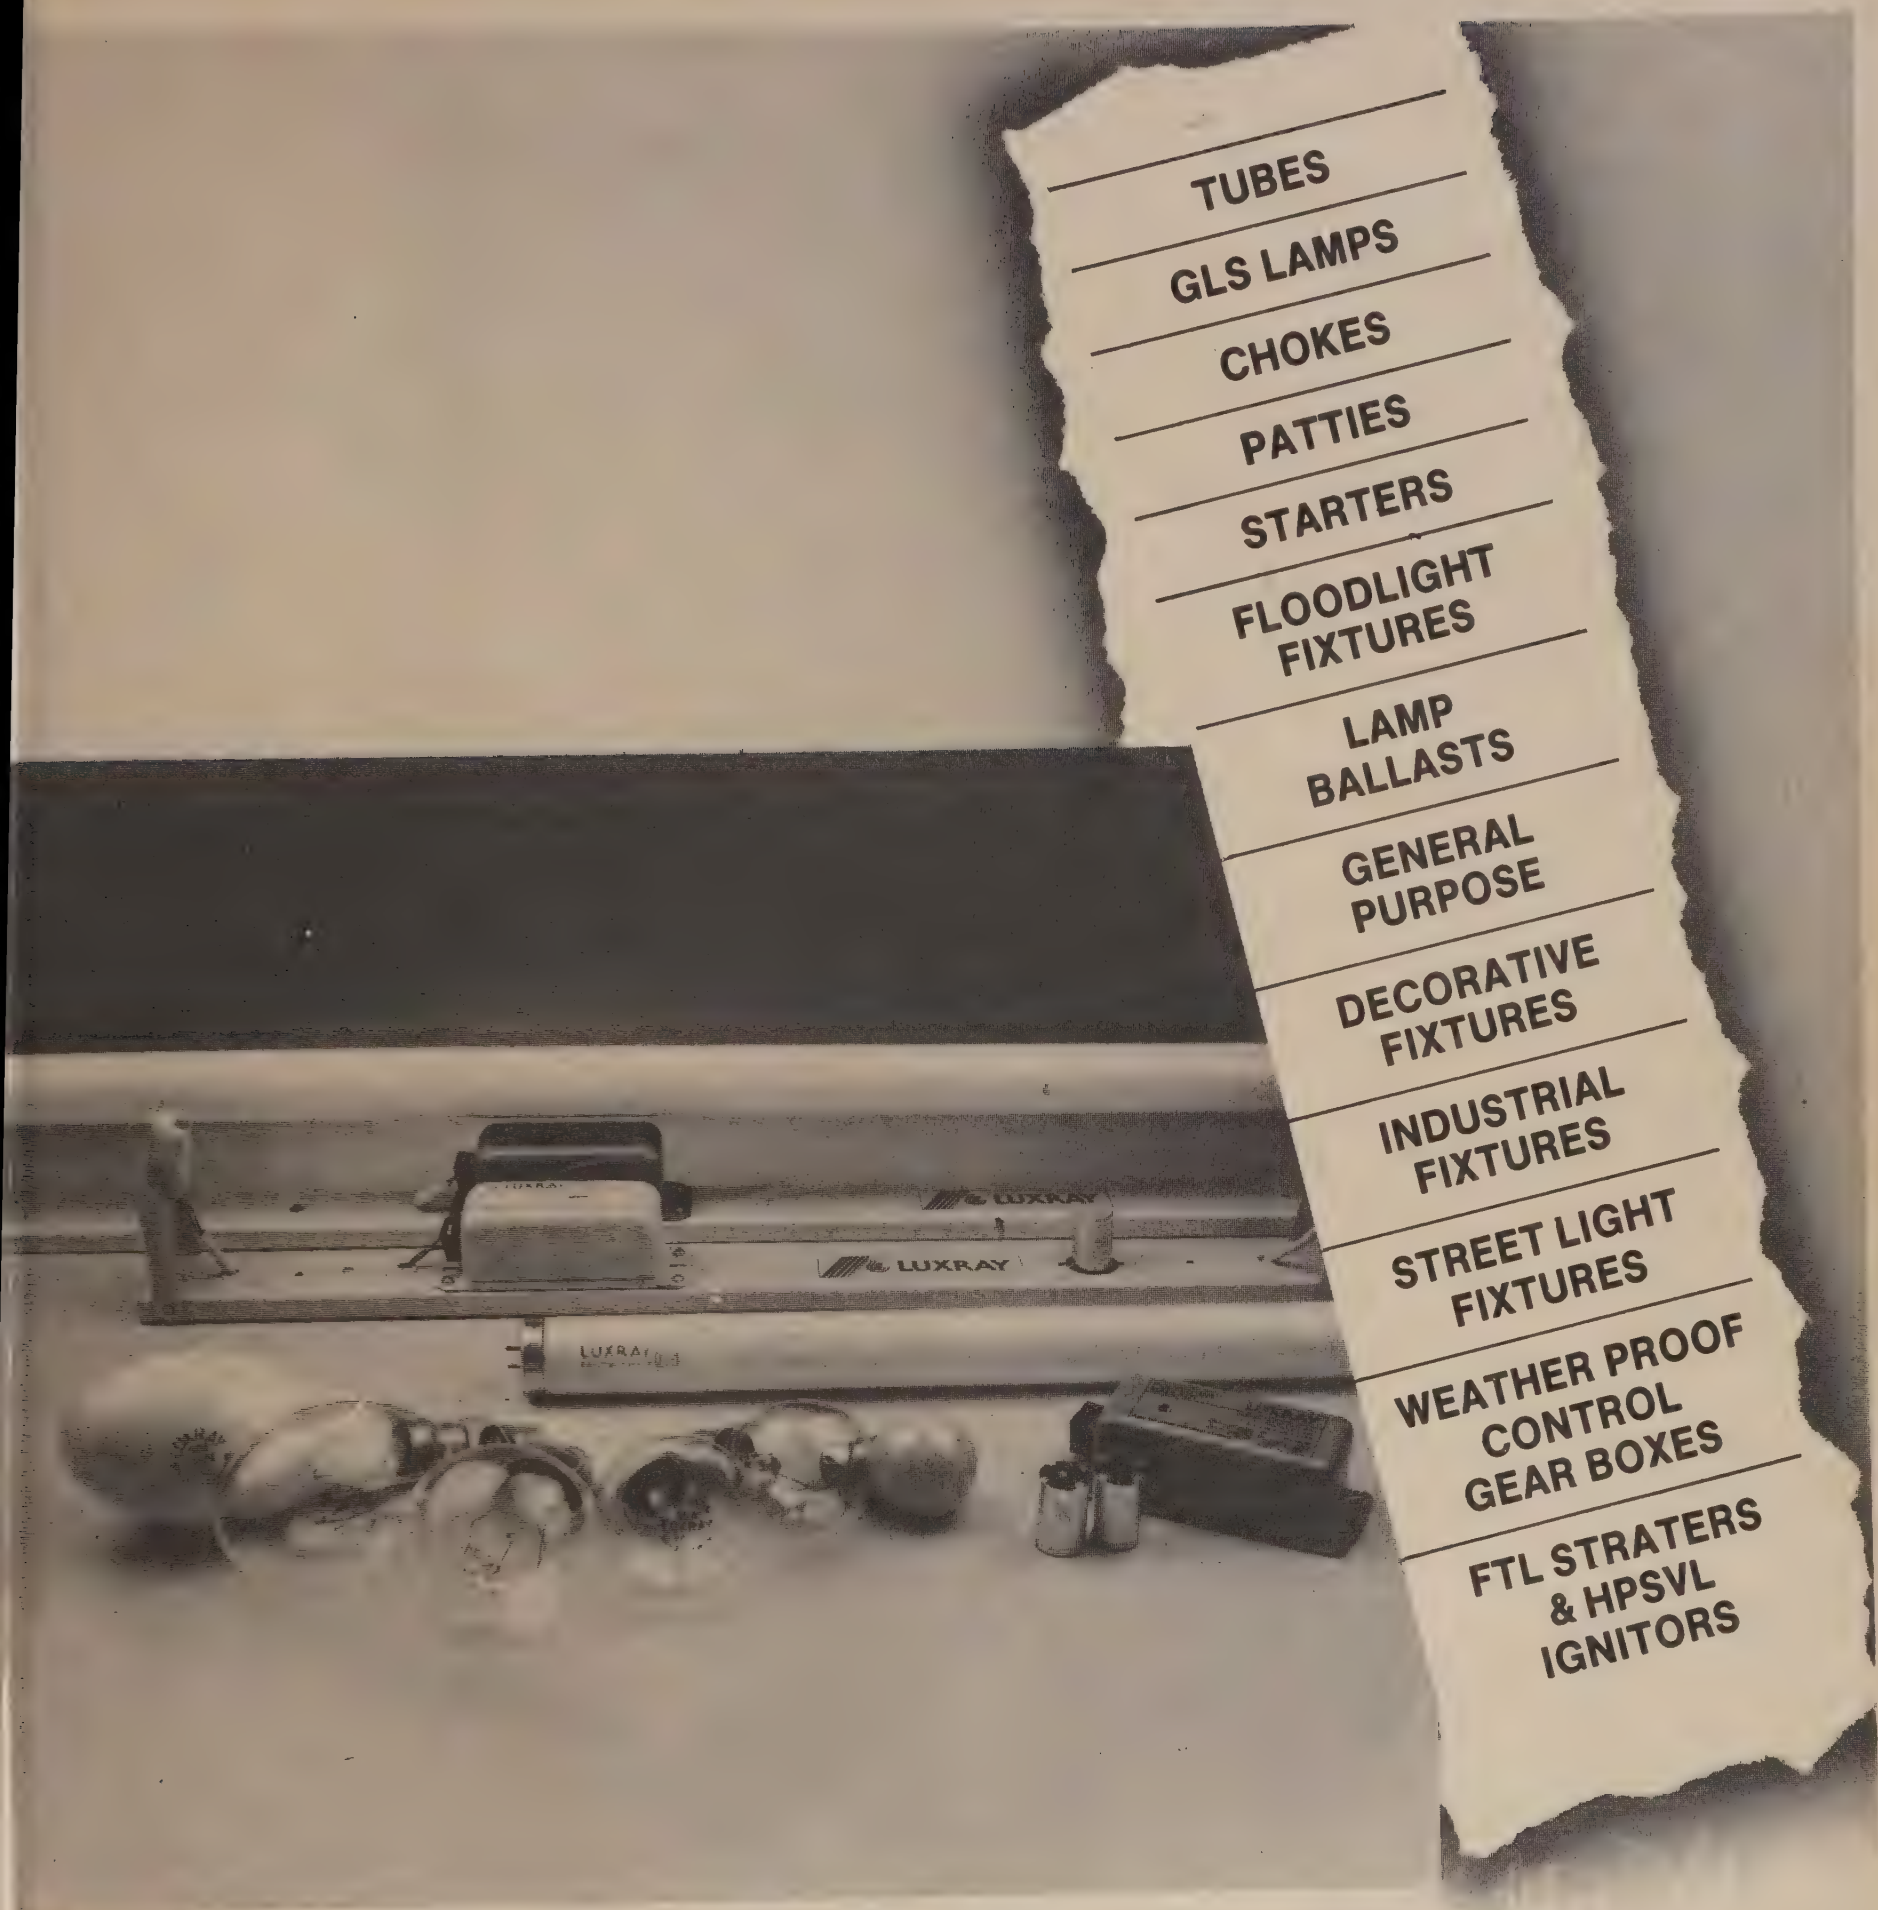
"The outstanding fact is the extreme precariousness of the basis of knowledge on which our estimates of prospective yield have to be made... If we speak frankly, we have to admit that our basis of knowledge for estimating the yield ten years hence.. amounts to little and sometimes nothing. In fact, those who seriously attempt to make any such estimate are often so much in the minority that their behaviour does not govern the market."

Of course, what Keynes was talking about was investment and future yields; but the basic point applies to all our estimates of the future. No one can be sure that our predictions will come true, it is therefore the strength of the marketeer that he openly admits to being unable to forecast the future and relies instead on confidence that the market will work out its own salvation. So far at least the finance minister has chosen another route, but he is economist enough to know the dangers of his choice.

DEVALUATION

A bold step

Devaluation of currency is a bold move, both politically and economically. But it may not work if mishandled — as the experience of 1966 will attest. However, the new government's swift move to devalue the rupee makes eminent sense in the current economic scenario and could mark a historic first step in the long overdue restructuring of the Indian economy



When the government hiked import margins on items under Open General Licence from 50 per cent to 133 per cent in March and again to 200 per cent in April, many small importers decided to stop imports and wait until a new government came to power by June in hopes of a more merciful policy. For them, the continuous devaluation of the rupee since January (*see chart*), along with the two sharp bursts last week that took the rupee down to Rs.25.95 from Rs.18.20 to the US dollar (a fall of 31 per cent), has meant a disastrous wait.

For larger importers, the rise in the dollar could wipe out much of next year's profits. Bajaj Auto, for example, is considered to have the most highly indigenised technology among scooter manufacturers. Yet, because the steel that it needs is not rolled to the desired gauge domestically, the company imported Rs.92 crore worth of steel and other items in the fiscal year 1990-91. Against this, its exports were Rs.20 crore. Its net foreign exchange outgo of Rs.72 crore will become — if it is able to maintain operations at the same level in 1991-92 — Rs.20 crore costlier merely due to exchange devaluation since January; this is equivalent to 20 per cent of its pre-tax profits in 1990-91. Given the competitive state of the scooter industry, Bajaj Auto is unlikely to be able to pass on all these costs. The effect on other scooter manufacturers will be far worse.

Cause for concern

A spokesman of the Indian Oil Producers and Exporters Association notes that the erratic behaviour of the monsoon to date in Gujarat and Rajasthan is a cause for concern in oilseeds. Last year, the country imported only 60,000 tonnes of palmolein thanks to a good crop. This year, it is expected that if production falls below 18 million tonnes, the country could be forced to import edible oil to meet the difference.

For a country like India, with a trade deficit, the decision to devalue is a difficult one, as it means adding to the rupee trade deficit immediately. Yet the new government, which engineered the latest rounds of devaluation, is being widely praised by large sections of trade and industry for what are seen as decisive steps towards the restructuring of the Indian economy. The view is not just that at least someone's hand is at the steering wheel. Even importers are not complaining a great deal. Says A.H. Merchant, ex-

O'KEEFFES ICARUS 540

President of the All-India Importers Association, "What the current 20 per cent devaluation does is add a general import duty of 20 per cent in addition to the existing duties on particular items. In its absence, the government would have probably raised import duties by more than 20 per cent on average in the upcoming budget on 24 July. If the devaluation is viewed in this context, it is not such a bad thing."

Jan Bergvelt, the managing director of Peico Electronics and Electricals, notes that devaluation does not automatically boost exports and curb imports. One is not, he says, "comparing apples with apples. Exports need to compete on price, quality, and also adhere to rigorous delivery schedules, if they are to be boosted."

Bergvelt is pleased that Peico has reduced its exposure in the colour TV market. The company could even benefit if, as he feels, there is a shake-out in the colour TV market and buyers shift to the audio market. Of course, a shake-out in TVs will hurt the smaller manufacturers the most, leaving the big three — Videocon, BPL and Onida — in a stronger position to control market prices and volumes.

Devaluation is widely viewed as a prelude to a phased reduction of both import duties and export subsidies. At the aborted Uruguay round of the General Agreement on Tariffs and Trade (GATT), India had committed itself to a phased reduction of import duties from their current average level of 120 per cent to 30 per cent over 5 years. The devaluations since January set the framework for a feasible phasing out.

Exporters are, to use a merchant banker's oxymoron, "cautiously ecstatic". Certain commodity exporters, such as aluminium and iron-ore manufacturers, are immediate beneficiaries. This is because they sell in markets where prices are quoted in foreign exchange and where India's supply is a small proportion of market size. Hence, they will immediately receive the full benefit of the devaluation.

A similar case applies to established firms like Century Textiles, whose foreign exchange earnings come from near-commodity items like grey cloth and shipping. Century, whose net foreign exchange earnings were over Rs.142 crore last year, has, not surprisingly, been a stock-market star over the past week. It rose from Rs.5,300 on 1 July before the devaluation was announced to Rs.6,300 after the second round of devaluation. Great Eastern Shipping, which has been bullish over the past two months thanks to a reviving foreign market for shipping, similarly jumped to Rs.72.50 from Rs.56.50.

The caution comes for items like gemstones and machine tools, where competition is fierce at home and recession rules abroad. Diamonds and other gems which are imported will benefit, even though almost 100 per cent of the raw material is

Calling a spade a spade

The media calls it devaluation, the IMF calls it depreciation while Doordarshan, fearful of a ministerial rebuke, reads the official press release and calls it a downward revision. Whichever D one uses, any time the rupee loses ground in international markets, it is devalued.

The media then screams that oil imports will cost Rs.1,000 crore more per year and that this will adversely affect the trade balance. True, government revenue is affected if petrol prices are not increased adequately, but does it adversely affect the trade balance, that is, the difference between exports and imports? In rupee terms, certainly, but in the more relevant dollar-figure, not at all. The dollar value of the imports is unaffected by devaluation. Since exports should, if anything, rise in dollar terms, devaluation should help the trade balance even in the short term, not hurt it.

Transferring benefits. Devaluation initially is all about transferring benefits, just like a cigarette tax transfers money from smokers via the government to (presumably) the general public. With devaluation, one domestic group, such as buyers of petrol, lose out to another, say Oil India Limited.

Why then is devaluation such a hush-hush word? And why is the government scared that the devaluation will be linked to IMF pressure? So scared that it announces devaluation in two strokes rather than one and the RBI governor is unwilling to meet the press. In other countries, the government would have put on a massive public relations exercise to justify and build support for devaluation. To the finance minister's credit, he came on television for a minute saying that this was an opportunity for both the legal and ill-gotten dollar holdings of Indians abroad to be transferred home at a realistic price, but everyone else in the government prefers to say as little as possible.

The reason is national pride. The IMF is undoubtedly behind the deal and the devaluation is an admission that we needed foreigners to tell us what to do. So much for the theory of the foreign hand.

Nevertheless, the devaluation has been welcomed abroad. This, for most countries, is unusual. Most other countries, including Japan and Hong Kong, would dearly love to have still more devalued currencies in order to promote their exports but cannot, thanks to American pressure. India, despite its surplus trade balance with the United States and despite Super 301 and Special 301, has been able to add still more protection to its domestic market via a devaluation. This may, in retrospect, be a most significant fact.

imported, simply because the value addition will translate to a higher sum in rupees after devaluation. "But" notes Jawahir Jhaveri, a processor of pearls, "foreign buyers are no fools. They will now try to negotiate a lower price in dollars."

Jhaveri is, in effect, recognising that the demand for many Indian exports is price-sensitive. These include chemicals (including pharmaceuticals) and engineering items which together account for 20 per cent of total exports. Of course, on the positive side, it is precisely in such markets that there is scope for substantial growth, as the experience of countries like Hong Kong has shown.

There is yet another export-related risk of devaluation, as tea exporters realise. Although the devaluation is expected to spur tea exports (Tata Tea alone should be able to increase its pre-tax profits by over Rs.20 crore this year even if it exports the same amount of tea), this is a market where India has a significant size (15 per cent of world exports). Increased exports may not only increase total supply enough to depress dollar prices but may also induce other significant producers such as Kenya and Sri Lanka to similarly subsidise their tea producers.

Cement will benefit

But the devaluation could help previously unexportable items find foreign markets. Cement is a prime example; even in 1987, at the depth of the recession in cement, the question of exporting spare capacity did not arise as the international cost was lower than the domestic price of Rs.1,000 per tonne. Yet continued devaluation coupled with liberal licensing and more efficient production at home meant that cement producers could ask for a mere 20 per cent export subsidy this January in order to help them to export competitively. The devaluation since then gives them more than the subsidy they wanted. This is borne out by the fact that the international price of cement is $60 a tonne f.o.b. The comparable Indian cost has fallen after the devaluation from $60 per tonne to $46 per tonne.

Cement companies are excited by this possibility, says Anil Singhvi, finance manager of Gujarat Ambuja Cements. He notes that a good export market could open up in south-east Asia. Similarly, other foreign markets in which India should have a natural advantage based on its raw material or manpower strengths — even such apparently far-fetched ones as nitrogenous fertilisers and finished steel — can quickly open up with decontrol.

The possibility of cement exports illustrates the great risk of devaluation — that some inflationary impact is inevitable and a great deal is possible. With demand so strong in India, cement exports will certainly cause cement prices at home to rise. In general, for items that are easily exportable and in limited supply (at least in the short run), such as tea and cotton textiles, the spur given to exports by devaluation will almost certainly lead to higher prices at home.

A further stimulus to inflation comes from the increased rupee cost of capital imports such as machinery which will show up in higher selling prices of the goods produced by these machines.

The policy makers' hope lies in the longer run: that the higher prices will stimulate higher supplies through addi-

tional production and subsequently bring down prices. This hope does not have a happy history. When the rupee was devalued by 67 per cent in June 1966, prices jumped 15 per cent in the next 12 months. This despite monetary discipline which brought money supply growth down from 11 per cent in 1965-66 to 9.3 per cent in 1966-67. But at that time we had rigid licensing and a miniscule capital market. New facilities just could not be added quickly enough.

This time around, however, things are likely to be different. For one thing, agricultural output constituted a larger proportion of total production then than now (45 per cent in 1965 versus 32 per cent in 1990). Since 1965 and 1966 were years of disastrous monsoons and preceded the Green Revolution of 1968, this had an adverse impact on inflation.

Record grain stocks

Currently, foodgrain stocks are at record highs of over 20 million tonnes. More important, the economy is buffered by a decade of growth that has exceeded population growth by 3 per cent per annum.

Also, on the plus side, the devaluation will mean an IMF loan and an improved international credit rating. This means that capital imports vital for growth will be able to continue.

Given the economy's inbuilt resilience, the government has, as expected, begun to follow devaluation through with a package of measures. Trade reforms have begun with the removal of duty drawbacks and export subsidies, and more changes will follow. These are necessary if devaluation is not to become a useless fifth wheel of economic development. Other structural reforms ought to include liberalising entry into and exit from industry (which has been hinted at) tougher control of trade unions and reduction of controls, such as administered prices. Only then will our economy be able to respond swiftly to additional demand from overseas and domestically. Nevertheless, the reforms already made are steps in the right direction.

However, other liberalisations such as reducing the credit squeeze are unlikely as this directly affects the success of the government price-control programme. The fall in the inflation rate from just over 12 per cent in January to 10.3 per cent in June means that the programme of monetary discipline introduced by the previous government has worked to control inflation. The new government is unlikely to give up this tool.

Category of deposit	Old rates (per cent)	Revised rates (per cent) from 4.7.91
46 days to 1 year	8.0	9.0
1 year to 2 years	9.0	10.0
2 years to 3 years	10.0	11.0
3 years and more	12.0	13.0

Note: Scheduled cooperative banks offer 1 per cent higher than the above rates.

This also means that high interest rates will continue. The Reserve Bank has accepted this reality by allowing banks to offer a percent higher on fixed deposits (*see table*). Meanwhile, the budget due on 24 July is likely to see stiffer taxes as part of the IMF's conditions to reduce the deficit.

However, helping the trade balance sounds merely like a worthy cause to the man on the street. What he is really concerned with is its effect on inflation and jobs. If the value of the rupee for domestic products matches the downward spiral of the rupee for foreign items, then the devaluation will be a wasted exercise. If it kicks in a recession as well, this minority government will quickly return to the opposition benches.

All this means that the bottomline for the economy, which is its rate of growth and job creation, should start to take off — though with a lag. The experience of countries which have succeeded with an IMF-sponsored programme of restructuring, such as Mexico and Peru, suggests that there will be a period during which things get worse before they get better — the notorious J-curve of growth. This is because there will be a period during which the shedding of wasteful expenditure will cut into aggregate demand. Once this is offset by efficient growth, the economy will pick up.

Dismantling the old regime

The old regime of quotas and selective duties has begun to be dismantled. This has its risks, especially obvious political ones. It should also be recognised that what we are seeing is not a genuine opening up of the economy by allowing free access to international markets and goods; it is, instead, an attempt to control the economy via the price mechanism. But it appears to be a necessary first step in the global integration of India.

■ RAFIQ DOSSANI

Loud protests, hard options

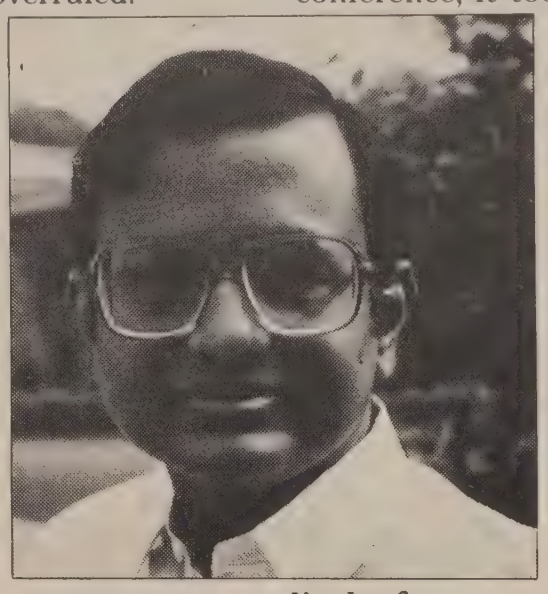
The two consecutive devaluations of the rupee against major foreign currencies and the announcement of a new export-import regime by the Congress-I government has placed the opposition parties in a quandary. The opposition, even while wanting to attack the policy changes, finds its hands tied. They all realise that there are very few soft options left on the economic front. It appears that when the minority government seeks a vote of trust in the Lok Sabha on 12 July, most of them might abstain from voting rather than oppose the continuance of the government.

When the rupee was depreciated for the first time on 1 July, the opposition had reason to cry foul. They had not been taken into confidence. But the problem was that even the government had not decided whether it should officially announce the depreciation. The second time, union finance minister Manmohan Singh took it upon himself to announce the decision. Yet the opposition leaders were kept in the dark once more. "People have to be explained the implication of the economic crisis," says the former finance minister and Janata Dal leader, Madhu Dandavate, "When I as the finance minister announced that the coffers were empty, I was taking the people into confidence."

BJP reaction. In fact, the BJP was the first party to react when it vehemently declared that its reading that the World Bank and the IMF were arm-twisting the country to meet preconditions for the loan turned out true. The party said that hard days were ahead as the economy was now being run by the foreigners. Said Govindacharya, all-India general secretary of the party: "Instead of rolling back prices to the 1989 levels in 100 days as promised in the manifesto by the Congress, we would witness a 200-300 per cent inflation in that period."

Janata Dal spokesman Jaipal Reddy felt that the step had been taken following unconcealed pressure by the IMF. However, when the changes in the trade regime were announced a day later by the minister of state for com-

TRADE POLICY



Brave new world

The policies announced so far by the new government mark a welcome break with the tinkering of the past, but sadly they do not go as far as they ought to

On 3 July, when the finance minister, Manmohan Singh, announced at a hurriedly convened press conference, that a new trade regime would be announced the same evening, officials of the commerce ministry were taken by surprise. Though Udyog Bhavan officials knew that their new boss P. Chidambaram was working out a new policy, they were also aware of the fact that much of the work remained to be done. Actually till 11 am on that day, that is three hours before Singh's press conference, Chidambaram himself did not know that he would be asked to announce a new policy before the day ended.

He found out only when he was summoned to a meeting of the Cabinet Committee on Political Affairs (CCPA) by the prime minister, Narasimha Rao, later that afternoon. At the meeting the only person who opposed the move was the former Congress party treasurer, and now family welfare minister, Sitaram Kesri, but he was soon overruled.

Singh took the decision to push for the announcement of a new trade policy an hour before the cabinet meeting when commerce secretary Montek Singh Ahluwalia called on him in his North Block office. However, the move had been initiated by the previous commerce minister, Subramaniam Swamy, who had prepared a strategy paper before he left office, a fortnight ago.

Chidambaram: radical reform

When minister of state for commerce (with independent charge), P. Chidambaram, revealed his new policy at a press conference, it took quite some time for the attending journalists to realise the magnitude of the changes that had been proposed. At a stroke, Chidambaram, ably assisted by Montek Singh Ahluwalia, had radically reformed the basis of India's trading system. At one go, he slashed export subsidies by nearly Rs.2,700 crore (estimated for 1990-91) and established a uniform REP rate of 30 per cent on all export earnings.

More importantly, Chidambaram expressed the hope that the government could make the rupee fully convertible within 3-5 years. And also that all import licences for capital goods and raw materials could be abolished.

The new policy is the first step towards linking all imports to exports. Essential imports like crude oil and petroleum products, fertiliser, edible oil and defence spending would however not be linked in this manner. It is important to realise that this is an important step but also that it spells out the objectives that the government hopes to achieve in the medium term rather than proposing an immediate prescription for the present. For example, India's total import bill in 1990-91 was about Rs.43,000 crore of which essential imports are estimated to be about Rs.15,000 crore. This means Rs.28,000 crore of "non-essential" imports have to be paid for. However, in this period, total export earnings were Rs.32,500 crore. At the newly announced 30 per cent REP rate, the total worth of the REP licences would be only about Rs 10,000 crore. This means about Rs 18,000 crore worth of imports cannot be paid for through the REP licences route now.

REP licences will now be called Exim Scrips and will be freely tradeable,

---

merce, P. Chidambaram, the opposition had little to say. In fact, the BJP leadership feels that most of the points relating to trade liberalisation were mooted in its manifesto, although devaluation of the rupee was not. According to Govindacharya, the BJP has never been for a protected economy. However, he felt that due to these and further anticipated policy changes, the Congress could face increased agitations by labour and farmers.

Even VP Singh, during whose tenure as finance minister the country witnessed the first winds of liberalisation, feels that though the present measures are inflationary the country can come out of it. "I was for a delicensed raj from the very beginning," While indicating his apprehensions regarding the devaluation of the rupee, he feels that even if the government wants to open the public sector, there is little money with private parties. They will eventually come to the financial institutions and therefore to the government for help.

Left's dilemma. It is the left parties which are caught on the horns of a dilemma. They are dead set against any kind of opening up. Subsidy cuts is taboo. India is not ready for these changes, they say. We should pursue the 'small is beautiful', theory, says CPM politbureau member Prakash Karat. He calls for increased participation of workers in the public sector, further indigenisation and a cut in defence expenditure.

Even Yashwant Sinha, finance minister in the Chandra Shekhar government, says that cutting defence expenditure can greatly help, but there seem to be few takers for this idea. Sinha thinks the devaluation of the rupee has come about because no budget was presented in March this year. The lack of a proper budget froze everything, including all new projects. This created a fear abroad that India was facing an economic crisis leading to a lowered credit rating and drying up all financial aid. So a trade liberalisation regime is not exactly anathema. Most are reconciled to the fact that a protected economy will not work any further.

WSI quality receives international recognition

ISO 9001

ISO 9001 is the most complete quality standard covering every aspect of quality management in an organisation, including design and servicing.

WSI's quality management system has been certified as conforming to the requirements of ISO 9001 by the reputed international organisation, Standards Australia.

Quality Endorsed Company

Standards Australia

WSI is in the enviable position of being the first Indian company to receive this recognition.

Today WSI with its wide range of electrical equipment, ranks among the elite group of international companies certified under ISO standards.

WSI-where quality is a corporate commitment.

Tea: windfall gains

eventually by financial institutions too. In due course the Exim Scrips will be replaced with Foreign Exchange Certificates (FECS), which will be even more easily tradeable and thus allow their use in services exports. Essentially, the objective of the policy is to ensure that those who require foreign exchange earn it through exports. Or buy it in the form of Exim Scrips from the market.

Many economists and industry associations have been pleading for such an arrangement for a long time. And in fact, *Business India* first mooted the idea of the Exim Scrip as far back as December 1988 (*Business India*, 26 December, 1988). Our columnist Prakash Hebalkar argued then that the cumbersome REP licences should be replaced with freely tradeable Exim Scrips.

Gains for exporters

The present policy has done away with the differential in REP rates — ranging from 5 to 20 per cent — and, thus, will provide windfall gains for some categories of exporters. Says Chidambaram, "The new REP scheme gives maximum incentives to exporters whose import intensity is low. For example, agricultural exports which earlier had very low replenishment rates of 5-10 per cent will now gain considerably." Consider what will happen to the fortunes of tea exporters for example. In 1990-91, tea exports were estimated to be at Rs 1,000 crore. Earlier, the REP rate on these would have translated to a maximum forex availability of only Rs 100 crore. With the new rate of 30 per cent this will jump up to Rs 300 crore. Given the low import requirements of tea exports, this means the tea exporters can sell almost their entire REP licences at a premium!

However, the uniform REP rate does not take into acoount the import intensity of certain exports. Says economist Charan Das Wadhwa, "REP rates should have been dependent on net foreign exchange earnings and not on the FOB value of exports. At present, there is no discrimination between exports which are import intensive and those which are not. For instance, steel pipes and tubes hardly have 10-15 per cent value addition. But under this policy, they will earn 30 per cent." Gem and jewellery exports are another example of low value addition which will be unduly benefited.

Also, the present REP facility does not allow for NRIs to be given REP licences against the non-repatriable forex remittances they make to the country. *Business India* believes that the logical step would be to not discriminate between exporters and NRIs in this manner.

CCS redundant

As part of the new trading regime, cash compensatory support (CCS), which made up a large part of the country's export incentives, now stands abolished. Says Chidambaram, "The recent changes in exchange rates and the substantial liberalisation make CCS redundant, so it is being done away with."

The other implication of the abolishing of CCS is the fact that all exports will now have to compete in international markets on their own strength and also that the government will not favour one category of exporter over the others as it used to in the past with differential rates of CCS. Says Montek Singh Ahluwalia, "The commerce ministry is not in the business of favouring one exporter over the other."

However, F.C. Rustagi, president, J.K. Synthetics, disagrees with that view. He

Textile exporters are pleased

says, "The uniform rate will give an impetus to agricultural exports but other, more value-added exports may suffer." Says one corporate analyst, "What is the big deal about a uniform REP rate. Is exporting cars the same as exporting rice?"

Ravi Upadhayay, senior general manager (exports), Shree Meenakshi Mill, a Sanjay Dalmia group company which exports cotton yarn and polyester cotton yarn, though, is among the many exporters who are happy with the new policy. Says he, "We were getting CCS of 8 per cent of exports to quota countries. Now we will get REP at the rate of 30 per cent."

The new policy has no special provisions for public sector imports either. Says Ahluwalia, "It is not my business whether public sector companies can manage their imports or not. If they are not efficient they will have to suffer." But public sector imports are bound to become a serious issue. And how the government will deal with this remains to be seen. Interestingly, at a meeting of the council of ministers held on the afternoon of 4 July, the prime minister informed ministers with public sector companies under their charge about the new policy and asked them to co-operate with the commerce minister.

Ahluwalia : no favouritism

Among the other features of the new policy are the retention of the advance licensing scheme. Says Chidambaram, "This has been an alternative to the REP route for obtaining imports. It is expected that many exporters will find the REP route more attractive now. But for those who wish to go through advance licensing, this route will remain open. The replenishment rate for advance licenc exports will be from 10 per cent of net fo eign exchange earned to 20 per cent."

Chidambaram also plans to decanalis the import of all items except those tha are essential. The entire canalisation po icy is under review, he says. This woul obviously be welcomed by users of cana lised imports but will seriously jeopardis the future of the two large public secto canalising agencies, MMTC and STC.

Chidambaram is quite optimisti about the thrust the new policy will giv to exports in the current year. He says "Exports will grow by 9 per cent in dolla terms this year. And then the country wil soar in the high skies of internationa trade." Some experts, however, think this is too optimistic a view given the infrastructural constraints like poor transportation facilities and power shortages that plague industry.

Step in right direction

Certainly, the policies announced so far mark a break with the tinkering of the past. Sadly, they do not go as far as *Business India* thinks they ought to. On the other hand, they are clearly a step in the right direction. Also, it appears as if the government has realised for the first time in forty years that trade policy is the most important and the most effective tool that it can use to not only restructure the economy but also to give a thrust to an economy in which market forces play the major role.

Even a cursory appraisal of the role of the government in the Korean and even the Japanese economy, for example, clearly shows that intelligent trade policies have helped to get the most distance out of the resources at the disposal of the two countries. This is now equally true for India. For example, once the industrial licencing policy is abolished, like *Business India* has always maintained it should be except for a small number of strategic industries, the only way the government can play a role is by policy thrusts in trade policy.

The best part of the trade policy becoming the most important tool of government lies in the fact that this will bring India in line with the rest of the world and perforce speed up the integration of the Indian economy with that of the world. So that we become equal partners in the new economic order that the world has already embraced.

The new trade policy, along with devaluation, will take exports to new heights

PARKE-DAVIS

Life after merger

Amalgamation with the sister concern has improved the prospects of the company. Sales have increased, relaunch of star products have clicked, and the scrip now commands a healthy premium

Had it been any other industry, there was a distinct possibility of making a killing. Thanks to the import restrictions imposed by the Reserve Bank of India, chloramphenicol-based drugs are suddenly in short supply in the market. Yet, a manufacturer like Parke-Davis India Ltd (PDL), whose chloromycetin is perennially in great demand, cannot take any advantage of this godsend opportunity. The reason: chloromycetin, and 80 per cent of the other drugs manufactured by PDL, fall under the dreaded Drug Price Control Order (DPCO) and the company cannot increase its price even though market forces dictate it.

Had it been any other company, its senior executives would have been upset at this lost opportunity. But the top brass at PDL is taking it in its stride. The reason is a move PDL made 32 months ago and whose results are now bearing fruit — amalgamation with sister concern Warner Hindustan Ltd (WHL). As a direct result of the merger, PDL does not have to be fully dependent on pharmaceuticals for its bread and butter.

A brilliant move

The fortunes of WHL, a subsidiary of the Warner Lambert Company, USA (1990 sales: $4686 million from operations in 40 countries) became inextricably linked with those of PDL after its parent company acquired the worldwide interest in Parke-Davis in 1970. But the long-delayed merger between the two Indian subsidiaries came about only in September 1988.

The result went much beyond a synergy in the strengths and resources of the two companies. In retrospect, it was a brilliant move on the part of the PDL management to escape from the clutches of the restrictive DPCO. Says an industry observer, "They were struggling to come out of a difficult situation and I think they have done a marvellous job."

Incorporated in 1958, PDL is ranked among the top bulk drug and formulation manufacturers in the country. Some of its products, manufactured at the Andheri plant in north Bombay, have become household names over the years — Chloromycetin (India's first broad spectrum antibiotic), Benadryl (an antitussive), Ferradol tonic, Neko medicinal soap and Abdec vitamin drops. And WHL's plant at Uppal, Hyderabad, has been turning out some of the best-known Indian OTC drugs, personal products and confectioneries — Waterbury's tonic, Sloan's pain balm, Listerine mouthwash, Halls cough-tablets and Chiclets chewing gum.

As expected, consumer products have started playing a significant role in the post-merger, new-look PDL. Around the time of the merger, only 9 per cent of the total PDL sales came through consumer products. In 1989-90, this division contributed towards 12 per cent of the total sales of Rs.81.19 crore. And according to the just released figures for the financial year ending March 1991, 15 per cent of the total sales of Rs.92.4 crore came from consumer products.

Banatwala: optimistic

PDL plant at Bombay: no scope for expansion

Higher profit

Along with an increase in sales, there has also been a jump in gross profit from Rs.6.05 crore to Rs.7.28 crore. The company declared a 24-per-cent dividend this year as against 35 per cent in the previous year, but since the new dividend is payable on an enhanced capital following a three-for-five bonus issue, it works out to 38.4 per cent.

PDL's shareholders have become used to this kind of high dividend from this consistent performer. Says Venkappa Agadi, group director (finance division), "Why shouldn't we keep our shareholders happy? As it is, today there are so many other alternatives like 14 per cent company fixed deposits and 18 per cent tax-free government bonds."

Heavily traded

While Warner Lambert holds 40 per cent of PDL's Rs.12.05 crore equity, 17 per cent is with the financial institutions and 36 per cent with the public. A Rs.10 paid-up PDL share is now being quoted at Rs.72 and though the company is not planning any immediate expansion/diversification, it is among the heavily traded group A scrips. After the amalgamation, PDL has suddenly become a company to follow.

The merger was masterminded by chairman and managing director (CMD) Ramesh Banatwala who was hoisted to the top chair in India after being brought in from Hong Kong where he was Warner Lambert's regional president, south-east Asia/India region. "Our parent corporation had earlier thought of concentrating on China but then concluded that India was miles ahead in terms of opportunities," says Banatwala.

The merger process, which began in March 1987, could be concluded only 18 months later. "Mergers in India are complicated affairs," says the CMD. "We had to take shareholders' approval, get the merger okayed by the Bombay and Hyderabad high courts and make the rounds of a host of ministries." As part of the amalgamation process, seven Parke-Davis shares were allotted against five Warner Hindustan shares. After the merger, the equity capital of PDL stood at Rs.7.53 crore.

An old Warner Lambert hand (he has been with the group for 18 years), Banatwala has still not got used to the Indian government's "step-motherly" attitude towards the pharmaceutical industry. "Thanks to the government's restrictive policies, our profitability is taking a beating even while production costs are shooting up."

Another step to be deplored was the arbitrariness of the government in removing certain drugs from DPCO and then suddenly bringing them back into price control. Devinder Pal, group director (manufacturing division), who is in charge of the two plants, lashes out at the government's policies towards the drug industry. "We are controlled by two ministries (health & family welfare and petroleum & natural gas). While one ensures that there is no shortage of medicines, the other enforces price control. Why should we not report to just one ministry?" he asks.

Happy position

Pal is one of the five group directors who were given independent charge of a major division each, immediately after the amalgamation. With the merger complete now, the two former sister concerns are in the happy position of enjoying several advantages. For instance, the Bombay plant has access to the well-equipped, ultra-modern R&D centre at Uppal which has been recognised by the government of India's department of scientific and industrial research.

Again, the combined field selling and distribution infrastructure of the two companies makes it a potent force. "We are suddenly in a commanding position after the merger," says Agadi. "Earlier, if we required 500,000 bottles, we now require 1 million bottles and can thus ask for a better price. Again, which transporter will not give us a good rate for 200 trucks?"

And then, of course, there is the big advantage of escaping from DPCO restrictions. Admits Agadi, "Many of the products of the erstwhile Warner Hindustan — which now come under our consumer products division — are free from price controls." Adds Banatwala, "Most of our pharmaceutical activities don't help with our profitabilty in any way. But they merely help us reduce the losses."

PDL has lost no time in exploiting its newly acquired goldmine. Immediately after the merger, the company went all out to promote its star consumer products and revive those that had lagged behind. "Our company took on a new mission — to make consumer products a growth priority," says Nitin Ghadiya group director (consumer products di sion). Innovative packaging, price rati nalisation, heavy advertising and an a out point of sale (POS) display campai did the trick. According to Banatwal consumer products are destined to pl an even greater role in the future and the next few years, should be able to co tribute to about 50 per cent of the tot sales.

Pal: lashing out against the government

Market share improves

Halls was launched in "pillow" packs ar a line extension — Halls Icemint — wa introduced. It now commands a 22 pe cent share in its market segment eve though it competes with such giants lik Vicks (Procter & Gamble) and Strepsil (Boots). Listerine was repackaged with new label and cap and continues to be market leader in spite of intense competi tion from Parle's Prudent. The formula tion of Chiclets was changed before re launching it with a high-profile ad cam paign. In the last six months alone, th market share of the product has jumpe from 0.2 per cent to 6.7 per cent. "As a result of these successes, the overall con fidence of not only our division, but also that of the entire company has gone up," claims Ghadiyar.

There are other reasons as well for the smiles all around. The company boasts of an established marketing network

(21 depots, 750 stockists and 110,000 retailers for the consumer products alone). And then, of course, there are the well-established brands. While the consumer products are now enjoying a new lease of life after the image-building exercises, PDL's high quality formulations have enjoyed a good reputation among doctors for long.

Praiseworthy ethics

Even competitors acknowledge PDL's high ethical standards. "Not many companies would have done what Parke-Davis did with its Chlorostrep," praises the production chief at a major pharmaceutical company. In 1985, PDL had launched Chlorostrep, an anti-diarrhoea antibiotic and it was immediately accepted in the market. Yet, when the company's ongoing research on the drug revealed that it was not having the full effect it was meant to, the company pulled out the drug from the market.

PDL is acknowledged as a very well-run, professionally-managed company, even by competitors. "They practise excellence in management," praises one of them. Its training programmes, conducted in close conjunction with the parent company abroad, is the envy of many an HRD manager. The close association with Warner Lambert in terms of ready access to marketing know-how and new technology also helps PDL.

Prudent financial policies, with emphasis on good management of assets and cash balances, have also served the company well. For instance, in 1989-90 (the last year for which full accounts are available), the company paid an interest of only Rs.55 lakh — quite an achievment considering that sales that year were Rs.81 crore. One way this was achieved was by avoiding the overdraft facilities available with the consortium of seven banks the company deals with and instead going in for instruments like fixed deposits. "We have a long tradition of efficiently managing working capital — and this is the key to successful financial control," says Agadi.

PDL makes it a point to restrict its receivables, to 21 days. "While other companies stop selling two weeks before closing their accounts, we maintain sales down to the last day so as to bring down receivables," reveals Agadi. PDL's gross profit margin (GPM) of 7.5 per cent last year compares favourably with the figures of similar-sized companies — Roche Products: 5.5 per cent, E.Merck: 4.6 per cent and Burroughs Welcome: 4.3 per cent.

At PDL, employee costs are pegged at a low 15 per cent — a very good achievement in an industry known for its high employee costs. One way this has been achieved is by freezing new employment and introducing voluntary retirement scheme (VRS) at the Bombay plant. P.M. Nayab, group director (human resources division), however, feels that not permitting new expansion at the Andheri facility is the main reason why they have stopped recruiting people.

Uppal plant: source of consumer products

Productivity declines

But an employment freeze and the introduction of the VRS scheme had become very necessary since the productivity of the workforce, particularly at the Bombay plant, had started declining, perhaps due to age. The average age of the women working on the Benadryl and Ferradol packing lines, for example, is 45 years. Also, at the Bombay plant, the labourers are highly unionised. "Compared to the Bombay workers, the Uppal workforce puts in longer hours. They accept lower wages and are also easier to negotiate with," says a middle level manager.

There are other problems as well. According to the manager quoted above, PDL suffers due to excessive control from the Morris Plains (New Jersey) headquarters of Warner Lambert. As a result, decision-making is slowed down and in the past the company had missed good opportunities for diversification.

Opportunity lost

In 1986, PDL had acquired a licence for manufacturing razor blades and shaving systems. But the parent corporation could not make up its mind about going the full hog. In the meanwhile, another international giant, Gillete, entered the Indian market. PDL lost what could have been a golden opportunity and later surrendered the licence. Had it remained in the field, it could have had quick access to a recently-introduced Warner Lambert best-seller: the Tracer flexible razor cartridge, made of special plastic, which allows the razor to bend according to the contours of the shaver's face.

The settlement for the marketing forces has been another problem area. While unifying finance functions and purchase activities and evolving common managerial systems took less time than expected, the bargaining sessions with the unions representing the sales personnel is taking longer. A settlement was reached with the 200-strong erstwhile Parke-Davis marketing team on 1 July, by which its sales force has agreed to sell products of the erstwhile WHL also. A similar settlement is expected to be signed with the 200-strong WHL salesforce within a month.

"Once these settlements are made, our 400 salespeople selling our full range of products across the country will become a force to reckon with and we will emerge as a strong Rs.100-crore-plus company by next year," says Banatwala optimistically. That, and the company's Rs.8-crore expansion plans (land has been acquired at Waluj and Mahad for pharmaceutical and chemical production, respectively) should keep the focus on PDL for a long time to come.

■ RAJU BIST

GOLDSTAR STEEL & ALLOY

Opportunity knocks

Political association, though indirect, is contributing positively towards the company's prospects. And its sponge iron project, nearing completion, may prove to be a goldmine

The upward spurt of a scrip in the stock-market makes people sit up. Especially when it is of a low-profile company located in the slow, slumbering Nizami city of Hyderabad. This company which witnessed its market price shooting up from Rs.16 to a high Rs.19.75 in Dalal Street, Bombay, is Goldstar Steel & Alloy Ltd.

What makes this company so special all of a sudden? Is it excellence of the product? No. Because the importance of sponge iron as an import substitute item depends on government import policies. And over the past few years, with the foreign currency crunch, it has remained consistently in the priority sector. Then, is it the promoter? Yes. For one of the directors on the board of Goldstar Steel is P.V. Prabhakar Rao, son of the new prime minister, P.V. Narasimha Rao. Prabhakar Rao, an electronics and electrical engineer by training, is also managing director of Sinclaire TV and associated with hire purchase and leasing/investment business. Low- profile and soft-spoken, he is not actively involved with the day-to-day functioning of Goldstar Steel, his friends say. His share in the promoters' capital of Rs.16.7 crore is also not sizeable. But, being son of the prime minister has helped, or so the market feels.

Prabhakar Rao: celebrity status

Rechristened

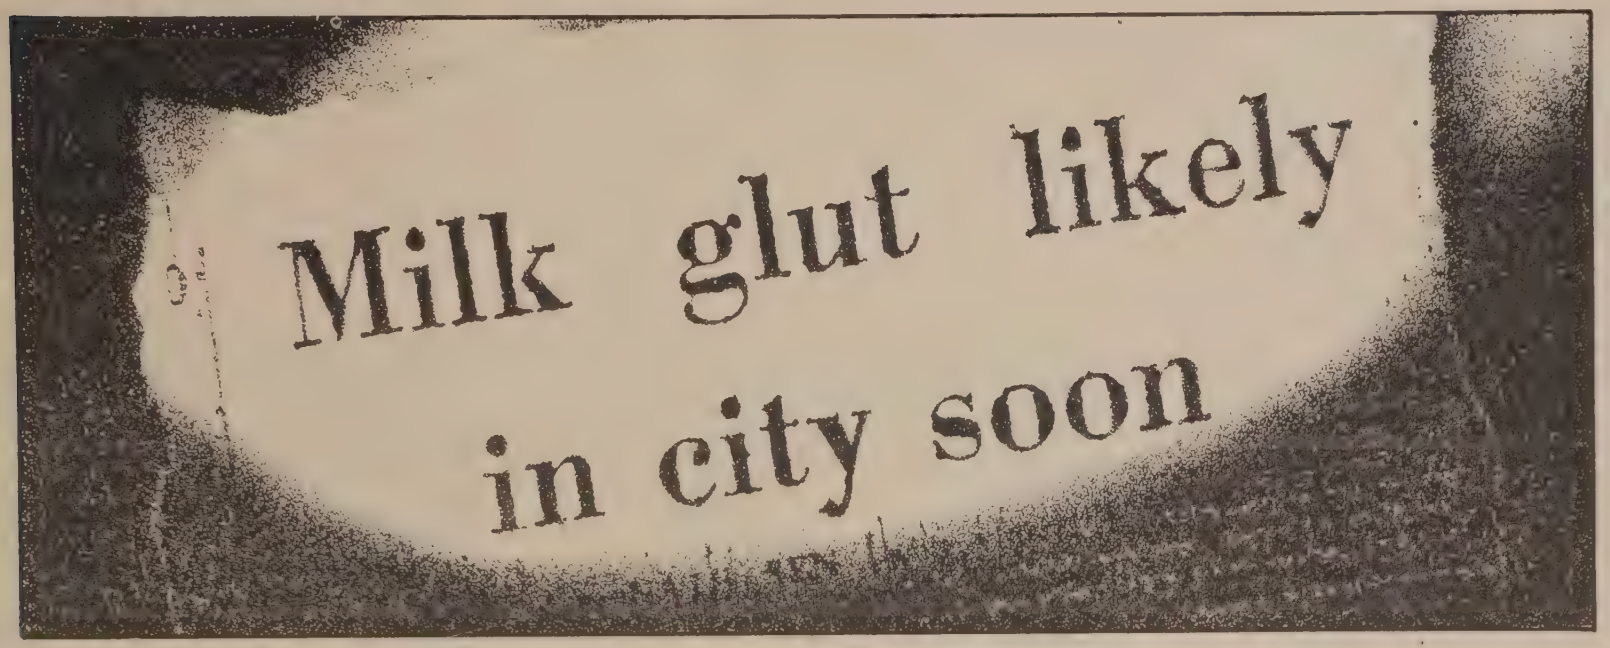
Goldstar Steel & Alloy was formed in 1985. But it was a part of the Priyadarshini group which dealt with cement and spinning mills. When the group split, N. Krishna Mohan, the present managing director of Goldstar, got this sponge iron plant, as part of the spoils. He rechristened it Goldstar Steel & Alloy to bring it into the Goldstar group consisting of Goldstar Holding and Industries Ltd and Goldstar Cements Ltd.

The project, with a capacity of 220,000 tonnes of sponge iron per annum, is located in the backward area between Malliveedu and Sreerampuram villages, 35 km away from Vizag. The envisaged project cost of Rs.125 crore was met by term loans of Rs.66.8 crore in Indian currency, Rs.16.9 crore in foreign exchange and Rs.41.5 crore through equity. The promoters' contribution of the equity was Rs.16.5 crore, foreign collaborators' Rs.2.3 crore, and APIDC's Rs.0.41 crore. The balance — Rs.22 crore — was raised through equity shares of Rs.10 each for cash at par. The issue, which opened on 4 March 1991, was oversubscribed four times according to the bankers who handled the issue.

For this sponge iron project, Goldstar entered into technical and financial collaboration with Mannesmann Demag Huttentechnik (MDH) of Germany, the world's largest suppliers of metallurgical plants. MDH had recently taken over the metallurgical equipment division of Krupp Industrie Technik GmbH, Germany. According to P. Srinath, chief executive of Goldstar Steel, the company opted for the proven coal ore direct reduction (CODIR) process of Krupp (which uses readily available non-coking coal as reductant) rather than the Lurgi technology. The reason was that the plant and machinery were more rugged, and better suited to Indian conditions. Sunflag, a 150,000 tonne single stream sponge iron plant promoted by a group of NRIs had also used Krupp technology which enabled Krupp to pass on its three years of cumulative experience with Sunflag to the Goldstar plant. Apart from equipment imported from Mannesmann Demag, indigenous equipment was procured from Buckau Wolf too.

Advantages

According to Krishna Mohan, the plant has several advantages. Firstly, supply of raw materials, iron ore and coal has been tied up. Sized iron ore will be supplied from the Bailadila mines in Madhya Pradesh; while non-coking coal will be obtained from Talcher in Orissa. Being located on the K.K. railway line (Kirandel-Kottawalsa), heavy transport costs have been avoided, as the material would come directly to the site.



An industry spokesman states that work on the Goldstar project is progressing almost on schedule with expectations of going on-stream in October 1991. This is chiefly because the company has absorbed the best talent in the sponge iron industry. For example, Srinath, their chief executive, was with Sponge Iron India Ltd (SIIL), when the first sponge iron plant was set up in the country. Also, marketing tie-ups have been worked out with Vizag Steel Plant in the neighbourhood and Bhilai Steel Plant. These large steel plants consume as much as 500 tonnes of sponge iron a day in the LD convertors as coolants.

The projected demand of sponge iron in India is at present 2.4 million tonnes per annum and the supply approximately half this figure. To meet this demand, several plants are coming up — Grasim's gas-based plant in Madhya Pradesh, Kumar Metallurgicals in Andhra Pradesh and HEGL in Raichur. But perhaps Goldstar will be the first among these to go on stream, says an industry spokesman.

Goldstar Steel & Alloy has a headstart over others as far as time, professional management and special relationships are concerned. So, this entrepreneurial alchemy may, perhaps, work and Goldstar could very well become a goldmine. ■

TO MOST PEOPLE IT WAS JUST ANOTHER ARTICLE

Milk glut likely
in city soon

TO NICHROME IT WAS A CHALLENGE TO BE MET

June 29, 1976, was the day when the above article was published in The Times of India. It gave information on Operation Flood and the need for automation in packaging a large quantity of milk everyday.

This was the article that helped Nichrome foresee the need and importance of reliable packaging solutions in India. And it gave them the inspiration to enter the field of packaging.

Nichrome took up the challenge and met it successfully by indigenously developing a Form-Fill-Seal machine – Filpack, to pack milk and other liquids in poly-packs.

Today Operation Flood is a success. It has also helped the co-operative movement and polythene industry grow. It has made milk freely available in poly-packs upto the taluka level. Nichrome's packaging machines played a considerable role in the success of Operation Flood.

Since then accepting challenges has become a way of life at Nichrome.

In the process Nichrome has clearly emerged as a pioneer and leader in packaging systems. Thanks to Operation Flood, The Times of India and Nichrome's clients who trusted them for packaging their products.

Nichrome now offers a state-of-the-art, indigenously developed fit and forget range of packaging machines, that guarantees speed, accuracy and economy. A range that packs solids, powders and liquids like milk and milk products, tea, coffee, detergents, snack foods, pharmaceuticals and chemicals.

Nichrome believes in offering total support. It has also developed and installed conveyerised, microprocessor based automation lines for packaging products round-the-clock.

Today, 600 Nichrome machines are successfully in operation in 80 cities in India and also in countries like Dubai, Oman, and U.S.S.R. The list of reputed clients manufacturing quality brands including multi-nationals is over 40 and growing.

After all, reliable brands must be backed by reliable packaging machines.

FENNER INDIA

Classic turnaround

The Singhanias of the JK group took over this company when it was gasping for breath in 1987, and have since successfully turned it around

Here is a classic turnaround of a company that went under but was revived and restored to health. In 1987, there seemed little hope for the industrial rubber belts manufacturer, Fenner India Ltd, the Indian subsidiary of Fenner UK. The company was in the red and steadily losing its earlier pre-eminent position in the market to competitors even though it was a 'dominant undertaking' for many products. But now, four years later, Fenner's situation seems to have undergone a sea change.

Fenner began operations in Calcutta in 1929 as a marketing outfit. In 1955, it changed its name to Fenner Cock Ltd and started manufacturing operations in Madurai. Again, in 1974, the company changed its name to Fenner India Ltd, when the foreign exchange regulations act came into being. It now manufactures V-belts, fan belts, conveyor beltings, automotive belts, industrial electronics, pneumatic power handling equipment and oilseals.

In 1986-87, the company ran into a loss of nearly Rs.2 crore on a turnover of Rs.40 crore. Two years later, in 1989-90, it had notched up a turnover of Rs.62 crore and a profit before tax of Rs.6 crore. The results for 1990-91 are currently being collated and company sources expect that they will match last year's performance. It thus appears that Fenner India is not only back and bouncing but also probably on its way to greater heights.

An Indian partner

In 1987, alarmed at the declining fortunes of its Indian subsidiary, Fenner UK decided that only an Indian partner, rather than professional managers, could stem the rot. In came the Hari Shankar Singhania branch of the JK group. Madura Coates, which held 25 per cent of the shares of Fenner India, disinvested in favour of the JK group. This set the Singhanias firmly in the driver's chair. They brought with them a new philosophy and a new way of doing things. Thus was initiated a process, the results of which are now being seen.

Says Raghupati Singhania, Hari Shankar's younger brother and vice-chairman of Fenner India, "Before we took over, Fenner was a typical foreign-managed company. Till about 1980, it was operating in a seller's market and pricing was on a cost-plus basis. This had led to complacency and also large overheads. So, when things started changing, the company could not cope up." His other contention is that, with expatriates at the helm of affairs, things got complicated. Each new boss was interested only in showing good results in the balance sheet during his tenure, and not in the long-term health of the company.

When the Singhanias took over, they realised that they had to change the way the company was run. Accustomed as it was to operating in a monopolistic situation, Fenner was floundering in the increasingly competitive business environment. This realisation, and the formulation and implementation of policies against this backdrop, helped the company to stage a comeback.

Problems identified

After changing the top management team pretty quickly — though Raghupati Singhania says, "We kept as many of the original team as possible" — the Singhanias quickly identified the specific problems which afflicted the company. Says R.C. Gupta, managing director, who left the Thapars to join Fenner, "There were several problems like high costs, overmanning, low productivity and badly managed finances. On each of them action was taken."

R. Singhania: coping with change

Fenner India headquarters: back and bouncing

Elaborates S.K. Budhiraja, executive director for finance, "We found that there was very heavy borrowing from the corporate world at rates of 22 per cent. This was necessitated by the fact that the cash inflow was very poor. Dealers were taking advantage of the lax management of the company and delaying payments. There were huge outstandings."

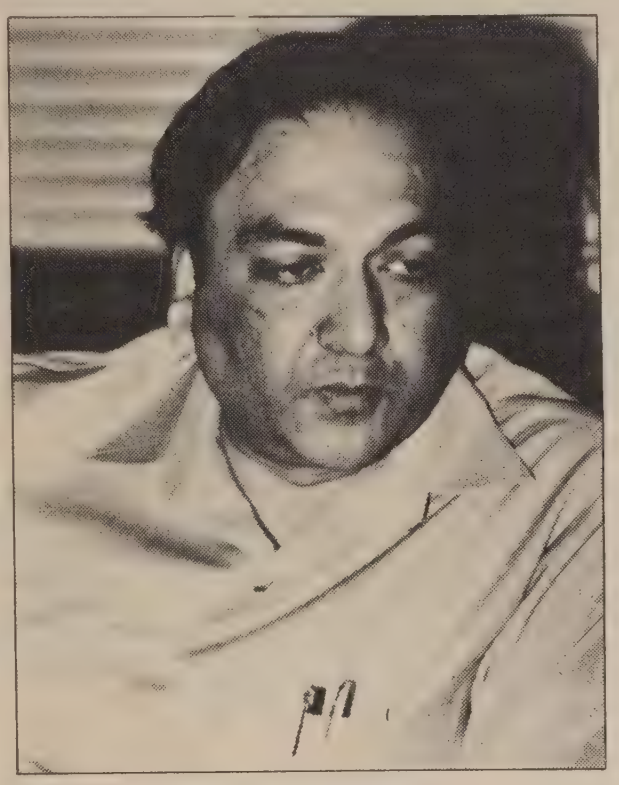
As a first step, the new bosses of Fenner tightened credit to dealers and recovered, the outstandings, at

least partially. Says Raghupati Singhania, "This generated enough cash flow and enabled us to fund additional working capital requirements. This saved us from having to infuse cash as normally happens in the case of losing companies."

A close look was also taken at costs. Again due to complacency, costs were very high. A massive cost reduction programme was initiated including substitution of certain materials, energy savings, stoppage of scrap wastage, and a reduction in the rate of rejects. To achieve further reductions in costs, the small plants in Faridabad and Calcutta were closed and shifted to Hyderabad. Now it has plants only at Hyderabad and Madurai.

At the same time, there was rationalisation of labour. Within 16 months of taking over, the Singhanias managed to reduce the manpower from 2,500 to 1,600. This was achieved through a voluntary retirement scheme which meant an average payment of around Rs.80,000 per retiring employee (including statutory payments). Simultaneously, the management entered into a revised productivity-based contract for five years with the workers.

The result of the last two steps was a 60-per-cent increase in productivity in terms of the manpower employed. Wage costs, which earlier comprised 14 per cent of the company's expenses, were reduced to 10 per cent.



Labour unrest

Though the management claims that industrial relations have remained "generally cordial" and that the trade unions have been by and large co-operative, there has been labour unrest. For example, in 1990, workmen at the Madurai plant resorted to a strike, which was followed by a lockout. That tangle was resolved only after three months and not before there was substantial loss of production.

On the marketing front too, the new managers had a daunting task. By 1987, the whole marketing team was out of gear and the dealer network was in a shambles. The team had no contact with the actual customers and this had led to improper product planning. Stocks of the Fenner products demanded by consumers were not available with dealers.

Worse still, newer companies in the field were taking advantage of Fenner's inabilty to service the market's demand. These included Hilton Rubber, Dunlop, Goodyear, Superseal and Andrew Yule. Not surprisingly, sales of some Fenner products in 1986-87 witnessed drops of as much as 30 per cent. And in a manner more suited to the public sector than the private, efforts to push goods were made only in the last quarter of the year, sometimes with discounts of as much as 80 per cent!

Says K.T. Reddy, executive director, marketing, who was drafted from JK Tyres: "First, we restructured the marketing department and shifted the marketing headquarters from Bangalore to

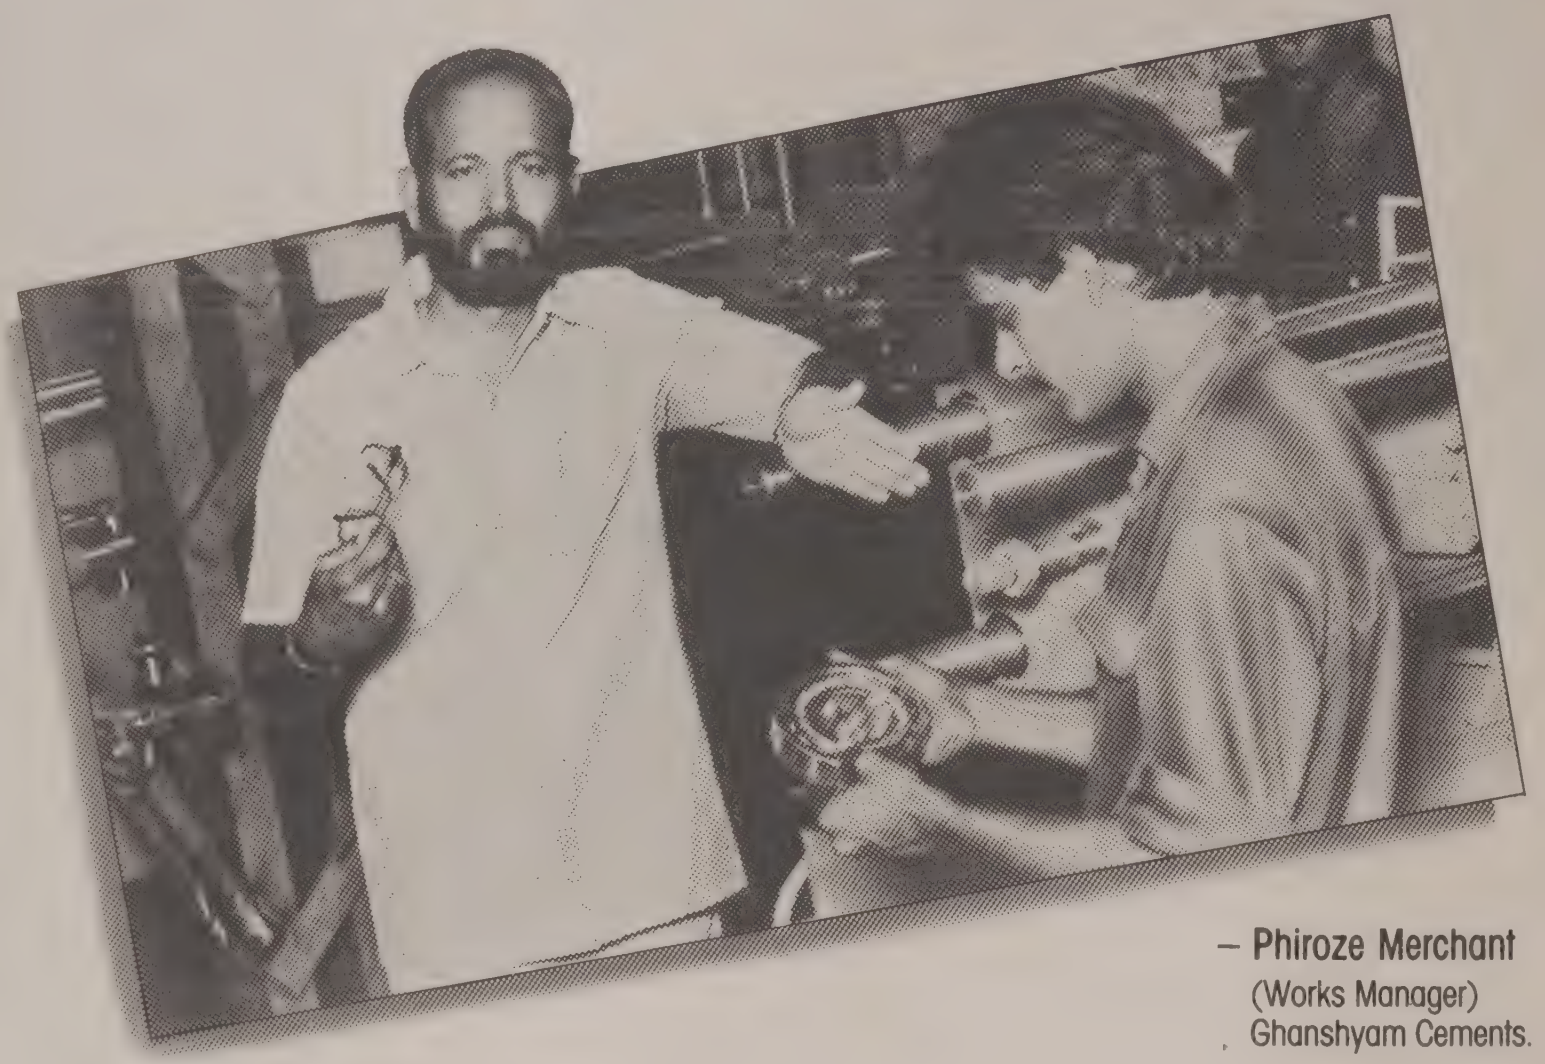
Gupta: product development

Hyderabad. Thereafter, the whole dealer network was reorganised — at the time of our takeover, a few distributors were controlling the whole show. This was rationalised and the structure was broadbased." The discount and pricing structures were modified and an effort was made to establish direct contact with consumers through personal meetings and seminars.

The Singhanias also looked closely at the company's product range. While in some cases it was decided to push sales of original equipment, in others the emphasis was shifted to replacement sales. Efforts were made to rationalise the product mix and an investment of Rs.7.5 crore was made for modernisation and balancing equipment. Says Gupta: "We also analysed where technology from Fenner UK could be brought in. On this basis, there was further product extension and a thrust on product development, especially in import substitution, energy saving and highly technical areas."

At an aggregate level, a renewed thrust was made for sales promotion and advertising, areas which had stagnated after 1985-86. Says Gupta: "We took steps to increase the visibility of the company and launched corporate and product campaigns to project ourselves as a multi-product company. We wanted to send the message that Fenner is a company which offers a total package in power transmission equipment." Now, with the company having stabilised, it is the perception of the management that the time is ripe for planning diversifications and engineering a quantum jump in turnover.

Established brand names



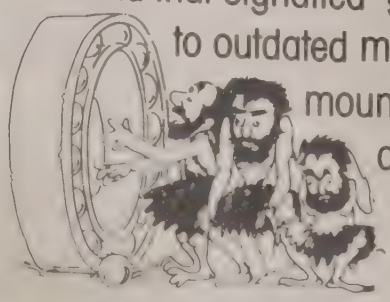
There are many losing companies in India which change hands, but not all of them manage to turn the corner and start to make money. Then how is it that Fenner India managed?

Says an analyst, who has worked for many years in Fenner before it came into the control of the Singhanias: "It must be remembered that Fenner is a company with established brand names. The brand name is of 1929 vintage in India. It has a sound technical base and is a subsidiary of a world leader in the field. It was doing badly only because of lack of proper direction. It is not as if the Singhanias had to establish the company; they only had to implement proper systems. To that extent, their task was not very difficult. Also to be noted is that Fenner was not an irretrievable case; it was down for only two or three years. Had it been losing for longer, things would have been much more difficult."

About his success with Fenner, Raghupati Singhania says: "We changed the whole culture of the company and gave a thrust to practical management. We had our goals clear and never shirked in taking decisions which we thought had to be taken. In fact, we never shied away from taking surgical steps. Thus, our policy has been to face the music rather than let problems linger on. This ultimately enabled us to put the company back on an even keel, even though it meant strikes and lockouts. And, of course, we were helped by the fact that there was no interference at all from Fenner UK." Gupta adds: "Being very effective bottomline managers was a key to our success."

That, then, is the story of the turnaround of Fenner. And, in a country like India where there are many sick companies, it clearly stands out as an example.

■ KINGSHUK NAG



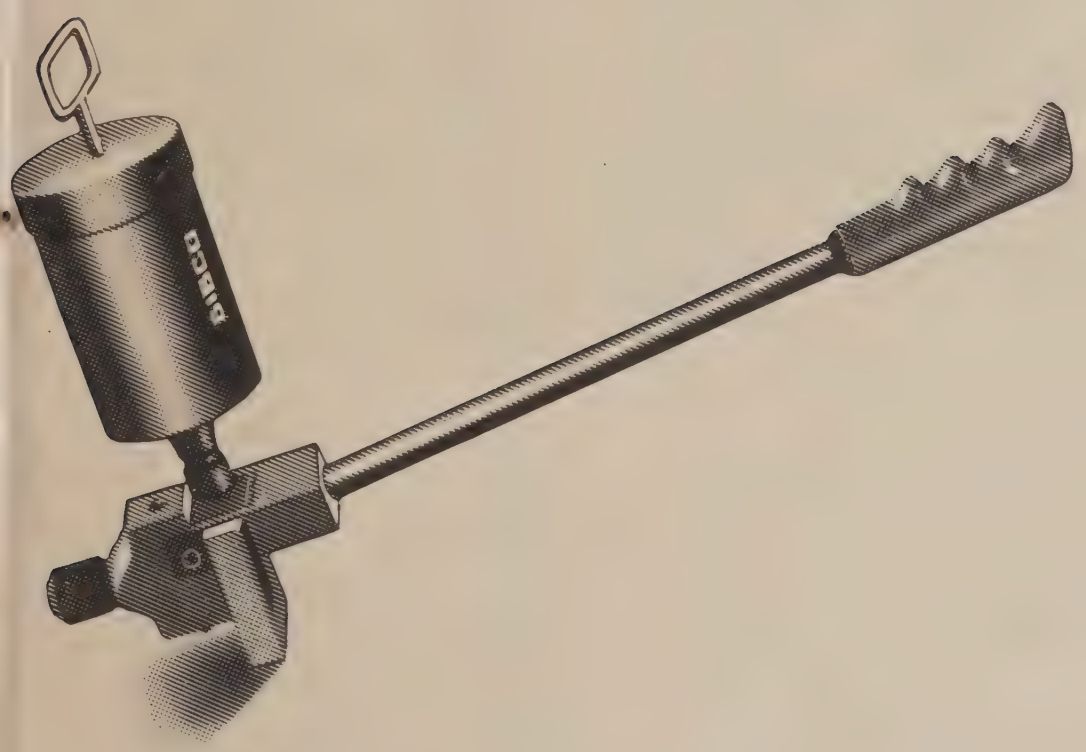
– Phiroze Merchant
(Works Manager)
Ghanshyam Cements.

"Imagine a load of manpower, struggling with 101 tools to mount or dismount large bearings. I've chosen the SIBCO® Oil Injection Pump instead"

On the factory shopfloor, 5 or 6 Fitters perpetually struggled to mount or dismount large size bearings with an array of crude tools and tackles.

Very often, at Ghanshyam, an entire shift was spent on this operation, so Merchant on a hunch, called SKF. "SIBCO® Oil Injection Pump!" they offered.

A new product concept. It eliminates the interference force by building up a thin oil film between bearing and shaft, thus making it possible to slide the bearing easily, on or off the shaft.



And that signalled 'goodbye' to outdated methods of mounting and dismounting large bearings!.

Skefko India Bearing Co. Ltd.
Mahatma Gandhi Memorial Building, Netaji Subhash Road, Bombay-400 002. Phone-313567.

L INJECTION PUMP FOR OUNTING/DISMOUNTING LARGE EARINGS USING OIL PRESSURE.

- A quick and easy hand-operated process.
- Can be used for mounting/ dismounting bearings above 180 mm bore dia.
- Protects fits and tolerances of shaft and bearing respectively.
- Has an oil release valve so that oil can flow back into container.

Yes! I am interested in **Oil Injection Pump.**
So please provide me: (Please tick ☑)

1. Price details ☐
2. Technical Specifications ☐
3. Sales Discussion ☐
4. Demonstration ☐

BEARING*PLUS*

I also understand that your 'Bearing Plus' programme covers various other advanced and innovative bearing maintenance products.

I therefore request you to recommend and send detailed information on only those products which will help solve my bearing maintenance problems like:
(Please tick ☑)

1. Under/Over lubrication ☐
2. Damage of shaft while dismounting bearings ☐
3. Uneven heating of bearings ☐
4. Mounting/ Dismounting of large bearings ☐
5. Others (specify if possible) ☐

I look forward to welcome this new era of TROUBLE FREE OPERATION. Let me introduce myself:

Merc Luck

Use your MERCARD and win a trip to SINGAPORE and back

Merc Luck.

A great new scheme from Mercard.

Here's your chance to win a trip to Singapore.

Make all your purchases with Mercard.

And you become eligible to participate in this scheme.

Remember two things.

One — the more you use your Mercard, the greater are your chances to win a prize — and there are many wonderful prizes too!

Two — you have a chance every month to win a prize.

First Prize: One ticket to Singapore and back or Mercard Gift Vouchers worth Rs.7,000/-.

Second Prize: A holiday to any place of your choice to the value of Rs.4,000/- or Mercard Gift Vouchers worth Rs.4,000/-.

Third Prize: A Titan watch worth Rs.2,000/- or Mercard Gift Vouchers worth Rs.1,500/-.

And 15 Better-Luck-Next-Time prizes of Mercard Gift Vouchers worth Rs.200 each.

Get going with your Mercard.

If you don't have a Mercard, call us at 525221/520015.

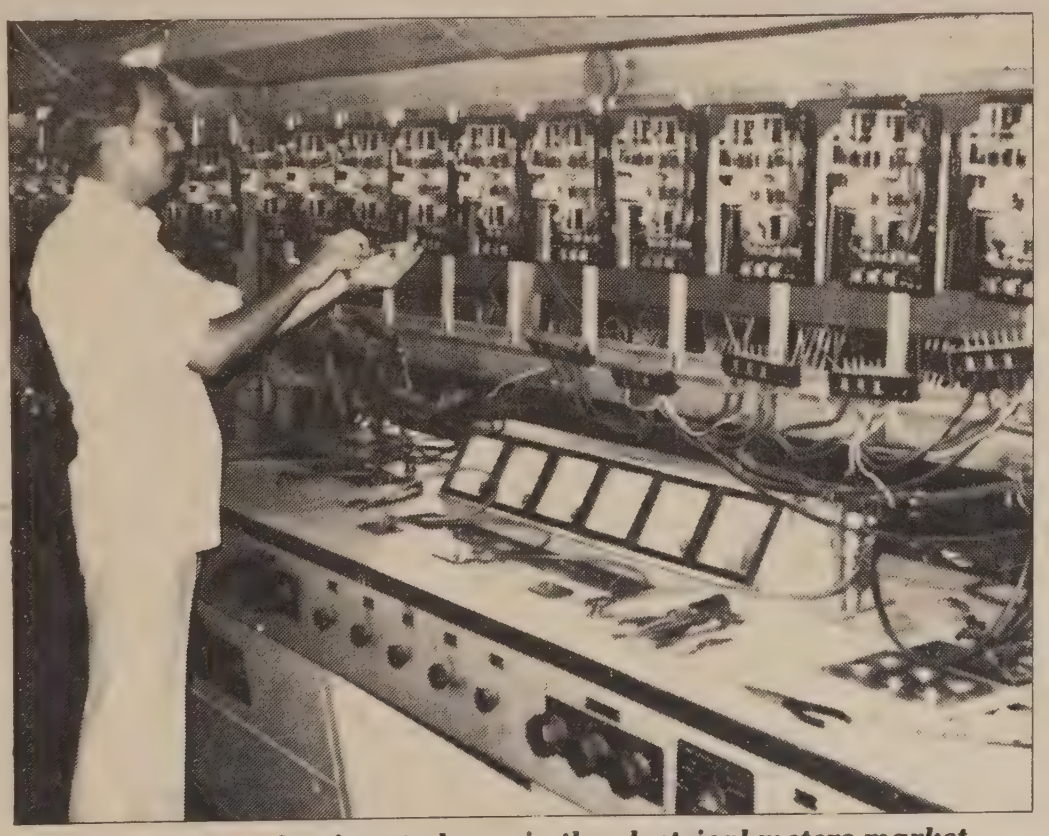
JAIPUR METALS AND ELECTRICALS

Meter slows down



Despite a major share of the equity going to the workers, the company's performance has not improved considerably. There are problems galore and even the diversifications planned are not likely to boost the bottomline

Six years ago, Jaipur Metals and Electricals Ltd (JMEL), the electrical meters manufacturer, became one of the first companies in the country to hand over a controlling equity stake to its workers. By then, the financial condition of the Jaipur-based company, owned by the Kamanis, was in a shambles. The agreement — worked out at the instance of the Rajasthan state government in January 1984 — gave the workers 60 per cent of the equity, in return for a wage freeze for the next five years. The state government kept 20 per cent of the equity and the balance was picked up by the financial institutions. But after an impressive performance in the first few years, JMEL is now gasping for breath once again.

In the first year after the agreement, the company had posted a gross profit of Rs.2.85 crore, with the net profit reaching Rs.1.01 crore. Factors that helped the turnaround were the wage freeze, financial reliefs and concessions (the interest rate on working capital, for example, was lowered to 13.5 per cent per annum, and a waiver of penal interest and other relief to the tune of Rs.1.36 crore eased the financial pressure greatly) and the company's reputation for quality products (which had remained unblemished through the long slide into the red, keeping customers still loyal).

The efforts of the workers and the management to raise production levels also helped a lot. The Rs.75 lakh the company earned when it sold 30,000 sq metres of prime land in the same year came in useful. Says Inder Singh Kavadia, the then chairman and managing director, "The decision to sell the land was taken because it had become necessary to mobilise resources quickly."

Set up in 1943 by the Kamanis, the company's losses by the end of 1983-84 stood at Rs.5.75 crore. By that time, the entire capital employed had been eroded and the Kamanis had lost interest in the company. In fact, they had wanted to go in for a 'voluntary liquidation' as early as 1977, but the government had baulked. Seven years later, when it engineered an equity-for-wage-freeze deal, the main purpose was to safeguard the interests of the personnel who would otherwise have lost their jobs.

Inside the plant: dominant player in the electrical meters market

Decline in performance

The company's best year was 1986-87 when net profit touched Rs.2.98 crore on a turnover of Rs.18.13 crore — a net margin of 16 per cent. Profitability since then has been declining. During the five-year period 1986-91, while turnover grew nearly two-and-a-half times, the gross profit went up by only Rs.43 lakh. And net profit declined over three-and-a-half times during the same period.

The decline in performance had begun in 1988-89. One reason for the debacle was a 27 per cent hike in the minimum wage by the government in August 1988 which raised the daily wage from Rs.11 to Rs.14. In August 1990, the government raised the minimum wage again to Rs.22 per day — a 57 per cent hike. Also, the power tariff went up by 22 per cent from Rs.1.20 to Rs.1.46 per unit in April 1990.

The company retrenched about 500 apprentices after the first wage hike, paring the staff down by a fifth. But the layoffs cost it Rs.41 lakh, though company officials claim that nobody was given a golden handshake. It has not laid off any more employees since. Net profit per employee which was Rs.12,040 in 1986-87 declined to Rs.4,100 in 1990-91. However, turnover per employee increased by the same ratio during the period, indicating that labour productivity has not been responsible for the decline in profits.

Profit margins are expected to fall further in the next year. Ranjeet Singh Kumat, the present chairman-cum-managing director, says that though turnover is projected to touch Rs.93 crore in 1991-92, net profit is likely to be only Rs.2 crore. One explanation for this is the hike in wage and power bills. Two other factors that have contributed to the poor progress are the company's rising interest burden and its dependence on imported raw materials. (In 1991-92, JMEL will import 3,000 tonnes of copper cathodes valued at Rs.32 crore for its continuous casting plant.)

Interest and finance charges which were only Rs.1.11 crore in 1987-88 doubled to Rs.2.23 crore in 1989-90. And though Kumat claims imported copper cathodes are Rs.3,000-3,500 cheaper per tonne than those available domestically from the Minerals & Metals Trading Corporation (MMTC) and Hindustan Copper Ltd, and better in quality, the high cash margins on letters of credit make extraordinary demands on JMEL's working capital. The company employed working capital of Rs.21.50 crore in 1990-91 compared to Rs.15.37 crore in the previous year. However, during the same time, turnover went up by only Rs.4.2 crore, showing that it was managing its working capital poorly.

Kumat's assessment is that he will need

only Rs.16 crore in working capital this year to touch a turnover of Rs.93 crore, an argument difficult to accept, given the recent performance. Further, even this amount is not provided for — there is a Rs.4-crore shortfall as the company's bankers (State Bank of Bikaner and Jaipur, Central Bank and Oriental Bank) have offered only Rs.12 crore till now. Their explanation is that they are currently reassessing JMEL's working capital needs and may release more money soon. Says the company's general manager, G.K. Purohit, "We do not have any problems on account of working capital." Bankers admit that JMEL is "not a bad account" but the shortfall remains unfilled.

P.N. Singh, the representative director of the workers on the company's board, is very sceptical about its prospects. "I am very dissatisfied with the performance," says he, "serious problems still remain." One problem is the heavy outstandings with the state electricity boards (SEBs). JMEL being a dominant player in the electrical meters market — it has a 25 per cent market share and is a regular supplier to SEBs — these account for almost half its turnover. Yet, it has been unable to collect its dues from the SEBs. Outstandings with the SEBs stood at a high Rs.10.50 crore in 1989-90. Thus, by ringing up sales for which it did not get paid, the company has increased its need for working capital. As a result, finance and interest charges soared. If it is serious about making a recovery, this increase in expenditure should stop.

Search for a foreign collaborator

To make matters worse, the market for electrical meters has not grown at all in the past 3-4 years. JMEL will thus be forced to diversify, if it expects to meet its projected increase in turnover. The management seems to be aware of this, judging by its plans to diversify into switchgears, fuses, air circuit breakers, oil circuit breakers and aluminium, cobalt and nickel permanent magnets. It also plans to export electrical meters to South East Asia — it has recently expanded capacity to this end — but no export orders have yet been received. Plans are also afoot to make electronic electrical meters and the company is now looking for a suitable foreign collaborator.

Unfortunately, the diversifications planned are into relatively low-margin products which will not really boost the bottomline. Also, the company will then have to compete directly with electricals giants like Crompton Greaves which has already established a commanding presence in these segments.

Besides this, JMEL had planned to shift the focus from electrical meters to copper rods for which demand and supply are so mismatched that the company currently earns a premium on their sale. But its new continuous casting plant — for melting, casting and rolling rods under one roof — which was scheduled to start commercial production in October 1988 began doing so only in April 1989. And soon after the imported Finnish plant went on stream, it developed snags. Also, a major breakdown in the induction melting furnace caused a shutdown. Says K.V. Srinivasan, general manager works, "All the problems have now been sorted out."

It had better be so, if the unique experiment in worker ownership that began in 1984 is to work. Otherwise, the landmark step JMEL took that year will turn out to be just another fiasco.

SATYA GROUP

Chequered success

Unfazed by a few reversals, the Calcutta-based multiproduct business house continues its climb into big league industry with a package of hi-tech diversifications and expansion plans

The rise of traditionally managed business houses in Calcutta, several of which have gone on to become prominent industrial groups in the country, has always been considered something of a phenomenon. The Khaitans of the Satya group of companies based in Calcutta, and one of the fastest-rising business groups today, are no exception.

From a small-time manufacturer of jute bobbins four decades ago, Satya Narain Khaitan, chairman of the Rs.100-crore group, which has interests in areas as diverse as wire drawing, metallurgy, machinery components, steel-making, pharmaceuticals and the consultancy business, has indeed come a long way. Further, the group's ambitious modernisation, expansion and diversification plans totally worth around Rs.350 crore and aiming for a turnover between Rs.400 to Rs.500 crore by the mid-nineties, is expected to shortly catapult it into big league industry. "The coming few years will be crucial," says S. N. Khaitan, "as they will be the take-off period for the group."

The eighties saw a great deal of reorganisation within the group and also the emergence of S.N. Khaitan's five sons who began playing a more active role within the companies. While eldest son Anil is vice-chairman, Sunil Khaitan, along with Sushil Khaitan, looks after the group's flagship Shalimar Wire Industries Ltd (SWIL). Sudhir Khaitan looks after Anil Steel and Umesh Khaitan is managing director, Shalimar Industries Ltd, which is a closely held company and is not quoted on the stock exchange.

Competing with the British

The 2,500-strong group started out humbly enough in 1947, when S.N. Khaitan started manufacturing accessories meant for jute mills. Shalimar Works, as the unit was known then was set up at Howrah, near Calcutta. In 1954, the company's name was changed to Shalimar Wood Products Ltd, and in the sixties to Shalimar Industries (P) Ltd. The company gradually expanded its activities over the years and also diversified into wire drawing through a number of technology tie-ups with foreign collaborators.

It was in the sixties that the wire drawing reached a significant proportion and (in 1962) Shalimar Wire Industries Ltd was formed (the company came to be known as SWIL in 1984). The company's share capital is Rs.2.66 crore and is widely held: about 40 per cent is with the Khaitans, 26 per cent with the financial institutions and the rest with the public.

The group has four major divisions, of which SWIL, with a turnover of Rs.47 crore last year, is the flagship company and accounts for nearly 50 per cent of the group's activities. SWIL, with factories in Uttarpara in West Bengal and Nasik in Maharashtra, specialises in the manufacture of non-ferrous Fourdrinier wire cloth, synthetic wires and Dandy rolls for the paper industry, as well as copper alloy wires and strips for various sophisticated end uses required by the atomic energy plants and the telecommunication and electronics industries in the country.

These products accounted for the quantum jump in the company's turnover and profits over the last five years. From a turnover of Rs.14 crore in 1986, SWIL last year (1990-91) made Rs.47 crore in sales, and posted pretax profits of Rs.6.25 crore, against Rs.4 crore the previous year.

A big factor behind SWIL's recent performance has been the change for the better in the paper industry. Of SWIL's turnover, Rs.20 crore come from products meant for paper mills (this segment accounts for nearly 45 per cent of SWIL's activities). With the paper industry looking up after a long recession, some of the benefits have rubbed off on SWIL.

In the future, though, Anil Khaitan would like to reduce SWIL's dependency on paper mills by about 15 per cent, and concentrate instead on hi-technology metallurgy projects so the company can achieve its projected turnover of Rs.400-500 crore by 1995. Priority will be given to the company's new, Rs.250-crore copper project to be commissioned near Bombay in the next couple of years. SWIL has already received the letter of intent for the manufacture of copper cathodes in technical collaboration with the international company, Austria Metal, with whom an MoU has been signed. At present Hindustan Copper is the largest manufacturer in the business.

Anil Khaitan: stress on growth

A substantial portion of the copper project will go towards captive consumption in providing basic raw material to SWIL's wire drawing unit at Nasik. A Rs.16-crore project for castings, also at Nasik, and modernisation of the looms for synthetic wire cloth at the factory at Uttarpara are also on the cards.

Though the exact details regarding the financing of the copper project has not

Photos: Sajal Bose

S.N. Khaitan: getting ready for take-off

been worked out yet, Anil Khaitan says the money will be raised through a blend of internal accruals and market borrowings. For its immediate needs however — for the modernisation project and the castings unit — SWIL intends coming out with a debenture issue of Rs.20 crore towards the end of this year. An additional Rs.8 crore will be raised through private placements and deferred payments.

make Rs.25 crore, at least, from exports. Also, SWIL's decision to set up a Rs.25-crore wire drawing plant in Indonesia is aimed at getting a grip on the foreign market.

"The emphasis in the future," says S.N. Khaitan, "will be on value addition and the new projects have all been designed with that end in view." Unlike in the seventies and the early eighties, the diversifications

Loom for wire cloth at the plant in Uttarpara: major expansion on the way

SWIL intends to go in for a significant expansion in capacity in order to increase its 65 per cent share in wires, wire cloths and strips in the domestic market. SWIL also has plans to make its presence felt soon in the international market, mainly in south east Asia, and partly in the US where it is currently exporting strips.

Advantage of monopoly

According to a competitor, SWIL's main strength is its near monopoly in wires. However, in wire cloths and strips, he disagreed that it had the lion's share of the market — BRALCO, India Smelting and SWIL are almost equally big, he claimed. As for quality, he said SWIL's product was not superior to the other companies' products, but as it had been in the market for years now, the SWIL product was reasonably good.

Last year, SWIL's exports touched Rs.1.10 crore; this year the company is aiming for Rs.4 crore. "Exports is going to be a major thrust area for us," says S.N. Khaitan. However, he qualifies this by saying that unless government incentives were forthcoming, it would be difficult to contend against price discriminations. By 1995, Khaitan hopes the company will

have been well-thought out. The earlier diversifications into the unrelated areas of steel and pharmaceuticals had produced mixed results. Anil Steels, a group company based in Jaipur which has a turnover of Rs.18 crore, has done moderately well. The group's diversification into pharmaceuticals, however, was a major disaster.

Sunil Synchem was set up in 1973 (in Alwar, Rajasthan), with a capital investment of Rs.1 crore to manufacture empty gelatine capsules. The company also decided to set up a Rs.2.5-crore drug unit to produce a hypertension drug, Methyl Dopa, as a 100 per cent import substitution. The drug unit was jinxed right from the start. The Khaitans say that they first had problems with the foreign collaborators and later the government took an inordinately long time to fix the price. By the time the price was finally determined, there was a hike in the import duty of the raw material for the drug and, together with low capacity utilisation, the company became sick by 1982.

A source in the industry, however, thinks Sunil Synchem became sick because of mismanagement and because the Khaitans had no experience in the field. He discounts the suggestion that the import duty hikes were a major cause of the sickness, because other companies in the field are doing roaring business.

The Khaitans have worked out a scheme for the company's revival with the IRBI, which was presented to the BIFR and includes an interest waiver. But the renewal plan has been rejected by the REICO and RFC (the Rajasthan Financial Corporation and Industrial Development Corporations) who have refused to agree to the waivers. In the meanwhile, the Khaitans have been successful in obtaining a stay order from the BIFR to prevent winding up operations.

Shalimar Industries Ltd (SIL) which is currently looked after by Umesh Khaitan, is the oldest plant in the group, having been set up in 1947. SIL, which has at present a turnover of Rs.13 crore, and profits of just under a crore, continues to manufacture jute mill accessories such as pins, shuttles and staves. Apart from this unit, the division also has a similar unit which produces accessories for textile mills.

SIL has recently gone into thermal plastics, manufacturing UHMWP (ultra high molecular weight polymenthene) sheets, which are widely used in material handling plants and also in paper mills. With this foray, and the substantial expansion in its existing wire drawing division (which manufactures all kinds of ferrous wires) the division hopes to grow by Rs.6 crore this year.

Spelling out the group's corporate policy, Anil Khaitan says, "Throughout, our philosophy has been towards organic growth. We would prefer to grow as we earn — no overtrading." One area which the group intends concentrating on is financial management. "We have taken a conscious policy not to divert working capital for long term investment, as we don't want to get short on funds," he says.

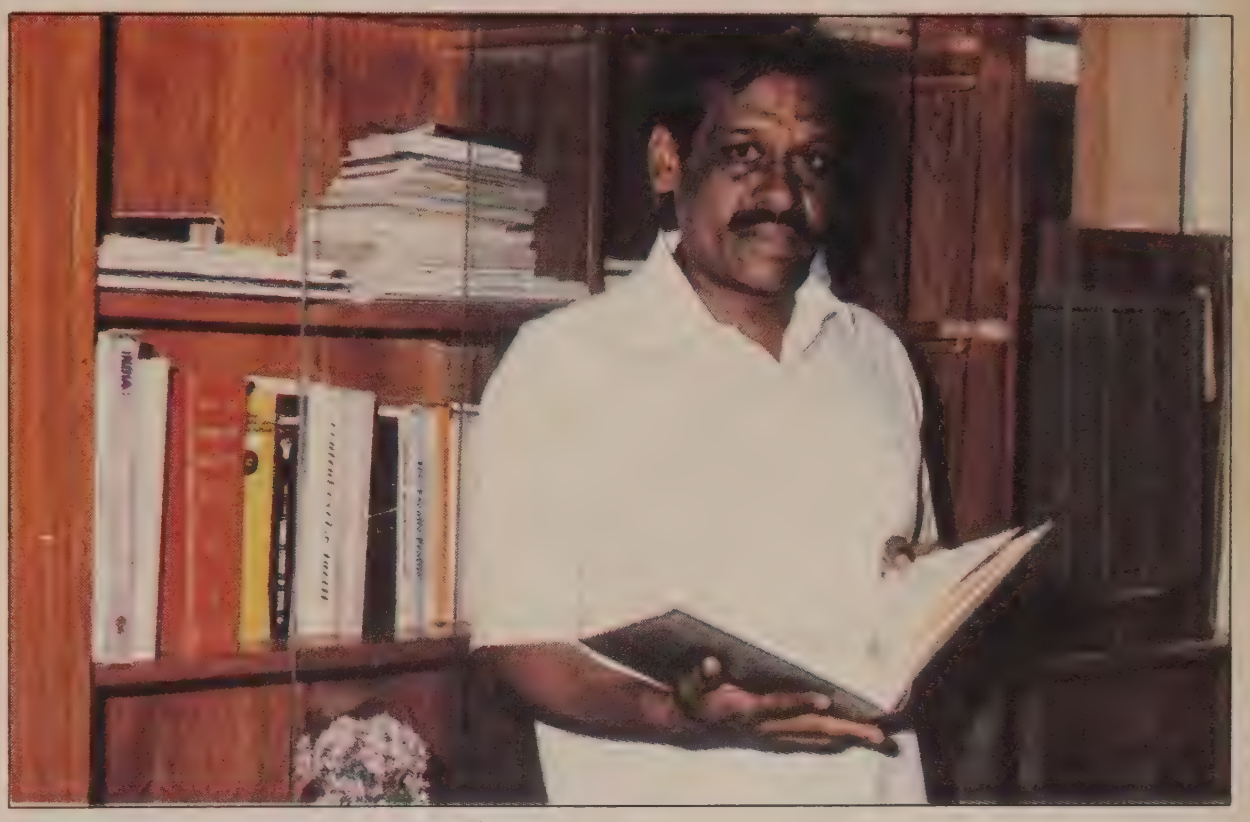
Though Anil Khaitan emphasises that the group's policy leans towards decentralisation, and the management comprises a healthy blend of family and professionals, policy matters and decision-making are invariably left to the Khaitan father and sons. Anil Khaitan, who enjoys the bulk of the responsibility currently, is brimming with fresh ideas. "We don't believe in the *lalaji* type of management here. We believe in keeping up with the times. Our survival has been based on this concept." The next five years should, hopefully for the group, bear witness to this assertion.

■ MADHUMITA BOSE

MYSORE LAMPS

Shining bright

Aggressive strides in production and modernisation undertaken by the chief executive have brought the company out of the woods



The going has never been as bright for Mysore Lamps Works Ltd (MLWL), the Bangalore-based manufacturer of electrical lamps and lamp components, as under the chairmanship of the tough and businesslike IAS officer, Chikkappaiah Muniswamy. The company which was doing fairly well till 1985-86, found huge stocks piled up in 1986-87. An inventory in June 1987 valued the stocks at an astounding figure of Rs.7 crore! Panic-stricken, the MLWL management decided to lay off half the workers and operate on a single production shift. It was at this crucial juncture, in July 1987, that the sagging fortunes of the 55-year-old state government undertaking was placed in Muniswamy's hands.

Production boost

Muniswamy worked steadily, launching strategic schemes not only to clear unsold stocks but boost production as well. The slogan he coined, "Make *me* (obviously MLWL's product) available, I will sell myself" worked as a psychological booster. As a result, unsold stocks of Rs.7 crore was disposed off in five months (August-December 1987). Production went up with the introduction of another shift. Results began to show.

The company earned a net profit (profit after tax) of Rs.18.60 lakh in 1987-88 against a loss of Rs.35 lakh in 1986-87. The company is estimated to achieve a profit after tax of Rs.1.7 crore during 1990-91. Turnover which was a mere Rs.20.58 crore in 1986-87, reached Rs.25 crore for the year ended 1988 in addition to a cash profit of Rs.1.19 crore. This reached Rs.52 crore in 1990-91 — a rise of 150 per cent and an achievement of sorts for a public-sector undertaking. Turnover is expected to reach Rs.70 crore during 1991-92.

All this was Muniswamy's magic at work. He made his colleagues in the marketing department realise that "the market is not saturated and there is no reason to panic. There is actually no brand preference as far as lamps are concerned." Earlier, MLWL's products were marketed in south India only. After Muniswamy joined, the marketing department was instructed to intensify marketing in the south while making these products available in other parts of the country as well.

Muniswamy: strategic overhauling

Production figures 1990

Name	GLS *in million*	FTL *in million*	HPMV *in '000*	HPSV *in '000*
Philips	82.40	11.50	318.80	141.70
Sylvania	34.30	5.00	41.50	-
HMT	22.20	1.80	260.40	18.90
Bajaj	30.50	5.00	—	—
Surya	19.70	10.40	—	24.00
Mysore Lamps	21.60	4.60	229.00	240.00

Says K.L. Subash, general manager, marketing, "Before Muniswamy took over, we were marketing in eight states. After he joined, we opened offices at Calcutta, Indore, Jabalpur, Jaipur and Bhubaneshwar and depots at Madurai, Vijayawada, Meerut, Hubli and Nagpur. Besides, we also opened new marketing offices at Bangalore and Ahmedabad." According to H.R. Linganna, technical director, HMT, who was earlier executive director of HMT's lamps division in Hyderabad and one of Mysore Lamps' main competitors, "At Mysore Lamps, Muniswamy has provided freedom to the marketing staff. He encouraged the marketing department in such a way that their products could be made available in the market."

What was lacking at Mysore Lamps was leadership. This came in with Muniswamy who instilled adequate confidence in the employees and boosted their morale. Says Shekar Bajaj, managing director, Bajaj Electricals, "Muniswamy has been very dynamic during the last few years. The company has progressed well under his leadership." Adds K.C. Varadaraj, partner, Kumar Enterprises, the leading distributor of Mysore Lamps' products in Bangalore, "The quality of Mysore Lamps products improved after Muniswamy took over. We have a good relationship with the company now."

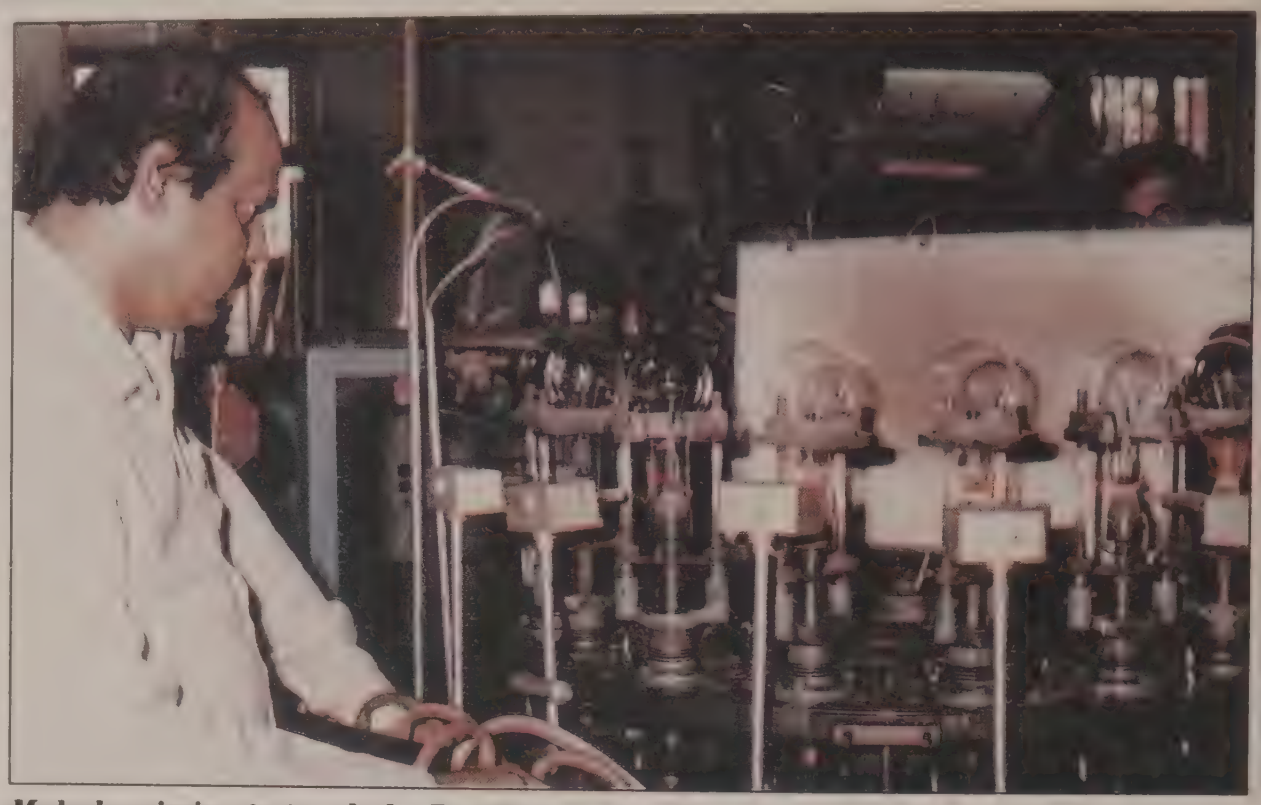
Increased efficiency

At the time Muniswamy took over, the value of production was Rs.17 crore which during 1990-91 went up to Rs.31 crore. Simultaneously, capacity utilisation shot up from 60 per cent during 1988-89 to 83 per cent in 1990-91. Says S. Seetharam, general manager, finance and secretary, Mysore Lamps, "While value of production during the same period went up by 20 per cent, there has been a marked increase in efficiency. Despite inflation our cost of production has actually gone down by 2 per cent."

MLWL has the fourth largest share of the lamps market after Philips, Crompton Greaves and Bajaj Electricals. It holds the largest share, 30 per cent, in

the mercury vapour and sodium vapour lamps segment. The company has a capacity for manufacturing 30 million glass shell components a year to which a capacity for making 18 million more will be added this month. Says J.G. Mahale, general manager, manufacturing, "The additional glass shell components will be supplied to small-scale manufacturers who will be working for us. We too will increase our production marginally while the larger production will be met by the ancillary units."

Adding turnover



The company has already sponsored an ancillary complex at Kolar in Karnataka. Sixteen units will be set up there to manufacture GLS (conventional man-selling lamps) lamps, fluorescent lamps, and glass shell components for luminaires (luminaires are light boxes with two or more fluorescent lamps or tubes which are used for lighting up commercial premises) which will go on stream by next year. When the sixteen units at the ancillary complex begin production, this will help the company add a turnover of Rs.25 crore per year. Adds Mahale, "That's how our turnover for 1993-94 will touch the Rs.100-crore mark." Says Shekar Bajaj, "Mysore Lamps is aiming at a bigger market share by buying products from the SSI sector and others."

Gradually, MLWL's investments in its production infrastructure will reduce and the company will be buying more items from smaller units in Karnataka, Kerala, Tamil Nadu and West Bengal. Says Mahale, "We don't wish to invest more on GLS lamps, a low-tech area. The ancillaries will be able to supply our requirement. Instead, there will be new capacity at MLWL, by end-1992, for the manufacture of certain new hi-tech products like halogen lamps, metal halides lamps, etc. These are also energy-saving lamps." Also, most of the machines at MLWL's factory are more than 30 years old. These will be phased out and disposed off to the ancillaries making way for more modernised techniques.

In fact, Mysore Lamps has of late been involving itself in trading of bought-out items, rather than production. For example, during 1986-87, the share of traded items in its total turnover was 11 per cent and this went up to 32 per cent in 1990-91. Says Subash, "Using the same marketing force, our share of traded items has gone up."

MLWL has also been exporting sodium and mercury vapour lamps — during 1989-90, products worth Rs.40 lakh were exported. The company expects to sell lamps valued at at least Rs.50 lakh to Zambia this year. Also, MLWL is perhaps one of the few Indian electrical companies which has a joint venture with Premier Electrical Industries in Nepal. MLWL assists them in production and marketing of bulbs. The company also has offers from Ethiopia and Zambia to help set up factories there to manufacture GLS lamps, fluorescent lamps and lead-in wires.

MLWL is the first state undertaking in Karnataka where the state government has decided to reduce its stake from 72.26 to 51 per cent through a proposed 1:1 rights issue. An application for this is yet to be made to the CCI but this will help the company double its equity capital from Rs.67.37 lakh. Says Seetharam, "The rights issue will enable us to raise Rs.2.12 crore, if the Controller of Capital Issues allows us a premium of Rs.20 per share. Of this, Rs.1.5 crore will be added to the working capital, while the rest will be used for modernisation programmes."

Mahale: aiming to touch the Rs.100-crore mark

The luminaires market has been growing at the rate of 15 to 18 per cent every year. Realising this potential, MLWL also takes up lighting systems for related turnkey contracts. While these jobs are confined to industrial customers, they provide the company an opportunity to sell electrical fittings. Set up in 1989, MLWL's lighting systems division achieved a turnover of Rs.60 lakh during 1989-90, followed by Rs.2 crore in 1990-91. Says Subash, "We are trying to explore this avenue of business (lighting systems) more aggressively."

New areas

The company also plans to enter other areas of marketing such as high-mast lighting — this will provide an opportunity to sell not only its services (lighting solutions) but also its lamps and fittings. Adds Subash, "In 1991-92, we should be able to sell four such systems (each costing Rs.7 lakh) and 15 to 20 in 1992-93."

The rights issue will help MLWL augment funds at a time when nationalised banks have slashed their credit limit from Rs.6 to Rs.4 crore.

Although MLWL's discounts to its dealers is not as high as what other companies offer, Muniswamy is not worried about the company's performance in the share market as long as the quality and price is maintained. Notwithstanding the discount rate, the dealers are happy. Enthuses B. Lalchand, proprietor, V.V. Electricals, Bangalore (who deals not only in Mysore Lamps but also in Philips), "The products of Mysore Lamps are as good as the others, if not better. The company treats us well and we do not have any problems in getting defective lamps replaced. Deliveries are made on the same day.

Mysore Lamps has certainly left its dark days behind. Its aggressive strides are only likely to make its rivals sit up and think.

■ DEVAPRASAD PUROKAYASTHA

COTTON

Ad hoc policies and political lobbies

Instead of the government being a balancing agent on the cotton economy, it has, with the Cotton Advisory Board, made arbitrary decisions based on political motivations

The forex crisis has led the Indian government to promote a variety of exports, never mind if there aren't exportable surpluses or if domestic prices are shooting up. If the exports are agricultural produce so much the better. Cotton is a good example of such a commodity. Without a comprehensive policy, ad hoc decisions from year to year depend on the vagaries of the political climate.

Domestic consumption this cotton year (October 1990 to September 1991) is expected to be 12 million bales while domestic production is estimated at 11.5 million bales. But the government wants to export 13 million bales of cotton. The decision has raised questions about the government's role as a regulator of the cotton economy.

Some amount of regulation has been seen in the past as necessary to balance the interests of the farmers, the traders and the textile industry. A regulatory body like the Cotton Advisory Board (CAB) seemed a necessity. Yet the changing motivations behind the decisions taken by the body, and the zig-zags in policy which have resulted have played havoc with the entire cotton economy.

Exports stabilise the market

Says K.N. Ardhanareeswaran, union textiles secretary: "The government has decided to export at least 500,000 bales every year even in bad years. Otherwise we cannot break into the international market." Adds a senior official of the ministry of agriculture: "Exports stabilise the domestic market and ensure remunerative prices for farmers. Without exports domestic prices tend to tumble."

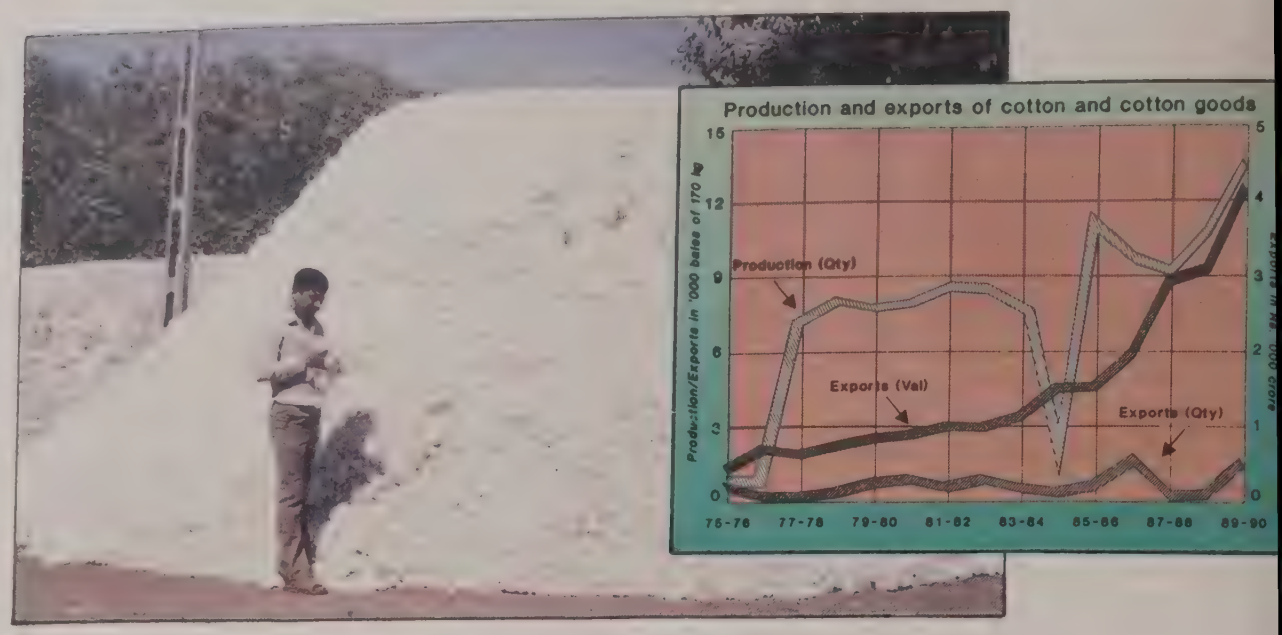
Analysts, however, question the decisions. Domestic cotton prices have rarely fallen below the prescribed minimum support price in the past ten years. The textile industry strongly opposes raw cotton export at the cost of the domestic market. Says Ajay Shriram, vice-president of the Northern India Cotton Textiles Mills Association (NICTMA): "The forex earned per 100,000 bales of cotton exported is just Rs.50 crore. Converted into yarn the earning is Rs.90 crore. For fabric exported, the forex earned is Rs.125 crore; for made-ups, Rs.160 crore and garments, Rs.240 crore. So from the point of view of forex it makes no sense to export raw cotton."

Cotton crop: even basic estimate is debatable

As an official of the Cotton Corporation of India (CCI) points out: "The whole export business has been Devi Lal's one point programme to benefit farmers." In fact, the major beneficiaries are a handful of traders who control over 70 per cent of the cotton trade, many of whom have political links.

The basic estimate of the crop size is itself a subject of debate. Crop estimates are decided by what seems like wild guesswork: though the cotton year starts in September, realistic estimates are not possible before December when a major part of the crop arrives. Yet in early November, the CAB meets to make an estimate of the crop size.

On the board, chaired by the textile commissioner, are representatives of trade, industry and growers who have mutually conflicting interests. The estimate of the board is then often a 'consensus' figure, perhaps unrealistic, but acceptable. Or else the estimates reflect the views of the strongest lobby that year in the CAB.



Awry estimates

This year the CAB's estimates were wide off the mark. In November, December and March, the board revised its crop estimates from 12.9 million to 12.2 million and finally to 11.5 million bales. Maharashtra crop estimates were downscaled from 2.4 million to 1.5 million bales.

According to Ardhanareeswaran, crop estimates were lowered due to prolonged rains and scattered pest attacks. Why then was a decision to export taken in November? In this case, the crucial difference in the crop estimates almost exactly equals the amount that was earmarked for exports.

The immediate effect of the export announcement in November, followed by two more, was to send prices soaring in the cotton market. Points out a Cotton Corporation of India (CCI) official: "It was a bad idea to announce the entire quota at the beginning of the year. The second announcement should have come only in December-January when the crop starts coming in."

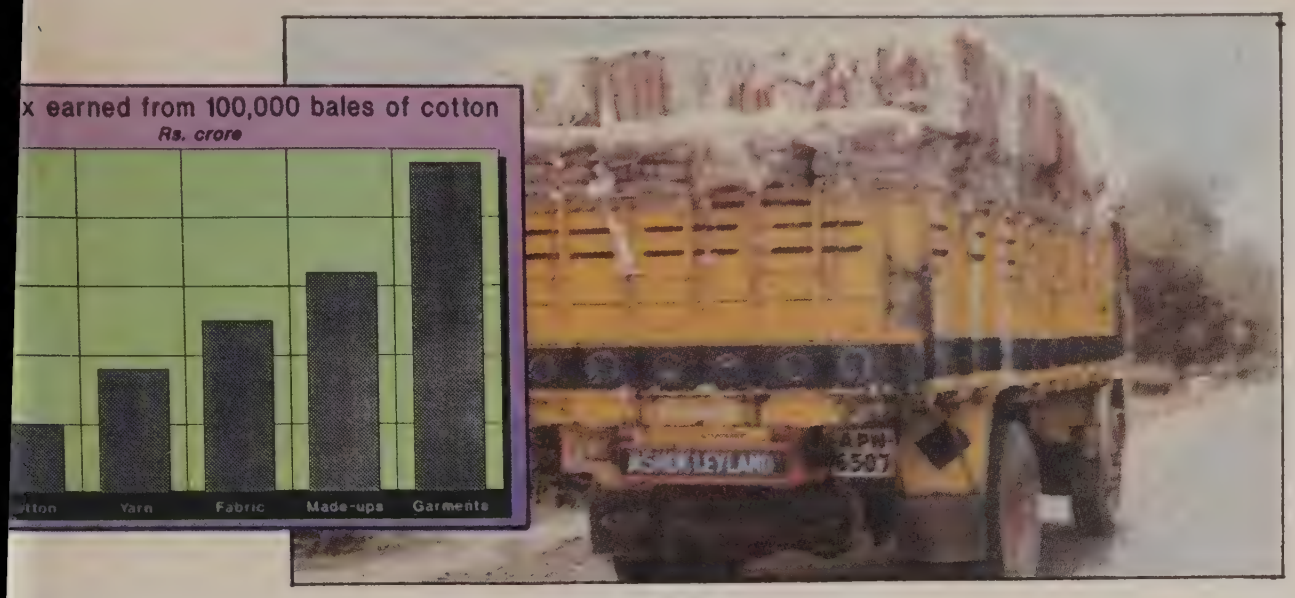
Worse still, this year a major part of the export quota was grabbed by private traders, (allocations to them this year was doubled) while the shares of the CCI and other state agencies were reduced.

Exports this year will be less than 1 million bales

The final lot of export announcements came in March-April by which time the entire crop had come into the market.

The dispute over how the export cake is to be sliced highlights the shortcomings in the policy. Traders can hardly be faulted for making the most of business opportunities. When the cotton market fluctuates in response to every policy announcement, it creates an atmosphere of uncertainty and destabilises the market.

Prices in the domestic market this year are 40-60 per cent higher than last year. This has made the domestic market more attractive to traders than the market abroad: international market prices have been low recently. Presently, the difference between the export price and the domestic price is barely Rs.500, which does not make it worthwhile to export.



Hoarding quotas

Following this thinking, traders with export quotas started hoarding without shipping stocks out. According to NICTMA's estimates, exports at the end of the year will be less than 1 million bales. The Indian Cotton Mills Federation (ICMF) states that less than 700,000 bales were exported by the end of April.

This year's events are a replay of the drama last year. The discrepancy between international and domestic trends is purely a result of the fact that policy decisions are not based on agricultural or economic forces. If India is to make its presence felt in the international market as an exporter of either cotton or textiles, international trends have to be taken into account. Now, instead of cotton prices in India moving down in conjunction with international prices, they continue to rule high.

According to Ajay Shriram, the phenomenal increases in cotton prices has caused a major dislocation in the industry domestically. Says Shekhar Aggarwal, vice-president of the Indian Spinners' Association: "Although the big companies have enough carrying capacity to pick up their entire year's requirement at the beginning of the year, the smaller mills are

Raw material supplies must be assured for textile exports

suffering, including those in the handloom sector." He adds: "India has 26 million spindles, the highest in the world, but capacity utilisation is barely 75 per cent even though domestic cotton production is growing."

As textile and garment exports are emerging as a focus area for exports, the industry cannot continue to function in a state of uncertainty from year to year. Without assured supplies of raw materials, competing in the international market is difficult. Pakistan and Turkey — other cotton exporting countries — assure domestic manufacturers cotton at prices 30 per cent lower than international prices. And Pakistan's share of the international textile market is 10 per cent compared to India's 4 per cent.

Powerful lobby

Devi Lal may be out of power, but the farm and traders' lobby will continue to be very powerful in Indian politics. Analysts see a solution only by rapid increases in cotton production. "This would mean enough surplus to take care of the demand in the domestic market and leave enough for exports too," says an industry observer.

But a bigger pie does not mean easier sharing. Given the government's poor record as a balancing agent, the system of allocations and the setting of export quotas points to serious policy lacunae. An alternative proposal which has the the backing of the industry is the establishment of an autonomous body to monitor everything from production to the textile stage, with one-time financial backing from the government.

The Abid Hussain Committee Report had recommended the setting up of a cotton development authority, and the ICMF submitted a proposal to the government for greater authority to an apex body. But if such a body's focus continues to be on market intervention rather than on development and monitoring, the state of the cotton scenario may not see much improvement. With fewer direct controls, the cotton economy will be less subject to unrealistic distortions.

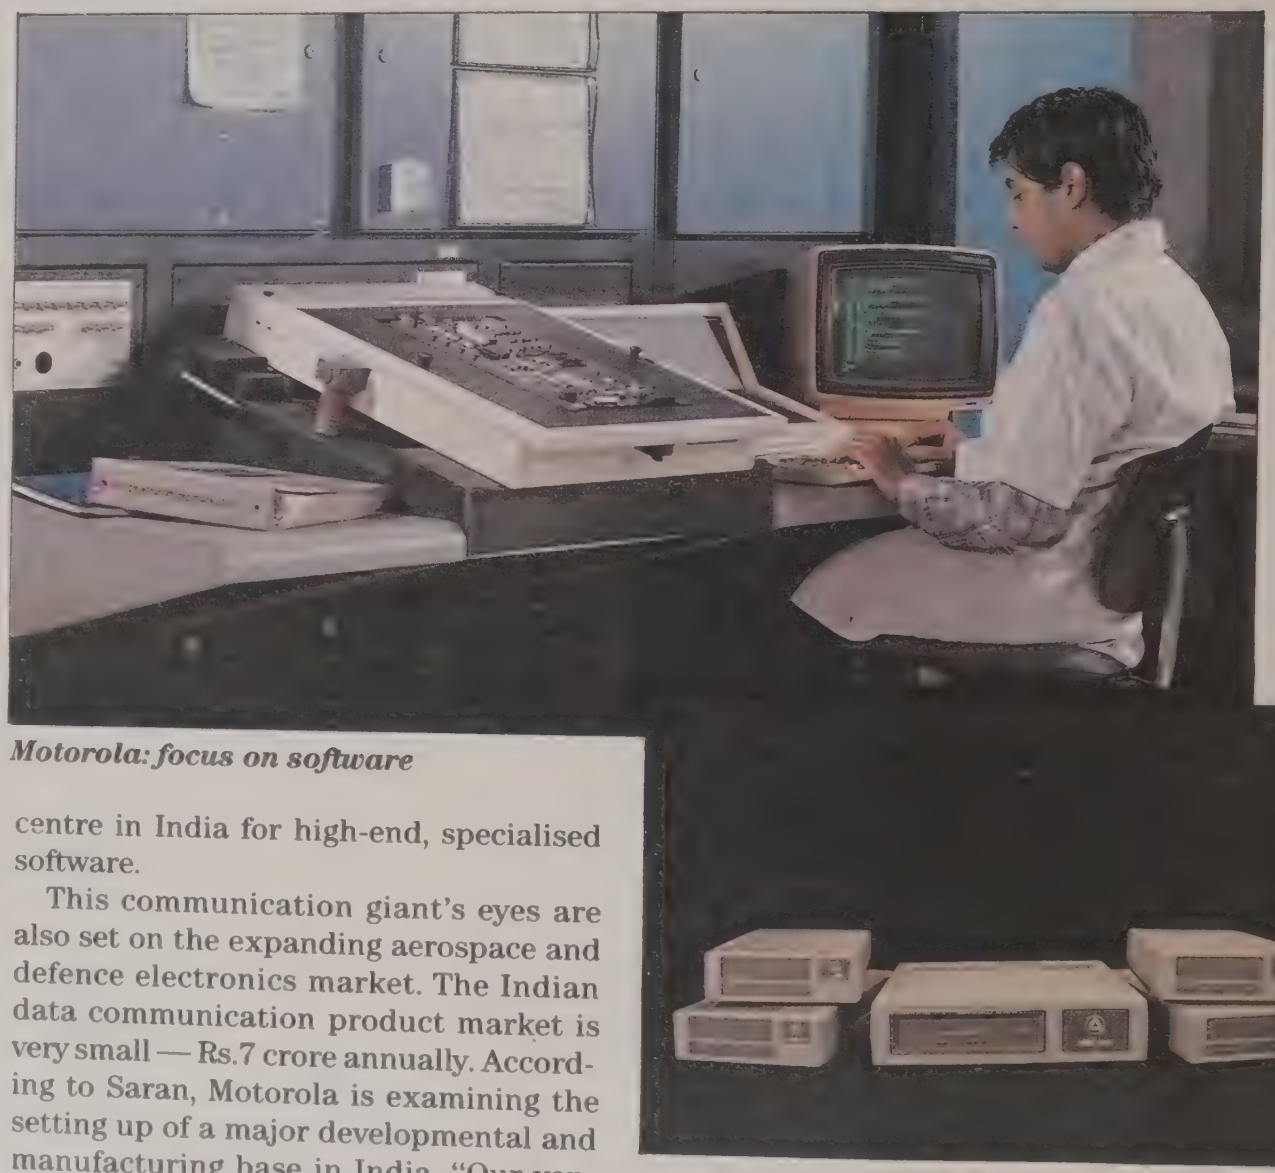
MOTOROLA

Communication gap

Even though the investment climate in the country is depressed, many large American electronics corporations are planning moves into India. In most cases, their agenda stretches over the next decade, during which understanding the marketplace and consolidating their positions will precede any manufacturing activity. While companies like Hewlett Packard are already here, others like IBM and international communications heavyweight Motorola are all set to arrive. Kuldip Saran, country manager for Motorola and its director (international operations, India), indicates that the US giant may be here before year-end.



This $11 billion, 60-year-old company needs little introduction. It has virtually taken over the global radio communication and semiconductor market. Its presence in major businesses — communication and semiconductor products, general systems, information systems, automotive and industrial electronics and defence electronics — makes it a name to be reckoned with. With over $1 billion invested in research and development, Motorola has been one American company that has successfully resisted the Japanese onslaught in the field of electronics.

Strategic market

Motorola came to India in 1987, after its senior planners at its Illinois headquarters chose India as a strategic market. A joint venture — the first in the company's history — with Blue Star two years ago was the beginning. Motorola-Blue Star has begun producing data communication equipment at its Bangalore facility. The choice of Blue Star, according to Saran, was made primarily because the Indian company had represented Motorola here for many years.

Its planned operations in the country will focus on software. Most communication products today are heavily software-dependent. Recognising India's potential in the area of software development, Motorola will shortly begin operations at its software centre at Bangalore. There will, however, be a difference. This 100 per cent EoU (recently cleared by the Department of Electronics) will be unique among Motorola's software development centres worldwide — the Bangalore facility will develop software for a multiple product range. Traditionally, Motorola has dedicated its software centres to a single product.

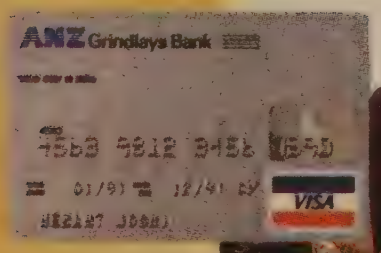
The initial investment in the centre will be between $4-5 million and Saran expects to employ almost 1,000 people in next three years — a massive recruitment drive by any standards. To begin with, work will be done on the design of radio base stations at an extremely high level of development compared to that in the country presently. However, Motorola is also considering opening a training centre in India for high-end, specialised software.

Motorola: focus on software

This communication giant's eyes are also set on the expanding aerospace and defence electronics market. The Indian data communication product market is very small — Rs.7 crore annually. According to Saran, Motorola is examining the setting up of a major developmental and manufacturing base in India. "Our venture is on, though I can't say when it will go through with the government," he says. Saran won't discuss the extent of investment in this project, but it is clear that the proposal has almost been cleared, though final sanction is awaited from the new government.

Largest investment?

Meanwhile, Motorola has been discussing a joint venture with several Indian companies. Such a venture would bring in the largest ever investment to India's electronics sector. Till date the largest is Hewlett Packard's $23 million. Does it mean Motorola is ready to spend even more to "develop the Indian market"? Few will hazard an answer.



Unfortunately, Motorola has become embroiled in a controversy which, given India's sensitivity towards multinationals, just might be a spanner in its works. Questions have been raised about the company's alleged links with the CIA. Some of its senior officials have reportedly been conveying information to the CIA. Analysts have also raised the bogey of having a multinational play a leading role in the field of defence electronics, which Motorola aspires to enter in India.

Saran refused to comment on the report in a leading financial daily on the alleged CIA link. He says there is no-one of the name mentioned in the report in the company. While Motorola considers India a "strategic country" — and it is aiming at becoming the country's largest electronics company — its intentions are under close scrutiny. Amid the drama and speculation, what Motorola will actually get remains a question. ■

RAHUL SHARMA

WHEN YOU HAVE ARRIVED, LET YOUR CARD DECLARE IT.

THE MARK OF
A FAST-TRACK
EXECUTIVE

If you don't deserve the ANZ Grindlays Visa Card, then who does?

You have worked very hard indeed to get where you are in your profession, haven't you?

Well, why shouldn't everyone know it?

Respect is not all that the card gets you. It is accepted at over 8,000 establishments like shops, hotels and restaurants.

You can buy just about anything on your card. For your home. For travel. For entertainment.

You can choose how you would like to pay. You can pay the entire bill at the end of the month. Or just 10% of the total outstandings. Or any amount over 10%.

Cash at 56 branches across the country. Show your card at any of our branches and you can get instant cash.

Your spouse, and children above the age of eighteen years can have their own cards, charged to your account.

You need not even have an account with our bank to get our Credit Card.

Now that you have arrived, claim the privileges you deserve.

Telephone or write to your nearest ANZ Grindlays Bank Branch or to:

Card Services Division, ANZ Grindlays Bank, 132 Mint Road, Bombay 400 001. Phone: 2623081, 2623082.

THANK YOU MR. HERCULES FOR TEACHING US HOW TO BUILD MUSCLES ON OUR OWN.

Your inherent strength and your grit in taking on challenges alone is legendary. With us at Akay too the same spirit of self-reliance and developing our own strength has made us what we are today.

Development and upgradation of products through continuous research is an on going process with us. Our CAD/CAM systems, automated manufacturing facilities and advanced test facilities have been instrumental in customisation and standardisation of our products – Chemflo process pumps and valves that match international standards.

At Akay we have never believed in turning out pale imitations of obsolete borrowed technology. With our R & D efforts we have forged ahead and created technology far ahead of its time. And nothing illustrates this better than our API 610 Seventh Edition Pump – the first of its kind in the world.

And this single-minded trait of constantly tapping our own resources is something for which Sir, we can never thank you enough.

A320s

Hub and spoke solution

The recent controversy regarding the A320 notwithstanding, the short haul range and medium capacity of this aircraft gives it several operational advantages. If these are to be effectively used, changes in the traditional set-up of Indian Airlines routes are called for. The fact that the total fleet strength will eventually reach some 30 aircraft, compared to today's mere dozen or so, only makes the need for advance planning even more acute.

In a geographically vast country such as the United States, with a number of national airlines, one principle appears to work uniformly well for all the airlines, namely, the use of one hub (or more, for the larger airlines) with routes that radiate from it like spokes of a wheel. This hub and spoke formation of routes has many advantages.

Several advantages

First, it permits an airline to provide service between many more city-pairs, through connections, than would be possible if it attempted only direct connections between city-pairs. Next, it allows the airline to make better use of its aircraft because they end up carrying fuller loads as a result. Then again, aircraft can be maintained better, because the hub is the central place where they all end up, both at night and several times during the day between flights.

Finally, the hub and spoke formation allows better customer service, because the frequent arrivals of a large number of aircraft at the hub can serve as backups or be used for supplementary flights on crowded routes.

As a result, the complexes at Chicago, Atlanta and Dallas-Fort Worth have developed into enormous airports, exceeding for some time even their own home requirements in the case of the latter two. In a different way, European airports such as CDG in Paris and Schiphol in Amsterdam serve similar roles as hubs of European route networks.

Given its similarly vast geographical spread, India too can benefit from the hub and spoke approach. A few decades ago, before the advent of jets, Nagpur, in the centre of the country, served as the exchange point — or hub — for the Night Air Mail, albeit as just a once-in-the-day affair. When jets arrived, more and more direct routes for passenger flights were introduced. However, with the ever-increasing growth in air traffic now and the need for passengers to go from each city to practically every other city, including from each state capital to New Delhi for political reasons, direct routes could spell growing inefficiency for the airline.

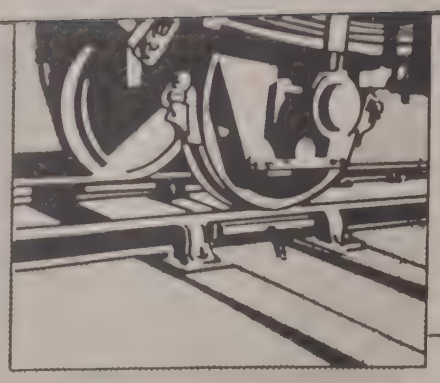
Reviving Nagpur as a hub for A320 routes would make good sense. It will permit Indian Airlines to offer more city-pair combinations, make effective use of the short hop A320s, ensure full loads for these planes, simplify maintenance by development of a single modern and efficient engineering facility, and so on. The larger A300s could continue to fly the Golden Triangle (or Diamond) of the major metropolitan cities and also handle nearby international destinations such as Colombo, Karachi and Singapore.

Reviving Nagpur as a modern hub... will permit Indian Airlines to offer more city-pair combinations, make effective use of the short hop A320s, ensure full loads for these planes and simplify maintenance

The effectiveness of the hub and spoke route structure, however, also presupposes that the hub has been designed to be efficient in moving people and baggage from flight to flight with minimal delay. This is more than merely exhorting the airline staff to become more efficient. It requires an airport design that permits such speedy transfers. Some of the elements which would help in the process would be as follows:

- circular terminals with radiating fingers going to the planes, permitting passengers getting off one plane to get quickly to their connecting flight
- people-mover escalators to move along swiftly elderly, young and other needy passengers from gate to gate
- efficient sorting and tagging of baggage to route it off one plane onto several others correctly and in time
- security checking facilities at each gate to ensure good security while still permitting transiting passengers with no checked-in baggage to quickly catch connecting flights
- jet-ways to aircraft at all gates, for quick loading and unloading of passengers
- diagonal passageways to shorten walking distance between distant gates
- computer systems for rapid and timely gate allotment and transmittal of gate information to transiting passengers as well as baggage-handlers and even cabin-crew of aircraft in flight en route to the hub
- cabin service and refuelling service designed to be rapid-response types, for instance, through the use of underground tanks at the gates for refuelling.

In short, adoption of this approach will require building a whole new modern terminal complex at Nagpur with the facilities outlined above and appropriate systems and procedures for handling transiting traffic, which will be 90 per cent of the traffic passing through it. International designs should serve as prototypes. This is a modest expense compared to even the billion-dollar initial cost of the 30 aircraft themselves, let alone the even larger operating cost of these aircraft over their twenty-plus years of use.



The construction of the modern terminal at Nagpur and adoption of the hub and spoke pattern of routes for the A320s needs to be undertaken right away, though. Each month's delay only adds to the opportunity cost of inefficiency in use of these aircraft. Moreover, the benefits are so large and will obtain for many, many years, making this arguably the wisest investment in the nineties by Indian Airlines and the National Airports Authority. Will they seize the opportunity?

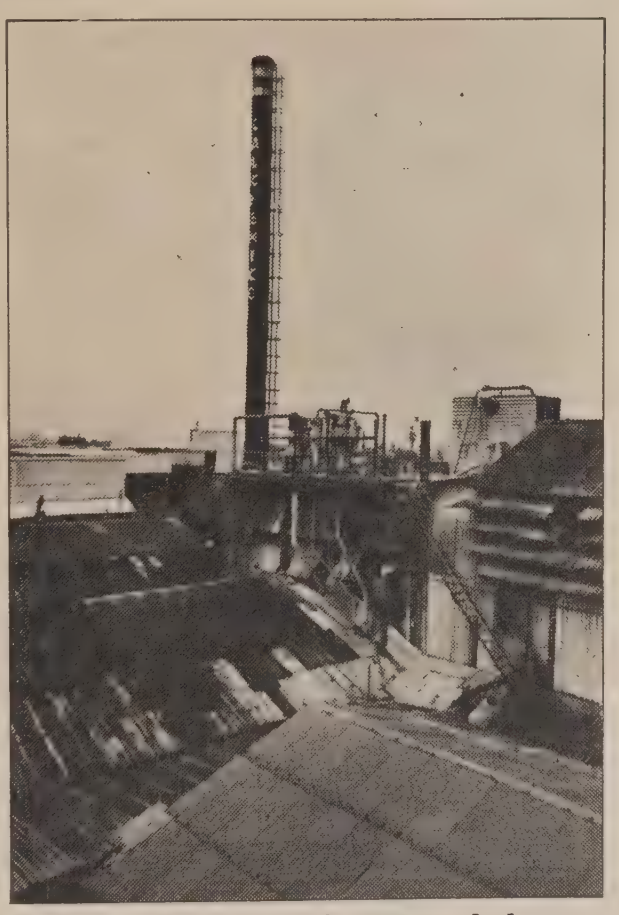
CALCUTTA CHEMICALS' DISPUTE

The importance of being earnest

When the management of Shaw Wallace, the liquor giant, ordered the "suspension of operations" at its subsidiary, Calcutta Chemicals, on 21 May, it marked only another episode in the saga of the 72-year-old company. At the time of shutting down, the company had an accumulated loss of Rs.12 crore on a turnover of Rs.18 crore. And now, the workers have come up with a proposal that they be given a bash at running the company.

There are currently three players on the scene: the Shaw Wallace corporate staff, the embattled workers of the company who have not been paid since the closure and the Board of Industrial and Financial Reconstruction (BIFR). A very interested spectator watching from the sidelines is the Industrial Development Bank of India, the lead agency in the revival of the old company.

Mistrust plays a big part in the whole affair. The BIFR does not trust Shaw Wallace and expects the company to fund any revival package. It is also not keen on a workers' co-operative plan and would only hand over the company to the workers "as a last resort". This proposal has sent Shaw Wallace into a tizzy, because it prefers to make a bilateral settlement with the workers. But the workers do not trust Shaw Wallace at all.



Niche in the market

Unlike most sick units, Calcutta Chemicals' cosmetic products — Margo soap, Neem toothpaste, the Lavender Dew and Moloy lines — did have a niche in the market. Yet, besides this recognition, the parties in the dispute agree on little else.

A Shaw Wallace spokesman maintains that total indiscipline prevailed in the Tiljala plant of Calcutta Chemicals (the plant was closed on this issue), and that it was grossly overmanned. The plant needed just 400 employees as against the 1,203 it employed. Per capita productivity of the employees was Rs.1.25 lakh per annum against the industry average of Rs.12-15 lakh. However, the demand of Margo soap was growing and had doubled in the last five years, forcing the company to take a plant in Kanpur on lease.

Because of the available marketing infrastructure, Calcutta Chemicals' products were marketed along with those of the Shaw Wallace consumer products division. The costs associated with this marketing had caused losses of Rs.1.62 crore in 1987-88, Rs.50 lakh in 1988-89 and Rs.68.31 lakh in 1989-90 to Calcutta Chemicals, claim Shaw Wallace sources.

But this point of view must be taken with a pinch of salt. The normally staid accounting and management consultancy firm, S.R. Batliboi, which was hired by IDBI to report on the operation of the firm, in its report presented before the BIFR, has accused the company management of "window dressing the account books" and "inappropriate accounting". The controversy centres around supposed cash credits, leasing of machines and raw material purchase worth about Rs.4.67 crore on the one hand and irregular writing off of sundry debtors on the other.

Calcutta Chemicals: in suspended animation

Under these conditions, the majority workers union, CITU-led Calcutta Chemicals Mazdoor Union, has put in a bid to take over the company for one rupee. It has made it very clear that the Shaw Wallace plan for retrenchment of 350 workers is quite unacceptable to them. Instead, it has proposed that it will run the company as a cooperative on the lines of Kamani Tubes in Bombay. The union believes that the company will turn around if it can handle its own marketing, as it did prior to the Shaw Wallace takeover.

According to the secretary of the union, Manik Samajdar, the company brands were selling without any major advertising. If anything, it is the exorbitant commission of 23 per cent charged by Shaw Wallace for marketing Calcutta Chemicals' products which has made the company sick. The company had 18 branch offices and the requisite marketing staff and about 2,000 redistribution stockists nationwide, says Samajdar, which Shaw Wallace used to push its own Chek detergent.

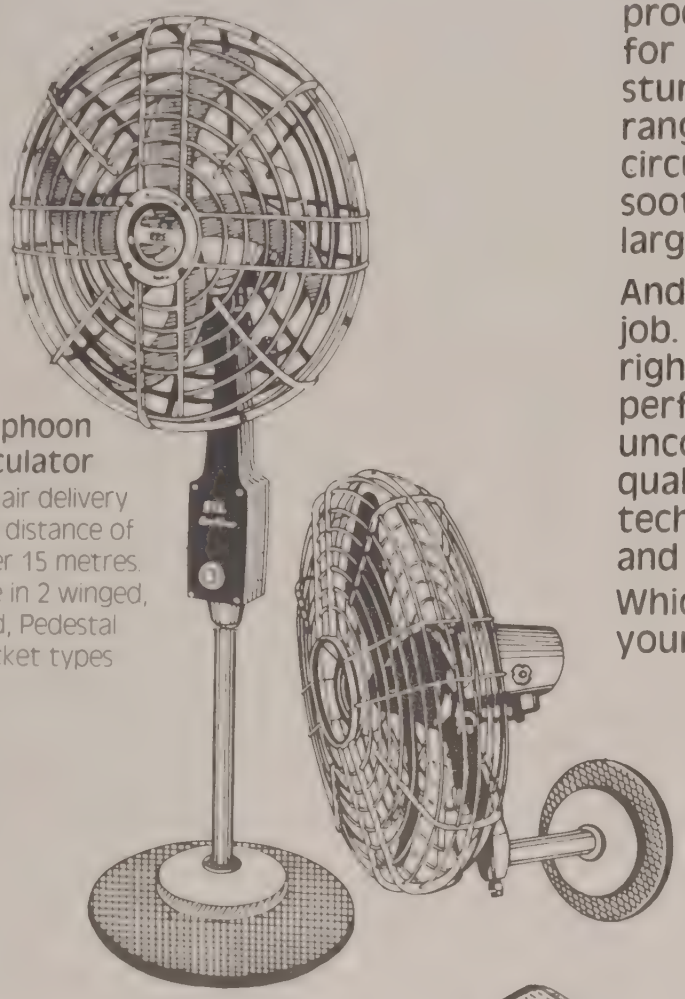
Products discontinued

Samajdar's argument is that there was no need for retrenchment since most of the 300 employees in the list would retire over the next five years. He also said that overmanning had become an issue because almost 95 per cent of the company's product lines had been discontinued.

But the Batliboi report is not entirely favourable to the workers either. And IDBI finds the workers' claims too "optimistic" and their revival package unrealistic. The workers have not helped their case by putting together the revival package themselves. Would marketing, for instance, be as easy as the workers make it out to be?

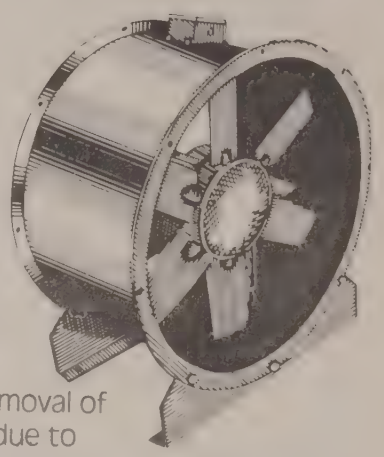
In addition, the employees seem to be divided among themselves. Samajdar maintains that the minority union — the Calcutta Chemicals Shramik Karamchari Union (CCSKU) — which is resisting the efforts of the CCMU has been set up by Shaw Wallace itself to thwart the majority union. CCSKU has objected to the cooperative plan saying that it was unviable. Samajdar claims to have handed over to the state government for verification a list with 886 signatures in favour of the plan. Against this, the other union had a list of 106 employees, including 24 contractor's employees and 42 officers opting to continue with Shaw Wallace.

The state government had initially refused to buy equity worth Rs.22 lakh in the cooperative venture saying that it was against the policy. But later, when asked by BIFR, it stated that it was willing to contribute an equal share of the revival package along with the IDBI, in case the choice falls on a workers' cooperative. Whether such a plan gets off the ground remains to be seen.



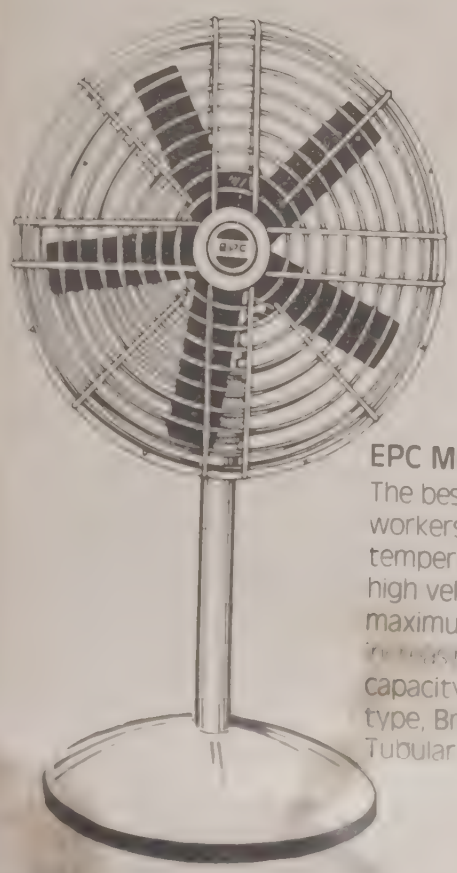
■ SUDIPT DUTTA

Ultimately, there is only one name in the air that stands for gold.

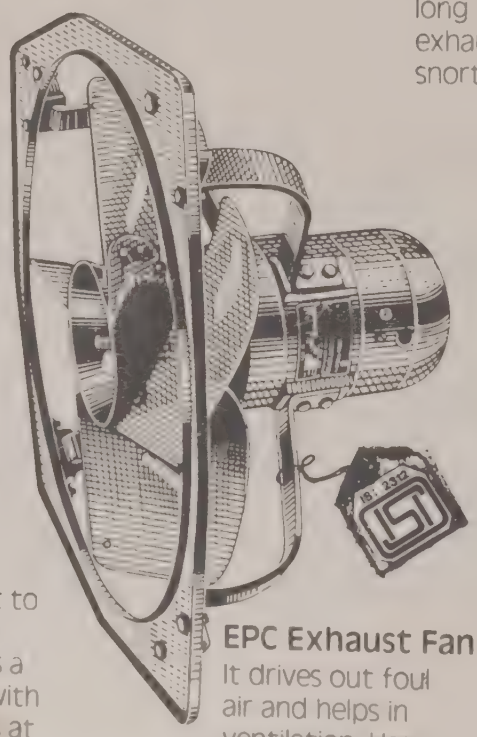


Here they are. The big-air producers exuding confidence, for the entire world to feel. In a stunning, sturdy spectrum. A range EPC holds its own, circulating air untiringly to soothe body and mind. Ensuring larger air coverage.

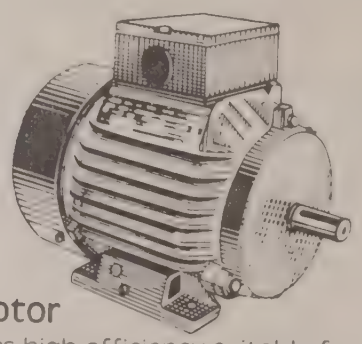
And, building it is not an easy job. It has to look right. Feel right. Above all, it has to perform. With precision. With uncompromising emphasis on quality. Not to mention, the technology ... truly advanced and reliable.



Which is why EPC fans convert your money into an asset.



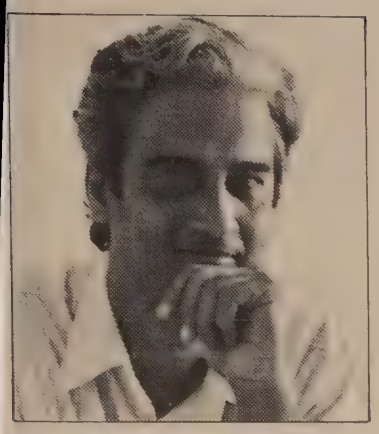
EPC Typhoon Air Circulator
Its large air delivery covers a distance of little over 15 metres. Available in 2 winged, 4 winged, Pedestal and Bracket types



EPC Axial Flow Fan
Specially designed for removal of dust and fumes where, due to long ducts, system-resistance is high and conventional exhaust fans prove inadequate. Available in long and short casings, bifurcated type and belt driven type.

EPC Mancooler
The best cooling comfort to workers working in high temperature. It produces a high velocity air stream with maximum reach and aims at increasing productive capacity. Present in Pedestal type, Bracket type and Tubular type

EPC Exhaust Fan
It drives out foul air and helps in ventilation. Has widest range from 230 mm (9") to 900 mm (36") in both single and three phases.



EPC Motor
Possesses high efficiency, suitable for Industry, Agriculture, Domestic Pumps and other applications. It is totally enclosed fan-cooled squirrel cage and has a cast iron body (international frame)

e.p.c.

Known by its quality

Do we need trade unions?

E.A. RAMASWAMY

I have been teaching for the past few months a course on trade unionism to a group of trade unionists, managers and civil servants from Asia, Africa and Latin America. The question that keeps coming up is whether the world, and especially the Third World, needs trade unions. Many of the countries represented in the class have dictatorial regimes or guided democracies that frown on protest. Their trade unions are emasculated by controls, but even this feeble labour movement appears burdensome in the context of their economic situation and the looming debt trap. They are under pressure from the World Bank to further tighten the clamps on labour through structural adjustment policies. For an economy besieged from all sides, trade unions appear an expensive and wholly dysfunctional luxury.

Trade unions are on the decline everywhere, and not merely in besieged economies. Their membership is well below a quarter of the working population in much of Western Europe. They control less than 20 per cent of the workers in the UK and the US and a mere 10 per cent in France. Large and powerful trade unions such as the National Union of Mine Workers in England have suffered a staggering depletion of membership. The halcyon days of the labour movement appear to be well and truly over.

No regrets

For many, this is not a cause for regret. The managers in my class, much like their counterparts in our country, feel that trade unions have brought this misfortune upon themselves with their insensitivity to larger social and economic questions. They cannot understand how labour can quarrel over the division of the cake when no surplus is being generated in the first place. They are perplexed that trade unions which talk so much about the exploitation of labour by capital are not troubled by the exploitation of poor nations by the rich. Their countries are now in economic bondage to the rich nations of the West after centuries of struggle to rid themselves of the political bondage. Instead of helping the country fight this new colonialism by improving productivity, trade unions are busy driving the economy further against the wall.

Significantly, even the trade unionists in the class agree that orthodox trade union methods forged in England and the US may not be appropriate to their situation. More than either trade unionists or managers, it is the civil servants who have a hard time deciding what to do with the labour movement. When unions embark on the path of conflict, they hurt the economy grievously. If they follow the path of co-operation, they end up as stooges of the management and move away from the basic purpose of protecting labour's interests. What in fact should they be doing? Do societies such as theirs — and ours — need trade unions at all? Or, are we all better off without them?

It was a challenge to debate these seminal questions with an audience drawn from such diverse political and social backgrounds as China at one end and Holland at the other, with Ethiopia, Kenya, Pakistan, Nigeria, Indonesia, the Philippines, Zambia, Trinidad, Uganda, Costa Rica, Egypt and Bangladesh thrown between. I must confess to being a firm believer in the need for checks and balances as an essential precondition for fairplay. No one can deny that while labour and management have many shared interests, they are also in conflict.

Balancing conflicting interests

The democratic method of balancing conflicting interests is to permit and even encourage pressure group activity. The managing director of a public enterprise once suggested that the public sector needed neither trade unions nor protective labour legislation because it was such a good employer. By the same logic, one might argue that public sector monopolies are good for the consumer because they are too benign to exploit him.

The core of the problem is that conventional trade unionism feels comfortable with conflict, but flinches at the thought of co-operation. For the orthodoxy of the labour movement, the employer is by axiom malevolent and narrowly selfish. Since he cannot be up to any good, the union must view every act of his with suspicion

It is just as unconvincing to argue that the economies of poor nations would benefit by gagging pressure group activity. What one finds after interacting with participants from more than a dozen third world countries, most of which have made it quite impossible for trade unions to function with any freedom, is that there is no inevitable linkage between economic development and denial of trade union rights. After decades of

The author is a freelance commentator and consultant based in Delhi

repression, their productivity is abysmal and their economies are in a shambles. We need go no further than to look at Pakistan — for all the controls they have clamped on unions, their productivity is certainly not superior to ours.

In fact, the need of third world societies for pressure group activity is more — and not less — than that of the industrialised West. We in India know for instance that it is quite impossible to promote social change merely through legislation. The keenness of the government to legislate is scarcely matched by its ability to implement the laws. Only voluntary pressure group activity, whether of consumers or industrial workers, agricultural labourers, women or whoever can protect sectional interests.

Achieving the objective

Pressure group activity can, of course, hurt the economy. It is true that labour and management are often locked in mindless conflict to the detriment of everyone. If we have to keep our heads above the swirling waters of the debt trap, our industry needs to fare a lot better. There is no question about that. The question is how we can achieve that objective. Will that be achieved by banning protest and hoping that the government, the employer or some other benevolent monolith would balance competing interests? That is a load of wishful thinking. Will it be achieved by mothballing trade unions until the economy has been restored to the pink of health, and pulling them out of the closet on that fateful day? That too is a bagful of tripe. The answer lies not in suppressing but in reshaping trade unionism.

The core of the problem is that conventional trade unionism feels comfortable with conflict, but flinches at the thought of co-operation. For the orthodoxy of the labour movement, the employer is by axiom malevolent and narrowly selfish. Since he cannot be up to any good, the union must view every act of his with suspicion. Co-operation on the other hand is a frightening prospect because it is seen as a synonym for collusion. The model is of class conflict and the union needs a class enemy to survive. This model, which is more appropriate when the employer is bigoted and conditions are oppressive, is not easily given up with changing times.

Having learnt only the language of adversity, this brand of trade unionism does not quite know how to respond when the employer changes tack, or when the members' interests go beyond a better wage. It becomes self-righteous to the point of believing that all others must always be in the wrong. Muckraking and the search for the fly in the ointment become [illegible] journal fate.

This [illegible] unionism we have in many of our enterprises, [illegible] too negative to have much social relevance, especially in poor countries struggling to provide a better life for everyone and ward off new forms of international enslavement. If only trade unionists will look around, they will realise what little sympathy there is for them. They are alienated not only from the wider society but even from other social movements.

The strategy of everlasting opposition does not make sense even from a more limited perspective. Trade unions are after all instruments for the realisation of a larger objective and not an end in their own right. For some, that larger objective may be the quest for a classless society. My own understanding of trade union purpose is more modest, although by no means easy to achieve. But the business of trade unionism should be to strive for a more just, humane, and democratic place of work — what one might call industrial democracy.

The future of trade unionism depends on its ability to forge a new strategy that blends co-operation with conflict. That in any case is how trade unions have prospered elsewhere, as would be amply proved by experience.... So long as they remember where and when to conflict, trade unions will not atrophy by co-operating

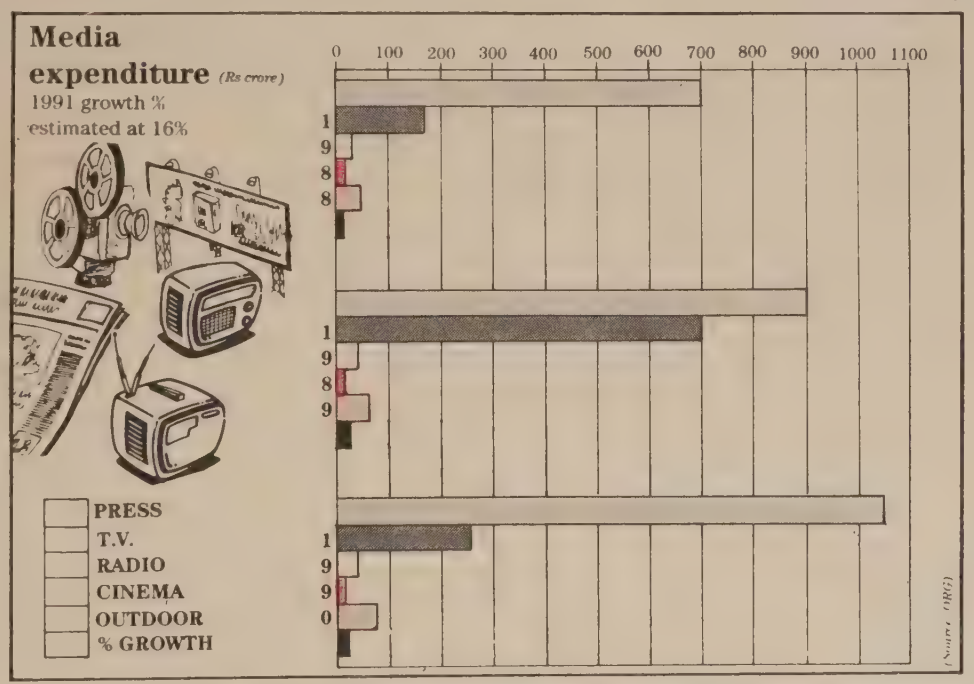
The trouble with blinkered trade unionism is that conflict becomes an end in itself. When such goal displacements occur, the union spurns ever so many opportunities to promote its true purpose. Participatory management is the most obvious example. Most of our unions are afraid of participation because it will compromise their freedom to conflict. They ask whether it is possible to participate with the employer. They don't ask whether participation offers the means — even limited means — for advancing industrial democracy. If they did, they would find wholesale opposition to participation quite impossible.

The future of trade unionism depends on its ability to forge a new strategy that blends co-operation with conflict. That in any case is how trade unions have prospered elsewhere, as would be amply proved by the experience of the Nordic countries and Germany. So long as they remember where and when to conflict, trade unions will not atrophy by co-operating with the employer. They will regain their relevance, stem the depletion of membership and serve a much needed social purpose. If on the contrary they refuse to change course, the future does look dim.

B(ad) times are here

The big squeeze on the Indian adworld has begun. Clients — even the most respectable names — are either delaying or reneging on payments. Ad budgets are likely to take a beating. With their bottomlines thus at stake, agencies are now closely monitoring their cash flows. The industry has been brought face to face with a reality it should rightly have woken up to in 1990: that the stupendous 30 per cent growth rate of the eighties is indeed a thing of the past.

But is business really heading towards the boondocks? In an unprecedented move, the Advertising Agencies Association of India (AAAI) wrote to the Indian Newspaper Society (INS) and Doordarshan, warning them that agencies would now begin to default on their media payments. An appeal was made, in the letters sent out in early June, that "in view of this situation, the AAAI is approaching all media, to take a realistic view of the industry's inability to meet its payment commitments on schedule".



The reply, received from the INS, dated 13 June, was brief and discouraging. "Do you think the ad agencies are the only sufferers? We are also suffering from the credit squeeze and our cash flow has been affected very badly." Therefore, the INS recommended that the ad agencies better learn to "cash and carry". Sequential liability — "we will pay when the clients do" — wasn't good enough.

Response as expected

This unsympathetic response was only to be expected; earlier this year the two had tussled over the credit period allowed to agencies, with the INS demanding that it be reduced from 60 to 45 days. Now, a meeting between the AAAI and INS in the second week of July is expected to "look into" the common interests of the media, clients and the ad agencies.

On their part, agencies have a valid reason for their demand. Gautam Rakshit, president of the AAAI and director of Advertising Avenues (billings in 1990-91: Rs.15 crore) says, "All clients without exception are delaying payments up to 10-15 days beyond the 60 day period. They are all genuinely unable to deliver cheques which are lying prepared by them because they simply do not have cash in the bank. Advertising for capital goods, consumer durables and perishables, in that order, has suffered. Further, clients are unwilling to launch new campaigns in this confused environment."

"It's three months to disaster," says Anil Bhatia, senior vice-president and general manager, Hindustan Thompson Associates, the country's number one agency in terms of billings (1990-91: Rs. 108 crore). "Both big and small agencies may not default this month, but no one is quite sure how they'll get through the next month."

The case of Trikaya Grey (1990-91 billings: Rs.26 crore) is no different. Says Raj Gupta, executive director, Trikaya Grey, "It's a photo-finish kind of a situation every month. But we are trying to honour our commitments."

While an ad agency's earnings amount to 15 per cent of total billings, all that they retain post-tax amounts to one-and-a-half per cent. That is not substantial enough to 'finance' their clients and meet their own bills at the same time. Some feel that it's a good thing that agencies are finally becoming cash conscious. As Gupta says, "So far, the money was just pouring in. Now we face the real challenge."

Cutbacks in ad budgets may compound the problem. According to reliable sources, the cash rich Reliance Industries has slashed its budget on the Vimal campaign by half — from Rs. 6 crore to Rs. 3 crore. Its agency, Mudra, will therefore (like most other agencies) have to cope with the consequences of reduced business. Other high-profile advertisers like Air India and Videocon have also implemented reductions in ad spend.

Plans reviewed

"We are reviewing the annual advertising plan prepared earlier," says Pheroze Bharda, vice-president (sales & marketing), Tomco. "But we will not have a clear cut idea till the Central budget is announced. The money crunch is a problem that has affected all aspects of production, leading to the pruning of expenses on all fronts, including advertising." Tomco spent Rs.9 crore on media expenses last year and had planned to increase its advertising expenditure further this year.

Bharat Puri, product manager, Asian Paints (annual ad spend: Rs.3 crore), says, "We had already prepared a conservative advertising plan for this year. Last year too, due to the Gulf crisis, we had to cut our ad budgets. Since most of our advertising takes place around the Diwali period, we are now reviewing the situation as per our current financial status. This year's budget won't exceed last year's and will also encompass the new products we plan to introduce. There will be no new campaigns for existing products."

Many agencies, with the backing of their big-spending clients, are already negotiating directly with publications asking them to accept releases for which payments will be made at a 'suitable' time — anywhere from 60 to 90 days.

But there are those who see the positive aspect of the current crisis. Sam Balsara, chief executive, Madison Advertising (1990-91 billings: Rs.4.2 crore), who has just been re-elected president of The Advertising Club, Bombay, says that, "The need of the hour is to stretch the ad rupee. Clients have, therefore, begun to appreciate the role of their agencies."

Amid all this, admen, quite characteristically, remain optimistic in the hope that with the economy expected to bounce back under a stable government, they will shortly be back to their two Martini lunches.

DEVENDRA TAK

A Glittering Performance

- Owned Funds — Rs.600.00 crores

CANARA BANK

(A Govt.of India Undertaking)
Head Office, Bangalore 560 002

MAA COMMUNICATIONS CB 1624

CITIBANK-DINERS

Top of the pack

Cash is *passe*. The common currency in corporate circles today is plastic money. Ever since banks got into the act, the credit card market has expanded manifold. Leading the pack is Citibank's Diners Club card, whose vigorous marketing strategy has kept it ahead.

A year ago, Citibank took over the Diners franchise at a fancy price from the Aggarwal family. Though a pioneer in the credit card business, Diners had suffered some erosion under its previous owners. Its upmarket aura was gradually waning. And for good reason. Delays in reimbursements to member establishments had resulted in some of them refusing to honour the card altogether. This had its impact on the membership roster which stopped growing. The number of active members too declined.

Starting from scratch

"Our immediate task after taking over the card was to stabilise the operations and rebuild confidence," says Sanjeeb Chaudhuri, vice-president and marketing director, cards division, Citibank. And while they were doing this, they put on hold the recruitment of new members. As a first step, the merchant establishment network was strengthened. Those who had turned away were persuaded to return to the Diners fold. The advertising campaign launched just then was pitched at existing members. It highlighted the card's features as "the rewards of success", reinforcing the upmarket image.

The Diners card is now sharply focused as a travel and entertainment card for businessmen and senior executives. "We wanted to create a product of international standing and make it better than anything the competition was offering," says Ashoke Dutt, vice-president and business manager. The aim is to give the cardholders features which exist in the wide Diners network the world over. One of the first things that was done was to arrange with airport authorities to enable the cardholders to use the airport business lounges. For the international traveller Hertz car rentals have been made possible at a discount. The cardholder also gets higher insurance coverage than normal while flying.

Diners card now also offers other insurance benefits for cardowners. The outstandings have been insured in the event of the death of the cardholder. "In fact, this is the first time that the Life Insurance Corporation has agreed to devise a variable cover product (a product whose value varies from month to month)," points out Chaudhuri. Concepts like these really aim at benefiting the cardholder at an emotional level. Citibank has for the first time persuaded some hospitals and medical centres to accept the card.

There have also been very carefully thought out special offers. Well prepared video cassettes on music and sports have been offered at a discount. A tie-up, for the first time, with the very upmarket Shyam Ahuja products brought in a lot of response. There have been other exotic offers like Tanjore paintings at a discount. An international Diners card benefit, by which a cardholder gets a bonus point for every usage which can be later redeemed, is going to be tried out.

The other side of the card operations is to build up the number of merchant establishments. "We have a separate merchant services cell, with separate staff who deal with member establishments. We want to make them feel a part of this big network. One of the benefits we are working on is to offer a special insurance scheme for them," says Chaudhuri.

The competitors are obviously watching Citibank's marketing efforts with great interest. With the exception of Mercard offered by the Madras-based Mercantile Credit Corporation, a non-banking institution, almost all the nationalised banks with sufficient financial strength are in the credit card business. Says Nageswara Rao, chief officer, credit card division, Andhra Bank, "Citibank Diners is really aiming at the upper crust of the market. One has to wait and see what they do with the Visa and Master Cards." According to C.G. Atwal Palkar, general manager, computer and consumer services, Canara Bank, Citibank is looking for a segment which is not necessarily being looked at by the other banks. "We want to go deeper into the market, the middle-class segment," he says.

But Citibank is looking into the middle-class market as well. "We have positioned Diners as a very strong travel, entertainment and a somewhat limited retail card. But Visa and Master are really more personalised retail cards. These are priced differently and they have different features. We see them as payment mechanisms. We don't really see them as credit mechanisms," explains Chaudhuri. The competition is really hotting up in this segment. Says Ray Galliott, manager, card development, ANZ Grindlays, which has a tie-up with Visa at present, "Our strategy is to offer a superior card and superior service."

"We are completely customer driven," claims Dutt. In the effort to satisfy customers, Citibank Diners card offers various 24-hour services, including ATM (automatic teller machine) withdrawal of money and so on. One might have to pay phenomenal amounts to get these services, but Citibank has made them available to those who can afford them. Most of the other banks are not yet in a position to offer these services. Says Ramesh C. Khanduri, deputy general manager, personal and services banking division, State Bank, "This kind of yuppie operation needs a full computer back-up to keep track of credit follow-up with the vast network that we have. At this point we don't have that kind of follow-up. The foreign banks have very few branches, so it's easier for them to operate."

Dutt and Chaudhuri: edge over competition

When Citibank took over Diners and launched its card division, it had inherited 65,000 members. Now it has 90,000 members (including Master and Visa cardholders) and hopes to cross 100,000 very soon. Citibank remains undaunted by competition. "We really feel cash is our real competition," claim Chaudhuri and Dutt. It is another matter that almost everybody else in the card business feels the same way. But Citibank, with its international experience (it is the largest issuer of cards in the world with 42 million holders) and its well-established computer network in India, certainly feels that it has an edge.

KINETIC HONDA

Off to a flying start

After having entered the Guinness Book of World Records thrice, Kinetic Honda seems to be heading for yet another record of sorts — this time in the area of exports. Last year, during 1990-91, its exports jumped to Rs.2 crore from a negligible Rs.70,000 in the previous year.

Although the total turnover of Kinetic Honda during 1990-91 was about Rs.110 crore, and the exports form a little less than 2 per cent of their turnover, it still is a creditable performance, when compared with the export of 2 wheelers worth Rs.3.5 crore by a giant like Bajaj Auto, whose turnover is over Rs.1,000 crore.

Several other factors make this performance look even more impressive. For example, the company is just 4 years old, having started its production in April 1986. "In the current year," says H.K. Firodia, chairman, Kinetic Honda, "We should easily be able to up our exports figures to Rs.5 crore. Thereafter, we should be doubling our exports every year, for the next couple of years." Explains Shigeo Hirose, joint managing director, Kinetic Honda, "Our target is to finally export 10 per cent to 15 per cent of our turnover every year."

Hirose: "The Indian model has been appreciated abroad"; (inset) *Firodia*

Revealing the reasons for Kinetic Honda's headlong foray into exports, Firodia says, "The foremost reason is that the country's balance of payments position is in a bad shape, to improve which we wanted to contribute our mite. Secondly, we already had a product which was of international standards. Thirdly, we calculated that we could get a better realisation in terms of profits. And last but not the least, we had available to us Honda Motors' worldwide distributor and service network."

Another interesting feature is that Kinetic Honda is exporting the same scooter which is selling in the domestic market. It has a high indigenous content of 95 per cent. "Each scooter brings in a net foreign exchange earnings of over $600," reveals Firodia.

According to an observer of the scooter scene, among all the Indian brands, Kinetic Honda's model can easily be said to be the most acceptable in the international market for several reasons. It has sleek styling contours, a push-button start and an automatic transmission. Also, it is the most fuel-efficient and its emission level is within international specifications.

"That's not all," emphasises Hirose. "The Indian scooter which has been designed for rough road conditions has been appreciated abroad for its toughness in comparison to Honda's original models. For example, it has all steel panels, while Honda scooters have fibre reinforced plastic panels. It is also cheaper than comparable Honda models."

Hirose points out that, apart from the availability of Honda Motors dealer network, what has made the export performance possible is the fact that Honda Motors have taken care not to market their models which fall in the range of the Kinteic Honda so as to avoid competition. So far, the parent company has opened up markets for Kinetic Honda in Turkey, Iran, Mexico, Macao, Hong Kong, Cyprus, Nigeria, and the Ivory Coast. H.K. Firodia recently visited China and a delegation from there will soon visit the Kinetic Honda plant. "I see Vietnam also as another big potential market," says Firodia.

Ideal for the lower end

One more reason why Honda Motors has included Kinetic Honda in its worldwide marketing gameplan is that due to the rising yen, its production costs and market price have risen quite steeply. On the other hand, the price of the model exported by Kinetic Honda has been benefited by a falling rupee and this model is ideal for the lower end of the international market.

Due to similar considerations, Hirose has prepared a proposal which is a long-term strategy, to shift some more production lines for one or two more models, from Honda's factories located in Japan, South Korea or Taiwan to India. These production lines could form a 100 per cent export-oriented unit in India, and they would form the single source of supply worldwide, for the models chosen. "This proposal is still in the planning stage," says Firodia, "but it definitely could take shape in the long run, as Japan, South Korea and Taiwan are all high-cost economies. Such a proposal would make eminently more sense to both Honda Motors and Kinetic Honda."

Kinetic Honda seems all set to go places in the international market, and it may be only a matter of time before it starts giving sleepless nights to the top brass at Bajaj Auto.

Lupin's rural formula

The Lupin Rural Support Programme, funded and managed by the Bombay-based pharmaceutical giant, is in many ways a unique experiment to help uplift the lot of the rural poor in Rajasthan

The sun is blazing down and dust swirls skywards forming a curtain around the jeep as it pounds its way to village Ramnagar in Rajasthan's Bharatpur district. The three-kilometre long stretch, cutting through a vast expanse of mustard, is as yet unpaved, and is unusable in the rains. But soon, there will be a major change. In the coming months workmen will descend here to press the flaky top soil under tar and macadam. What, for generations of Ramnagar residents, seemed only a far away dream will at last be realised — their village will finally be linked to the main district highway by an all-season motorable road.

It is arguable whether a motorable road will in any way substantially alter the quality of life of Ramnagar's 600 villagers. But the other changes that have taken place here in recent times definitely have. Till about two years ago, this village was like thousands of other villages in India, poor — the average household monthly income was less than Rs.400 and existence was an every day struggle.

Ramnagar was blighted by nature as well. The main village tank lay silted for over two decades and the wells in the vicinity were all dry. This meant that women had to trudge upto one kilometre every day to the nearest source for their daily potable water. "Outsiders were reluctant to get their daughters married to boys of my village," says sarpanch Budhilal Sharma in his halting Hindi. "The talk was that sending one's daughter to Ramnagar was like sending her to Kalapani (incarceration in an inhospitable exile)."

God smiles on Ramnagar

And then, in the words of Sharma, "God smiled on us two years ago in the form of Deshbandhuji." Deshbandhu Gupta is the low profile son of a school teacher, who started out life as a college professor and then went on to set up one of India's most successful pharmaceutical companies the Bombay-based Lupin Laboratories (annualised sales last year Rs.170 crore). For many years Gupta has been practising the *Vipasana* form of meditation which, he says, developed in him "a deep inner urge to do good for people, to lead a life of service. And the feeling that whatever you are in life is because of society and you owe it to do good in gratitude."

To fulfil this inner urge, in October 1988, Gupta launched the Lupin Rural Support Programme (LRSP) in Rajasthan's Bharatpur district with a corpus of Rs.1 crore and with the objective of developing "appropriate models to achieve integrated rural development in India" and "to make the best use of resources, appropriate technology and scientific management concepts for need-based programmes at the grassroot level." Gupta got one of India's most respected rural development experts, Bhupat Trivedi, to head the programme.

The immediate aim, as the plan was chalked out in Lupin's Bombay headquarters, was to provide an income base of Rs.1,000 per month per working person. The idea was to ensure an annual family income of Rs.24,000 in a time period not exceeding three years, on a self-sustaining basis, in a target population of 100,000 people in 35 villages in Bharatpur. (Today the scheme covers 100 villages.)

Waiting for water

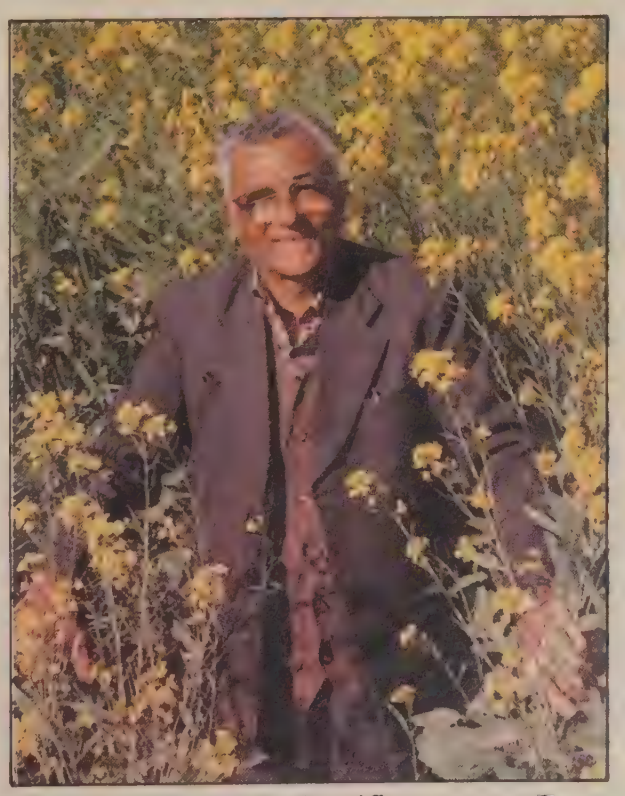
But how did Ramnagar catch the Lupin programme's eye? One fateful day in late 1988, Trivedi and his officials happened to stop in Ramnagar while on a scouting mission to locate the villages to be adopted in the first phase of the programme. As Sitharam Gupta, who under Trivedi is the chief project co-ordinator for the programme, describes it, they asked for some tea soon after reaching Ramnagar. But it took an inordinately long time to arrive and when asked why, the reply was that the householder had gone to fetch water from about a kilometre away. Almost immediately Ramnagar was adopted.

Less than a month later, a four kilometre pipe line, put up at a cost of Rs.6 crore, was bringing water into the village.

The main objective is the uplift of farmers

"Deshbandhusahab for us is like Krishna Bhagvan being reborn," says Sharma in gloating reverence.

In village Somka, about 80 kilometres away, the term of endearment for D.B. Gupta changes, considering the village's largely Muslim character. *"Khuda ka shukar hai,"* is how Sher Mohammed, a 22-year-old farmer, talks about LRSP adopting his village. Somka was briefly in the news in April 1986 when the late Rajiv Gandhi came here during his tour of rural India. The prime minister's visit resulted in a good motorable road for the village but did little about the main reason behind the villager's grinding poverty. For more than a generation Somka's residents had not been able to farm their land because it had turned alkaline. LRSP's first task here was to treat the soil with gypsum and zinc sulphate, which brought more than 25 acres of land back to life within the first year itself. In the second phase some 1,000 acres will be reclaimed through this process, at a cost less than Rs.2,000 an acre.



About two hours' drive from Somka is

Nonera, a village of 2,300 people, which has lived through successive monsoons virtually marooned for want of an elevated path-way. "During a particularly heavy shower we had to wade through waist deep water," says sarpanch Lakhan Singh. And now, thanks to LRSP, a 4.6 kilometre road is nearing completion. "Fifty years of Independence and no one ever came here," Lakhan Singh says, "and Lupin has changed our lives."

It cost Rs.4.21 lakh to build the Nonera link road, Rs.3.70 lakh of which came from LRSP, Rs.51,000 from the villagers themselves, apart from the labour they put into the actual construction. The water pipeline to Ramnagar cost Rs.6 lakh and all of it came from the Rajasthan government as also the Rs.4.6 lakh needed for the link road there. In Somka of the Rs.74,000 that has been spent so far on the land reclamation, Rs.48,000 came from LRSP, Rs.6000 from the government and the remainder, Rs.20,000, from the villagers themselves.

The funding pattern that LRSP has adopted for the work done in these three villages is indicative of an important aspect of LRSP. "Our role is that of a catalyst and a facilitator of rural development," says Bhupat Trivedi. And thus, unlike some over-generous philanthropists, Lupin is not pouring in an endless quantum of money into the projects that it is involved in. In fact, till late last year for example, about Rs.2 crore has been spent on the various projects in the 35 villages. Of this amount, less than Rs.1 crore came from the pharmaceutical company's own funds, the rest came from the government and the people themselves.

Trivedi: a totally scientific approach

"It is a three-way participatory rural development programme where we get the government and the people to play an equally important role," says Trivedi. Sitharam Gupta concurs, "One of the primary aims of our programme is to see that the existing government outlay for rural development is used efficiently and effectively. We contribute the managerial effort that is required for this venture."

Well thought out

Consequently a great deal of thought and effort has gone into planning every aspect of LRSP's activity, from mapping its objectives, to selecting the people to run it, to the actual implementation of the programmes. Gupta doesn't see much difference between the way he runs his company and the working of LRSP. "What we are doing is identical to what we do in business. We fix an objective, seek the appropriate technology, apply the appropriate management technique, and then provide the resources needed to achieve the objective."

Gupta says he was lucky in finding the right man to run the programme. The son of a farmer from Gujarat's Jamnagar district, the 61-year-old, sprightly, Bhupat Trivedi has spent 30 years working in rural India, in activity ranging from organising young farmers in Gujarat to helping rehabilitate Naxalites in West Bengal, to helping raise the standard of living of tribals in Kerala.

Keeping to the totally scientific and management-oriented approach of LRSP, Trivedi says he was clear right from the beginning that this was not going to be a khadi-clad, ideology-spouting social worker show. In fact, none of the 31 people who run LRSP, except Trivedi himself, have had any experience in social work or rural development. They are all highly paid professionals who were selected for their expertise in different fields.

Sitharam Gupta, the 40-year-old chief co-ordinator of the programme, was an engineer with the Rajasthan State Electricity Board and had made a name for himself organising the power engineers'

association in North India. Amar Singh Sharma, who is the senior co-ordinator for the agriculture and animal husbandry programme is an agricultural scientist who is actually an assistant director in the Rajasthan state government's agriculture department and is on a long deputation at LRSP's special request. Mukesh Gupta, the senior co-ordinator for the village industries and civil works programme, is a 31-year-old management graduate who has had a brilliant career in industry in Bombay.

The 35 villages under the programme are divided into 13 clusters and each cluster has one field assistant, most of them post graduates, staying in the village itself. With this kind of management structure, it isn't surprising that last year out of the Rs.90 lakh spent by LRSP till December 1990, Rs.42 lakh went toward administrative expenses. Says Trivedi, "Ours is a professionally-managed organisation with clear and achievable objectives."

Why Bharatpur?

The choice of Bharatpur as the district to implement the first phase of the programme was also an important and well thought out one. According to Gupta, he wanted this programme to become a model for similar ones that could be replicated elsewhere. And the only way the replication was possible was to get ministers and officials from the union government to see the success of the project and use their resources to persuade other industrial houses to take up similar programmes. Bharatpur being just 5 hours drive from Delhi, it is easy to get the capital bigwigs to visit the project.

Apart from the civil infrastructrual work like building of roads and providing water connections, LRSP's programme for each village (drawn up after an extensive survey of the population) is a comprehensive one which covers every possible aspect of economic activity there — agriculture, animal husbandry, dairying, fishing and cottage industries. Through demonstrations at an experimental farm in village Khoh, LRSP has within a year been able to vastly improve the yield of various crops grown in the target villages. The average wheat production last year, for example, was 26 quintals an hectare compared to 22 in the previous year. Similarly, the figure for barley was 30 against 23, for paddy 20 against 12, jowar 19 against 14, mustard 13 against 10.

Animal husbandry and dairying is another area where LRSP experts are working full time to improve yields. Fourteen co- operative milk societies involving 1,100 members have so far been established in as many villages. The Rajasthan State Co-operative Dairy Federation has contracted to buy the milk at a rate that has improved the farmers' income by more than 20 per cent on an average.

D.B. Gupta: Lord Krishna reborn

Other animal husbandry related programmes range from developing piggeries, poultries, goat and sheep keeping to deepening of village tanks and using them for rearing fish.

Introducing industry

As for village industries, Mukesh Gupta, the co-ordinator, says that since Bharatpur has always lacked an industrial culture it has been rather difficult developing it. Nevertheless, LRSP has set up two training-cum-production centres for dhurry weaving where trainees are paid stipends of around Rs.300 a month. NABARD has also recently sanctioned a training-cum-production centre with a grant-in-aid of around Rs. 18 lakh.

One aspect of the LRSP that Trivedi is genuinely proud of is the extent to which he has got the government and government agencies involved in the various projects. Apart from the district administration in Bharatpur and the government of Rajasthan, the other organisations who are active in one way or the other include the Khadi & Village Industries Commission, the Union Rural Development Ministry, Indian Council of Agricultural Research, Central Bee Research Institute, various agricultural universities, NABARD, Central Fodder Research Institute, Jhansi, the Punjab National Bank and even HDFC. Says Trivedi, "There is enough of expertise available in this country. The important thing is to use these resources well."

Participatory approach

The Rajasthan government, in turn, now looks upon the LRSP as a model for its rural development programme. According to M.L. Mehta, the state commissioner for agriculture and policy planning, the state government would like LRSP to cover more villages in the state under the programme. The participatory approach adopted by LRSP has not only generated great enthusiasm among the people but has also given a new thrust to community development. People have participated in real terms, voluntarily by way of labour, contribution of funds and supervision of development works benefiting their village or locality, thus making 'development at doorstep' a reality."

A measure of LRSP's success can also be seen by the fact that the United Nations Development Programme (UNDP) is sending four of its volunteers from Philippines, Indonesia, Sri Lanka and Bangladesh to train in Bharatpur for two years. But D.B. Gupta claims the programme is still in the experimental stage.

"The day the programme is successfully replicated elsewhere by other voluntary agencies is when I will consider it a major success," he says. "And I don't think this is a difficult task. There are 500 districts in the country and I am sure there are 500 companies and associations which can individually, or in groups, spend a few crores and provide the managerial resources for rural upliftment programmes in each of these districts. All that is needed is the will, and millions more will be able to put their grinding poverty behind them."

MIDDLE EAST MONEY

Same camels, new products

DAVID KLEIN

BY OSAMA EL-SHERIF
in Amman, Jordan

TO THE VICTOR go the spoils of the Gulf War: access to oil, billions of dollars in reconstruction and military contracts, plus US political and economic dominance over the affairs of the Gulf and Middle East.

Just as the Gulf conflict changed the political map of the Middle East, it is now redesigning the economic relationships between rich and poor within the beleaguered Arab world, between oil-producing Arab countries and the West and between poor Arab countries and the West, particularly the US.

Iraq's Saddam Hussein had told millions of impoverished Arabs that his occupation of Kuwait embodied the struggle for a new Arab economic order based on a just and more equitable distribution of wealth among the Arab people. But in political and economic terms, Iraq's occupation of Kuwait meant that, in effect, Hussein controlled more than two-thirds of the oil reserves in the Middle East.

The industrial West saw in Hussein's control of Kuwait a repetition of the bitter memories of Mussadeq's nationalization of Iranian oil in the 1950s, the Arab oil embargo during the 1973 Arab-Israeli War, the Islamic revolution in Iran and the rise of Khomeini in 1979 and the bloody Iran-Iraq War of the 1980s, all of which have threatened free access to oil from the deserts of the Middle East to the factories of the capitalist world.

Continued next page

New products

Continued from previous page

The tribal leaders of the sparsely populated Gulf states were also fearful for their very existence as privileged societies enjoying luxuries made possible by the billions of dollars generated from the sale of their black gold.

The Gulf sheikdoms had clustered together into an exclusive rich-man's club, the Gulf Cooperation Council (GCC), as far back as 1980, soon after the Iran-Iraq War broke out. They were always wary of the territorial ambitions of their two large neighbors who engaged in a bloody war which lasted for eight long years.

The GCC grew from a political garrison into an economic forum for the six countries which make up the council today (Saudi Arabia, Kuwait, Bahrain, Qatar, United Arab Emirates and Oman). Policies of the Organization of Petroleum Exporting Countries (OPEC) were discussed and coordinated at the council while various trade agreements were concluded among the members to theoretically lift trade, investment, customs and other barriers.

But their billions were invested outside the Arab world: in French gas station chains, British luxury hotels, Japanese real estate and US financial institutions. Nonetheless, the GCC was unable to protect Kuwait from the invading Iraqis. The Gulf states had to turn to the US for help. By the time the Iraqis were driven out, Saudi Arabia, the United Arab Emirates and Kuwait had paid more than US$14 billion and are expected to pay another $21 billion to cover the cost of liberating Kuwait.

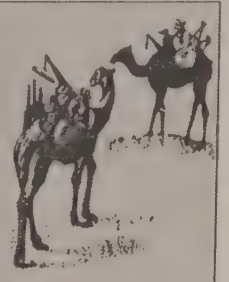
The cost of the war depleted substantial sums of GCC countries' liquidity. For the first time in its history, Saudi Arabia, which was trying to adjust to dwindling oil returns and rising budgetary expenditures even before the Gulf conflict, had to borrow money in order to meet its financial obligations.

Jordan, Yemen and the Palestine Liberation Organization (PLO) have now been taken off the GCC's aid list because of their political stands during the Gulf War. Their nationals, who brought in billions of dollars in expatriate money, were either expelled en masse, like the Yemenis from Saudi Arabia, or harassed into leaving. Those in Kuwait (a prewar estimate put the number of Palestinians and Jordanians at 450,000) lost most of their possessions fleeing either the invading Iraqis or the liberated Kuwaitis who persecuted them for their leaders' stands.

The loss of expatriate money could mean catastrophe for Jordan and the Palestinians of the West Bank and Gaza Strip. Jordan, which lost $4 billion in trade with Iraq and the Gulf states because of the conflict, as well as direct aid and expatriate remittances, was also punished by the US which cut its military and economic aid, estimated at $38 million annually.

As a token of their appreciation, the GCC members met with their Syrian and Egyptian allies in Damascus in March to discuss the setting up of a new defense and economic order. A $15 billion development fund is to be established to assist Arab countries who supported Allied intervention in the Gulf. Naturally, those Arabs who did not support the military option and the GCC's alliance with the West will not be welcomed into the new economic and military pact.

Iraq's defeat also means that GCC countries can now ignore the July 1990 OPEC quota agreement which was engineered by Hussein himself one month before his occupation of Kuwait. Hussein had forced GCC members to stick to their production quotas in an attempt to raise the price of oil to a respectable $24 per barrel after it had dropped to as low as $10 per barrel.



Reconstruction of the war-ravaged Gulf region is the biggest reward for Western members of the alliance. Destruction of Kuwait's infrastructure has been tremendous. Iraq has been pummeled back into the Middle Ages. Western sources are now talking about billion-dollar deals. The US will almost certainly get the lion's share in terms of contracts and trade agreements. In the 1980s, US exports to the GCC countries reached $80 billion in commodities and military equipment. Kuwait's reconstruction alone is estimated at $70 billion.

US peace efforts in the Middle East to settle the Arab-Israeli dispute and the Palestinian question are a direct consequence of the Gulf War. Again Arab oil money is lubricating the US-engineered peace machine. The GCC countries are now more susceptible to the idea of peace with Israel.

In economic and political terms, the Middle East today is opening up to US dominance. On the surface there is promise of reconstruction, political stability and economic security. But deep inside this troubled region there are issues which still need to be addressed and will continue to haunt the victors of the Gulf War. The "pacification" of the Middle East may have started, but it is a long way from completion.♦

Passing bucks

Gulf War profits and losses

Estimated value of Kuwait's foreign investments: **US$100 billion**

Estimated amount Saddam Hussein "skimmed off" Iraq's oil revenues over 10 years: **$10 billion**

Amount Syria received from Saudi Arabia and other Gulf states for coalition support: **$1 billion**

Value of gold and currency looted from Kuwait by Iraqi forces: **$1 billion**

Percent of GNP Syria and Israel spend on defense: **10-15;** Iraq: **25;** Saudi Arabia: **20;** most NATO countries: **3-4**

Advance offered US General Norman Schwarzkopf for his memoirs: **$4 million**

Estimated loss in trade and aid Jordan has suffered due to Gulf War: **$4 billion**

Total of direct foreign aid disbursements to Jordan from Japan and Germany between September, 1990 and February, 1991: **$947 million**

Ratio of funds spent on the military to funds spent on health and education in Iraq: **7:1;** Syria: **2.3:1;** Japan **1:10**

Kuwait's secret weapon

Small nation, big international investor

By Nigel Adam
in London, UK

THE CITY OF London is home to many famous financial institutions. In the shadow of Saint Paul's Cathedral sits one of the most powerful and, until recently, one of the most secretive. It is the Kuwait Investment Office, known throughout the world's money markets as the KIO.

More than any other Arab institution, the KIO is a striking symbol of overseas wealth. It controls around US$40 billion of Kuwait's foreign holdings, which are estimated to be worth at least $100 billion. The KIO owns large chunks of companies in the UK, including a 9.8 percent stake in British Petroleum (BP), and has made similar investments elsewhere in Europe.

Kuwait's decision to build an international portfolio from a London base has proved to be a masterstroke. While Iraqi troops were plundering Kuwait City last August and removing valuables of all kinds, the country's overseas investments remained untouched. A freeze on Kuwaiti assets by the major powers proved purely temporary.

The KIO's reputation in London and its operational experience there made it a rallying point for the Kuwaiti government-in-exile. It also helped the country's banks deal with problems created by the freeze and worked closely with the Kuwait Petroleum Corporation, the state oil company which has also had a London office since 1983.

For many years, the KIO adopted a highly secretive approach to its investments, only declaring stakes built up in companies when it was legally compelled to do so. Whenever a stock price shot skyward on the London exchange, rumors of KIO buying swept the City.

> *It is ironic that such careful planning in Kuwait's overseas investments should be met with the wholesale destruction of its assets at home.*

Although firmly rooted in London, the KIO has recently been hunting for bargains on the continent, particularly in Spain. It is now the largest foreign investor in that country, with assets valued at between $7 billion and $8 billion. It has interests in food, paper and chemical companies, as well as a near 75 percent holding in Grupo Torras, one of the country's largest industrial holding companies.

The KIO is not the only guardian of Kuwait's international investments. The government itself owns a 14 percent stake in Daimler Benz, Germany's biggest industrial grouping which recently expanded its activities from motor manufacturing to aerospace.

The state-owned Kuwait Petroleum Corporation owns over 20 percent of another German industrial giant, the chemical concern Hoechst. This stake was acquired in 1982, at a time when the country was starting to build overseas investments of a different kind: a network of oil refineries and gas stations in Europe.

Kuwait Petroleum has spent substantial amounts to build a refining and retail presence in Europe, using its own Q8 logo. Its assets include three oil refineries and over 6,500 gas stations in most countries of Western Europe.

It is ironic that such careful planning in Kuwait's overseas investments should be met with the wholesale destruction of its assets at home. This raises the issue of whether foreign assets may have to be sold to pay for reconstruction, although the KIO insists that its hand will not be forced.

Kuwait has also said that it intends to borrow hefty amounts of US dollars on the international markets to help pay for the damage. There will be no shortage of lenders since the country's massive oil reserves make it a highly bankable proposition.

Yet the KIO may never be quite the same. The strains that have surfaced among the Kuwaiti community following debate over the pace of political reform are equally apparent among KIO staff. Several senior executives resigned in December over differences about control and policy, although some have since rejoined.

KIO is also in the unusual position of having no automatic increase in funds each year, now that oil revenues have dried up. This means that the KIO will have to work quite a bit harder to make the most from its existing assets.♦

FACTS ABOUT ISRAEL

At left: Israeli technology and industry can be peacemakers.

Regional trade ties can overcome political logjams

Only token inter-Arab trade now in the Middle East

By Joel Bainerman
in Jerusalem, Israel

POLITICS DON'T guarantee peace agreements, solid economic ties do. Enhanced US diplomatic activity won't bring about a resolution to the Middle East conflict because a lack of diplomatic activity is not the primary cause of the problem, nor is the absence of a Palestinian state.

Probably the only way to bring peace and stability to the Middle East and to get rid of current and future dictators is to enable capitalism to gain a foothold in the region. Democracy will be the obvious by-product. Once economic self-interest is firmly established, democratic systems of government will surely follow. Japan, South Korea and Taiwan are just three examples of countries that could have easily become (or remained) dictatorships had it not been for their consistently rising levels of prosperity.

Capitalism in the Middle East might emerge when Arab nations begin fostering bilateral trade ties with each other; when no ties exist, it's a lot easier to vilify your neighborhood. It's no coincidence that the US and Canada boast the highest level of trade of any two bordering countries while at the same time they enjoy warm political relations.

Currently, only 5 percent of all Arab trade is intra-Arab trade. The obvious reason is that Arab nations have not developed their industrial infrastructure. But even when certain products are available, importers choose a European or other supplier. Such is the case with West Bank Palestinian products. Neighboring Arab traders often base decisions for purchasing Palestinian goods on politics; for example, whether there is a current dispute with the Palestine Liberation Organization or fear that West Bank products contain Israeli components.

Overall, however, it is the lack of close political ties between Middle Eastern countries which keeps intra-Arab trade to a minimum. Unless these nations begin to create stronger economic ties, their rulers have nothing to lose by declaring war on each other.

Economic ties need to precede peace treaties. One way for this to happen is for the US to initiate the establishment of an EEC-type organization linking Israel, Egypt, Jordan, Saudi Arabia, the Gulf states, Turkey, Morocco and Cyprus into a partnership based on trade and technological cooperation. Once Israeli agro-technology finds its way to Saudi Arabia, the Middle East will take on an entirely new political face.

The skewed distribution of wealth is one of the region's major economic problems. For instance, 2.1 million Kuwaitis share nearly US$30 billion, while Egypt's 55 million inhabitants split less than $35 billion. GNP per capita in Kuwait is $13,680, but in Egypt only $650.

Another ingredient needed for democracy to work is for citizens of the Middle East to be given equal opportunity to amass wealth. The bribes to officials for import licenses and the royal families' involvement in nearly all business deals must end.

Economics influences other trouble spots in the area. For instance, what will happen in Syria if President Hafez al-Assad is one day overthrown? How will the Syrians build a stable political environment if their economy doesn't prosper beyond the current $1,670 per capita GNP? Would Egyptian President Hosni Mubarak have been able to maintain control over his country if Egypt's foreign debt of $50 billion hadn't recently been cut by one-third as US payment for participation in Operation Desert Storm?

An even larger question mark hangs over Jordan whose economy is more than $8 billion in debt (more than 100 percent of GNP) and heavily reliant upon a mixture of foreign aid and remittances from workers in other countries. The Gulf War is estimated to have cost Jordan more than $500 million in revenues from its tourist industry and caused a steep decline in exports. Additionally,

Joel Bainerman is a freelance journalist who frequently writes on topics regarding the Middle East and its economy.

more than 200,000 Jordanians lost their jobs in the Gulf, worth another $300 million to the national economy. Unemployment in the kingdom now runs as high as 30 percent.

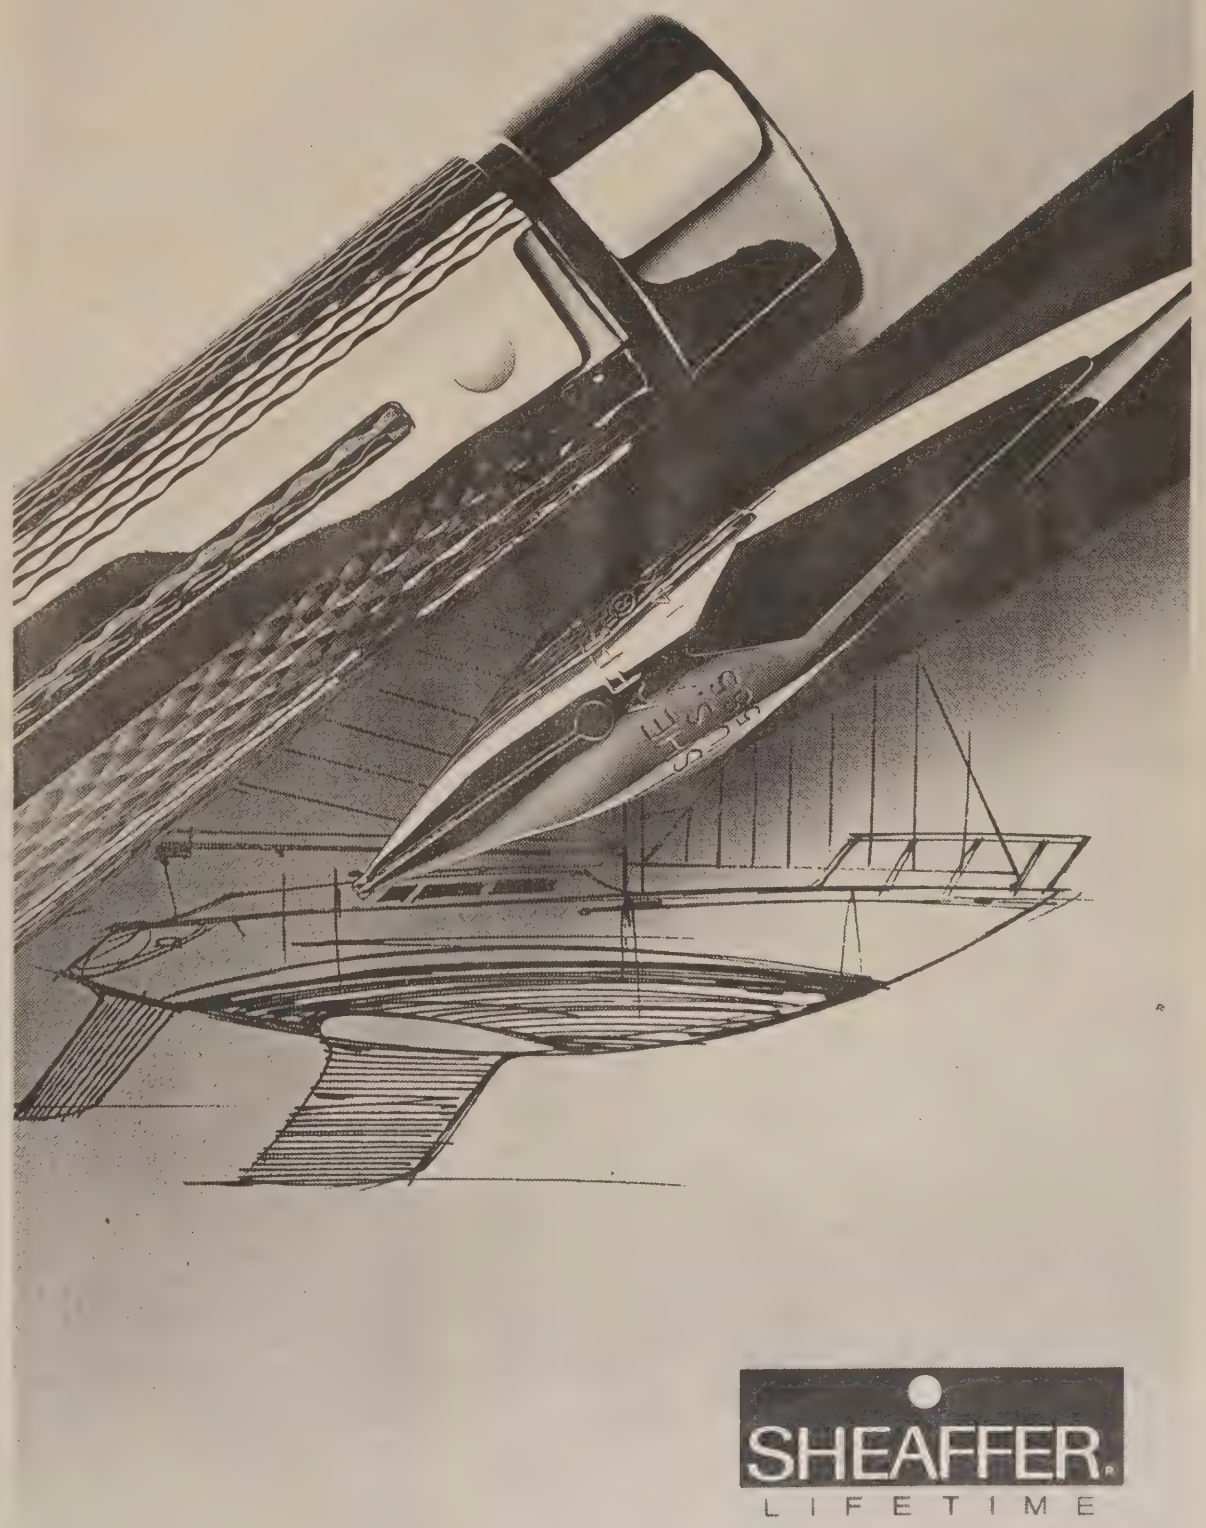
More important to the future stability of the region, if Jordan's economy continues to falter, could an *intifada* occur, installing a Palestinian leader in power? If so, what would that mean for the Palestinians on the West Bank and Gaza and their conflict with Israel?

Despite all that has been said and written about the Palestinian-Israeli conflict, neither the problem nor the solution can be comprehended without considering economic factors. Any peace agreement will last only so long as the Palestinian economy prospers and socioeconomic development has had a chance to cement the fragile strands of political stability.

Even if the status quo continues or if the emergence of an independent Palestinian state remains a long way off, Israel can do much to improve relations with residents of the territories by removing the heavy hand of government that blocks economic opportunity.

Daniel Doron, director of the Israel Center for Social and Economic Progress, a nonpartisan think tank based in Tel Aviv, believes Israel should continue dismantling the walls between the two communities, a process that began with the Israeli "shopping invasion" of East Jerusalem in 1967, the opening of bridges to Jordan and the employment of West Bank and Gaza Arabs in Israel.

"Commercial activity is the only sphere where Jews and Arabs have learned to interact—not in the artificial and rarefied atmosphere of conferences and seminars, but in daily life and in a framework that, despite all its problems, is mutually beneficial," says Doron.



Economist George Abed, the executive director of the Geneva-based Palestine Welfare Association, estimates (calculated before the Gulf War) that for a Palestinian state to be viable, $25 billion would need to be pumped into it over a 10-year period. As in Israel, tourism could be a major contributor to GNP of any future Palestinian economy, with many of the tourists coming from the Arab world.

Although the *intifada* has made it almost impossible for Palestinians and Israelis to discuss economic options, one point is clear to all: the Palestinians' economic problems must be solved before, or at least alongside, their political problems.

Economic ties cement existing political relationships. Thirteen years ago, Israel and Egypt signed the first Israeli-Arab peace treaty. In those early years, many Israeli businessmen and industrialists visited Egypt and saw great potential in doing business there. The enthusiasm climaxed in 1981 when 60 Israeli firms participated in an international exhibition in Cairo, most of them in the agricultural field.

Yet a decade later, bilateral trade between the two countries has barely increased. In 1990, if Egyptian oil exports which amount to more than $150 million are excluded, total trade is a paltry $10 million as Egypt acquires only 0.05 percent of all Israeli exports. Thus the cold peace.

Economics plays a key role in most of the region's hot spots, yet this component of the problem is rarely considered. Diplomats, columnists, politicians and potential peacemakers need to look at these crucial economic issues. Without a greater understanding of how economic impasses and obstacles contribute to the Middle East conflict, the future is left to worn-out myths and neatly put propaganda.♦

The bank that Abidi built: Success and controversy

'Cheeky upstart' takes on Western banking

By Mushahid Hussain
in Islamabad, Pakistan

IT HAS ALL the ingredients of a best seller: a financial wizard who builds a banking empire from scratch, knit together by the sheer brilliance of its founder with threads of occasional financial wheeling-dealing, links to Third World autocrats, Arab riches and Pakistani talent.

The result, predictably, was extraordinary: US$20 billion in assets, over 350 branches in 70 countries and the world's seventh largest private bank. The bank's name, in the eyes of the Western financial world which treated it as a "cheeky upstart," is today literally a four-letter word, BCCI (Bank of Credit and Commerce International).

When Agha Hasan Abidi, a Shiite Indian immigrant who settled in Pakistan after the 1947 division of the South Asian subcontinent, decided to launch BCCI, he was helped by a combination of events prevailing in the region. After the 1971 war between India and Pakistan, and the resulting independence of East Pakistan (renamed Bangladesh), Pakistan turned to the West—toward the Middle East—for economic succor and political support.

Erected on a tripod of Abidi's drive, Pakistani ideals and Arab money, BCCI relied on the support and influence of people like the president of the United Arab Emirates and ruler of Abu Dhabi, Sheik Zayed bin Sultan al Nahayan (whom Abidi met through their mutual love of falconing) and Dr. Ghaith Pharaon, a Saudi billionaire with close connections to the House of Saud.

BCCI became a banking juggernaut by expanding its services to a diverse clientele, from the select among the Muslim nouveau riche to general customers, drawn by the bank's personalized service and efficiency. But Abidi was not a typical big-time banker with a "have money, will travel" approach.

His initiative came from his world view, which he was keen to peddle via BCCI. The view combines spiritual zeal from his Islamic background, business acumen from experience in the banking world, and concern for humanity, which lent the BCCI a Third Worldist thrust.

In large measure, however, BCCI suffered from problems peculiar to a "Third World style" of doing business. Abidi the man invariably stood taller than BCCI the institution. Abidi personally controlled BCCI, disbursing largess at his whim, rewarding retired bureaucrats with cushy jobs that provided them fat salaries.

BCCI branches dotting the globe were often staffed largely by relatives of leading Pakistani and Third World officials; the criterion for their appointment was often not competence but connections. Sprinting ahead of rivals in the Western banking world, Abidi earned the wrath of many influential and envious rivals.

By 1988, Abidi was confined to freelance status in the banking world with neither solid support from an important government nor backing from a base in one major country. His vulnerability was increased by frail personal health, which culminated in a heart transplant.

Two other factors also contributed to the 1988 fall of Abidi's BCCI. In February 1988, Panama's strongman, General Manuel Noriega, who had earned the ire of US authorities, was indicted by a grand jury in Tampa, Florida, on charges of drug trafficking and money laundering. Noriega's bankers in Panama: BCCI.

US publications have been quick to accuse BCCI of many shady deals. An April 1991 issue of *Time* magazine featured an article on BCCI under the headline "Masters of Deceit," which told of "a pattern of unprecedented global financial duplicity."

In the meantime, these crises compounded with Abidi's failing health (he suffered a stroke following his heart transplant) were too much for him to handle and in 1990 he parted company with BCCI, whose ownership and control was passed on to one of its original shareholders, Sheik Zayed, who reportedly paid $500 million for this acquisition.

Abidi's vibrancy and never-say-die approach are best reflected in recent reports of his plans to set up an investment bank capitalizing on Pakistan's new political environment which is more conducive to economic growth, generated by the government's policies of privatization and deregulation.♦

The real Gulf War: Operation dollar storm

BY CROCKER SNOW, JR.

In all the proud and prejudiced post-mortems of the Gulf War, with all the incantations about its ultra high-tech nature, two noteworthy dynamics characterized the restless international kibitzers who were arrayed around and beyond the battlefield.

These were the respective dynamics of dollars and dirty laundry that were part of the international background beat to the central rhythm at hand.

As so often happens in history, this war was fought for economic as much as political reasons. Yet beyond the precious Kuwaiti oil fields and their impact on world oil prices, the conflict had an overarching global money dimension in which funding was solicited, negotiated, calculated, spent and squandered in ways worthy of "the mother of all battles" that, of course, never came. And while the well-funded combat was being waged in the Gulf, some of the major noncombatant big boys on the world stage stole the moment to try to wash, or at least tumble dry, the worst of their own dirty laundry. Each approach was costly.

The dollar dimension of the war was visible at every turn. Saddam Hussein, in the first instance, invaded Kuwait out of irritation at the Emir for undercutting OPEC oil prices and as a way to relieve his own US$70 billion-plus debt burden built up during his fruitless eight-year war with Iran.

If the coin of the threatened Kuwaiti realm was petroleum, the coin of the coalition that sprang up in its defense was cash. Recall the central role of Britain's Chancellor of the Exchequer Norman Lamont before the full UK commitment was proffered. Consider the readiness of the oil-rich nations of the Gulf emirates and Saudi Arabia to fatten the wallets and thus strengthen the resolve of the then-deploying American military force.

For Tokyo, the fiscal and monetary challenge of the war was especially acute. From August to December, the Japanese waved their "peace constitution" aloft, hurrahed the coalition and provided only nominal financial assistance to the campaign that would help secure the Middle Eastern oil on which they so much depend. It was only on the very eve of the war's end in late February that the Lower House of the Japanese Diet approved Prime Minister Kaifu's pledge of $9 billion to add to the funds previously pledged to the coalition.

Ultimately, the allies pledged a total of $53.9 billion to the war effort in what amounted to a jumbo syndicated bank financing to reverse the unfriendly takeover. There remains a most curious balance of payments twist to this for the lead bank.

Certain things didn't change. The war revolved around the importance of funds as much as force.

Whatever the ultimate figure collected by the US against its own exaggerated military costs, this total will, as collected, become a direct credit against America's current, debilitating $95 billion foreign exchange deficit on the current account.

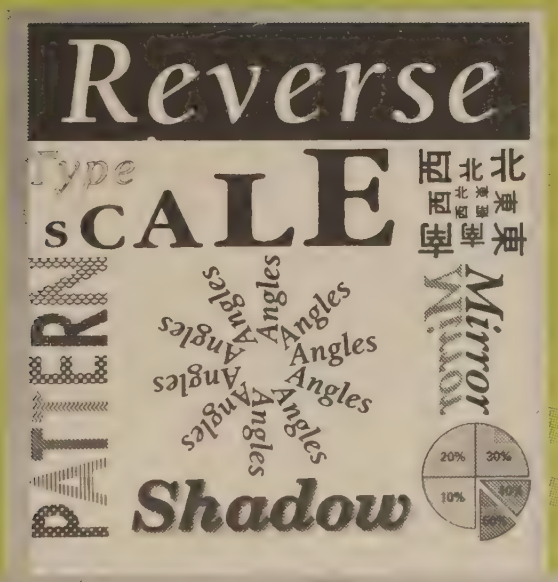
The destruction of Kuwait, however, has American and other construction firms lining up for lucrative Kuwaiti contracts.

Out of gratitude alone, US firms stand to benefit the most. In the first days after the war, American companies won 70 percent of the 200 contracts let by the restored government of Kuwait for providing basic services and repairing damaged oil wells, pipelines and refineries.

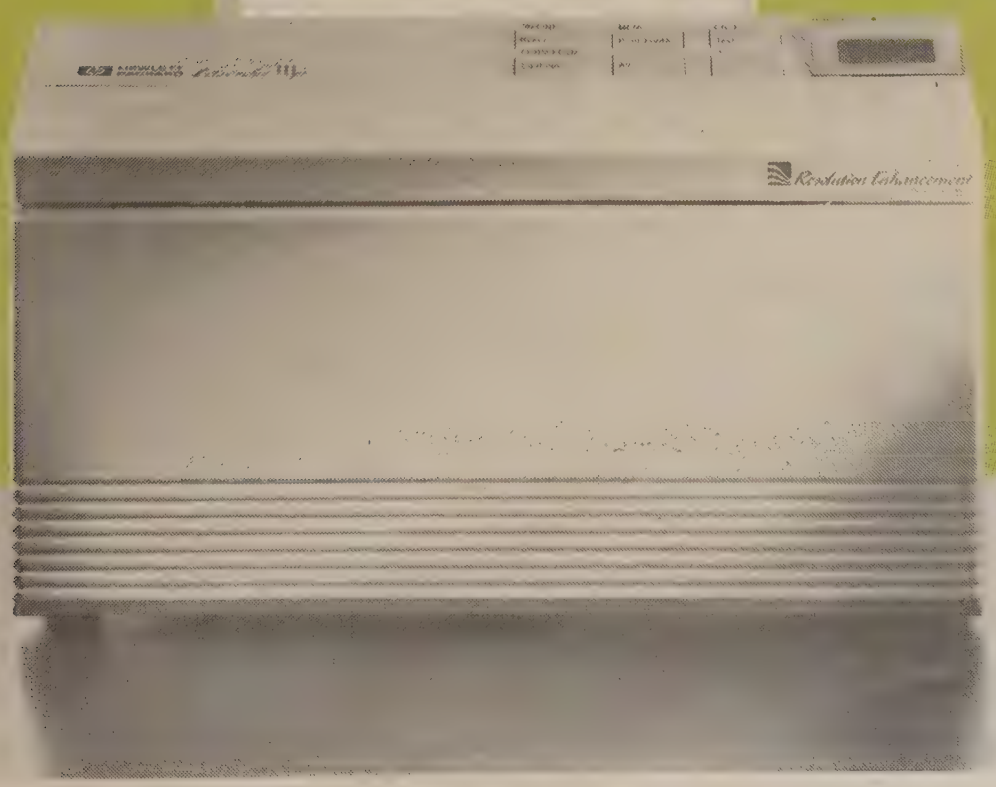
In a few forceful capitals far from the battlefield, the internal affairs ministries were catalyzed by the war clouds too. Specifically, in Moscow and Beijing, the guardians of the two threatened communist nations tried to buttress their failing political facades under cover of the war.

Faced with persistent independence movements in the Baltic states and elsewhere, Mikhail Gorbachev grudgingly unleashed elements of the Soviet army to quell the troubles in Lithuania with force of arms rather than political persuasion. But the ploy didn't work anywhere near as well as it did in 1956 when Soviet tanks moved into Budapest to quell the Hungarian uprising under cover of the simultaneous Suez Crisis that had captured the attention of the Western world.

This time around, Washington and Brussels looked up from the war dispatches and distractions long enough to threaten withdrawing some precious political and economic support that Gorbachev sorely needs to survive. Moscow blinked, the Lithuanian patriots didn't buckle and the standoff for Baltic independence continues for a future day.



China's dirty linen laundry washing did a more effective job. Twenty months after the violence and bloodshed at Tiananmen Square, some of the last student offenders were brought to trial and sentencing.

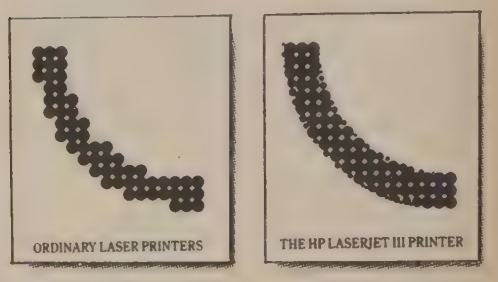


It was no star-chamber proceeding. More than 60 of those held were released without trial. Three of those tried and found guilty were released without sentence. Five of the most prominent pro-democracy agitator were sentenced from four to seven years in prison for their unrepentant attitudes.

During this extended morning-after from the Gulf War, we are being conditioned to believe that this was an "all new" kind of war with weaponry like cruise, Scud and Patriot missiles, an all new lexicon involving "sorties," "collateral damage" and "anecdotal evidence," and yes, even the fresh prospect of a postwar new world order.

But certain things didn't change. The war revolved around the importance of funds as much as force. And under its cover some major noncombatants tried to finesse some unpleasant, unpopular and unnoticed tasks. In this sense, at least, it was all too historically familiar.♦

Imagine what you can get up to with the new HP LaserJet IIIP on your desk.



What do you do when you've created the biggest sensation in LaserJet printers?

You go on to create the smallest. The HP LaserJet IIIP.

All the sharpness and clarity of the HP LaserJet III compacted into a personal printer for use on your desk, your window ledge, top of your filing cabinet. Anywhere.

Whilst our Resolution Enhancement Technology (RET) or in layman's language, different sized dots, makes printing perfect curves a foregone conclusion.

(Take a look at the visual, you'll see at a glance why we're so proud of it.)

Of course, the HP LaserJet IIIP uses the latest version of our industry standard language PCL5.

Naturally, it gives you expanded graphics capability, flexibility of multiple and scalable fonts, all on one page.

Not to mention the high standards of quality and reliability you've come to know and expect from HP.

If you'd like to know more, and we're sure you will, please get in touch with any leading computer manufacturer or their authorised dealers.

Keen competitor

Trouble-free industrial relations and quality products ensured the competitive edge while diversification added zip and lent credibility in tough times

Swarup Sampat the telestar, has popularised Surya fluorescent tubes that 'light up at a low voltage' so well but the Delhi-based company that makes them has largely remained unnoticed. The Rs.115-crore company even changed its name from Prakash Tubes Ltd to Surya Roshni Ltd last year to exploit its brand's fame. But Basudev D. Aggarwal, the chairman and managing director, still prefers to maintain a low profile. Aggarwal believes that working quietly gives one the advantage of springing surprises in an industry and also keeps the company away from undue pressure tactics.

Aggarwal, who hails from Hissar, started his career with Jindals' first small-scale venture in 1952 in Calcutta and was co-founder of Jindal Tubes Ltd in 1960. In 1970, he quit directorial responsibilities with the Jindal group as according to him, the boardroom began teeming with the younger Jindals. Says Aggarwal, "I had to start afresh for a place in the sun for myself."

B.D. Aggarwal: springing surprises

Father-and-son team

Jaiprakash Aggarwal, his son also quit his job with Jindal Industries Ltd to join him. The father-and-son team founded Prakash Tubes Ltd in 1971 at Bahadurgarh in Haryana with an initial investment of Rs.24 lakh. In 1985, they diversified into lighting as the steel tubes industry faced tough times with the onslaught of polyvinyl chloride (PVC) pipes.

Aggarwal claims that despite adversities in the steel tubes industry, he has not lost money in this operation. Even though the tube makers lost a great part of the government orders for underground water supplies to PVC, the demand from tubewells, construction and industrial sectors stayed with them. With only the tube operations going, it took Aggarwal 10 years from the start of production in 1974 to achieve a turnover of Rs.18 crore. However, the mid-eighties saw Aggarwal launching his lighting venture while at the same time modernising and expanding production of tubes.

The outcome of all these efforts shows clearly in the company's financial performance. Turnover increased to Rs.115 crore in 1990-91 with a post-tax profit of Rs.6.26 crore. The diversification into lighting in 1985 with technology from GEC (UK) added zip to the growth of the company. Since its inception, its turnover has grown at an average rate of 50 per cent annually.

While pressures on profitability in the steel tubes venture made Aggarwal think of diversification, his choice of the lighting industry for this purpose was on account of the government's grand plans for rural electrification in the Seventh Plan period. The government's projections of the demand for lighting items also invited massive expansion plans by established manufacturers like Philips, Sylvania Laxman, Bajaj Electricals, etc. Consequently, between 1984 and 1987, the industry's capacity increased from 32 million to 85 million fluorescent tubes. But unfortunately for them, the government's projections proved to be rather optimistic.

The three consecutive droughts between 1987-89 did not help matters either. Also, competition from the small sector in ordinary bulbs became tougher as the production and marketing costs increased for the organised sector. Thus the industry had to face rather indifferent times with most of the companies' bottomlines struggling to stay above the red.

In these circumstances, Aggarwal not only managed to avoid losses but even grew at a rapid pace. Within six years of operation, Surya Roshni's Kashipur unit emerged as the single large producer of fluorescent tubes in the country. Though Philips remains the largest selling brand with three of its units producing tubes, still in terms of market share, Philips' lead over Surya is only three per cent (18 per cent against 15 per cent). In ordinary bulbs (range 25-200 watts), Surya Roshni however, lags far behind Philips, the market leader in this segment too. While Philips enjoys 27 per cent of the market, Surya bulbs has so far managed only 7 per cent.

Price sensitive

According to G.B. Bansal, executive director, the reason the company has not been doing so well in the bulbs segment is that this is essentially a price sensitive market with emphasis not on quality. According to him, though 2700 million bulbs were produced by the organised sector last year, the small-scale sector produced and sold almost the same number. For this reason, Surya Roshni has maintained a low (by industry standards) capacity for bulbs and focused only on tubes.

Bansal claims that it's the technology that has given Surya the edge in this market. The water-based coating process gives tubes a uniform fluorescent coating and a greater output. Also, the image that is be-

G.P. Bansal: superior technology creates an edge

ing projected is that their brand lights up at a voltage of 160 volts while most other tubes do so only at 180-200 volts.

Surya Roshni has also ventured into the area of lighting lamps. A beginning was made in manufacturing high pressure sodium vapour lamps last year. The area lighting lamps' market — consisting of high pressure sodium vapour and mercury vapour lamps — is currently dominated by the public-sector companies, HMT and Mysore Lamps. However, this segment has failed to live up to its promise so far. According to Bansal, the deterrent fact has been the higher cost of vapour lamps — seven times in comparison with traditional fluorescent street lights.

Re-rolling steel pipes at the Bahadurgarh plant

Cutting costs

The company has also gone in for backward integration to cut costs on two expensive imported inputs — fluorescent powder and filaments. This Rs.10-crore project is being implemented at Kashipur itself. Another unit is being planned at Malanpur in Madhya Pradesh for further expansion of capacities of ordinary bulbs and tubes. This is likely to come up by 1992.

J.P. Aggarwal: boom time

According to R.C. Saxena, general manager, marketing, Sylvania Laxman, Surya's performance has been creditable. "They have been able to give good quality products at reasonable prices due to efficient and latest machines and trouble-free industrial relations," he says, adding that Surya Roshni was lucky to enter the industry at a time when two major lamps producers were closed — Bengal Lamps and Mysore Lamps.

Last year, the lighting division performed extremely well and its turnover leaped from Rs.24 crore to Rs.38 crore thanks to the combined effect of a small boom in the market as well as inflation. According to Bansal, the boom came about partly by the cyclical nature of the market and partly by the benefits of rural electrification and a good agricultural year.

Interestingly, the usually staid steel tubes division also pulled off a dramatic performance last year. The division worked up an increase of about 60 per cent in turnover — from Rs.48 to Rs.76 crore. J.P. Aggarwal, the joint managing director in charge of the steel tubes division, attributes this stupendous increase to a combination of the geographical expansion of the products' distribution, aggressive advertising and marketing, coupled with improvement in the product mix. He claims that market penetration among pump and conveyor system makers also helped. J.P. Aggarwal agrees that at least 10-15 per cent of the improvement in the turnover figures is on account of inflation.

Till 1989, the company was making steel tubes of diameters only up to 8 inches. Last year, the range was increased to 14 inches. According to J.P. Aggarwal, the company has recently set up facilities for making 16 inch diameter tubes to cater to bulk orders.

The performance of the company is impressive considering the fact that in the steel tubes industry the overall capacity utilisation is as low as 35 per cent and the market growth has been a low 5-7 per cent a year. Says S.R. Aggarwal, sales manager, Ajanta Tubes Ltd, "Not prosperity but survival is the name of the game in this industry." He attributes Surya's success to the competitiveness of the company's products on quality and prices.

According to B.D. Aggarwal the company has benefited from shifting the emphasis from small diameter tubes to larger ones. He boasts of Surya enjoying a premium of 3 to 4 per cent in the market which is, however, scoffed at by S.R. Aggarwal of Ajanta Tubes.

Although the government's purchase departments are dominated by Ajanta and Jindal Pipes, B.D. Aggarwal has no regrets as most of Surya's steel tubes production is sold in the open market for tubewells and industrial purposes besides furniture and cycles. Over 80 per cent of the company's production is sold in the open market. Of the total market for steel tubes Surya has maintained a stable 4 per cent share.

B.D. Aggarwal is satisfied the way the market has responded to his product. Says he, "The good thing about the open market is that despite cut-throat competition if one can offer a better product one can realise a couple of extra rupees."

But Aggarwal is clear that he will not make major investments in this division any more. "Being an investment-intensive and a low profitability industry, I see no charm in sticking my neck out too much in this sphere," says he. Then what does he plan for the future? "Do whatever we can to improve the earnings in steel tubes division, consolidate lighting division further and think of diversifying into a promising industry which I've not identified yet," replied Aggarwal.

With two decades of independent enterprise behind him and a successful company under his belt, does he feel he has played his innings well? Aggarwal breaks into a chuckle as he answers, "I don't think my success is too much but I've done well enough to justify the confidence of shareholders and the institutions."

■ FEROZ AHMED

VITREOUS ENAMELLING

A fading sheen

At one time, it covered everything from industrial components to cheap mugs and plates. But consumer preferences have changed, and with it the fortunes of the vitreous enamelling industry. Thanks to the rise of plastics, stainless steel and powder coating, enamel has slowly gone out of fashion. The shrinking number of units in the business have had to adjust to life in the slow lane and many are battling for survival.

Essentially a protective coating for steel surfaces, the enamelling process involves an old technology which has been around for decades. An enamel finish looks exactly like paint. The basic component of enamel, however, is glass. The glass powder, or frit, is ground into a paste, which is then applied to the metal. The metal is then fired in a furnace at temperatures exceeding 850 degrees centigrade. The glass melts and bonds with the steel to form a durable coat.

Stuck since the fifties

For an industry which once had a wide range of applications, its size has been reduced to barely Rs. 20 or 25 crore on the outside. Says G.M. Aggarwal, managing director of the Calcutta based Ferro Coatings and Alloys, which is the main supplier of enamel colouring in the country, "The industry has shown hardly any growth since the fifties. Our growth has largely been due to inflation."

The handful of existing manufacturers are in the small scale with isolated units scattered all over the country. In West Bengal, the nerve centre of the industry during its heydays from the twenties to the fifities, the major units are barely limping along. Bengal Enamel, Sur Enamel, and Ogale's, pioneering companies which were once industry leaders, are now all sick units. Says S. Singh of the 75-year-old Pioneer Enamelling Works Pvt Ltd at Bombay, "Many units are closing down and hardly any are being started." Though most units were set up years ago, there has been little modernisation or upgradation of machinery.

The emergence of new substitutes is the chief factor behind the decline of the industry. These have made inroads into the traditional areas were enamelling once held sway. Stainless steel and plastics are the main culprits. In hospitalware and kitchen appljances, like cooking ranges, gas stoves and utensils, stainless steel has virtually pushed out enamelled steel from the market. The armed forces, at one time a major market for enamellers, has switched to aluminium and plastics for its regulation plates, mugs and hospital-ware.

Cheaper options like painting and powder coating have had a devastating impact. Powder coating, a sophisticated painting technique which ensures an even and long lasting-coat, is becomimg more popular for industrial components. Hoardings and sign boards, too, are now painted or powder coated, and rarely enamelled. "Customer tastes have changed. Enamel is no longer in fashion, despite the fact that it is almost indestructible," says Prabhu Parikh of the Bombay based Classic Enamel.

The change in customer tastes is not only due to the vagaries of fashion. With very high input costs, enamelling is an expensive technique, though it can last much longer, upto 40 years. This, in fact, has also added to the industry's woes. Because of its product's very longevity, repeat orders come only after years.

The main costs incurred by the enamellers are for mild steel, the main raw material, and for the energy inputs required to run the high temperature furnaces. For more than one colour, the firing has to be repeated, which only increases energy costs. "I need a tanker of oil every two weeks, which means I have to shell out Rs. 40,000 each time," says Singh. The rate of rejections is also very high, as almost 10 per cent of the steel cannot withstand the temperatures used. Adds Parikh, "The steel we buy is almost five times the price of what it is internationally."

Many of the units, therfore are taking on more jobworking orders for enamelling specific componenets. Steel, the raw material which eats up almost 50 per cent of the cost, is provided by the client, easing the pressures on margins considerably.

Faced with prohibitive costs and a shrinking customer base, the few diehards in the business are trying their best to find other areas to branch into. The small market that does exist is restricted to components such as the ovens of cooking ranges, flushing systems, in washing machines, and to government issue articles like shades for street lamps, and highway and road signs.

Singh, whose main product line comprises signboards for the government, is the only family member who is still interested in the business. "Thanks to the government's specifications which require enamel for signboards, there is enough business for me," he says. Nevertheless, he keeps trying to innovate. "One of my old customers demanded a fibreglass signboard—so I am experimenting with that now," he says.

Versatile and durable

Parikh, who took over the loss making Classic in the early eighties, has experimented with a variety of applications from roofing material, and hoardings for export to the Gulf, to enamelling on aluminium. While his major line of products is industrial reflectors, he has also come out with a range of cook-and-serve kitchenware. "This line has a lot of potential since enamel is both versatile and durable," he says.

Enamel ware: yet to become popular

Enamel kitchenware, though, is yet to become popular. Except for the Delhi based Elite, which manufactures under the brand name of Litware, enamel kitchenware is restricted to the lower end of the market.

But these are few stray efforts. Agarwal, in fact, feels that the once-flourishing industry is on its last legs. "It is almost dying out," he says. Unless enamellers can find alternative markets and beat the cost problem, vitreous enamel may soon be another casualty of changing technology.

COATS-TOOTAL COMBINE

All sewn up

In the early hours of 17 May, Sir David Alliance, chairman of Coats-Viyella, emerged exhausted but victorious from a night-long round of negotiations with Tootal, a rival textile group. The announcement that Coats had acquired a controlling stake in Tootal marked the end of a long-drawn-out takeover tussle between the textile giants.

With this merger, the Coats-Tootal combine has become the world's biggest manufacturer of sewing thread. It has a combined turnover of approximately £2,400 million and pre-tax profits for 1991 are estimated at £115 million.

The run-up to the merger is an interesting tale in itself. It began in 1985 when Australian industrialist Abraham Goldberg made a futile bid for Tootal. Then, in 1988, Coats began its first round of friendly talks with Tootal. By March of 1989, the two had agreed on a price of £395 million. This deal came apart when the share price of Tootal fell and the Monopolies and Mergers Commission of the UK said nay.

By this time, however, Goldberg had quietly managed to build up a 25-per-cent stake in Tootal. Michael Sandberg, former chairman of Hongkong Bank, had suggested then that Goldberg and Tootal should reach an understanding. This too, however, did not come through. Coats got into the act once again this year when it made a public offer for Tootal. It was generous enough to attract Tootal shareholders: 23 Coats shares and £51.02 in cash for every 100 Tootal shares.

Alliance's agenda

In a video-taped message to the employees of the newly formed monolith, a visibly jubilant Alliance said, "It's a challenge to make this merger work. It will create tremendous opportunities for all of us." Alliance wants to streamline the manufacturing operations; for starters, he wants to integrate the thread manufacturing plants and review Tootal's non-thread business. But, citing Coats' difficulties during its merger with Paton five years ago, experts say the integration with Tootal too won't be easy.

Fears have also been expressed that having added to its might, Coats will now begin to dictate its own terms and prices. To counter such anxieties, Coats has decided that it will continue to maintain a separate identity from Tootal in some markets.

What does this merger signify for Coats' Indian associate, Madura Coats Ltd, in which it has a 40-per-cent stake? According to W.T. Drummond, Madura's chairman, the Indian company's exports of threads, fabrics and garments should receive a boost within a year or two. Neville Bain, the newly named chief executive officer of Coats-Viyella Plc, says, "Madura

Alliance: "tremendous opportunities"

Coats will have an important place in our future plans. India is an important source of our worldwide fabrics and thread production and the quality is of the highest international standards." Madura's current exports of Rs.64 crore represent about 17 per cent of the turnover. With the merger, Drummond reckons that could go up to 30 per cent.

Sourcing point

Readymade shirts is one area where India could be a sourcing point for Coats. Towards this end, the company has tied up with three garment units in Bangalore. Two more will be added later this year. (Incidentally, Drummond is proceeding to the UK this month to take up a new assignment: to head Coats' international menswear division.)

Satish Kumar Modi, chairman of Modi Threads, Madura's rival in the Indian market is certain that the company's exports will be strenghthened, particularly to the Far East where Tootal has its manufacturing facilities. R. Jayaram, chief executive of the Ludhiana-based Vardhaman Threads, says that Coats will now be "a virtual monopolistic force in the international thread market."

■ DEVAPRASAD PUROKAYASTHA

IBM

Drastic measures

For the second successive quarter, IBM has reported a drop in earnings, this time 50 per cent below the corresponding period last year. A recession and intense competition have taken their toll, forcing IBM to opt for some pretty drastic measures.

The main reasons for the downturn were thinner margins and high overhead costs. Margins were squeezed as the industry moved towards standardised products. As a result of this, there has been a price war in the PC segment. In a bid to shore up sales, IBM cut prices thrice during the year. This, however, did not help as consumers only postponed their buying decisions in anticipation of further cuts.

High staff costs

All this has been exacerbated by the high cost of maintaining a staff of 373,000. Even five years of early retirment schemes and other programmes, which did cut the staff by 47,000 workers, does not seem to have helped. Recently, the company revealed that it plans to pare another 14,000 workers. And industry analysts believe another 25,000 could go within the next two years.

As part of its restructuring a year ago, the computer giant got rid of product lines like typewriters and keyboards, which are unrelated to its core business. It also sold off its interests in chip manufacturer Intel. But recently IBM did an about-turn when it acquired a stake in the loss-making Wang Computers which manufactures word processing systems. In India, Wang is represented by Digitron which will now act as an additional channel for IBM.

Big Blue is not the only company that is in a bad way. Compaq Computers, the largest supplier of IBM clones, reported that second quarter profits will drop by 80 per cent. Apple plans to lay off 10 per cent of its workforce, as does Digital, which plans to cut another 4,000 manufacturing jobs this year.

As a reflection of this, technology stocks on Wall Street, the mainstay of investors, are taking a beating. Probably the only ones who have anything to be happy about are the consumers: they can now look forward to buying computers at bargain prices.

■ AROON SARKER

THE STORY IS BRIGHTER ON THIS SIDE OF THE PARTITION.

PHENOTHERM

- Unmatched fire resistance
- Excellent sound insulation
- Good aesthetic attributes
- Exceptionally low thermal conductivity
- Does not emit toxic gases in case of fire
- Easy installation
- Retains rigidity over a period of time
- Cost effective
- Longer life
- Easy to clean
- Light in weight

OTHERS

- Average or poor fire resistance
- Poor sound insulation
- High thermal conductivity
- Emission of toxic gases on burning
- Laborious installation process
- Difficult to clean

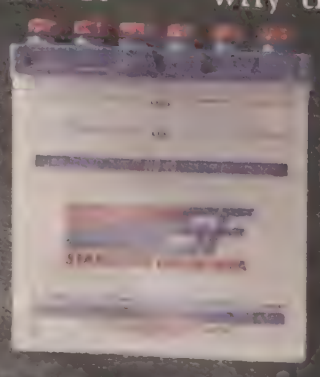
Shhhh.



Discover the secret that Telco, Maruti, Premier, Ashok Leyland, Eicher, Bajaj, DCM-Toyota, Escorts and Mahindra & Mahindra share.

There are whispers in the automotive industry. Whispers about the Standard Furukawa battery's outstanding performance.

And that's not very surprising, really. Considering that the battery is made by The Standard Batteries Limited, an associate of the Macneill and Magor Group, in technical collaboration with The Furukawa Battery Company Limited of Japan.

Furukawa is the largest supplier of O. E. (Original Equipment) batteries to Suzuki, Japan, and is also a supplier to Honda, Nissan and Toyota.

What's more, the Standard Furukawa is made with 1.8% selenium. It has the lowest antimony content amongst all Indian batteries. Which means, it needs topping up less frequently and less maintenance. That's why the last 18 months have seen more and more leading manufacturers using Standard Furukawa as O. E. batteries.

So if you're replacing your vehicle's battery, listen to what the manufacturers are whispering about. The performance of the Standard Furukawa battery.

US RATING AGENCIES

Packing a powerful punch

When Lee Iacocca came to New York to visit Standard and Poor's, he did so knowing full well that one miscue on his part could send Chrysler's debt rating skidding overnight from investment grade to non-investment grade. For Chrysler, such a downgrading would mean additional interest expense amounting to several million dollars, a burden it could ill afford.

Such is the power and influence of the two biggest credit-rating agencies in the US — Standard and Poor's and Moody's. They speak softly but carry big sticks. Their analysis, expressed in a cryptic alphanumeric code, can cause serious repercussions in debt markets around the world.

The Poor's Manual, first introduced in the late nineteenth century, was an antidote to the misleading projections being provided by the robber barons trying to finance the railroad industry. John Moody, the street's original 'quant jock' was the first to use sophisticated computations to study debt. His first book, *Moody's Manual of Industrial Securities*, was a flop but the concept of rating securities became permanent. The rest, as they say, is history. Moody's was purchased by Dunn and Bradstreet in 1962 while S&P was snapped up by McGraw-Hill a few years later.

Critical role

Today, S&P has some 500 analysts worldwide. While most analysts are US-based, the agency has grown rapidly in Europe too. With the leveraging binge that occurred in the US in the eighties, rating agencies have become increasingly influential. With the growth of the European capital markets, the need for Eurobond ratings has magnified. Furthermore, with nations relying more heavily on public debt, rating agencies are playing an important role analysing country credit risk.

Shortly after the assassination of Rajiv Gandhi, *The Wall Street Journal* of 31 May reported that S&P had lowered the implied ratings on India's foreign debt, both long-term and short-term. S&P's reasoning was that with the postponed elections, the government would take longer to reverse the nation's liquidity.

The importance of debt ratings cannot be understated. Ratings are critically important for two reasons. First, with interest expense having become a larger component of the cost of conducting business, for both corporates and governments, a one notch change in rating can mean either millions in dollars being consumed by interest expense or flowing straight to the bottomline. Secondly, some institutional investors, forbidden by law to invest in non-investment grade securities, need a disinterested authority to evaluate credit.

Despite their analysis, missteps have occurred. Some credit-watchers have suggested it is due to complacency, while others have suggested arrogance. Either way, there have been some memorable slip-ups. Integrated Resources, a large property syndicator, was rated investment grade by S&P only weeks before it filed for bankruptcy and was eventually liquidated. Another serious slip-up was S&P's and Moody's failure to spot the declining creditworthiness of the state of Massachusetts. With most of the outside world watching for more than two years its steady decline, both agencies continued to stand by their favourable ratings. Today Massachusetts bonds are the lowest rated municipal bonds in the US. This particular debacle caused *The Wall Street Journal* to suggest that "the agencies slept while the finances of Massachusetts crumbled". The credit-watchers, it said, "sustained a fundamental conceit: that they are smarter than the market place".

Embarrassing slip-up

Perhaps the most embarrassing slip-up surrounded the RJR rating process. Shortly after both incidents, with both agencies on the defensive, came the bond offering for RJR. The company, trying to complete its financing for the $25 billion buyout, was looking to raise convertible and zero coupon debt as the first in a series of offerings. Moody's questioned RJR's ability to meet its interest burden on a cash basis. Investors panicked. Overnight the junk market lost about 20 per cent of its value. RJR's bond offering had to be delayed, putting the completion of the LBO in doubt. It quickly became apparent that Moody's, rather than looking at RJR on its own merits, was reacting defensively to its earlier fiascos.

Today, less than two years later, RJR is almost an investment grade company and showed its first quarterly profit, despite its massive interest burden. This prompted the treasurer of a multinational to remark that "they certainly perform an important evaluative role, but for people who don't know your business from the inside they may have too much power over its fate".

While several mistakes have been made along the way, there is no denying the important role credit agencies play. India's approach to the ratings concept should be two-pronged: locally and internationally. Although the debt markets in India are in their relative infancy, local rating agencies such as CRISIL can accelerate the growth process. Innovative products, longer maturity instruments and cheaper funding for some issuers are a natural fallout of solid credit analysis. Perhaps, more important for India is the international aspect.

Expensive debt

If the international debt markets are to reopen for India, two things need to be addressed. One, and it goes without saying, better economic management is a prerequisite. Secondly, India needs to continuously nurture the ratings and investment community. Without their support, debt if available, will become increasingly more expensive. Nurturing is best done by keeping them abreast of economic developments, constantly appraising them of the game plan going forward and keeping them well informed with accurate information. Credible information is the key. And now, especially with India headed towards the precipice, the importance of these issues has magnified dramatically.

OUR MASS-HOUSING PROJECTS CAN ALSO BE CALLED MASS-CONFIDENCE PROJECTS.

The Lok Group, over the years, have won a massive following for providing decent, dignified homes at affordable prices. The group has popularised the concept of townships where occupants of even a single room home can avail of facilities like lush landscaped gardens, shopping complex, gymnasium, school, health centre, central dish antenna, etc.

At Lok Group, we place a premium on integrity. All payments are made by cheque only, thus making it easy for the service class to raise adequate housing finance from institutions.

Our policies have prompted the common man to develop tremendous faith and confidence in the company. Today hundreds of families enthusiastically respond to the announcement of any new Lok project.

Encouraging responses to Lok Group's various projects like Lok Puram, Lok Angan, Lok Gram, Lok Darshan and Lok Udyan comprising over 3,500 homes have further strengthened the confidence of the masses. And now the Lok Group has concrete plans that will give a new dimension to their already popular concept of self-contained townships. These plans involve the construction of around 25,000 new homes in the next 5 years.

Lok Housing and Constructions Ltd. is presently involved in 8 new projects and is on the threshold of its next phase of accelerated growth. With concrete plans to build a happier tomorrow.

THE EARLY-BIRD-INCENTIVE SMILE

SPECIAL INCENTIVE FOR EARLY SUBSCRIBERS

Incentive amount, at the following rates will be remitted separately for early subscribers.

APPLICATION RECEIVED DURING THE PERIOD	INCENTIVE FOR EVERY RS. 1000 OF SUBSCRIPTION RETAINED
17th June to 30th June, 91	Rs. 20
1st July to 15th July	Rs. 15
16th July to 31st July	Rs. 10
1st Aug. to 15th Aug.	Rs. 5
16th Aug. to 31st Aug.	Nil

There are many good reasons to invest in Ind Sagar and Ind Moti. And now there's one great reason to invest immediately. A special incentive for those who apply early. Ind Sagar Capital Gains Scheme offers 60% tax exemption on gains and a 3 year buy back option or listing. Ind Moti on the other hand offers annual returns over five years. Both schemes offer easy transferability, liquidity and tax benefits. So why wait, when the early bird gets the incentive.

Bhadrachalam Paperboards

Slight drop in capacity utilisation more than offset by better sales realisations; profit margins look up; EPS crosses face value; dividend hiked two points

Three price hikes were effected by paper manufacturers in 1990 to make up for the increase in input costs. This company, under the ITC fold, has been no exception either. Their scrip soared past the 1990 high of Rs.153.75 in May this year to touch Rs.170 anticipating a good performance. It now quotes at Rs.152.50 discounting latest earnings 10.4 times.

While capacity utilisation went down by four points (due to a strike in June 1990), average price realisation went up by around Rs.2,331 per tonne. Return on net worth jumped by 10 points to 33 per cent. With a decline in the average inventory holding period by around four days, the inventory turnover was quicker. At the operating level, the company earned margins of 24.5 per cent while gross profit margins went up by nearly four points to 16.3 per cent. At the net level, the company earned Rs.14.65 (Rs.7.67) per share of Rs.10 and will distribute Rs.3.75 (Rs.3.25) per share as dividend. Payout eased considerably to 25.6 per cent (42.3 per cent) in line with a better bottomline.

Bhadrachalam Paperboards *(Rs crore)*

Year ended	31 Mar '91	31 Mar '90	% change

** Equity capital presently stands at Rs.14.34 crore due to conversion of debentures*

A substantial capital expenditure programme, estimated at Rs.54.09 crore is under way. This will include modernisation, technology upgradation, energy conservation and widening of the premium segment of the product range. A rights issue to part finance the above and to meet incremental margin money needs for the working capital, was floated in October last. This mopped up Rs.34.18 crore. While part of these proceeds have been utilised, the balance pending utilisation has been temporarily invested in units of UTI. The first conversion is already effective from 15 June 1991. Equity has thereby increased to Rs.14.34 crore while Rs.10.13 crore has been added to reserves.

While the present installed capacity of around 3 million tonnes within the paper industry is more than sufficient to take care of existing demand, the deterrent lies in raw material constraints hampering capacity utilisation. Also, the customs duty on waste paper and pulp, the primary raw material has doubled. The stipulation of margin money at 200 per cent of the value of imports and a 25 per cent higher rate of interest on borrowings for imports, will definitely strain profit margins in the current year. This is so as 36 per cent of raw material requirements are imported.

Timely execution of the capital expenditure programme — giving a thrust to value addition and quality upgradation — is what is required on the company's part to gain market share and a competitive edge. Meanwhile, the company plans for a caustic soda and a 200 MW thermal power plant. Both are meant for captive consumption and involve a cost outlay of around Rs.400 crore.

Kesoram Industries

Dividend up five points as profit soars by over sixfold; tyre project to go on stream in third quarter of 1991; plans further expansion of cement capacity; reduces net current assets to finance tyre project

Kesoram has stepped up dividend by five points to 15 per cent following encouraging results for the year ended 31 March 1991. Belonging to the B.K. Birla group, this company is well diversified in the areas of, among others, cement, textiles, paper, yarn and recently, tyre manufacture. Trial runs for the tyre plant have been completed this year and commercial production is expected to start during the third quarter of 1991.

The cement division accounts for about 50 per cent of Kesoram's total sales at Rs.297 crore. Profitability at this division improved considerably due to higher sales realisation at 18 per cent. Cement production at both plants was marginally higher by 2.3 per cent at 1.14 mt (1989-90, 1.12 mt). The working of the division would have been better if it were not for labour unrest for 11 days, power problems, non-availability of wagons and poor quality of coal. The company has received permission to expand its cement capacity by 500,000 mt. The expansion, however, will be considered after the tyre plant is commissioned.

Sales of the textiles division recorded a growth of over eightfold at Rs.31.14 crore (Rs.3.35 crore) on account of a higher sales volume. Working of the paper division was satisfactory with sales up by 12 per cent. Sales realisation per tonne of viscose filament yarn declined by 3 per cent but sales value improved by 29 per cent due to a higher sales volume (33 per cent). The 33 per cent increase in excise duty on rayon yarn in December 1990 and increase in import duty on rayon grade pulp from 5 to 30 per cent is likely to affect working of the yarn division during the current year.

Borrowing by the company during the year increased by about Rs.73 crore. This

PRISMA A.V.90-B11

as done to finance the tyre project hose cost has been revised upwards to s.265 crore due to implementation de-ys and the declining rupee value. Dur-ng the year under review, the company dded Rs.130 crore to its net block. To re-uce pressure on funds, net current as-ets were reduced by over Rs.40 crore — y bringing down loans and advances. he company has substantial net worth tacked away in its investments with a market value that has appreciated from Rs.36.19 crore to Rs.50.49 crore. The cost of these investments, in various blue chip Birla companies, is just Rs.3.67 crore.

On conversion of the debentures, equity capital expanded by Rs.2.61 crore to Rs.14.07 crore. EPS on the expanded equity base is higher at Rs.6.5 (Rs.1.1 dur-ing 1989-90). The last conversion of the debentures will be in July 1991 when equity will further expand by Rs.2.51 crore and Rs.8.54 crore will be added to the share premium account.

The scrip is steady at Rs.92 discounting its earnings by 14 times.

Siltap Chemicals

Scrip firms up on expectations of maiden dividend and due to low floating stock; plans expansion; turns corner during 1989-90 thanks to change in basis of closing stock valuation

Siltap Chemicals, promoted by Supreme Industries and the Taparia family to manufacture cross laminated films used for industrial packaging, has firmed up on the Bombay Stock Exchange after the announcement of its half yearly results. The scrip shot up from Rs.65 to Rs.125 in just three months on account of low floating stock and expectations of a maiden dividend.

For the six-month period ended 31 January 1991, the company has reported a small net profit of Rs.5 lakh against a loss of Rs.62 lakh in the six months ended 30 September 1989. Total income during the first six months of the current year rose by 60.8 per cent to Rs.3.20 crore against Rs.1.99 crore in the six months ended 30 September 1989. With higher capacity utilisation, the company is confident of wiping off the accumulated losses of Rs.2.24 crore during 1991-92.

However, rising input costs and financial charges should be a cause of concern for the company. Its main raw materials are LDPE and HDPE, whose prices have gone up substantially on account of the Gulf war. Raw materials cost as percentage of sales escalated from 50.6 per cent during the 16-month period ended on 31 July 1990 to 70.8 per cent during the six-month period ended 31 January 1991. Interest costs ate away about 25 per cent of total revenue due to a delay in implementing the project and foreign exchange fluctuations. This resulted in a 34 per cent increase in project cost to Rs.7.84 crore.

Siltap Chemicals *(Rs crore)*

** 16 months ** annualised*

Earlier, the company had turned the corner during the 16-month period ended on 31 July 1990 thanks to inclusion of interest on term loans in the valuation of closing stock. This resulted in inventories higher by Rs.28 lakh and enabled the company to report a net profit of Rs.6 lakh against loss of Rs.1.53 crore during the year ended on 31 March 1989.

During 1989-90, its sales volume of cross laminated films increased by over threefold to 1,040 tonnes (annualised) as against 183 tonnes in 1988-89 with capacity utilisation improving from 15 to 58 per cent.

The company proposes to raise its borrowing powers from Rs.12 to Rs.30 crore to finance expansion and promotion of new products and also to meet long-term working capital requirements. It is raising its capacity from 1,500 to 2,400 tonnes per year. The expansion is expected to be completed in January 1992. To meet increased demand for fabricated products other than sacks, it is setting up another unit at Daman which was scheduled to go into operation by April 1991 but has been delayed.

TRENDS

Punjab Alkalies and Chemicals

Punjab Alkalies and Chemicals Ltd (PACL), engaged in the manufacture of caustic soda, liquid chlorine and hydrochloric acid, had declared a maiden dividend of 12.5 per cent for the year ended March 1990. This year the company has stepped up the dividend to 18 per cent as its cash profits have gone up to Rs.10.21 crore.

Punjab Alkalies & Chemicals *(Rs crore)*

Period	Oct '90-Mar '91	Oct 89-Mar '90	Apr '90-Mar '91
Net sales	17.42	16.96	34.60

RM/sales (%)	18.25	16.92	18.58

While sales for the year ended March 1991 is up 8 per cent, operating profit is placed 3 per cent higher at Rs.12.73 crore. Due to 20 per cent lower financial charges, the bottomline has increased by 27 per cent, yielding an EPS of Rs.6.12 (Rs.4.80).

Meanwhile, the company is implementing a capacity optimisation project through addition of balancing equipment at a cost of Rs.11.20 crore. The project is likely to be completed by September 1991. PACL has also planned to diversify into value added down stream projects such as the manufacture of chlorosulphonic acid, ethylene dichloride, epichlorohydrin and synthetic glycerine. The company has also received a letter of intent to set up a 100 tonne per day caustic soda plant using membrane cell technology, costing Rs.50 crore.

India Cements

India Cements Ltd (ICL) has proposed a final dividend of 13 per cent which, together with the earlier interim paid, totals 25 per cent for the year ended March 1991. This is 13 points higher than what was paid last year.

Having acquired the cement division of Coromandel Fertilisers, ICL has clocked a 82 per cent higher net sales at Rs.223.54 crore for the year ended March 1991. With this takeover, completed by September 1990, the total cement capacity of the company has been increased to 2.8 million tonnes per annum.

Meanwhile, ICL's equity has tripled from Rs.4.9 to Rs.15 crore. This would further increase when the 12.5 per cent convertible debenture gets converted during the current year.

The company's diversification plan into shipping has not yet taken off. However, it has made a foray into real estate and property development. ICL has recently offered to take over Industrial Chemical and Monomers Ltd (ICML), a sick company producing calcium carbide.

RESULTS ANNOUNCED

Orient Paper & Industries

A 5 per cent rise in sales margins have increased to give a heavier bottomline; EPS has crossed the face value for the year ended March 1991

Engaged primarily in the manufacture of paper and a recent entrant in cement (which contributed 20 per cent of its 1990 turnover), Orient's gross profit margin has gone up by 5 points to 12.7 per cent on sales of Rs.249.15 crore (Rs.237.78 crore). The net profit, up 89 per cent at Rs.17.24 crore, yields an EPS of Rs.15.06 (Rs.7.97). The scrip quotes at Rs.175, discounting these earnings nearly 12 times. A rights issue of partly convertible debentures to finance modernisation plans is on the anvil.

Zuari Agro Chemicals

Rise in sales and profit margins for this fertiliser manufacturer of the K.K. Birla group

Gross profit margin was up two points to 9.3 per cent (7 per cent) on a sales of Rs.280.63 crore (up 8 per cent). Zuari's bottomline went up 66 per cent to Rs.11.01 crore giving an EPS of Rs.8.86 (Rs.5.33). Dividend is up by 2.5 points to Rs.3.25 per share at a payout of 37 per cent (56 per cent). The scrip quotes at Rs.76.25 discounting these earnings 8.6 times.

Bayer (India)

Bayer, primarily in agrochemicals, has done well in terms of sales and profits for the year ended March 1991. Dividend stepped up by two points

Gross profit margin was up by more than two points to 9.9 per cent on a sales of Rs.179.06 crore, up 21 per cent. On an equity base of Rs.16.22 crore, Bayer earned Rs.52.03 per share (Rs.32.80) of face value Rs.100 and will distribute Rs.22 per share (Rs.20 per share) as dividend. The scrip quotes at Rs.825 discounting earnings 15.8 times.

Polyolefins Industries

Rise in sales but fall in margins for the year ended March 1991. Higher tax provision depresses the bottomline but dividend up five points

Sales are up 23 per cent at Rs.256.85 crore for this Mafatlal group company, whose primary product is high density polyethylene. Gross profit margin dropped to 14.9 per cent (16.8 per cent). On an equity base of Rs.19.30 crore the company earned Rs.83.21 per share (Rs.93.99) of face value Rs.100 and will distribute Rs.4 per share (Rs.3.5 per share) as dividend. The scrip quotes at Rs.1,150 discounting these earnings 13.8 times.

The Mafatlal Fine Spg & Mfg Co

Fine turnaround for the year ended March 1991, with a bottomline that's back in the black and a dividend payout after a lapse of one year

Sales are up 6.5 per cent to Rs.219.27 crore. Gross profit margin, however, for this textile manufacturer, has shot up to 6.9 per cent from barely 1 per cent last year. As against a net loss of Rs.4.79 crore, the company has now posted a bottomline of Rs.4.61 crore. This would have been even higher but for the amount of loan written off in respect of Mafatlal Engineering amounting to Rs.2.78 crore. Having earned Rs.31.84 per share of face value Rs.100, dividend payout will be Rs.17 per share at a payout of 53 per cent. The scrip quotes at Rs.450 discounting earnings 14 times.

Glaxo India

Moderate rise in turnover, stagnant profit margins and dividend maintained for the year ended March 1991

Turnover up 20 per cent at Rs.370.27 crore gives a gross profit margin of 7.1 per cent (7.6 per cent). On an equity base of Rs.20 crore, Glaxo has earned Rs.5.30 per share (Rs.5.28) and will pay out Rs.2.70 per share as dividend. The scrip quotes at Rs.95 discounting these earnings nearly 18 times.

ICI India

Turnaround in performance for the year ended March 1991 for this highly diversified company

Sales went up by 18 per cent to Rs.598.25 crore while gross profit margin went up to 5.3 per cent (3.6 per cent). The net profit owing to operational performance was Rs.1.77 crore as against a net loss of Rs.12.19 crore in the previous year. In-

We have people who check the people who check the people who check your aircraft.

You might well call it excessive German thoroughness that we don't let our technicians work unsupervised on an aircraft until they have completed four years' basic training and have at least eight years' practical experience.
It goes without saying, however, that their work is still inspected by an even more experienced technician who, in turn, is checked by a highly qualified engineer. And, after all that, there is the independent inspector from the technical control department who reports directly to the Board of Management.
We call this Lufthansa's contribution to inflight relaxation – it's something we simply owe you and ourselves.

Lufthansa

cluding Rs.18.90 crore being a non-recurring profit item, the bottomline stands at Rs.20.67 crore. Dividend however has been skipped for the second consecutive year. ICI now quotes at Rs.54.

Vanavil Dyes and Chemicals

EPS more than half the face value; maiden dividend of 15 per cent declared; export market up

Vanavil Dyes and Chemicals Ltd (VDCL), which became a Colour Chem subsidiary in 1990, is engaged in the manufacture of dyestuff intermediates and chemicals. For the year ended March 1991, the company notched a 22 per cent higher net sales of Rs.19.69 crore. With net profit margins up two points to 7 per cent, the bottomline has increased by 80 per cent to Rs.1.37 crore yielding an EPS of Rs.5.71 (Rs.0.31).

The company went public in 1984 and the share capital then was raised to Rs.1.8 crore. Today, the equity stands at Rs.2.40 crore. Till 1987, the company had accumulated losses worth Rs.87.56 lakh virtually becoming a BIFR case. In 1990 however, TIDCO, the other promoter, divested in favour of Colour Chem after which the company has grown steadily.

Siemens

Sales up by 33 per cent; dividend up 6 per cent

The sales of this electricals and electronics manufacturer, for the year ended March 1991, reached Rs.371.8 crore, an increase of 33 per cent over last year's on an annualised basis. Net profit margins were up 0.6 per cent with net profit reaching Rs.13.1 crore. Exports (including deemed exports) of the company went up by 39 per cent to Rs.54.2 crore.

Meanwhile, the company is setting up a subsidiary called Siemens Information Systems Ltd in which it will have a 51 per cent stake. With a Rs.3-crore investment, the company is expected to produce software for both domestic and international markets.

National Organic Chemical Industries

Primarily a petrochemical manufacturer, this Mafatlal group company has maintained dividend for the year ended March 1991 inspite of profit margins taking a drop

Gross profit margin down by 3.4 points to 14.9 per cent on a sales of Rs.498 crore, up 12 per cent. With a 15 per cent fall in the bottomline to Rs.35.75 crore, EPS has dropped below face value at Rs.99.31 (Rs.117.33). Dividend has been maintained at Rs.40 per share at a higher payout of 40 per cent (34 per cent). The scrip quotes at Rs.1,150 discounting these earnings 11.6 times.

Hinditron Tektronix

Fivefold increase in net profit; EPS Rs.6.03; future blue chip company

Hinditron Tektronix, promoted by the Hinditron group in technical and finan-

cial collaboration with Tektronix, US, manufactures oscilloscopes and other electronic testing and measuring equipment.

For the year ended March 1991, the company has registered a 100 per cent growth in its turnover from Rs.5.48 to Rs.10.95 crore. While gross profits zoomed by 269 per cent to Rs.2.83 crore, profits at net level witnessed a fivefold jump from Rs.34 lakh to Rs.1.81 crore. This resulted in an EPS of Rs.6.03.

Meanwhile the company has begun export of technical services which could increase the company's other income in the coming years.

IN BRIEF

Kusum Ingots and Alloys, a B.K. Modi group company, proposes to set up a 135,000 tpa wire rod mill at a project cost of Rs.44 crore.

Radan Tapes and Tubes plans to manufacture video software, computer tapes and computer graphics and animation workstations at its plant in Kodivale, Raigad. The project cost is Rs.6.1 crore.

Lan Eseda Software Systems, in a joint venture with the US based International Storage Systems, is starting an EoU at NOIDA, Delhi, to manufacture high capacity hard disk drives, with an investment of Rs.25 crore.

Larsen and Toubro has bagged a Rs.41 crore order to supply four steam generators for the 500 MW nuclear power plants being set up by the Nuclear Power Corporation.

VIP Industries is going to diversify into the manufacture of plastic crates.

Kothari Orient Finance plans to increase its equity base through a rights issue in the ratio of 2:1, aggregating Rs.85 lakh.

Aridhi Hi-Tech Industries' ice cream factory, on the outskirts of Delhi, commenced commercial production in April 1991. It achieved 70 per cent capacity utilisation in the very first month of operation. The company is planning to set up an export oriented unit (EOU) to manufacture fruit juices and concentrates.

The Delhi-based **Worldlink Finance** plans to double its equity through a rights issue of Rs.2.5 crore. The issue, in the ratio of 1:1 at par, will be floated in September 1991. The company also plans to get into merchant banking and allied areas.

Eldeco Housing, which has concentrated its activities in UP, is now pursuing expansions into other states to acquire a national status. It is also setting up a manufacturing facility for mosaic tiles and panelled and flush doors.

The Bangalore-based **Victory Glass** has wiped out its accumulated losses and reported a maiden profit of Rs.39 lakh. For the year ended March 1991, the company clocked a turnover of Rs. 11 crore with a gross profit after interest of Rs. 85 lakh.

DCM Data Products has ventured into a joint programme with Aspect Development of the US to provide a component library management system and component data bases for electronic design automation.

United Carbon has stepped up its dividend by four points to 20 per cent for the year ended March 1991. The company's modernisation project is expected to be commissioned in the second half of 1992. The transfer of technology agreement with Cabot Corporation of the US, has been approved by the government.

STOCK MARKET REVIEW

Straight and narrow markets

(For the fortnight ended 28 June 1991)

	28 June	14 June	per cent change over fortnight	year
BSE Sensitive Index	1269.91	1292.81	−1.8	+52.2
BSE National Index	628.75	636.44	−1.2	+43.2
Vol (Rs.cr) fortnt. ended	160.11	124.05	+29.1	−2.1

The fortnight came alive with plenty of news — a new prime minister was sworn in, the finance minister announced his views at a press conference, several large companies announced their results, the rupee was devalued shortly after the close of the fortnight, and, the market hardly budged. The narrow band of 1,250 to 1,350 that the BSE Sensitive Index entered from below on 11 April has since been broken only twice: once when the index fell to 1,235 on 30 April and next when it hit 1,361 on 21 June on annoucement of the cabinet.

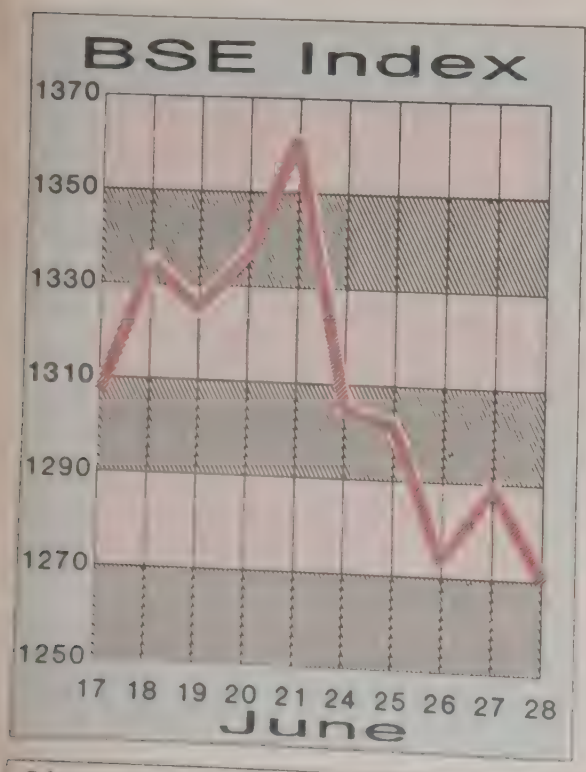
Anticipatory purchases. Mutual fund propping is stated to be one of the reasons. But mutual funds have actually been busier in call markets than in stock-markets over the past three months; purchases by speculators in anticipation of mutual fund entry is probably part of the reason.

Narasimha Rao's appointment as prime minister on 20 June was less well-received than his allocation of portfolios the next day. In particular, the appointment of erstwhile RBI governor Manmohan Singh in finance and industrial scion P. Chidambaram in commerce caused the index to cross 1,350 on 21 June.

The market, however, reacted neutrally to the finance minister's announcement on 25 June that controls should be reduced. There was, as one broker commented, nothing in Singh's speech to show that he has strong free-market instincts. Singh merely stated the inevitable, showing that even Indian bureaucrats sometimes need to recognise reality.

Singh's budget, to be announced on 24 July, is expected to bring in stiffer indirect taxes, especially in the areas of cement and paper. The bureaucratic tendency to mop up surpluses, however temporary and cyclical, on a strongly performing industry will probably be appropriately exercised. As a result, cement shares were weak over the fortnight. ACC fell from Rs.2,555 to Rs.2,335 (−8.6 per cent), Madras Cements from Rs.4,900 to Rs.4,700, Jaiprakash Industries from Rs.33.50 to Rs.32.50 and Raasi Cements from Rs.67 to Rs.66. This, despite record profits from both ACC and Madras Cements, in addition to news that the cement boom is far from over. Demand for cement remains stable, so do prices, although the 5 per cent average monthly jump in prices that occurred in the last six months of 1990 is, temporarily, over.

The surprise in the results declared by big companies over the past fortnight, including ACC, Raymond Woollen, Tata Steel and Tata Locomotive was in the tax-bite. Thanks largely to the December 1990 change in allowable depreciation to 75 per cent of the calculated amount, just three companies, Tata Steel, Tata Locomotive and Raymond Woollen ended up paying Rs.191.5 crore in income taxes, compared to Rs.78.5 crore in 1989-90.



Reliance Industries, however, continued to steer clear of the income-tax net. Last year, the company managed to do this despite losses of over Rs.250 crore made by its subsidiaries which were treated as unrealised investment losses. This year the company's annual report could throw up equally interesting surprises.

In terms of corporate disclosure, the annual report of Indian Aluminium is exclusively informative. Apart from the directors' report, there is a detailed management report that discusses both the past and future of each of the company's product lines.

The monsoon has begun well; by devaluing the rupee, the government has obviously fulfilled one of the IMF's main conditions for a loan. Such firm undertones reflected the market's optimism. If a programme of immediate privatisation is begun in July, brokers hope (probably unrealistically) that there will be no unduly stiff taxes in the budget. *Propter hoc*, a steady market. ■

UP SCRIP

Star performer

United Phosphorus (UP), the country's sole producer of tri methyl phosphite (TMP) doubled its plant capacity to 4,000 tonnes per annum, last year. In May this year, TMP, the pesticide intermediate was removed from open general licence and placed in the restricted list for purposes of import.

This was the icing on the cake for UP's shareholders. The company's results for the year ended March 1991 were already excellent, thanks to TMP sales, which, along with other pesticides, contributed over 60 per cent of the turnover. Sales at Rs.57.7 crore was up from Rs.41.75 crore last year (38 per cent) while net profit rose to Rs.5.74 crore from Rs.0.72 crore (783 per cent).

The current market price of TMP is firm at Rs.100 per kg. The scrip has been a star performer on the stockmarket, attracting attention after it rose from Rs.45 to Rs.125 between July and October 1990. The current year is expected to be excellent as well, with the rupee depreciating rapidly.

■ MANALI RESHAMWALA

1990-91 RESULTS

At a glance

For the full year ended March 1991, the results of 240 companies show a 24 per cent jump in sales with gross profit margins stagnating at 11.1 per cent (10.4 per cent). Net profit margin moved up slightly to 5.7 per cent (4.9 per cent). For 146 companies, sales for the second half of the year ended March '91 are up 18 per cent while gross profit margins have stagnated at 8 per cent (*see Table A*).

Outlined below (*in Table B*) are some companies where the turnaround in performance has been spectacular. While it is the cement companies that seem to have been touched by the magic wand, Peico in consumer electronics and Hero Honda in the automobiles sector have shaken off the red and posted gleaming black bottomlines.

Table A

	240 companies % change over 12 months	146 companies % change over 6 months
Sales	24	18
Gross profit	31	21
Net profit	44	15

Note: Gross profit is profit after interest but before depreciation and tax. Net profit is profit after interest, depreciation and tax.

Table B *(Rs. in crore)*

* For the 6 months ended 31 March 91

** Figures for 31 March'91 are for a period of 15 months

On the flip side of the coin, companies in the man-made fibres industry are the ones that have shown an absymal decline in profits. Thanks mainly to the excise hikes slapped on in December 1990 (*see Table C*), the bottomlines of these companies have turned distinctly weepy.

■ ALKA MUKUNDAN

BSE MEMBERSHIPS

Fresh moves

The Bombay Stock Exchange (BSE) has not admitted new members since 1986. In fact, over the past two years, membership applications from the public sector financial institutions were even rejected. The government, however, is keen to see financial institutions as members. It would like the addition of another 100 individual members to its list.

Member-brokers of the BSE have been hostile to the government's proposals primarily because they would lose business to new members, especially to institutions. In this context, SEBI's (The Securities and Exchange Board of India) revolutionary proposal for membership of the Bombay Stock Exchange has, surprisingly, not been opposed by the members. In fact, when SEBI's chairman G.V. Ramakrishna presented his ideas to BSE members on 17 June, a group of brokers who were initially sceptical warmed up to his suggestion that to prevent unfair competition, membership for financial institutions should follow only after the BSE has several more private corporate members. He also suggested that a single broker be allowed to incorporate himself instead of the current rule requiring at least two member-brokers to jointly promote a corporation with at least 51 per cent of the share capital held between them. SEBI would also allow corporate bodies to become members even though none of its shareholders are currently members.

Subtle viewpoint. In fact, Ramakrishna's views are considerably more important than brokers realise. He is hinting at nothing less than transferring the control of authorising membership from the BSE to SEBI. He observes that "the exchange has shown no willingness to apply its mind to the issue of corporate membership. They have had a negative attitude and have harped only on not letting the financial institutions in".

The BSE is currently also examining a proposal that allows corporate membership if at least 2.5 per cent of the paid up capital is held by "approved persons" who are not members of the BSE. But the point is that the BSE views itself as a private club of persons holding valuable membership cards. It has not so far and it is unlikely in the future to dilute this value by granting anyone the "approved" status.

Ramakrishna would like SEBI to, therefore, authorise memberships based on three criteria that would apply equally to any corporate applicant. The criteria are: adequate networth, professional staff and adequate infrastructure in

terms of the existence of a branch network and investment in capital equipment. The payoff, notes Ramakrishna, would come in the form of better access of corporate bodies to organised forms of credit (such as bank loans) and, ultimately, better client service.

The BSE's executive director, M.R. Mayya, refused to comment on the possibility of SEBI controlling memberships. He maintained that the BSE had not received any formal communication from SEBI on the matter. He, however, refuted Ramakrishna's views on the BSE's attitude towards corporate membership stating that a committee appointed by the BSE had recently suggested guidelines for institutional membership and this had been rejected by the government. Meanwhile, Ramakrishna has already approached the finance ministry for the necessary amendments in the Securities and Contract Regulation Act.

Considering that SEBI has consistently advocated self-regulation for brokers, Ramakrishna's latest move is probably intended to prompt the BSE into action along similar lines. Given the poor quality of client service currently available, such moves ought to be welcomed.

SOYA SCRIPS

Worth a watchful eye

Crippled by an acute shortage of soyabeans due to poor monsoons, between 1986 and 1988 the soya industry had languished . This year, the industry is definitely on the upswing, as the recently released financial results of six soya processing companies for the year ended March 1991 and their promising fundamentals show. So, it comes as a surprise that this industry is not being fancied by investors.

In the first place, what is puzzling is that the industry price to earnings (P/E) ratio, placed at around 10 times (the beginning of the upward trend) last year, has tumbled to the current 4-6 times. Which means that although earnings have risen, the share price has not reacted positively, resulting in a deflated P/E.

Stigma attached. According to Jamboo Bhandari, the managing director of Alpine Solvex, there is a stigma attached to this industry as the major players have let down the investing public by not honouring their commitments. The investors, who hopped on to the bandwagon in 1985-86 during the stockmarket and soya booms, have got negative returns on their investments and companies have been getting on and off the dividend list.

As many as 50 plants with a total processing capacity of 3.5 million tonnes of soyabeans per annum had sprung up by end-1986. The next two years' droughts adversely affected the crop and raw material became scarce for the processing units. Also, export prices became unremunerative, because the input costs had shot up.

The crop was a mere 750,000 tonnes in 1987-88. This led to overcapacity with most companies operating at only 20 to 25 per cent of installed capacity. Several plants were forced to suspend operations. So much so, that even big players slipped into the red. Tri-Star Soya's losses mounted to Rs.2.69 crore on an equity base of Rs.2.49 crore (1987-88), while Noble Soya reported accumulated losses of Rs.2.57 crore against an equity of Rs.6.75 crore (1987-89).

Beginning 1989, thanks to the good monsoons, the soya crop surpassed previous records to touch 1.7 million tonnes. The industry revived as companies reported positive bottomlines and share prices started looking up. Alpine Solvex's scrip began being quoted at Rs.18.50, up from Rs.4 (1988), while that of Tri-Star Soya rose from Rs.5 (1988) to Rs.40. Meanwhile, soyabean production continued to increase to 1.85 million tonnes for 1989-90 and over 2 million tonnes for 1990-91, leading to a capacity utilisation of 70 per cent by the processing units.

Turnaround. A long-term assessment of investment possibilities in this industry is naturally linked to the soyabean crop every year, the installed capacity and the companies' managements. According to a leading merchant banker, many existing companies have planned capacity expansions and there is also the likelihood of new entrepreneurs entering the field now that the industry's fortunes have turned around. Alpine Solvex has already planned to expand its capacity from 75,000 tpa to 210,000 tpa at a cost of Rs.13 crore. "This expansion," says Bhandari, "will be financed mainly from internal accruals and loans from financial institutions. The details will be finalised by the time production starts in November 1991.

But if the gap between the installed capacity and the crop size widens, history could repeat itself. Consequently, the short-term investment entry hinges upon how plentiful the monsoon will be in the soya growing region (M.P. accounts for 80 per cent of the crop). "Indications are that the rains have been as expected," says Abhay Chaturvedi, manager (exports), Premier Industries.

Another important factor that has a bearing on this industry is exports where India has a minuscule share of less than one per cent of the world market. This could increase. The price realisations are also moving upwards, partly because of the falling rupee. Also, as Europe is going to be a single market 1992 onwards, soyameal companies could venture into other hard currency areas, if the Argentina, Brazil and US crops fail.

There is a general apprehension that many soya companies may re-enter the capital market as the going is good. However, it is important to keep a watchful eye on the growth of the equity bases of these companies, as they should be able to earn enough to service it.

■ LANCELOT JOSEPH

Good prospects for export units

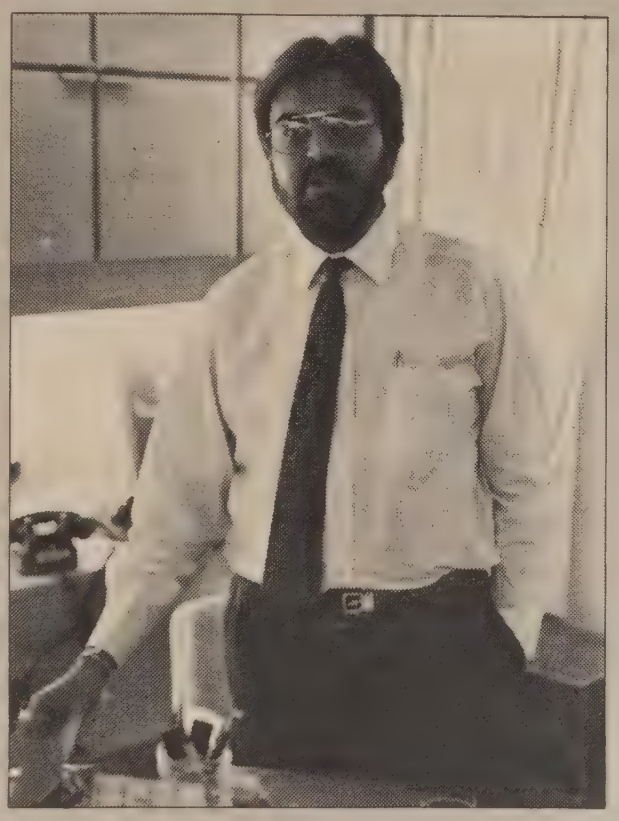
Paresh J. Khandwala, *a partner of the stockbroking firm, Jayantilal Khandwala & Sons, that caters mainly to financial institutions talks to* Business India's *Lancelot Joseph and Alka Mukundan on portfolio choice. Khandwala is basically a fundamental analyst. His time frame for investment is medium-term. About 60 per cent of the funds that he manages is put in for the long-term, while the remaining is for short-term and trading purposes*

Until the budget, Khandwala thinks that it will be a short-term traders' market with the BSE sensitive index swinging between 1,245 and 1,375. Obviously, other factors include the rain gods and a quick clearance of the IMF loan with minimum conditionalities. Khandwala feels that a "safety net" exists in the form of mutual funds waiting in the wings flush with cash.

In this context, he notes that the equity linked savings schemes mopped up Rs.700 crore in March this year, while since January other mutual fund schemes have garnered approximately Rs.2,700 crore. Hence, long-term, demand for scrips at lower levels is more or less assured.

Prime picks

Commenting on the budget, Khandwala opines that cement and paper, both industry groups that have witnessed a year of bumper profits, could face excise hikes, along with the usual cash cows like consumer electronics. At the same time, he feels that as a fallout of the forex crisis, export-oriented units hold out good prospects. Here, he cites Sesa Goa and Tata Unisys as prime picks. At Sesa Goa — exporters of iron-ore — implementation of the project to manufacture low phosphorus pig iron is under way. This will make for value-addition and a diversification of the product range. The scrip that now quotes at Rs.263.75 is likely to touch Rs.320 within a year's time, with an expected EPS of Rs.16 for the year ended March 1992.



Khandwala also likes Tata Unisys, the information technology venture of the Tata group and Unisys Corporation, USA, which posted an EPS of Rs.15.41 for March 1991. The company has big orders from Crompton Greaves, and export prospects are good. For March 1992, turnover is expected to rise by 35 per cent, and EPS should be around Rs.20. The scrip which currently quotes at Rs.165 could, according to Khandwala, appreciate by 80 per cent in a year (*see table for price appreciation*).

Another export unit that Khandwala closely tracks is Kerala Chemicals, a joint venture between the Kerala State Industrial Development Corporation (KSIDC), Nitta Gelatine Co and Mistubishi Corporation, both of Japan. This company manufactures ossein and dicalcium phosphate and exports mainly to Japan. The scrip was quoting barely at Rs.30 in January 1990 when Khandwala started acquiring it. It currently trades at Rs.165 and is likely, he feels, to appreciate 100 cent in the next six months. With an EPS of Rs.16.14 for March 1991 on a tiny equity base of Rs.1.40 crore and a book value of Rs.62.50, the company is considered a hot bonus candidate. A 1:1 bonus is anticipated and the EPS for March 1992 is likely to be maintained on ex-bonus equity.

Two low-priced scrips that hold potential for price appreciation in Khandwala's view are Gujarat Apar Polymers and Sree Rayalaseema Alkalies. Gujarat Apar Polymers, a joint venture of GIIC and Apar Ltd, was set up to manufacture acrylonitrile butadiene rubber (NBR) and latexes. NBR is an import substitute. Because of the Gulf war, the selling price, which at the start of the project was around Rs.53/kg, has now firmed up to Rs.81/kg. With commercial production slated to commence in August-September this year, capacity utilisation is expected to be around 45 to 50 per cent for the year ended March 1992 and the company is expected to post a cash profit in the first year itself. The scrip quotes at Rs.23.50 and could appreciate by 60 per cent within a year's time.

In Sree Rayalaseema Alkalies' main product, caustic soda, price realisations per tonne are higher by 30 per cent over last year. The company uses the latest membrane cell technology. With an expected EPS of Rs.5 for the year ended March 1992, the scrip that currently quotes at Rs.25.50 should, says Khandwala, appreciate by 60 per cent in the next one year's time.

Winding up with a scrip for the short-term, Khandwala points out that thanks to the shortage of steel scrap, the price realisation of sponge iron at around Rs.5,200/tonne has increased by 32 per cent in just eight months. The market price of Essar Gujarat, in whose management Khandwala has great faith, is expected to touch Rs.100 on declaration of results from its present value of Rs.67.50. That's a 48 per cent potential appreciation in the shortest of short terms.

Until the budget, it will be a short-term traders' market with the BSE sensitive index swinging between 1,245 and 1,375. Obviously, other factors include the rain gods and a quick clearance of the IMF loan with minimum conditionalities. Khandwala feels that a "safety net" exists in the form of mutual funds

The winning quartet

Save for National Peroxide that spurted by 30 per cent and Grasim that stayed put, all the other scrips registered slight declines. For the contest under review (IC345), we have four winners — Tejinder Marwaha, Sudhir Pillai, Prasad Kushe and T.S. Negi. Handshakes to you.

Scrips	Prices as on Friday 17 May 1991 (Rs.)	Prices as on Monday 17 June 1991 (Rs.)	Ranks
Grasim	244.00	245.00	2
Indian Aluminium	172.50	160.00	6
Kinetic Engg	178.75	167.50	5
National Peroxide	1,225.00	1,600	1
Tisco	193.00	182.00	4
Titan Watches	84.00	81.00	3

Given here is a new list of six scrips, and their closing prices on 2 July 1991. Pick the share that you think will rise the most in percentage terms by 1 August 1991 and rank it number one. Then choose the one that you expect will rise the second most and rank it number two. Then number three, and so on till rank six. It's as simple as that!

So, in this Investor Contest, you don't have to predict the price of shares; you merely have to rank the performance (in percentage terms) on the basis of the prices you expect each to reach on 1 August 1991. You don't have to tell us the prices nor even the percentage changes you expect — only fill in the ranks from one to six.

Please note that if you assign the same rank to two scrips, then the following one should be ranked the next consecutive number. For example, if you rank two shares at number three, the next will be number four (in which case, of course, your last rank will be five).

Rules:

1. There is no entry fee.

2. The price mentioned last in the official quotation list will be taken as correct for the purposes of calculation. If the stock exchange remains closed on the stated last day, the closing price on the prior day will be used.

3. Entries must be on the printed form given below. Any other entries will be disqualified.

4. Only one entry will be permitted per form.

5. Envelopes sent in should be marked Investor Contest. All entries should be sent to: Investor Contest, **Business India**, Wadia Building, 17/19 Dalal Street, Bombay 400 001, by 5 pm, 26 July, 1991.

6. Business India's decision on the winning entries is final and binding, and no correspondence in this regard will be entertained.

7. The contest is open only to residents of India. No employee (or any direct relation of an employee) of the **Business India group of publications** is entitled to enter the contest.

8. The prize of Rs.5,000 will not be carried forward if there is no winner. In the event that there is more than one winner, the prize will be shared equally.

Name of scrip	Prices as on Tuesday 2 July 1991 (Rs.)	Rank as on Thursday 1 Aug 1991 (please fill in number)

WHERE FLOWERS BLOOM

Two momentous things are happening in front of our very eyes. The population is increasing dramatically and large tracts of land are becoming infertile.

Somewhere in between, is trapped the common man. As pressures on him increase, a house for him remains a pipe dream.

But with socially alive companies, a lot of ground is being covered.

ELDECO is one such.

In 16 years ELDECO has built over 15.5 million square feet of area. Some of it for commercial use and some of it for residential.

And, today, scores of complexes in Agra, Lucknow, Kanpur and Ghaziabad are throbbing with life. With that breath of freshness ELDECO has provided them.

Some months ago these places were barren. But now you can actually step out here and pick flowers.

Some of the prestigious projects

- **The 500 Apartment Sikha Enclave, Kanpur**
- **Stock Exchange Building, Kanpur**
- **HAL Complex, Karwa**
- **Udyan a 4000 house Mini township, Lucknow**
- **Sanjay Complex, Agra**
- **15-Storeyed Kausambhi blocks, Ghaziabad**
- **Low Cost Housing that has won international recognition**

Some launch!

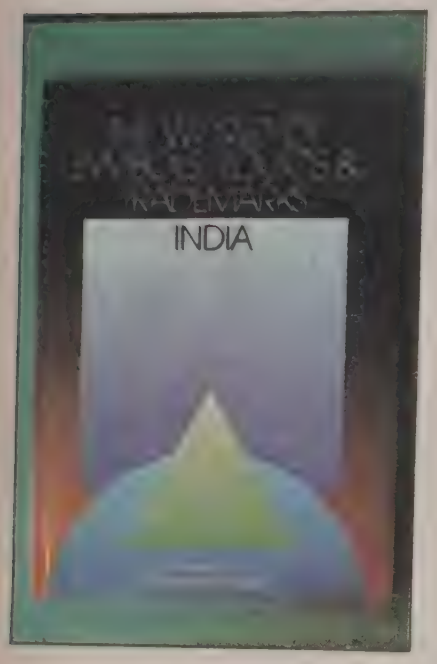
Andhra Jyoti creates Telugu publishing history

19th May 1991. 10.00 am. 54,606 copies of the Andhra Jyoti Vizag bumper inaugural issue were sold out.

The 60 page edition with 15 pages in colour, carried a special message from the Telugu screen idol, Vijayashanti – National and State Award winner.

192 local advertisers took 7,280 col cm space, proving once again Andhra Jyoti's clout in the cash-rich Telugu upmarket.

NRS IV proves that Andhra Jyoti daily is the only Telugu publication which has jumped the readership charts by more than three times.



Now, with the Vizag edition, Andhra Jyoti offers you a special omnibus package, for comprehensive and cost-effective coverage of the entire Andhra market.

In praise of Indian design

THE WORLD OF SYMBOLS/LOGOS & TRADEMARKS: INDIA
Edited by Sudarshan Dheer
Grantha Corporation USA, Designscope and Super Book House, Bombay, 1991, pp.195

In India we are used to symbols — from symbols in our rituals to typographic forms in our diverse dialects and languages. It is not surprising, therefore, to see proof, in this book, of the excellent standards our designers have attained in solving communication problems through the use of symbols based on geometric forms, numerical letter forms, calligraphy, lines and dots. This is very encouraging, and one must say, we are the best. And to hell with modesty.

Among the designers featured, we have Yashwant Chowdhery, R.K. Joshi, Sudarshan Dheer, Panna Jain, Binoy Sarkar, Preeti Vyas, Rohit Modi, Arun Kale, S.S. Sathaye, Ravi Poovaiah and Bharat Chavan. They have done consistently good work, year after year, project after project. The companies where designers can hope to find appreciation for their skill in developing corporate identity programmes would include Escorts, CRY, ITC Hotels, Larsen & Toubro, State Bank, NID, BEST, DTC, Indian Airlines and Taj Mahal Hotels.

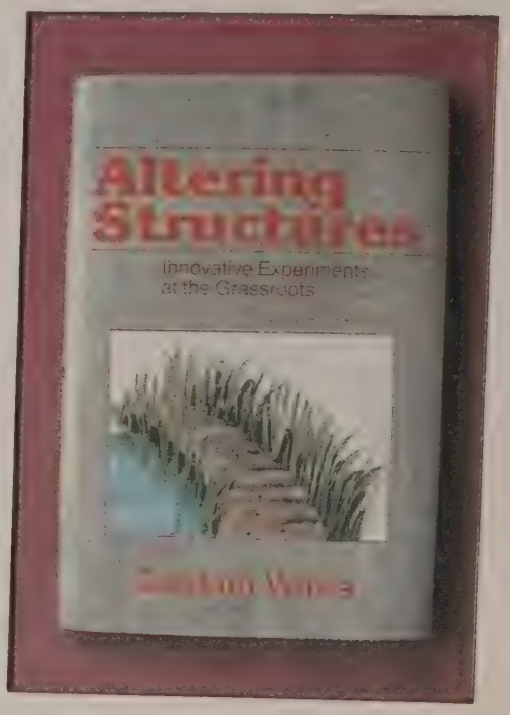
Untapped reservoir

This book has only scratched the surface of the vast, untapped reservoir of talent and art buyers. A good design is a result of an equal partnership between the creative mind and the creative and responsive buyer. Companies, builders, architects and town planners owe it to themselves and to their target audiences to appreciate, encourage and implement good design. In this world of pollution let us at least not create visual clutter. And if designers take their job more seriously they can influence decision-makers to consider what good design can do for aesthetics, besides being functional. After all, money is being spent in creating visual mess. Why not utilise some of it to create a better looking environment and better communication?

Logos and symbols are not necessarily confined to companies engaged in business, trading and manufacturing. Environment and architectural graphics are becoming equally important. Graphics can enhance, or ruin, the finer aspects of a park, a building, or a residential or commercial complex.

Some of the projects executed by Bharat Chavan, Ravi Poovaiah and Sudarshan Dheer are excellent examples of how graphics can inform, regulate, restrict or direct the public without sacrificing aesthetic appeal.

If designers take their job more seriously they can influence decision-makers to consider what good design can do for aesthetics... After all, money is being spent in creating visual mess



Sudarshan Dheer needs to be commended for putting this book together. This reviewer recalls how he personally approached each one of us designers and encouraged us to contribute; and one hopes he will continue to bring designers together.

One last thing — was there any need to get this book printed in Singapore? If we have such good talent in design we also have excellent printing facilities for book production. A book on Indian graphic design capabilities and corporate culture should only be handled by Indian printers. Otherwise, we will be contradicting our own sincerity. ■

Agents of development

ALTERING STRUCTURES: INNOVATIVE EXPERIMENTS AT THE GRASSROOTS
By Gautam Vohra
TISS, Bombay, 1990, pp 225, Rs.100

Voluntary agencies (VAs) have a long and distinguished lineage in India, dating back to the pioneering experiments of Tagore and Gandhi.

There are thousands of VAs spread all over the country. Collectively, they receive aid to the extent of Rs.800 crore annually from indigenous and foreign sources. This, together with their dynamics, innovativeness and fight against vested interests, has generated a major debate as to their long-term and cumulative impact on the country's political economy — a debate involving the government, political parties, international development agencies and intellectuals. The book under review is a contribution to this ongoing debate.

In-depth studies

Authored by Gautam Vohra — a researcher and activist in the voluntary sector — the book comprises in-depth studies of four VAs: Banwasi Seva Ashram (Uttar Pradesh), Rural Development Association (West Bengal and Bihar), Mysore Resettlement and Development Agency (Karnataka, Tamil Nadu, Andhra Pradesh, Orissa and Meghalaya) and Mahiti (Gujarat). They represent the Gandhian, Marxist, church-related and eclectic ideological tendencies respectively. Each agency is analysed in terms of

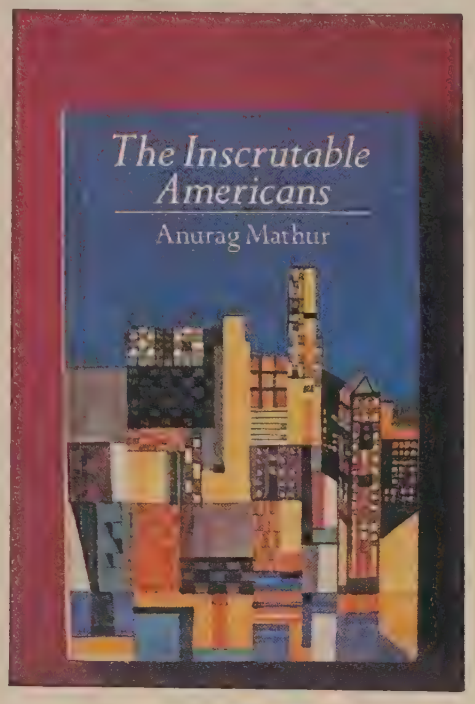
ts economic and afforestation programmes, fight against vested interests, people's organisations, involvement of women, ideology and replicability. Budgetary details are also provided except in the case of the RDA.

The author views the new VAs as agents of a people-centred, egalitarian, ecologically sustainable and self-reliant strategy of development. He provides ample evidence of the genuine commitment of the VAs he has studied, to the cause of the downtrodden.

The innovative and ecologically benign nature of their programmes is also clearly evident. BSA's success in irrigating a drought-prone area, RDA's forest cooperatives for tribals, MYRADA's waste and development programme and Mahiti's use of plastic-lined ponds to store potable water testify to this. Besides, they have promoted alternative models of energy production and indigenous medicine.

But what critics question is the hope that these initiatives would incrementally give rise to a larger and lasting process of socio-economic transformation. Available evidence does not support such a happy augury.

Measure of success



In the absence of unity among the VAs, vested interests can fend off any major challenge to their dominance. Despite this, the agencies discussed in this book have achieved a measure of success in blunting the edge of exploitation by the predatory classes. They have released and rehabilitated bonded labourers, fought for minimum wages and against the corrupt and heavy-handed bureaucracy. Above all, they have striven to give the poor, the will and power to regain control over the land, forest and water resources necessary for their well being.

The real significance of the book lies in highlighting this insight with the aid of abundant, empirical data. Other merits of the study include its truly national scope, its use of a uniform analytical scheme across individual case studies and a jargon free, lucid mode of presentation. Its major weakness is the absence of an overall theoretical framework, systematically relating the work of VAs to the political economy of development in India.

Getting their number

THE INSCRUTABLE AMERICANS
By Anurag Mathur
Rupa, 1991, pp.250; Rs.40

The United States of America is possibly the country most familiar to post-Independence Indians, and we have read more American books, seen more American movies and met more American people than those of any other nation. We feel, to use an Americanism, that we have their number.

And yet, this view of the most high-profile nation in the world is essentially polarised between two extreme points — that of the western-educated Indian intellectual, usually a negative view of a crass, materialistic, sick society; and that of the Indian yokel or disguised yokel, of a kind of adult Disneyland, constantly to be compared to India in terms of efficiency, technology, and availability of options, obviously to the latter's disadvantage.

Anurag Mathur's book brings us face to face with the US from a delightfully new angle, that of Gopal, a wealthy, educated small town boy, who looks at the country with a freshness that the intellectual can never regain, and a self-respect that the yokel type never had in the first place. Gopal is hilariously comic, but he is no fool. His innate intelligence sees him through situations that he can analyse later with an openness and clarity which are endearing.

Gopal's year-long stay in the United States, where he comes to round off his education before plunging into the family hair oil business in Madhya Pradesh, is described here as an internal journey on various planes. He arrives as a naive and easily-impressed greenhorn, with only the haziest idea of what he is plunging into. He leaves as a more urbane young man, comfortable with gadgetry and slang, but also with a deeper understanding both of the country of his birth as well as the Land of Hope and Glory.

Basic intelligence

First of all, Gopal (and the author) present us with the paradox of the Indian education system. On the one hand, Gopal finds himself greatly superior to his American classmates in terms of the understanding he has of fundamentals. But the same system that has hammered these fundamentals into him so efficiently, has not given him the freedom or even the ability to progress from these to a stage where he can ask questions and look for answers. But, Gopal's basic intelligence helps him to overcome this, and he begins to revel in analysis, to dare to conjecture, and to excel in class.

This brings him to a second discovery — that of the absence of envy among his classmates, the kind of petty envy that is the bane of the academician in India. Sadly Gopal realises that the brain drain to the West is inevitable, not because of the better quality of life (nothing can compensate having to clean your own toilets, Gopal feels), but because of the absence in western society of this obsessive interest in and envy about one's neighbour, and because of the efficient, civil and well-equipped work environment that is irresistible to the Indian.

A parade of archetypal characters pass through Gopal's life; The Peacock, symbol of the violence that racial discrimination breeds; Randy, all-American fellow-student, whose mission becomes "getting Gopal laid"; a viciously anti-Asian waiter; an aggressively amorous land-lady; Andy, once Anand, who wouldn't go back to India if Rajiv Gandhi gave him a million bucks. Gopal realises that his well-rehearsed platitudes about our glorious heritage and Five Year Plans are totally inadequate to explain what it is that eventually pulls him back home.

A highly readable book, *The Inscrutable Americans* is, like the protagonist Gopal, funny, thoughtful and astute in equal measure.

RIL-APR-SKBA-491

EXPORTS

Wanted: global salesmen

The worsening foreign exchange crunch has forced the realisation on Indian industry that it has no option but to focus on exports. Quite suddenly, the search is on for managers who can compete in the international arena for business and bring in those much needed export orders in double-quick time. And naturally enough there are none available.

The export effort, even in the few companies where it has been pursued with some degree of seriousness, has generally been restricted to developing a few chance contacts and ensuring that all the cumbersome formalities are met. The

focus in export departments was therefore on having people who were *au fait* with the procedural aspects and could handle logistical problems rather than on marketing skills. The typical exports executive was one who had earlier handled purchases or imports in the company. At senior levels, this was normally a finance person who could perhaps provide guidance on obtaining duty drawbacks, etc.

Even in the few export oriented companies, managers in the exports department were certainly not those who could be considered as the up-and-comers in the organisation. The 'stars' were reserved for the domestic marketing sector. Over the years, the export function became a victim of top management neglect or inattention. The better or the more ambitious managers moved out of such jobs. The few who remained had limited exposure to true marketing in the global sense. Top executives in the company, often the directors, relied on stray contacts or the odd agent whom they dealt with personally to bring in the minimal export orders.

Multinationals have been constrained to work in the parameters set by their parent companies. This, more often than not, has meant exporting only to those countries which the parent company finds uneconomical to deal with or cannot deal with due to political reasons. Despite their overseas connections, these multinationals proved to be just as lacking in international selling skills as their Indian counterparts.

Developing exports to a substantial level would necessarily mean deploying the best marketing people in this area and away from the bread-and-butter business. This is going to be no easy task for managers, used to sheltered markets or manipulating local situations. Knowledge of sales tax and excise, which is important in the local market, are totally redundant in the international context. Marketers would have to prepare themselves for the consequences and the totally new competitive configuration of a free market.

Several companies are looking to develop exports in unrelated products in which they have no prior experience or track record. Such a diversification in the product portfolio would bring its own pressures on the organisation.

Companies seeking international markets for their own manufactured products would have to focus on better quality and competitive prices. Production managers would need to understand what international quality is all about. Recently, several organisations have created the position of quality director to provide precisely this thrust towards quality consciousness. Traditional quality control jobs in several organisations are undergoing a significant change as the concept of quality 'assurance' assumes importance. And in this area too organisations are discovering that skills for these jobs are virtually non-existent. There is no option but to begin intensive programmes for creating awareness and training.

Despite the fact that a lot more Indian managers today have travelled overseas and have a feel for global markets, very few have an understanding of the environmental and market factors. Managers with even a semblance of understanding of potential export markets and some limited experience are going to be much in demand. The same will be the case with consultants who can provide market knowledge and expertise in setting up export activities — and, of course, the all-important contacts.

Only one

Significantly, the Institute of Foreign Trade in Delhi is the sole institute that trains managers for export jobs. Graduates of this institute are bound to be in greater demand though they may be too inexperienced for senior positions. All other export courses are oriented to the procedural aspects of exports and shipments. Management schools have a somewhat cursory course on international trade. Relevant courses for training both fresh and more importantly middle-level managers is a top priority today.

A major lacuna felt by good marketing managers in dealing with international trade is a better understanding of finance and especially international finance. Competitive pricing and trade terms, together with the need for quick decisions, are vital to clinch a deal. Delegating such decisions would mean changing from a highly centralised style of decision-making, where decisions of consequence can be taken only by the CEO, to a more decentralised one.

Marketing managers may soon need to improve their linguistic skills too. While they may have the advantage of being fluent in English, they cannot in some markets get by with just that. Knowledge of other European languages could be an imperative.

The coming months should see companies scrambling around for the skills that are in short supply. And as they do, a new breed of consultants and training programme conductors will become much-wanted commodities.

■ ANITA RAMACHANDRAN

Senior executive positions

A compilation of executive jobs advertised in **Business India** a other major publications between 17 June and 1 July, 1991.

CHIEF EXECUTIVE

With Skill and Expertise to Germinate Success!

SOUTHERN METRO

EXCELLENT TERMS

Our Clients – a fast-growing reputed Group with an asset base of over Rs.1000 crores – are committed to expansion by widening their involvement in the agricultural sector and through comprehensive farmer service. They wish to establish modern seed research, production and processing facilities for marketing seeds in the domestic and export markets. For setting up this comprehensive project, they need an individual of outstanding ability for above-mentioned position to initiate, plan, organise and implement the Project.

The Chief Executive will be thoroughly conversant with seed technology, related Government regulations and marketing methods and strategies. He would have successfully managed and run a seed business of a sizable scale. He should be capable of identifying possibilities of collaboration with seed producers abroad for production and export.

The selected candidate will possess a good degree in agriculture or engineering with 10-15 years of experience in this business. He will be capable of coordinating, motivating, and leading his team of men drawn from different disciplines. A strong commercial flair and outstanding integrity are basic requisites. Preferred age is 40-45, but can be relaxed.

The position will be suitably designated in keeping with the high entrepreneurial and managerial skills it calls for.

The compensation package will be comparable to the best in the country for position of this seniority and responsibility, and will not be a constraint for the right candidate.

Please apply within 15 days to:

Mr. G.T. Shahani,
Chairman,

Apex Management Consulting Group Private Limited,
C-1, Rams Square, 2, Village Road, Madras 600 034.

Al-Futtaim

MARKETING MANAGER

Dubai **c. Dh. 11,000 p.m. tax free plus benefits**

The Al Futtaim Group is one of the largest and most professionally managed groups in the Middle East and has interests in trading, manufacturing, insurance, real estate and the service industry. We have been retained to assist in the selection of a Marketing Manager for Al Futtaim Electronics, the exclusive distributor in the U.A.E. of internationally reputed brands of consumer/entertainment electronics and home appliances such as SANYO, FISHER, DANTAX, etc.

The selected candidate will be expected to contribute significantly to improving sales and profitability by increasing penetration in the domestic market through the extensive dealer network and specially concentrating upon opportunities for exports. Identification, development of sources of supply and the successful introduction of new products alongwith improvements in market shares of existing product lines will be key result areas. This is a hands on job and the Marketing Manager will be expected to lead his team by example.

Candidates must have a proven and successful track record in sales and marketing of consumer electronics and/or home appliances and this should have resulted in their currently occupying responsible middle/senior management positions in reputed organizations in this industry. Their experience should have included product sourcing and negotiating with principals at an international level. Previous overseas experience in the Middle East or the Far East would be an advantage. A good personality and excellent interpersonal and communication skills are definite pre-requisites. The preferred age is between 36-42 years.

In addition to the salary indicated above (Dh. 1 = Rs. 5.50 approx. at current rates), the benefits will include furnished housing, company maintained car, annual leave passage, gratuity, etc.

Please apply in strict confidence within 10 days to:

A.F. Ferguson & Co.
P.O. Box 1786
Bombay 400 001.

giving full details of age, qualifications, experience and salaries drawn along with a recent passport size photograph and contact telephone numbers. All applications and envelopes should be marked with the reference number "MS/5700".

BUCKAU WOLF

We are a leading, heavy engineering organisation based at Pune, with an annual turnover exceeding Rs 1,000 million and over three decades of experience. We have specialised in various turnkey activities related to infrastructure generation and the core sector, and our excellent foreign collaborations include the world-renowned Krupp Industrietechnik, Krupp Polysius and Deutsche Babcock of Germany. With the opening up of the economy, we foresee rapid growth for the Company which will offer exciting opportunities and challenges for ambitious, top-flight professionals. We are now poised to touch the Rs 1,500 million turnover mark, with current orders exceeding Rs 2,000 million.

We believe that our reputation and growth is largely dependent on the quality of our people. Therefore, in addition to being technically qualified, we encourage them to develop professional pride, quality consciousness, creativity, dynamism and the desire to grow – both professionally and personally.

We now require the following marketing professionals to help realise our growth plans.

MARKETING MANAGERS
MARKETING EXECUTIVES

Sugar, Food Processing and Chemicals.
Cement, Mineral Beneficiation Plants.
Open Cast Mining and Bulk Material Handling.
Fluidised Bed Boilers.

We require Marketing Managers and Marketing Executives for our above divisions.

The Company allows considerable autonomy in marketing decisions, and is looking for key people to further develop the product range and new markets.

Candidates should be engineers, with relevant experience in marketing engineering projects.

For Marketing Managers: Experience 10 years+, Age 30-40 years.

For Marketing Executives: Experience 5 years+, Age 25-35 years.

We offer an attractive remuneration, good perquisites, stimulating working conditions and good prospects for growth.

Please apply with relevant details, enclosing a passport-size photograph. The position applied for should be clearly marked on the envelope addressed to:

The HRD Department
Buckau Wolf India Ltd, Pimpri, Pune 411 018.

If you'd like to be a Manager who only handles sales...

Balsara doesn't need you!

No way! We need managers who are adept not only at handling sales but also at home with supporting functions like depots, inventories, systems, offices, planning and forecasting. One branch manager each for Bombay, Calcutta, Delhi and Madras.

That calls for a lot of responsibility, doesn't it?

You bet it does! But that's what working with Balsara Hygiene Products is all about. After all it's a Rs. 80-crore consumer – product company, with a back-up of over 1,200 stockists, 130 sales representatives and 21 depots. When you have national brands like Promise, Babool, Odonil, Odopic, Odomos and a whole range of new products, only the toughest and most flexible people will do.

The qualifications you'll need

You should be 35-40 years of age and should have experience in selling widely distributed products in a competitive environment, through a large field force. If you're an MBA, we'll relax the age limit.

The reward you'll receive

Over Rs. 1,40,000 per annum. And much more, if we feel you're a deserving candidate. After all, we like to keep our employees happy.

What you'll have to do

Apply within 10 days with your resumé and photographs to:

Lucas-TVS

LUCAS TVS - a leader in Auto Electricals for over 25 years with a track record of sustained growth requires an

EXPORT MANAGER

to develop its export business.

The assignment is a challenging one and calls for dynamism and drive. The Company has set itself ambitious targets of export performance over the coming years which the Export Manager is expected to achieve.

The incumbent should be an Engineering Graduate with a minimum of 8 to 10 years hands-on experience in export of light Engineering/Automotive Products. He should possess in-depth knowledge of the Middle East, African and U.S. markets and be fully conversant with export procedures/formalities.

The position is in the Senior Managerial cadre.

Preferred Age Group: 35-40

The remuneration package which would be attractive would be commensurate with the candidate's background and experience.

Please apply with complete bio-data attaching a photograph within 15 days to

THE PERSONNEL MANAGER
Lucas-TVS Limited

Come, add your muscle

Perhaps, you thought MRF was just tyres. There is indeed much more than a Zigma on the MRF horizon. Currently, we are in the process of accelerating our accent on diversification into various consumer and industrial products.

As a leading recognised Trading House, we are gearing up to capture more and more international markets with a wide range of products. To further strengthen our muscle in each field, we need:

MARKETING & SALES

Top/Senior/Middle Managers

A dream career for the tough, smart and dedicated with a determination to succeed. Those with selling in their blood, and willing to be posted anywhere, will meet their match in this highly rewarding career at MRF. If you are confident of your strength, write to:

The Director–Human Resources & Services
MRF LIMITED, Tarapore Towers, 826 Anna Salai, MADRAS - 600 002.

MRF

Going beyond tyres

Anugrah 672/91

There's something very exciting about being an Area Sales Manager at Vadilal. And also something very frightening.

Vadilal ice cream is marketed in Western India, and in parts of the South. It is the market leader in all its territories.

We plan to make Vadilal a national brand over the next three to five years. One of the reasons why the brand has been so successful (it has a turnover of well over Rs 35 crores) is a very good selling and distribution infrastructure..

Our Area Sales Managers are key people in this structure. Each ASM controls a territory with a turnover of Rs 3 to 6 crores, and is assisted by a team of Sales Executives, Sales Representatives and sales support staff. In turn, he reports to a Divisional Sales Manager.

We give our ASMs a very free hand. He participates in setting his own targets: after that, it is his responsibility to develop and implement sales strategy and tactics for his territory. The guidelines given to him from Head Office are very broad, and allow him a great deal of flexibility.

This freedom is necessary because, in our business, the competitive environment can change from town to town. A centrally-developed Manual Of Procedures simply cannot work in this situation.

Our Area Sales Managers find this situation both stimulating and satisfying: although it might be a little frightening at first to someone not used to this level of responsibility.

Professionals who join us find that the environment, besides providing them a lot of freedom, gives them a great deal more. The average age in the company is in the late 20s, making for an informal atmosphere. There is a lot of sharing of learning. 15 of our managers in sales and marketing are MBAs from premier institutions, and they have introduced radically new approaches to these functions. And we have learnt a lot from their experience with other companies such as Asian Paints, Cadbury's, Johnson & Johnson, Nestle, Colgate-Palmolive, ICI, HMM and Lakme.

Very few people who have joined us would care to return to an environment where there is a book to go by.

Right now, we are looking for three **Area Sales Managers** to look after three very interesting territories – **Bombay, Pune and Bangalore**. We'd like them to be MBAs (IIMs, XLRI, Bajaj, FMS) with 4-5 years' experience, or non-MBAs with 8-10 years' experience. They must have set a good record in sales or marketing in a competitive consumer products industry.

The remuneration package is good. We are growing very rapidly, and interesting possibilities for development will come up for good managers (our former All-India Sales Manager, for example, has now taken charge of exports and joint ventures abroad).

If you're interested, please write in 10 days to the Personnel Manager, Vadilal Enterprises Limited, 'Shubhangan', 24 Gulmohar Road, JVPD, Bombay 400 049. Please mark the name of the post and the preferred location on the envelope.

Vadilal ICE CREAM

NORTON **GRINDWELL NORTON LTD.**

REQUIRES MARKETING-ORIENTED ACCOUNTANTS

We are an integrated manufacturer of industrial abrasives and ceramics in collaboration with NORTON CO. of USA, the world's largest manufacturer of abrasives.

We consider MARKETING as one of our major strengths. The marketing organisation consists of over 18 field offices all over the country, an extensive network of dealers and stockists, and a strong marketing services function. This function is being strengthened further and we are looking for marketing-oriented Accountants for the following positions:

MANAGER– WORKING CAPITAL

The selected person will be primarily accountable for working capital management. This will involve the following:

- Management of finished goods inventory at various locations.
- Formulation and implementation of credit policy.
- Monitoring and control of accounts receivables.

The incumbent will lead a team of 3-4 executives posted in the field.

The ideal candidate would be a Chartered/Cost Accountant with 6-8 years' relevant experience. A good insight into industrial marketing and excellent interpersonal skills are critical requirements of this position.

B.Com s/M.Com s with longer relevant experience may also apply.

EXECUTIVE– WORKING CAPITAL/ BRANCH ACCOUNTANT DELHI/CALCUTTA MADRAS

The job involves:

- Management and physical control of Regional / Branch warehousing operations.
- Monitoring and control of receivables.
- Transportation and logistics.
- General office administration.

The ideal candidate would be a Chartered/Cost Accountant with 3-5 years' relevant experience at the Regional/Branch level, preferably in an engineering company.

B.Com s/M.Com s with longer relevant experience may also apply.

Gross emoluments will be attractive for a person to make a change. Persons selected for Delhi/Calcutta/Madras will be covered under our Vehicle Scheme.

Write within 10 days to Deputy General Manager, Human Resource Development, **Grindwell Norton Ltd.,** 114, Mahatma Gandhi Road, Bangalore 560 001.

oping effectively

omnath Roy, *41, is head of the merchant anking division of the ICICI*

ow that there is a steady lull in the new sues market, merchant bankers have ased to be the most sought after people. But if you concentrate on services other han issue management, you can proba- ly insulate yourself from fluctuations in he new issue market," says Somnath Roy, ead of the merchant banking division of ndustrial Credit and Investment Corpo- ation of India (ICICI), one of the three erm lending institutions in the country.

Primary job. The primary job of a mer- hant banker is to raise finance for his cli- nt but his effectiveness depends on how many different sources he can tap. In this area, ICICI's merchant banking division has an edge over the other institutions. Apart from managing a large number of public issues, it also syndicates long-term loans in rupee as well as in foreign cur- rencies. And ICICI's links with the inter- national development banks like World Bank, Asian Development Bank, Com- monwealth Development Fund, etc, have placed its merchant banking division in a better position to arrange foreign ex- change loans for clients, says Roy.

Roy, a graduate in mechanical engi- neering from Calcutta's Jadavpur Univer- sity, took over as the head of ICICI's merchant banking division in mid-1990. He started his career in 1971, when he joined Devel- opment Consultants Pvt Ltd, a Calcutta-based consulting engi- neering firm. Two years later, he joined ICICI (operations).

Roy worked in operations for 17 years before moving to mer- chant banking. "My experience in operations has helped me a lot in my work as a merchant banker," recalls Roy. "During that time, I had to monitor the performance of a number of companies very closely and reg- ularly." Formulating a suitable financial plan for a company and then implementing it to raise money being the main task of a merchant banker, Roy, with his experience in project ap- praisal and implementation, finds himself quite at home on the job.

ICICI's merchant banking op- eration has also grown manifold over the last few years. In 1990-91, the division mobilised Rs.2,515 crore for its clients — five times the amount it mobilised five years ago. It has also expanded its clients' list by including smaller companies, as opposed to earlier serving only the large companies. "All this means more and diverse work to cope up with," says Roy.

Demanding schedule. Being the head of the division, Roy's work schedule is quite demanding. In the office by 9 every morn- ing, he often works till late evening, when- ever there are conferences to attend. Roy is also on the board of six companies as nominee director of ICICI. This and his departmental work take him frequently on tour to various parts of the country. "I am out of town at least once a month, at least for a week on an average," says Roy. He enjoys his work very much. "With more players coming in, market growing bigger and government liberalising its financial policies, merchant banking is becoming more and more challenging," says Roy and hopes that ICICI and its merchant banking wing will certainly live up to its reputation.

Roy enjoys Tagore's poems very much and has a good collection of his works.

■ DILIP MAITRA

FRONTRUNNERS

A sales representative for Herbertsons, 11 years ago, **R.L. Rajah**, 34, is now their regional manager, in charge of the western region. A graduate in sociology from Madras University, Rajah began his career in 1979 with a detergent company in Madras but left this soon to join Herbertsons. In 1983, he was transferred to Hyderabad as area sales manager.

The challenge, however, came in 1989 when he was promoted as zonal manager, in charge of the state of Tamil Nadu. Appointed as regional manager earlier this year, Rajah does not feel that a marketing degree is essential to sell a product. Says he, "It's the inborn leadership qualities that help a sales person sell his product."

–M.S.

Manoj Kohli, 32, general manager, human resource development with Shriram Industrial Enterprises Ltd (SIEL), has worked his way up. In the newly formed SIEL (an offshoot of the erstwhile DCM Ltd set up last year) he has the unenviable task of reorganising the personnel structure.

Joining DCM in 1979 as an executive he took his LL.B. and MBA while on the job. Most of his first ten years with DCM he handled the personnel department at Sriram Foods and Fertilisers Ltd. He was also instrumental in re-motivating employees at the chemical unit in Delhi after the 1985 gas leak. In 1989 he was made director of a sick company in the DCM fold, Indian Hard Metals Ltd, for whom he played a leading part in finalising the BIFR package.

With Siddharth Sriram, SIEL's managing director, reposing confidence in him, Kohli hopes to achieve many more tasks.

–F.A.

EXEMPT YOUR CAPITAL GAINS FROM TAX

INVEST IN

IDBI

CAPITAL BONDS

Long term capital gains from the sale of land, buildings, jewellery, shares etc. attract Income Tax. But there is a way out. Invest in IDBI CAPITAL BONDS, keep your capital intact and earn interest too.

- Bonds available at par throughout the year.
- Exemption from tax on Capital Gains under Section 54E of the Income Tax Act, 1961.
- Income tax benefit under Section 80L.
- Exemption upto Rs. 5 lakhs from Wealth Tax under Section 5(1)(xvie) read with Section 5(1A) of the Wealth Tax Act, 1957.
- Interest at 9% p.a. payable half yearly.
- At the investor's option, interest for the full period of 3 years can be paid in advance on discounted basis.
- No deduction of tax at source.
- Outstation cheques accepted and cost of collection borne by IDBI.

)BALLAPUR

n age-old sheen

nty-five kilometres away from galore is a sleepy-looking town called ballapur. It is one of the largest weav- centres for the famous Mysore silk ees, but there are no hoardings pro- ming this, nor colourful fabrics drying backyards to show you the way. None- same, as weaver N. Devraj says: "My ndfather told me that silk saris were ven here even when his grandfather s a child."

Only the clickety-clack of powerlooms itting from every home indicates that lf the silk saris that find their way into ngalore are produced here. About 90 r cent of Dodballapur's 100,000-plus pulation is involved in silk-weaving. e Kannada or Telugu speaking De- nga community that traditionally con- olled this activity has not only kept this t alive but also passed it on to new- mers in Dodballapur, like the Gowdas d Harijans.

Every home has at least one loom — ually more. S. Gowramma's, for in- ance, has two looms. "I prepare the els and help with the twisting of the rn," she says. Her husband, along with employed help, operates the looms.

Until 1940, the silk was woven on hand-operated looms. Then electrification brought in 13,000 power looms, speeding things considerably. Today, a weaver can produce about 15.5 metres — two-and-a-half saris — in a ten-hour work day. Erratic power supply, however, brings down the average yardage to between 8 and 10 metres.

A riot of colours: ready stock before shipping

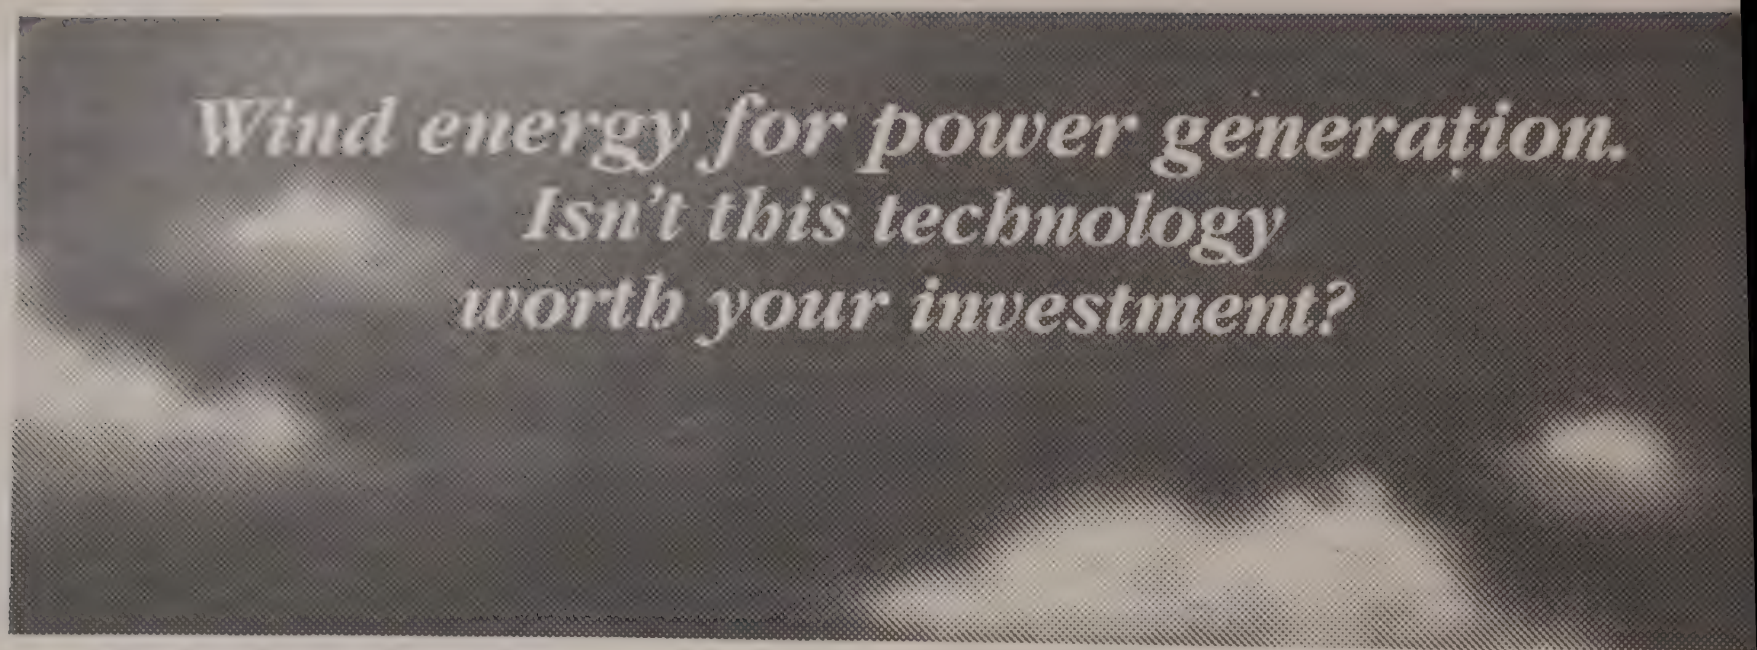
Keeping the art alive, on modern equipment

Assured market

Only white silk is produced in Dodballapur, with or without a narrow *zari* border which is sourced from Surat. "We do not have any facility for dyeing, printing and processing here. That is all done in Bangalore, Bombay and Delhi," explains B.S. Subbanna, vice-president of the Sri Kalpataru Powerloom Weavers Pure Silk and Art Silk Cloth Producer-cum-Sellers Co-operative Society Ltd. A few weavers, like K.H. Rangaraju of K.M.H. Silks, however, buy the dyed yarn and specialise only in coloured silks for dress material. The weavers have an assured market, as the fabric is made to order.

Weavers buy the yarn from the Karnataka Silk Board at around Rs.1,100 a kg. Most saris take in an average of about 200 gm (between 35 and 45 gm a metre). Unlike the silks produced in the northern states, the material here is woven from twisted yarn, making it durable and giving it a sheen. The quality of silk depends on the twisting of the yarn. Simple twisting produces lighter silks, while tightly twisted warps and wefts create chiffons and crepes.

There are heavy levies at almost every stage of production. "We are exempted from paying registration fee or sales tax, but we have to pay 1 per cent tax on the cocoon yarn, a levy on the reel as well as a turnover tax," says Subbanna. Since this situation does not exist in Tamil Nadu, many weavers are moving to towns like Hosur on the Tamil Nadu-Karnataka border.



Erratic power supply has been a major handicap. Although Subbanna and Devraj, who have large units, do not feel the pinch, people like Gowramma do. "All it takes is a strong wind to interrupt power," she says. "During the monsoon it is at its worst. My husband has to work at night when the supply is a little more stable."

No formal training

The weavers lack formal training and technical knowhow in making the looms. Those who do not have their own looms work for others, earning between Rs.18 and 25 per sari, depending on the weave. Daily wages can amount to Rs.50, depending, of course, on the power supply.

If government apathy is responsible for Dodballapur's slow growth, the weavers are equally to blame. Several co-operative societies exist but are ineffective. In fact, the workers' own inability to put up a united front to push their cause is only worsening their lot.

■ VIDYA SRINIVAS

The welcome innovation

Incredible though it may seem, the truth is visibly evident. All you have to do is take a trip to either Kayathar in Tamilnadu or Mandvi in Gujarat. You'll witness a revolutionary technology in action. A technology that converts the power of wind into electrical energy – a welcome alternative in the light of rapidly depleting other resources, non-availability of coal, diesel, etc. In fact, this revolutionary change will soon, if not already, sweep across the country.

A partnership firm by the Indian promoters by the name of Natural Energy Processing Company was formed in 1986 to carry on the installation of Wind Turbine Generator of 55 KW to 250 KW. A three year fruitful association with Micon of Denmark – the world leader, proved the commercial viability of wind energy and led to the formation of NEPC-MICON LTD.

Together, Natural Energy Processing Company and MICON have executed a number of projects like the 10 MW project consisting of 50 Wind Turbine Generators of 200 KW each for Tamil Nadu Electricity Board and two Wind Turbine Generators of 250 KW each for Gujarat Wind Farms Ltd., in Mandvi, Gujarat.

The Promoters' success does not stop with Government Projects. For the first time they have created a private sector market by proving the commercial viability and the long term economic advantage of Wind Turbine Generators as against diesel and other fossil fuels. Maiden order came in the form of a project for execution of six wind turbine generators of 250 KW each at a total cost of Rs. 3.5 crores from three private sector companies engaged in diverse fields.

Enthused by the response, Natural Energy Processing Company surged forward to complete installation of 13 Wind Turbine Generators each costing Rs. 60 lakhs for private sector companies during the year 1990-91. For NEPC-MICON LTD., the current year looks more promising with a Rs. 3 crore order from TNEB, apart from a host of orders from private sector companies. NEPC-MICON LTD. is poised to reach greater heights.

With a target of 500 MW (2000 WTGs) fixed by Department of Non-Conventional Energy Sources to be completed before 1995 and a large and growing private market already tapped successfully by the promoters, isn't the power of wind worthy of your investment?

H I G H L I G H T S

- Pioneering Venture – Wind energy for power generation, proven alternative source of energy.
- Project in core sector – to manufacture Wind Turbine Generators (WTGs) and Wind Driven Pumps (WDPs).
- Technical collaboration and equity participation by M/s. Morup Manufacturing Company, MICON A/S, Denmark, world leaders.
- Government incentives and high priority – No Excise and Customs duty. No Sales Tax.
- Promoters well established in this line of activity.
- High Demand – Orders from Corporate Clients and Electricity Boards.
- Low breakeven of 10.42% – Pure equity funding.
- Risk Factor - Fiscal and import policies of the Government will have a bearing on the profitability.
- Commercial production by September 1991.
- Listing at Madras and Bombay Stock Exchanges.

Public Issue of 25,00,000 Equity Shares of Rs. 10/- each for cash at par

NOTE: If the Company does not receive the minimum subscription of 90% of the Issue amount, the entire subscription will be refunded to the applicant within 90 days from the closure of this Issue. If there is a delay in the refund of such amount by more than 20 days, the company will pay interest at the rate of 15% per annum for the delayed period.

ARTERED FLIGHTS

n wings of their own

gh-flying corporate executives are dis-vering the joys of flying on their own ne. Chartering a whole plane may seem esomely expensive, and even flamboy-t, but those who regularly do so say at time-wise there are huge savings ich can't be quantified. With airline ghts regularly re-scheduled without so uch as a by-your-leave, valuable execu-ve hours are whiled away at airport unges. Besides, they argue, charters are od for a company's image, especially hen collaborators are visiting.

Last September, Wipro Infotech's new inter factory at Mysore was scheduled r inauguration. Senior executives of its llaborator's, Epson of Japan had flown own to Madras especially for the event. ut the Japanese were hard-pressed for me. And Mysore was not connected by ther Indian Airlines or Vayudoot. Wipro ecided that the best option was to char-er a plane from UB Air. The 14-seater ornier picked up the Epson representa-ves and senior Wipro executives from Madras and landed them well in time for he function at the mall aerodrome at My-ore. After the inau-uration and lunch they lew back to Madras, the ame day. Says Ashok Soota, president, Wipro nfotech, "It was a very easant experience. The on-board person-alised services were su-perb. They were prompt and it helped us main-ain our programme."

Plane on call

Impossibly packed schedules can be ad-nered to by having a plane on call. Last Octo-ber, the Federation of Indian Chambers of Commerce and In-dustry (FICCI) had organised an impor-tant meeting at Madurai. FICCI Chartered a Vayudoot plane at Madras to Madurai and flew down president S. K. Birla. After the meeting, Birla rushed to Bangalore where he addressed the mem-bers of the Chamber of Commerce in the garden city.

Apart from Indian Airlines and Vayudoot, planes are available for char-ter from the several new air taxi opera-tors. The costs range, depending on aircraft size, from Rs.7,000 to Rs.2 lakh on an hourly basis. And there are many who can afford to pay these prices. For chartered flights, operators regularly re-ceive the odd request for transporting marriage parties or airlifting injured for-eign nationals. Some time ago, a leading newspaper group hired an Indian Air-lines jet to move a marriage group from Madras to Bombay.

Ideal solution

In an emergency, a charter presents the ideal solution. During the Gulf War, when Indian Airlines was forced to cut down its domestic services, a Bombay-based fi-nancial service company was in a fix: the inauguration of its Madras office could not be put off as many VIPs had already been invited. The company chartered a 14-seater aircraft from Bangalore and the managing director and other execu-tives managed to reach on time.

A chartered aircraft: saving executive hours

A chartered plane has flexibility, since it can skip or add any airport and land at any remote place, depending on the na-ture of the landing ground. On occasion, these planes have reached inaccessible destinations such as Wadi, Hubli, Hari-har, and Kudremukh, etc.

Three Pune-based companies — Bajaj Auto, the Kalyani group of companies, and the Kirloskar group — have formed a unique pool which lets out Beechcraft (three to seven seaters) to member com-panies. This has improved the mobility of senior executives in Pune since this city is not well connected by Indian Airlines. Says Atul Kirloskar, vice-chairman and managing director of Kirloskar Oil En-gines, "Chartering makes travelling eas-ier and convenient. Since it's flexible, we can decide when and where to fly. It's im-possible to depend on Indian Airlines when foreign visitors are in town and we have to take them to factories located in different parts of the country."

Better service

On-board services on privately hired planes are several cuts above Indian Air-lines. In October last year, W. Grubman, director of Unilever and S.M. Dutta, chairman of Hindustan Lever, and their wives travelled from Madras to Pondi-cherry on a chartered plane to inaugu-rate Hindustan Lever's new plant. There were surprises in store for them: specially prepared lunch, and champagne, from Hotel Windsor Manor in Bangalore.

With such goodies laid out, the flying time on board can be utilised effectively too. In October last year, Vijay Mallya was to preside over the first management op-erations review meeting of Mangalore Chemicals and Fertiliser (MCF) and return to Bangalore the same day. Charter-ing was the only answer as there was no Indian Airlines flight that day. MCF hired UB Air's Dornier and ten senior executives of UB and MCF flew to Mangalore. Says N.B. Chandran, managing director, MCF, "On board, we had a meeting with our chairman, which would not have been possible on a regular Indian Air-lines flight. Also, it was economical for ten of us to fly together."

But not everyone who charters has cost savings exactly on top of his mind. The CEO of a multinational went overboard when he flew as the sole passenger from Bangalore to Pondicherry. The plane was kept waiting there while he drove to Chidambaram to deliver a lecture at An-namalai university!

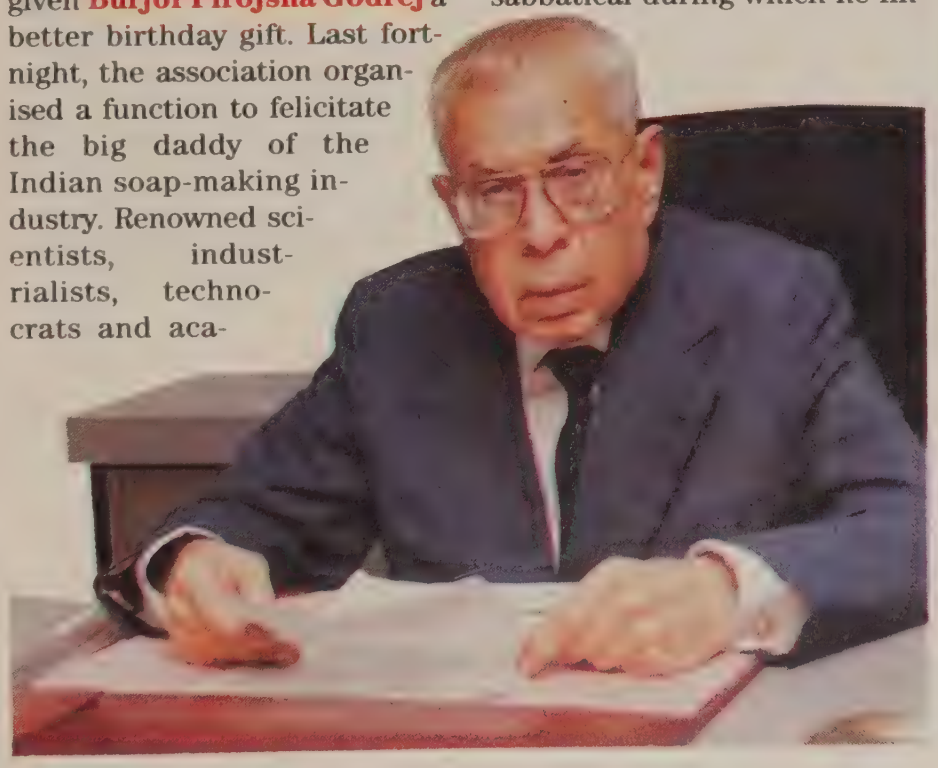
■ DEVAPRASAD PUROKAYASTHA

"A LEGEND WITH LEGEND"

INDIA'S FAVOURITE CAR TYRE

MRF RH L1

ttending a press conference where **Russi Mody** is at tre stage is always a refresh- experience. Mody's ready can always be trusted to en up an otherwise drab air. Last week, he was at his morous best while presenting co's financial results. He was ked which company he was anning to take over. Mody



poked around, and noticing hat Ratan Tata had just left the oom, replied, "Telco." Another cribe wanted to know who would succeed him. The steel nan put on a mock serious ex- pression and replied solemnly, I do not want to discuss my pri- ate life in public. All I can say is hat I am growing younger every lay." Mody, who is in his seven- ies, was definitely feeling elated. Tisco's good perfor- mance, of course, added to his ovial mood.

Joining the growing list of Indians featured in the *Guinness Book of World Records* is **Rajendra Singh** of Udaipur. Braving blinding sandstorms, congested traffic

It was his 75th birthday, and the Oil Technologists Association of India could not have given **Burjor Pirojsha Godrej** a better birthday gift. Last fortnight, the association organised a function to felicitate the big daddy of the Indian soap-making industry. Renowned scientists, industrialists, technocrats and academicians from all over India praised Godrej's achievements. A pioneer in the science of making soaps from fatty acids, he is also credited with being the first to introduce deodorant soaps in India. Besides, Godrej is also a keen student of the German language, and is keenly interested in horticulture.

There must be more to life than just journalism, feels the greying young egghead, **Mukul Sharma**, editor of *Science 2001*. Much more.... Having traded cushy prospects in his family's agrochemicals business for a "creative" career as a freelance journalist, the fortyish Calcuttan is game for trying out anything new. From writing to photography to acting in a Hindi movie, he has done it all. Now he's back from a year-long sabbatical during which he finished three books: a novel a computer book for the layman and a collection of "Mindsport", his popular column in the *Illustrated Weekly*. He now plans to organise an exhibition of portraits shot by him.

A week after **Javed Khan**'s unique feat of breaking 500

one-inch-thick wooden boards in an hour, the congratulatory messages are still pouring in. At his evening classes in a south Bombay school, fans and well-wishers bow before the 27-year-old taekwondo third degree black belt and congratulate him reverentially. Khan accepts these gracefully, but says he has a long way to go. He will be participating in the world taekwondo championships in Leicester soon, after a gap of five years. The last time he took part, he was disqualified in the quarter-finals for being too aggressive. "I was disqualified simply because I had beaten up an Englishman," he says with a shrug. Khan, who is the son of a Pathan father and Gujarati mother, says he loves to fight. "This is my passion," he says, "just as other people have other passions. But I fight only when the fight is challenging. And then I fight to win."

Banking on quality

With the introduction of its thrice-weekly Zurich-Delhi flight, Swiss Air plans to increase its share in the growing Indian market. The airline will fly its new Mcdonnell Douglas' MD-11 aircraft on this route from January. Swiss Air chairman **Otto Loepfe** *spoke to R.S. Venkatesh of* Business India *about the airline's post-recession strategy and the Indian sector*

What impact did last year's recession have on your airline's performance?
In the 60 years of our existence, it was only the second time that we did not declare a dividend, though we did end up with a small profit. That shows how severe the recession of 1990 was. Apart from the Gulf war, the problem was aggravated because some airlines tried to expand too fast. We ourselves had targeted for a conservative 5 to 6 per cent growth in passenger load, but others were over-enthusiastic. The result was excess capacity which pushed fares lower, making it difficult for the entire industry.

Is your airline in favour of a publicity gimmick like the one British Airways had of offering free seats worldwide?
No, we are not. We believe in riding out the waves. We bank on our quality and we will compete on that level.

You have introduced New Delhi in your map at a time when both tourist and business inflow into this country is at its lowest?
I know the natural reaction is to shy away, but we believe that this is a transition period. In fact, it was India's tourism year — 1991 — that prompted us to come here. We are in touch with tour operators abroad, and the indications are that more and more tourists and businessmen are going to come here. India is more a continent than a country, and I am confident we will do well here.

Does that mean you are changing your image as an airline which primarily services the business sector?
We plan to have a 50:50 ratio of tourists and business travellers on this route. Destination Delhi will offer both the attractions of northern India's beautiful tourist spots and the capital city's business opportunity. I foresee a lot of foreign investment coming to India and we will be there to bring in the businessmen. In fact, we have shifted our entire accounting department to Bombay, and it is working very well.

What are your passenger load targets for the Zurich-Delhi sector?
It is the lean season now, and business will pick up after the monsoons. We to carry an average of 150 to 160 passengers per flight after three m We have been operating out of Bom since 1957, and that experience has been very good. So I do not mind ho long the gestation period will be. We have been in the airline business for years and we are here to stay.

You will be facing stiff competition from Lufthansa and British Airways which are doing well here.
We know what competition is and we used to surviving in a competitive market. Switzerland has 62 schedule airlines flying into Zurich, and we are doing well there. In fact, 77 per cent o our passengers are non-Swiss, so competition does not deter us.

How does your airline plan to tap th newly opened eastern European and USSR markets?
We already have operations in all East European capitals, but I think it will take some time for the market there to mature. We have also introduced flights to Leningrad and Kiev in the USSR, but that country is going through serious political and economic problems. Of course, these two regions are potential long-term markets, and we are gearing up to service them.

Do you plan to maintain your airline's working alliance with Fin Air, Aas and Austrian airlines?
Of course. Together, we account for 42 per cent of all air passengers. The alliance is advantageous to all of us. It helps us cut costs, and gives us an edge when competing with the bigger airlines. I foresee more such working partnerships between different airlines because it is getting difficult to fight it alone in today's marketplace. We are already witnessing mergers between smaller airlines, and I think working alliances offer the second best alternative.

Other airlines have complained about the airport facilities available here. What are your views?
Yes, there is scope for improvement. The airports here can be modernised to meet international standards. But the main thing is that India has gone through a difficult phase politically, and a little stability can generate a lot of goodwill from abroad.

Ramada® Inn Palm Grove

The spirit of business!

Sacramento to Singapore. San Diego to Sydney. San Fransisco to Seoul.

5-star all the way!

As friendly as home

Businessmen choose Ramada Inn Palm Grove not just because of our stature, but also because of our style of service.

Our people treat our guests as if they were their guests – which, in a way, they are.

By being friendly, not formal. Solicitous, but not embarrassingly so. Attentive, but never intrusive.

It takes practice, but we have it.

And our happy guests confirm it.

All you want a hotel to be

We have 113 twin and double bedrooms. Five spacious suites. A 24-hour coffee shop. A spiffy restaurant offering Indian, Chinese and Continental fare. And a bar too!

We also offer a swimming pool, a health club, a shopping centre, and a business centre.

Yes, we're geared to help you handle your business better. It's the kind of spirit we're sure you're looking for.

As 5-star as Ramada

Ramada Inn Palm Grove is a Palm Grove-Ramada tie-up.

It gives the business sophisticate an opportunity to experience that classy savvity which has made Ramada what it is today.

The world's third largest hotelier. With a chain of hotels stretching from

The Smart People's Computers

When you expect to use your computer for many years, day in and day out, what you look for is Performance, Quality and Service. Over the years you realise these are so much more important than the price you paid for your computers. High Performance translates as shorter response times, which means you have more of your valuable time for other important activities. This represents a lot of money over the years. Good Quality translates as fewer problems or breakdowns, and Good Service ensures that when problems or breakdowns do occur, their effects are kept to a minimum. This also represents a lot of money saved over the years.

Smart People know and appreciate the value of Performance, Quality and Service, and know that it represents much more money than a few percents "saved" on the purchase price of a computer.

Aurelec is in its 11th year of selling Smart Computers to Smart People.

Aurelec: Quietly building the best.

LETTER FROM THE PUBLISHER

The new government deserves to be supported fully for facing the harsh economic realities squarely, and taking tough decisions quickly. We are now beginning to see the shape of things to come.

The Left is up in arms and the old guard socialists within the Congress are resisting strongly. To be sure, there are legitimate and serious concerns that arise out of any restructuring. The most important concerns are obviously prices and unemployment. The fear is that by opening up, there will be large-scale disruption of industry. A direct result will be shooting price increases. Both of these neither the middle class nor the working class can afford.

It is unfortunate that large sections of the intelligentsia have this almost knee-jerk reaction to any opening up or letting go of controls. One only has to look at the lessons in recent history in the West. No politicians or bureaucrats in America liked seeing a giant US airline like Pan Am bankrupted. Nobody in Britain liked to see the original Rolls Royce company go under. The British certainly did not like their giant shipyards and steel facilities humbled in the early Thatcher years. The only reason the western public accepted deregulation and decontrol was that the economic cost of supporting these industries was just too high.

Unfortunately, in India, while lip service is always paid to the common man and the poorest of the poor, the truth is that the same politicians just do not face up to the enormous economic burden being put on the common consumer only to support and protect inefficient industries. Because the cost — in the form of higher prices, paid every day, for manufactured goods — is borne silently by the tolerant majority, their interests are neglected. In fact, it would be more accurate to say that the very persons, now, fearing a price rise, have just not realised the fact that Indian consumers pay such high prices for articles they use every day. As for the unemployment and other disruption feared by restructuring, nobody denies there may well be some initial disruption, but the subsequent rapid growth not only absorbs everyone quickly, but also creates many more new jobs.

The truth of the matter is these changes are inevitable. Even the Russians and Chinese with their rigid socialist system now extoll the virtues of market forces. How long can we be different? We strongly feel that the government, by acting firmly, is taking the necessary restructuring steps while still in overall control of the economy. If these new measures are not pushed through, we will soon be overtaken by events and left way behind.

Ashok H. Advani

Introducing

Mymoney

The deposit you can draw on without paying to use your own money.

ANZ Grindlays Bank has introduced Mymoney in answer to a frequently asked question "Why should I pay interest to use my own money?" And that is exactly how each of us feel when we draw against our fixed deposits. Whether it is to buy something special, go on a vacation, meet a medical emergency or even to take care of unbudgeted expenditures.

Mymoney is the way to deposit your earnings from share dividends, bonuses and other annual payments. Perhaps even gift money!

This is how Mymoney works. The amount you save is held in deposit units of Rs. 1000/- each. You can draw one or more deposit units of Rs. 1000/- each. The rest of your Mymoney deposit continues to earn the same rate of interest. (Deposit units withdrawn will be treated as partial withdrawals and interest thereon will be subject to directives issued by RBI from time to time.)

Mymoney is your money, designed to give you high returns in interest plus the freedom to draw from your deposit.

Make Mymoney a part of your saving plan. Walk into any ANZ Grindlays Bank branch convenient to you and meet our Customer Services Officer or telephone us at the numbers given below or find out all about Mymoney by mailing this coupon to reach Marketing Department, ANZ Grindlays Bank plc, 132 Mint Road, Bombay 400 001.

ANZ Grindlays Bank

"You are right : Why should I pay for what's mine?"

I'd like to know how Mymoney can earn higher interest on my deposit. Please send me more information.

BL/C/3

AT TIMES WE MAY BE THE ONLY FRIEND YOU HAVE.

Ordinary telephones never delivered the extraordinary freedom and convenience with which people now talk to people.

Until Radiophones came along.

Progress demands keeping in touch. So folks are talking to each other. From car to car. From car to office. From city office to plants in remote areas. And across the world.

They're also using radiophone links to transmit fax, telex, and even computer-to-computer mail.

In India, the future is here.

And it's called Punwire.

In business for over a decade with products which enjoy world markets, Punwire makes the systems and provides support for all hand-held, portable, vehicle-mounted and stationary radiophones.

Whatever your needs.

Connected to a PBX, its systems can even work as radio extensions of the normal telephone exchange. Even where telephone lines do not or cannot go.

Which, if you live and work in any part of India, you'll admit is really staying in touch!

• Mark the contradiction

Your Cover Feature on the role of UTI (10 June) was excellent and thought-provoking. I was also impressed by your forceful yet poignant expression of realities in the Letter from the Publisher regarding the problems UTI and other financial institutions under the state syndrome are facing.

Yet, see the contradiction. The government stifles UTI's normal impulses for growth and motivation of the corporate community in our country. It is squeezed by its own logic that seminal institutions should not be allowed to cross frontiers with freedom lest they wield their power on profitable lines.

A.N. DUTTA
Calcutta

• Unfair criticism

From the entire tone and contents of the article 'First the tragedy, then the farce' (Cover Feature — box, 27 May), it is evident that the writer has criticised the Nehru family only for the sake of criticism. He has completely failed to appreciate that the same Nehru family — Jawaharlal Nehru, Indira Gandhi, and Rajiv Gandhi — have made so many sacrifices for the country. No doubt, there were certain lapses or shortcomings in their policies, but on the whole, all of them proved to be far better than many other prime ministers of India.

C.R. CHINCHANKAR
Bombay

• Your Cover story on Rajiv Gandhi's assassination by N. Radhakrishnan and Eapen Thomas was an excellent evaluation of his impact on the Indian economy and politics.

However, the box titled 'Saving the party' by Ruchira Gupta was the worst I have ever seen in *Business India*. The writer seems totally confused and there is absolutely no flow in the story.

She first writes that Narasimha Rao was present at the meeting of senior Congressmen held at 10, Janpath, soon after the assassination. Then, she says that his name was proposed to fill in the gap till the elections, because he could not stick to the chair in the long run. How could such a thing have been said about a respectable septuagenarian leader in his very presence?

The story alleges that Priyanka had convinced Sonia to say yes to the Congress presidentship. It adds that Sonia's refusal was part of Congress strategy, and that she would be pressured by party workers to accept in a day or two. This is totally absurd and lacks any substance. It has been weeks since Sonia's first (and probably final) refusal. These allegations have been proved wrong.

One of the golden rules of quality journalism is that a writer should attribute all important pieces of information to some source, unless it is common knowledge. Can Ruchira Gupta disclose the source of these extreme suggestions? Obviously not, because it is none other than a figment of her imagination.

AMIT BAGARIA
Calcutta

• It works, and how?

The article on vastu shastra was quite entertaining and amusing (Lifestyle, 27 May). We have one sure fire formula for success — just build your factory as per vastu shastra and live happily ever after. The product quality, technology, management and other mundane things will take care of themselves. The corollary being: most public sector companies do not follow these rules and are therefore in the red. Just rearrange everything and presto, Indian Iron and Steel Company (IISCO), National Trading Corporation (NTC) and Heavy Engineering Company (HEC) will all start making profits!

P.Y. KULKARNI
Bombay

• For the record

In the article entitled 'Succession battle ends' (27 May) the writer has stated, "Goenka's only son, Bhagwan Das Goenka (Saroj's husband) died childless about ten years ago." This statement is incorrect, as my husband, the late Bhagwan Das Goenka was the father of three daughters.

SAROJ GOENKA

The error is regretted.— Ed.

• Looking homewards

That MRTP have finally cleared the Escorts project is good news — "Escorts to make harvesters" (News and Events, 27 May). This comes close on the heels of Escorts crossing the Rs.1,000 crore mark in sales. But, its main plant centre in Faridabad seems to be bursting at the seams and spilling over to the roads and parks meant for public utility. Escorts must do a Jamshedpur in Faridabad and establish colonies for their working staff.

PADMA WAHEED
Haryana

• Cut to size

This refers to the article on Banking Service Recruitment Boards, 'Time for review' (Banking, 27 May). The estimates committee of Parliament recently pointed out deficiencies in the method of recruitment to public sector banks. There are at present 16 such recruitment boards (BSRBs) including the central recruitment board of the State Bank of India.

In the interest of national economy, it is enough if we h seven to eight BSRBs (includ the central recruitment bo for the SBI group) now, as visaged in 1978, with e board effectively serving tw three states.

Further, their functioni leaves much scope for improv ment. There is practically no nancial control over the working and most of them are deficit. It is essential to stu the working of these BSRBs make them viable. In additio the present chairmen of BSRB who are mostly retired admini trators, have outlived the usefulness.

S. KALYANARAMAN
Madras

• Ditching old faithfuls

While reading the feature 'Th old faithfuls' (29 April), I wa reminded of the days when peo ple used to be known by the company they worked for — Wimco Lakshmanan, Asbestos Iyer, HMV Parasu, Good Year Gobi Ettan, etc.

It would have been nice if the article had covered companies which have been through mergers, takeovers, changes in management, institutional monitoring and massive restructuring, etc. The article should have also covered companies which, in their zeal to expand, laid more emphasis on qualification rather than experience absorbing young, brash and qualified persons.

P.N. VISWANATHAN
Madras

• Errata

In Businessmen in the News, 10 June 1991, the president of Whirlpool Overseas Corporation was wrongly referred to as Richard Frey. His correct name is Robert Frey.

• In the FYI titled 'MBA for Agriculture' (29 April) the name mentioned as G.D. Naidu Agricultural University should read Tamilnadu G.D. Naidu Agricultural University (formerly Tamilnadu Agricultural University) Coimbatore.

WE'LL CHANGE THE WAY YOU LOOK AT CONFERENCES.

If you think conferences are all about slide presentations and prepared speeches, think again. Because, more often than not, only after you've left the conference room do the real discussions begin.

And if you're lucky enough to be at The Leela, then this meeting of minds could take place in a picturesque 11-acre garden. Or maybe beside a placid lotus pond. Perhaps even in the midst of peacocks and deer.

Come over to The Leela. We'll open your eyes to a whole new world of conferencing.

THE LEELA
KEMPINSKI BOMBAY
The profit centre for your business.

Listing the Eximscrip

The Eximscrip — a blanket entitlement to import dutiable capital goods at 30 per cent of free-on-board export value — will have an issued value of Rs.10,000 crore in the next 12 months and a likely market value of Rs.13,000 crore. The quantity issued is expected to grow at 25 per cent per annum over the next three years in line with export growth. Its quantity may grow even quicker if the government decides to raise the proportion of imports to be financed by exports or if it decides, in all fairness, to allow all foreign remittances (including NRI repatriations) to earn Eximscrip entitlements.

Sometime in the next two years (when the Eximscrip is converted into a Foreign Exchange Certificate), an Eximscrip holder will receive the additional right to convert the scrip into foreign exchange. After about three years, the Eximscrip will be replaced by a convertible currency.

Since about 30 per cent of import entitlements have typically been traded (the rest being used for captive consumption by exporters), there will — given the higher entitlements now allowed — be about Rs.8,000 crore of Eximscrips of different maturities available as floating stock for trade. This is expected to finance 20 per cent of imports initially. Hence, it is important for a high-volume, well-priced market to quickly be created for Eximscrips.

This requires, first, standardisation in terms of face values and maturity dates. Once the government accomplishes this, the second requirement will be that there are low buy-sell spreads, quick deliveries and rapid price adjustment to changing economic events (particularly RBI's exchange rate adjustments and export performance).

The government has several options before it to create a market. It appears to be in favour of doing so by allowing public sector financial institutions like the Unit Trust of India to trade in these scrips. It is hoped that this will get over the current situation where an informal, low-volume market consisting of import brokers currently trades replenishment licences over the telephone. Another option is to allow banks to create markets in the manner done for foreign exchange.

Such thinking misses the real opportunity — that of listing the scrip on the Bombay Stock Exchange and other stock exchanges. The Eximscrip, listed, would be the largest scrip on the exchange, thrice the market value of the current leader, Tata Steel. Given the large quantity available with a market price dependant on export performance, the scrip will not be susceptible to insider trading while at the same time being well-suited to forward trades. Hence, dozens of competing stockbrokers would choose to make markets in this scrip and large volume would thus be available.

This in turn would lead to very low spreads, probably below even the quarter per cent that rules for most forward shares on the BSE. Compare this with the three-quarter per cent that banks currently charge for foreign exchange, and the 2 per cent plus rates charged by import brokers for rep licences and by UTI for its securities. In addition, the possibility of rapid price movements in Eximscrips make them intrinsically unsuited to institutional market-making.

There is another reason to list Eximscrips. It would revolutionise the stock exchanges in two ways: it would provide small investors with their only (and hence valuable) access to a security virtually denominated in foreign currency. Second, it would provide to the supply-starved stock exchanges a new, liquid and substantial marketable security. It makes sense to list Eximscrips.

Governments and development

In the current liberal mood in India and abroad, much government spending is viewed as wasteful. Yet in vital areas like education, the government has no option but to provide the funds (although it could allow the private sector to manage the money). That is because education is a "public good", i.e., less is spent by private choice than is socially desirable.

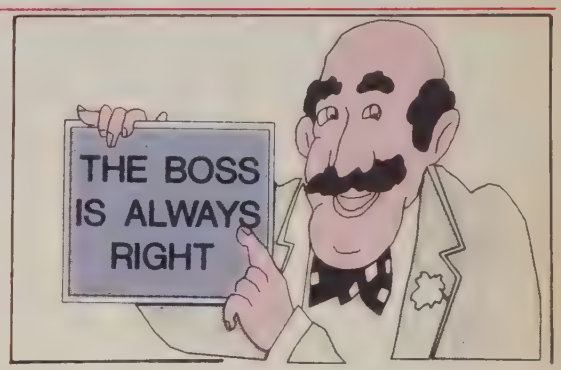
Should government restrict its active role to the well-known "public goods": education, health, defence, family planning, environment and a physical, administrative, regulatory and legal infrastructure of good quality? Or can it do more than that? This relationship between governments and capitalist growth in developing countries is the key question of the recently released World Development Report (WDR).

The answer to the second question is yes, it can usefully provide a little-recognised public good: a stable macroeconomic foundation. Too often, as the WDR notes, governments ignore the usefulness of fiscal and monetary policy in setting the right climate for growth. Instead, these are used as equally acceptable means of raising resources for government expenditure. This distorts growth because government's resource raising is either inflationary (when it prints too much money) or through fiscal policies that are

politically expedient (like promoting industry through subsidies at the expense of agriculture) or quickly profitable (like over-taxing the tea industry).

The WDR advocates moving towards a prudent fiscal policy of controlled deficits and sector-neutral taxes, a monetary policy of using tight money to control inflation and a competitive real exchange rate.

But how quickly should reform proceed? This is an important question for India where the government has introduced several distortions in the price mechanism in order to channel growth into or away from particular directions, for example, by overpricing air-travel or underpricing drugs.



The WDR tries to answer this question by looking at the experience of successful reformers like Korea and argues for speedy reform — although the pace of reforms depends partly on their nature. Price reforms can be done quickly while developing new or better institutions such as privatising power generation entirely takes time. In general, speedy reforms have been found to work in times of acute crisis because of the existence of a political consensus in emergencies — a point relevant for India.

The WDR's second plug is for globalisation — another little-recognised public good. Increasing global competition raises the demand for new technologies worldwide and thereby raises living standards. Second, the availability of new technology in developing countries depends on its degree of integration with the global economy. This is because new products and processes are transmitted through imported inputs and capital goods, sold directly through licensing agreements and transmitted through direct foreign investment or export contacts with foreign buyers.

Yet most developing countries, including India, have restricted international trade and foreign investment in order to promote industry and raise revenue. Access to foreign technology has required, in many cases, government bureaucrats to select "approved" technologies. The net result has been lower growth and, ultimately, worse trade balances.

The theme of this year's WDR — the interaction between government and the economy — is the main issue for India in 1991. Recent policies suggest that World Bank and IMF documents are proving to be useful primers for the economists in the Indian finance ministry. The WDR will be no exception.

The corporate monarch

Those who can, control. Those who can't, delegate. Despite what they may publicly profess, chances are that a good many public and private sector companies will be led by a corporate monarch who surveys and decides all.

Why does the Indian chief executive display such a marked reluctance to relinquish his hold? The reasons could be partly historical and related to the growth curve of the enterprise which he heads. Small firms often start as one-man shows with a few loyal employees, and yielding control when growth occurs is equated with an erosion of the chief's power base.

A Darwinian resolution of the problem ought to be a natural consequence of unprofessional management. Over-centralised organisations ought to fail and thereby lose out to firms that delegate responsibly. But the problem here lies in the fact that managements are rarely changed because of poor performance. The bankers who finance them have a history of throwing good money after bad in an effort to recoup the bad, until the company goes sick.

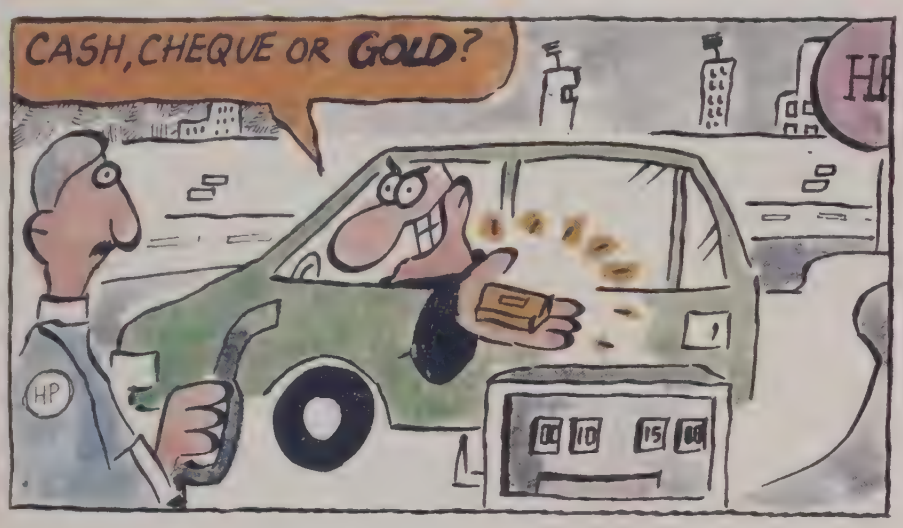
Even in publicly listed companies, where shareholders theoretically own the company, the system fails. This is because shareholders are comparatively poorly organised or informed, and in such situations it is possible to shroud important decisions and the management structures that underlie them in a veil of secrecy. Putting a representative of smaller shareholders on the board of directors will, in consequence, not succeed in resolving the problem.

Similarly, the auditors of the company do not legally have the brief to look at this issue. Even if they had the capability, they are not likely, given the close nexus that often exists between control-oriented managements and their auditors, to have the willingness.

What then is the solution? Ultimately, delegation should be part of a wider concept of accountability. The manner in which the government has tried to induce accountability through legislation and directives from the financial institutions and their board nominees has failed. Appointing board members from among financial institutions has not prevented poorly run companies from defaulting on their loans, let alone improving on their performance. This has happened because the nominees are all from public-sector financial institutions with short-term transferable appointments. This gives them no incentive to undertake an in-depth study of management systems within the company they have lent money to.

The way out is to improve the information base about companies to shareholders. Shareholders can then react to highly centralised management by selling off their holdings (and thereby bidding down the share prices) if they do not like what they see. But this requires an organisation like the Securities and Exchange Board of India (SEBI) to make companies publicly reveal their organisation and compensation structures, perhaps in the annual report. SEBI could, in effect, be the management auditor of the company.

Until then, the corporate boss's right there will be none to dispute.



Golden geese

The Bombay Bullion Association says that the stock of gold in private hands in the country is estimated at about 7,000 tonnes. Of these 7,000 tonnes, even if the government collects or the people surrender a mere 10 per cent, then the country can technically have extra assets worth $10 billion. Indirectly, we could also say that the Treasury would then possess a stock of 1,000 tonnes against the present stock of only 300 tonnes. And this would take care of our balance of payment crisis right away.

Since most of our foreign exchange is lost on petroleum products, this sector could be brought within the purview of a scheme wherein gold bonds are issued to vehicle owners and supply of diesel and petrol made against such bonds only. The amount of gold to be deposited can be determined according to the vehicle type in the following manner:

Vehicle Type	Nos. in lakhs 1990	Gold to be collected from each vehicle owner & Indian Rs. to be paid as per local market rate	Total amount of gold Kilo
Two-Wheelers	96.10	20 gm	1,92,200
Three-Wheelers	4.65	30 gm	13,950
Cars, Jeeps & Taxis	21.60	100 gm	2,16,000
Commercial Vehicles (goods) + Buses	13.63	200 gm	2,72,600
		Total	6,94,750

Note: Vehicle statistics compiled by the Planning Group on Road Transport (PGRT)

Similarly, industrial imports could also be synchronised against gold deposits instead of increasing margin money to 100 per cent or 200 per cent in Indian rupees. For this purpose, different rates can be formulated for different industrial product groups depending on the value of imports and quantity required.

T.S. BHANDARI
Bombay

Hear, hear

Did you ever think that travelling in Bombay's Bombay Electric Supply Transport (BEST) buses could prove instructive?

So it seems with the BEST which has introduced buses equipped with audio systems. As soon as you step into the bus, you hear a welcome address followed by music and then a recorded voice goes on to inform you that you must purchase your ticket, not crowd at the gates and avoid picking up any unidentified parcel lying around. (The last instruction inspired by recent bomb scares, perhaps.)

BEST officials say that these audio system-equipped buses (four so far) have been started on an experimental basis. And while 20 more are scheduled to begin operations, if the response is favourable, the audio system will become a regular feature in BEST buses.

Overdose!

Last month the excise commissioner of Madhya Pradesh invited sealed tenders for the supply of 105,000 kg of cleaned *bhang*, or opium as it is more popularly known, to be harvested during the year 1991-92.

Madhya Pradesh is the largest producer of opium in India, a fact unknown to many. Of the total 19,558 hectares under cultivation, MP has 9,830 hectares. In terms of production too, MP accounted for half the amount — 387 tonnes of the 720 tonnes — produced in the country in 1987-88. Also while the national average yield is 36 kg per hectare, MP produces 39 kg.

To avoid any misuse, most of the opium cultivated is bought by the state government which later uses it for the manufacture of morphine and other related drugs.

OFFICE OF THE EXCISE COMMISSIONER
MADHYA PRADESH

**TENDER NOTICE
FOR SUPPLY OF BHANG**

Sealed tenders are invited for supply of 1,05,000 kilograms (one lakh, five thousand kgs) cleaned Bhang of crop 1991-92, during the year 1991-92. The terms and conditions of Bhang-tender may be obtained from the office of the Excise Commissioner, Madhya Pradesh, Gwalior on any working day upto 1 PM to 10.6.91. The Bhang supplier interested for making supply may submit his sealed tender to the office of the undersigned by 3.30 PM of 10.6.91. The tender will be opened at 4 PM on the same day, i.e., 10.6.91 in the presence of the tenderers. Tender may also be submitted for lesser quantity of Bhang which shall not be less than 20,000 kilogram.

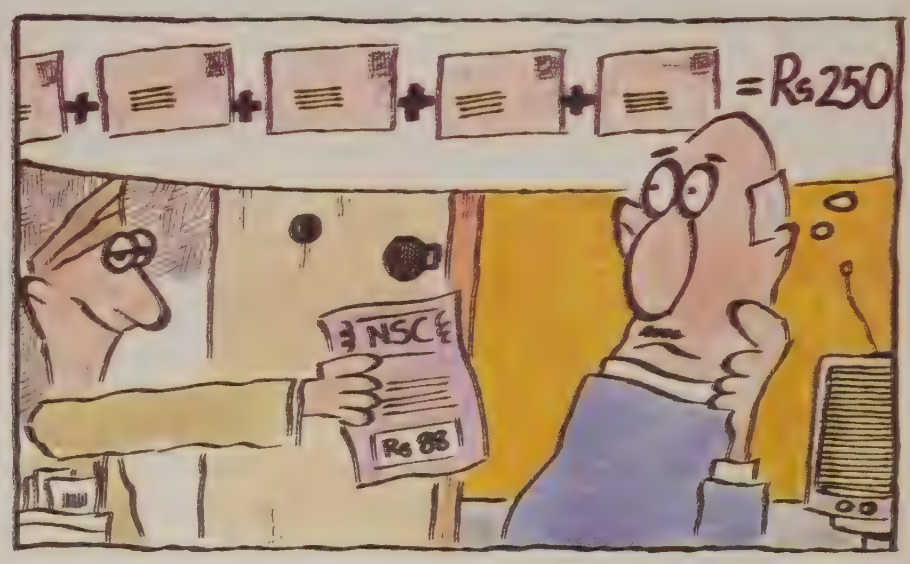
The rise of the forint

While Citibank in its recent newsletters predicts a gradual depreciation of the Indian rupee to Rs.30 per dollar, Hungary on the other hand is moving towards full convertibility of the forint by 1993.

It may surprise foreign visitors leaving Budapest's Ferihegy Airport — still carefully quizzed about any forints they may be spiriting out of the country — to learn that the forint is virtually convertible according to the country's central bank.



The National Bank of Hungary's argument is simple. Some 95 per cent of imports are now fully liberalised (with the exception of drugs, precious metals, and a handful of consumer goods) and importers can change all their forints into any convertible currency.

Despite the appearance of convertibility however, the barriers to the free movement of capital are obvious. A central bank spokesman explains: "There are still serious restrictions on the forint as regards individuals. The hard currency quota is still $50 a year. At the same time, people still buy and sell hard currency on the street at blackmarket rates 10 or 20 per cent higher than the official rate."

Where's the fire?

English scientists have developed a paint that triggers a fire alarm even before the flames begin. Developed for the British Navy, this alarm is said to detect fire much faster than other smoke alarms available in the market. When this special paint is exposed to heat, it immediately releases tiny traces of ammonia which set off an alarm.

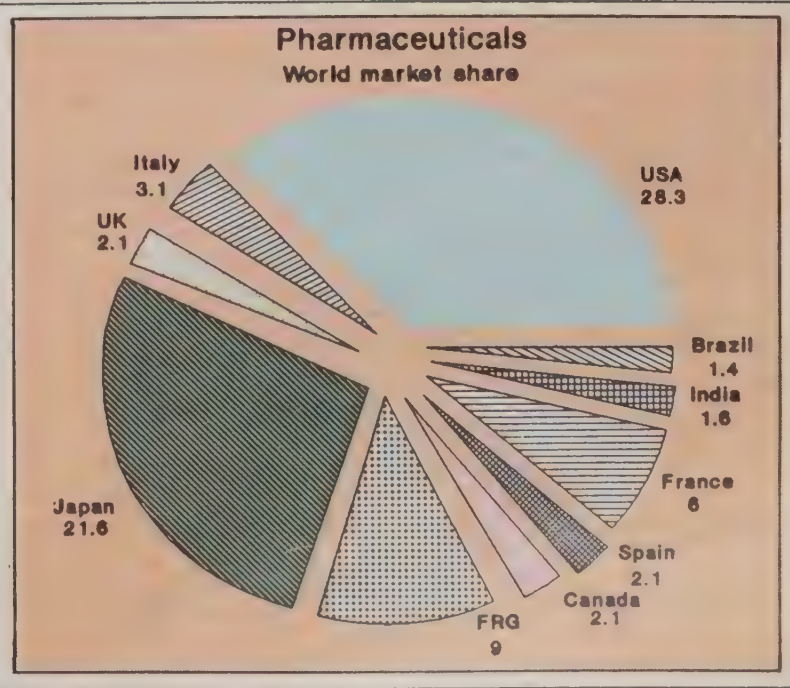
Try try and....

For the Consumer Education and Research Centre (CERC) it was a victory of sorts — this time against the finance ministry. A complaint was filed at the CERC by one R.P. Shah, saying that he had not received interest for the month in which he had deposited the money in spite of depositing it on the first of that month.

As it happened, Shah spent more than Rs.250 in correspondence from November 1989 to May 1991 to claim his interest of Rs.88 on his investment of Rs.10,000 in National Savings Scheme (NSS). And the people he had to correspond with ranged from R.K. Saiyed, director general of posts, New Delhi to ex-finance minister, Madhu Dandavate. The complaints however finally paid off — not only was Shah given the benefit of doubt but NSS rule 6(11), which relates to interest payable on NSS was also suitably modified by the finance ministry after pondering over it for 18 months.

Thanks to Shah's efforts, with effect from 1 April 1987, depositors will get interest for one more month. Interest will be allowed for a calendar month on the balances at the credit of an account between the close of the tenth and the end of the month, calculated and credited in the account at the end of each year.

Trading pollution control



Environment issues were hotly debated in the World Economic Forum 1991, held in Daves in Switzerland, and means were suggested by which global percentage cuts in pollutants could be effected.

According to Norwegian prime minister Gro Harlem Brundtland and chairperson of the World Commission on Environment and Development, "Percentage reductions have provided a licence to pollute up to a certain level for many who actually could have performed much better." And in view of this a new idea was proposed — tradable carbon dioxide ($CO..._2$) quotas. First, a global ceiling for emissions is agreed. Then each country or region may reduce emissions according to an emission quota within this global ceiling. Countries or regions could then choose to use their quotas or to trade them. Countries where the costs of reducing emissions are high could buy quotas from other countries where such costs are low. Emission quotas could be paid for in various ways, in money, deliveries of pure energy, trade agreements, or a mix of these.

Strong medicine

The current world pharmaceutical market is believed to be worth $130 to $160 billion. In 1987, 10 countries accounted for 81.6 per cent of the world pharmaceutical market (excluding Eastern Bloc countries of $117.5 billion).

The world's 50 largest pharmaceutical companies produced two-thirds of world output and supplied 50 per cent of the pharmaceuticals consumed by developing countries.

Difficult times ahead?

Notwithstanding his political connections, Bank of India (BoI) chairman, R. Srinivasan, who is on three months' extension and now believed to be aspiring for a deputy governership of the RBI may have difficult times ahead of him.

Srinivasan's bank registered a profit of Rs.22.46 crore for the year 1990-91 (as against Rs.18.11 crore for the previous year). Which is fine. But problems have arisen because the statutory auditors have commented that a bad and doubtful debt of Rs.130 crore, for which no provision has been made in the books, has been used to bolster the profitability of the bank.

This is not all. The operations of the New York branch of the bank has been at the receiving end of flak from the Federal Deposit Insurance Corporation (FDIC) of the US for making "huge loan losses". The FDIC now wants BoI to repatriate Rs.100 crore to the US to make up for this.

Has the charm faded?

Things are not quite hunky dory in the UB group these days. At least it appears so with quite a few senior associates of chairman Vijay Mallya leaving the group. For instance, Satish Kaul, a director in charge of breweries, left to join a Chhabria company in Dubai. The vice-president of the international division, Shrikant Bojkar, has also quit. And finally, Charanjit Taneja, a whole time director of McDowell and Co, will soon be joining Standard Chartered Bank at Bombay as director, finance.

Has Mallya lost the charm that had once attracted top corporate professionals in the past?

Outward ho!

The massive devaluation of the rupee has certainly opened up good opportunities for exports and some companies have been quick on the uptake. Ceat Ltd, the flagship company in the RPG group, is one such.

About three weeks ago, a senior executive of RPG signed an MoU with Lucky Goldstar of South Korea to export 1 million 14-inch black and white (B&W) televisions to that company for re-export. For the purpose, Ceat's electronic division, Murphy, which merged with Ceat last year, is setting up a B&W TV plant at Gandhinagar in Gujarat. The plant will probably have a capacity to make 1.5 million pieces a year and the surplus after the export will be sold in the domestic market. The cost of the project is estimated at Rs.20 crore.

Meanwhile, another RPG group company, the Bombay based International Computers Indian Manufacturers (ICIM), has taken a decisive step towards exports by setting up ICIM International in California, US, as a subsidary recently. The latter will take over all the export related activities to the US, UK, Europe and Far East from the parent company in India.

The RBI has permitted ICIM to invest $1 million in the new company.

All in the money game

The foreign exchange squeeze has been acutely felt in the money markets. These have virtually dried up and the little money that is available, is costing banks a fortune. Of course there are those who are making windfall profits in the game. N.C. Singhal, managing director of the Shipping Credit and Investment Corporation of India (SCICI), is one such.

The funds mobilised by SCICI from international markets a while ago had no takers as potential buyers in the shipping industry are awaiting the ship prices to soften a bit. In the meanwhile, SCICI thought of lending it in the overnight call market where the rates are touching the skies.

According to one estimate, SCICI lent about Rs.200 crore in the past three months, of which sources confirm Rs.150 crore has come to the money market. At an average rate of 30 per cent earned on call money, SCICI has already earned a hefty Rs.11.25 crore in the first quarter itself. It is also said that SCICI has lent the remaining Rs.50 crore to big brother ICICI.

Easy bucks

One of the newer games in town is unofficial dealings in Russian roubles, and East European currencies, in three way transactions. It's really quite simple, and very lucrative at that. It's played like this.

The opening gambit is to 'export' software and other such items to Russia. Of course, this 'export' is only on paper and no real transaction of goods takes place. At best, dummy goods are shipped. Before the papers are filed here in India, the 'exporter' sends dollars to the Russian 'buyer' through a *havala* transaction. The Russian, in turn, converts the dollars into roubles at the higher unofficial rate there. He keeps his cut and sends the balance roubles to his Indian partner as 'payment' for his imports.

The roubles so 'earned' by the Indian are converted to rupees here at the official artificially inflated rupee-rouble rate. The exporter not only makes money on the exchange but is also entitled to treat his export earnings as tax free.

Bankers have a name for this game — three-way arbitrage. That doesn't make it as legal as it sounds though.

WIMCO

Uncertain future

Almost 10 months have passed since the match manufacturing giant Wimco was sold by its Swedish parent Swedish Match AB to Delhi-based Flex Industries Ltd (see *Business India*, 6 August 1990), yet the Reserve Bank of India has not granted approval to the Swedish company to repatriate the foreign exchange that will accrue to it from the sale. This has led to speculation about the future of the deal.

Now, rumours are rife about certain parties picking up large chunks of Wimco shares in a bid to take over the company — though it does not appear very sensible since 40 per cent of the equity is with Swedish Match AB and 22 per cent with the institutions. And about 10 per cent of the shares is dormant. In all probability, as Wimco's shares are on the specified list, the purchases could be speculative.

New bidders. Also, because of the delay in the RBI clearance, some new bids have cropped up. According to B. Nordman, managing director of Wimco, some people have approached Swedish Match with offers but so far it has not changed its mind about the buyer. He confesses that the RBI clearance has taken longer than was expected and that Swedish AB cannot

wait indefinitely. Flex's Ashok Chaturvedi accepts that his inability to deliver ready foreign exchange is a drawback but is still confident that he will get the company. But if Chaturvedi's NRI partner, Aloke Srivastava were to come up with the foreign exchange on the deal, Chaturvedi could lose out on the control.

Interestingly, Wimco has done better to break even during 1990-91 after suffering a net loss of Rs.4 crore the previous year. Getting rid of unviable assets has contributed substantially to this improvement as it has also brought interest costs down.

■ FEROZ AHMED

MALCO

Tough fight in store

In a surprise development, on 10 July, the Madras Aluminium Company Ltd

(Malco) obtained an interim stay from the Madras high court, on the notice issued by the BIFR to wind up the company (see *Business India*, 24 June 1991).

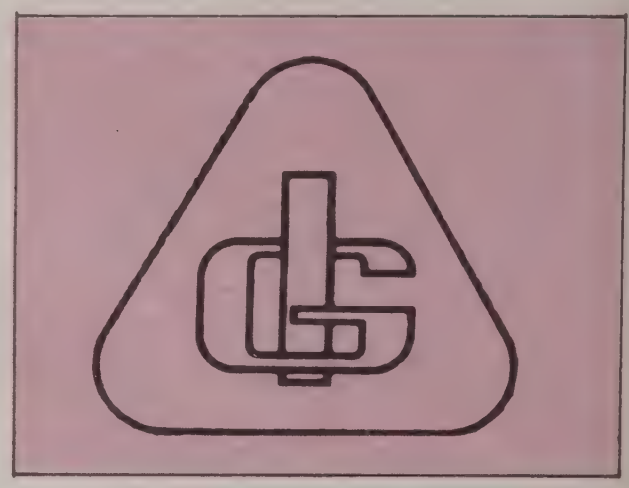
A personal dimension has been injected into the proceedings with Malco taking umbrage at the comments made by R. Ganapathy, chairman BIFR, at a press briefing, held in Madras recently. Maintaining, that his statements signified an imminent closure, the company held that the BIFR chairman "has prejudged the issue", without waiting for the hearing scheduled for mid-August.

Many grouses. Malco has other grouses against Ganapathy — the first rehabilitation package, arrived at in 1989 fell apart when the TNEB went back on its commitment to supply power. Malco is sore that the BIFR did not pull up TNEB (Tamilnadu State Electricity Board) for reneging on its agreement. Also, the operating agency, the IDBI has not recommended the winding up.

Malco feels the points in its favour have not been taken into account *viz* the Supreme Court ruling in March 1991, directing the TNEB to supply 47 MVA of power and the fact that the government has not rejected its plea for excise exemption.

Malco is therefore working overtime to finalise the details of a Rs.37-crore rehabilitation package with the IDBI, aiming to reduce the cost of production of aluminium and alumina before the stay expires on 10 September 1991. With the lines firmly drawn, the battle for Malco will get tougher, as personalities are drawn into the fray.

■ DHARANI K. PANI



GAMMON (INDIA)

Fighting for survival

The accession of Abhijit Rajan, as managing director of Gammon India in June has not exactly remained a secret but even the company's closest competitors remain ignorant of the fact. "The loss of Subba Rao will be quite a loss for the company," says one competitor.

It was T. N. Subba Rao, reputed as a competent engineer, who really built Gammon. He also fought a tenacious battle to stave of a takeover threat from the Chhabrias, two years before (see *Business India*, 17 April 1989). He took help from a few quarters in his attempt to save the company from the takeover. Rajan, one of Rao's helpers, is said to be the 'white knight' — reportedly a proxy for film actor Amitabh Bachchan.

Under his own steam. The new incumbent, of course, denies any business links with Bachchan. But he agrees that he was associated with Bachchan's pharmaceutical venture, IPCA — a Bombay-based bulk drug manufacturing company. His claim is that he has severed all connections with it and that he has bought three per cent into the Gammon under his own steam.

Rajan also insists that "nothing has changed in the company." Rao continues to hold his three per cent stake in the company and is also on the board of directors and is redesignated president. "This in effect will make him a technical director in the company," explains Rajan. The reason for Rao's stepping down is, according to him, Rao's preoccupation with a coming international conference later this year, and his age.

However, it appears that the Chhabrias, whose shares in the company have been frozen by the company law board till November this year, and Rajan might want to get rid of their shares in the company. But with an average price of Rs.200 being paid for the shares, there are likely to be few takers. Rajan has little option but to run the company. And with a background in chemicals, he plans to revive the dormant fertiliser and chemicals division of Gammon by the year end. "This is going to be my primary interest and responsibility," says Rajan.

Philips Lighting

PHILIPS

LIGHT.

Philips Lighting In Action

The Victoria Memorial, Calcutta, with Philips Lighting.

Ancient figures, carved in stone, come alive... bathed in light. Voices from the past resurrect history. With sound... and light. Philips Lighting. The brains behind some exquisite spectacles of architectural glory, seen today.

Philips Decorative Floodlighting: Past returns to the present.

Every archaeological site or ancient monument, has a historical "presence", that the world can see and touch and admire.

And, to make sure that this pleasure lasts well beyond daylight hours, Philips Lighting uses the most advanced technology in the world... to light up ancient monuments, every night. Two of its outstanding international achievements: The Tower Bridge in London and the Eiffel Tower in Paris.

PHILIPS INDIA has its own successes, too. Decorative floodlighting for the Marble Rocks at Jabalpur, the Hawa Mahal at Jaipur and the dancing fountains at the Vrindavan Gardens, Mysore... to mention but a few.

But that's not all. Only Philips gives the world... the wonder of Son et Lumiere. A spectacle of technical wizardry that integrates multi-coloured lights of changing intensity and direction. Co-ordinates them with a synchronised sound track carrying music and a dramatised story. And creates... a journey back in time.

India's Son et Lumiere shows at the Red Fort in New Delhi, the Gwalior Fort and the Madurai Palace enthral visitors. Not only because they're beautiful... but also because they embody a triumph of technology for Philips LiDEC. The Lighting Design and Engineering Centre that leaves no stone unturned. To bring the past to light.

Leaders in Decorative Floodlighting. Worldwide.

ECONOMY

Loan for thermal plant

The World Bank has sanctioned $200 million to help build a 500 MW thermal power plant in Dahanu, near Bombay. The new transmisssion lines are expected to meet the increasing demand for electricity in Bombay. The IFC, a World Bank affiliate, is likely to provide another two loans worth $68 million to support this project.

Gold shipped to England

In a hush-hush operation, 25 tonnes of gold was shipped by the Reserve Bank of India to the Bank of England. India can borrow upto $200 million from the Bank of England which holds the gold as security. RBI says it has only partly availed of the option of holding 15 per cent of its total gold reserves (332 tonnes) outside India.

This action follows that of the previous government which mortgaged 20 tonnes of confiscated gold with the Union Bank of Switzerland. Finance minister Manmohan Singh says this will be repurchased once the BoP situation improves.

NRIs to bring in gold

The Union finance ministry is seriously considering allowing NRIs and Indians visiting abroad to bring gold into the country. According to official estimates, in 1990 nearly 177.6 tonnes of gold was smuggled in, resulting in a drain of Rs.6,232 crore. The All India Manufacturers' Association has, in its pre-budget memorandum to the government, suggested that gold bonds bearing a 6 per cent interest rate should be reintroduced.

OPEC to stabilise oil prices

The Organisation of Petroleum Exporting Countries (OPEC) has shown an interest in stabilising the prices of oil in the international markets. This is in response to feelers sent by India and other developing countries. In a consumer conference held at Paris, OPEC has assured adequate supplies of oil too.

Opening the skies

The ministry of civil aviation is initiating steps to completely deregulate the domestic civil aviation industry. This liberalisation move is expected to bring into existence new private sector airlines and break into the public sector monopoly. Moreover, the ministry is keen to withdraw all existing constraints on private air taxi operators.

IMF's emergency loan

The IMF is expected to release $220 million as an emergency loan to India later this month. The World Bank-approved $150 million worth of quick-disbursing credit is also expected soon. The credit, thus made available, is likely to help meet India's foreign debt this month alone.

No change in food procurement

Union food minister, Tarun Gagoi, recently announced that no major changes are forthcoming in the foodgrain procurement policy. He also said that India's buffer stock position is sufficient at 19 million tonnes. Food subsidies are due for a cut, and the public distribution system will also be streamlined.

Coal to be costlier

The Union finance ministry has proposed a hike in coal price by Rs.50. Coal will now fetch around Rs.300 a tonne. This proposal takes into account the normative costs per tonne of coal, the all India consumer price index and other input costs to arrive at the Rs.50 hike.

Steel decontrol

The government plans to decontrol steel prices and lower import tariffs. The department of steel had earlier mooted the idea of partial decontrol which was agreed upon, in principle by the finance ministry. The decision, which was deferred, has now been revived for consideration.

CORPORATE

Ambassador charms the British

The good old Ambassador has charmed British dealers with "its lovely classic lines and beautiful body"! Mark Owen Lloyd and Jo Burge of a British-dealership firm are negotiating with Hindustan Motors for the import of 480 Ambassador Novas.

With other cars priced at £11,000 and above, its showroom price tag of £5,495 will make the Ambassador the cheapest automobile in Britain. The model will be exactly the same as the one on the Indian roads, except for the carburretor which will be replaced.

New credit card from IOB

The Indian Overseas Bank (IOB) has tied up with the highly popular Canara Bank's Cancard. IOB's credit card will hence bear two logos, its own as well as that of Cancard. The Madras-based bank is the sixth to have a credit card tie-up with Canbank.

TCL's new plant

The country's largest maleic anhydride plant has been successfully commissioned by Thirumalai Chemicals Ltd located in Tamil Nadu. The plant has been set up with technology from Alusuisse Italia, Italy, and

uses butane or benzene as feedstock.

Thirumalai Chemicals' capacity is adequate to meet the entire domestic requirement of the chemical. It has given an undertaking to the government to export about Rs.9 crore worth of maleic anhydride and its derivatives over the next three years.

Thapar Du Pont on review

The on-again, off-again Thapar Du Pont Nylon 66 project, formally cleared by the Chandra Shekhar government, has once more been put on hold by the new administration which wishes to review it.

Other projects cleared by the caretaker government will also be reviewed and only those that meet the "required conditions" will be cleared. But it is almost certain, sources say, that the Thapar Du Pont project will finally be cleared.

GCEL develops TDMA system

The public-sector Gujarat Communications and Electronics Ltd (GCEL) has indigenously developed a sophisticated communications system which uses radio waves for networking several subscribers in an area. It is called the Time Division Multiple Access system (TDMA) and has been supplied to SAIL for providing communication facilities for its steel mines located around Kiriburu.

Private bid in power

British Gas and five Indian companies — the Oswal group, Videocon, Ballarpur Industries Ltd, Vam Organics and Straw Products — have responded to Delhi Electric Supply Undertaking's (DESU) invitation for bids for the Rs.1,300-crore gas-fired power plant at Bawana near New Delhi.

The decision would however require amendments to the Indian Electricity Act 1910 and the Electricity (Supply) Act, 1948 which prevent private sector participation in the power sector. Under the project terms, private parties will generate and supply power to the DESU but would not be involved in the distribution.

Pepsi to test pesticide

The government has permitted Pepsi Foods to undertake large-scale commercial trials of a biological pesticide, bacillus thurungiensis (BT), on tomato crop for its tomato paste export project. Several companies including Lupin Labs, SPIC, Sandoz and Rallis are keen to launch BT in India.

Ramon & Demm takeover

Ramon & Demm, the Bombay-based engineering company, and now referred to the BIFR, is on the selling block. Strong contenders for its takeover are the Hindujas and an Iran-based NRI. Eicher Motors is also in the race and has submitted a package to the BIFR.

Grindlays' facility for SAIL

ANZ Grindlays will be providing a short term facility of $25 million to SAIL, for its import of coking coal from BHP-UTAH, a large Australian conglomerate. The facility was structured with the assistance of Grindlays, New Delhi office and its merchant bank in the UK, at the rate of 125 basis points above LIBOR per annum.

INDUSTRY

HPF rolls back prices

The 37.5 per cent increase by Hindustan Photo Films in the price of raw film stock has been withdrawn. This follows a directive from the industry ministry and will be in force until further orders.

The film industry had stopped lifting stocks and r leasing films from 28 June protest against the increase. (the same day, the prime mini ter had issued a directive hol ing the rise in abeyance, whic was not, however followed. Th led to the present order.

Cut in soda ash production

The Western Gujarat Chamber of Commerce and Industry ha warned the government of a 5 per cent cut in production o soda ash. This is used by chemi cal and pharmaceutical units as a result of shortage of cok and coal. Only 10 per cent of th industry's coal requirement is presently available to it. Of the country's total output of soda ash, Saurashtra produces 94 per cent, worth Rs.4,425 crore.

Copper price hike

Hindustan Copper Ltd has reportedly informed its customers that they will be given only 20 per cent of their monthly quota. This and the high international prices together with devaluation has already sent prices for the metal through the roof.

Copper wire bar went from Rs.1.35 lakh per tonne to Rs.1.55 lakh per tonne overnight, a new high for the current year. This brings the total increase in the 10 days from the end of last month to Rs.39,000.

Nylon production down

Nylon spinners have cut production by 15-20 per cent during the first half of the current year. A further cut is expected in the current quarter mainly due to the high cost of all raw materials including the erratic supplies of the chief one, caprolactam. This in turn is due to the shortage of benzene.

Tea output up

While the target set for tea production for the entire year is 735 million kg, tea planters have produced 176.2 million kg

from January to May 1991, an increase of 4.3 million kg over the same period last year. This increase is due mainly to a bountiful production from gardens in the south whereas production at the north Indian garden's fell by 3.5 million kg as compared to the same period last year.

Imported paper costs to go up

Devaluation of the rupee has pushed the prices of imported coated paper and paper boards up by 15-20 per cent. Paper manufacturers have decided in principle to increase the price of writing and printing paper by Rs.2,000 to Rs.3,000 per tonne.

This hike which is to take effect from this month, follows close on the Rs.1,000 per tonne hike of last month. Additionally, India will have to import 300,000 tonnes of newsprint in 1991-92 to meet the anticipated demand of 600,000 tonnes.

Electronic items to cost more

According to the Electronic Component Industries Association (ELCINA), the prices of electronic components will go up by 15 per cent as a result of rupee devaluation and the recent trade policy. The abolition of the unlisted open general licence category has meant that raw material imports have to be made through the REP licences route and are therefore more expensive.

CTV prices to go up

According to the Indian Television Manufacturers Association (ITMA), the price of colour tubes is to go up by Rs.1,000 per tube. Coupled with the 15-20 per cent increase in the cost of imported TV components this means an increase in production costs of between Rs.1,650 and Rs.2,000 per set.

Pooling coffee stocks

The small and medium coffee growers of Kerala, Karnataka, and Tamil Nadu have proposed the setting up of a multi-state cooperative to ensure fair prices as an alternative, if the present system of pooling all the coffee grown by the Coffee Board is replaced by an optional pooling system. This system, first suggested by a study conducted by the Indian Institute of Management, Calcutta, is being considered by the government.

LABOUR

IOC employees protest

As many as 10,000 employees of the Indian Oil Corporation

(IOC), including its officials and administrative staff, went on a flash strike recently in protest against the delay on the part of the Union government in arranging the safe return of its kidnapped executive director, K. Doraiswamy.

They also threatened to, if necessary, stop oil supply to aircraft. IOC officials are perturbed by the fact that while the government had released the ULFA militants, it is taking its own time in deciding the release of the JKLF militants.

Tax collection disrupted

The West Bengal government's tax collection drive has been affected seriously with almost all the inspectors under the commercial taxes directorate refusing to go on outdoor duty for over a month now.

The agitation is likely to intensify as the state finance department has issued

suspension notices to four inspectors and transfer orders to some commercial tax officers within the directorate's bureau of investigation. The trouble began on 26 April after four inspectors were arrested on charges of accepting bribes. Police say the inspectors were caught red-handed.

AIBEA suggestions

The All India Bank Employees Association (AIBEA) has asked the Centre to restructure the entire banking system to improve its efficiency. AIBEA says that the exercise should be taken up in two phases.

In the first stage, the three different banking sectors (scheduled commercial banks, regional rural banks and apex co-operative banks) should be merged strictly on a "geographically contiguous regional basis" so that seven or eight banks of comparable size and with comparable resources could be combined and operated under the overall control of the All India Banking Corporation. The second stage would involve setting up a central banking authority, delinked from the RBI, with full powers to supervise and monitor the banks system.

AIBEA feels the bane of the banking system is the unholy nexus between the captains of industry, politicians and a section of the bank management who are ruling the roost.

Bata officers assaulted

Workers owing allegiance to the CPI (M)-led Bata Mazdoor Union (BMU) detained five senior officials of Bata India Ltd for several hours and assaulted them in a locked room recently. The workers apparently took this step because the management wanted to go ahead and resume work in the gum boot unit at Batanagar despite obstruction by the BMU. The officials were rescued by the police after the company obtained court orders.

Oil officers' threat

The Oil Sector Officers' Association (OSOA) issued a warning in early July that drilling operations in the entire north east and Bombay region would be halted unless the Central government took steps to secure

the release of all ONGC personnel abducted by the United Liberation Front of Assam (ULFA). The convenor of the AISO has demanded that the government work out a 'totally protected working climate' for ONGC personnel or it would lead to "massive demoralisation and demotivation of the staff to the detriment of the national interest."

IDPL workers inconvenienced

Over 250 employees of Indian Drugs and Pharmaceuticals Ltd (IDPL) who have sought voluntary retirement from the company are still awaiting clearance from the ministries of labour and finance and the office of the income tax commissioner, New Delhi, before exercising their option.

Company sources say that some employees, who had sought alternative employment before opting for voluntary retirement, are now facing problems due to this bureaucratic delay.

IDPL, a loss-making public sector company, is likely to save as much as Rs.1 lakh a day on the retirement of these employees.

LANDMARKS

Assumed, by Rajendra Saboo, the managing director of a small Chandigarh firm, Groz-Baker Saboo, the position of president, Rotary International, on 1 July. The Chicago-based organisation has 25,325 member clubs spread over 176 countries and over 11,00,000 members. Saboo is the second Indian to achieve this distinction after Nitish Lahari in 1961.

Launched, India's first indigenously built surface-to-surface missile Prithvi on a successful test flight from the Sriharikota launch pad in Andhra Pradesh in the presence of the new defence minister, Sharad Pawar. Developed under the Integrated Guided Missile Development Programme, Prithvi has a range of 250 kilometres and will carry a one-tonne warhead. To be employed for tactical battlefield support, it will be in use in the Indian Army by next year.

Launched, Sindhu-15, the first of a series of three offshore supply vessels being built for the Oil and Natural Gas Commission by the Mazgaon Dock Ltd. The vessel will be provided with high-capacity external fire-fighting equipment and higher fresh water storage capacity and is capable of towing heavy oil rigs, mooring and carrying essential supplies and personnel to offshore installations.

Recovered, four vintage cars, including a Swan Car made by Brooks in England in 1912, and two Rolls Royces of 1912 and 1948 vintage after the enforcement directorate in Bombay arrested four persons, including a Belgian national, on charges of smuggling to London. The cars belonged to the Nabha royal family in Punjab. The Maharani of Nabha is alleged to have been involved in the illegal export for which she was paid Rs.35 lakh.

Scrapped, by the new Congress government in Haryana, the controversial Rs.50-crore Disneyland project envisaged by former state chief minister, Om Prakash Chauthala, which was to come up at Damdama, near Delhi. Chief minister Bhajan Lal said that the project had been scrapped as it was anti-farmer and conceived in utter disregard of the economy of the state and other pressing problems.

Sued, A.R. Antulay, former chief minister of Maharashtra, on charges of misappropriating Rs.40 crore of public trust properties during his tenure as chief minister in the early 1980s, by former Union finance minister Madhu Dandavate. Dandavate has also implicated Ramrao Adik, finance minister of Maharasthra, as he was a member of the board of trustees. The case has been filed in the Bombay High Court.

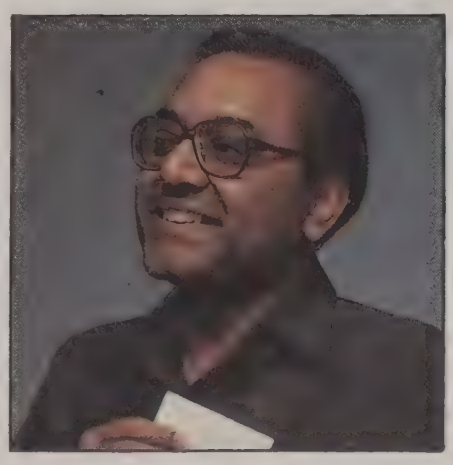
N GOMATHINAYAGAM

The only private sector bank to have an overseas branch (in Bangkok), Bharat Overseas Bank Ltd (BOBL) will soon become the first Indian Bank to raise capital overseas. The capital will be increased in stages to about $12 million from the current $5 million.

BOBL has other plans as well.

During 1991-92, an entry will be made into merchant banking. "Initially, BOBL will act as bankers to public issues, in order to give our personnel an exposure to the business," says N. Gomathinayagam, chairman of BOBL. A new concept called LAB (Large Advances Branch) is also being introduced. According to Gomathinayagam, any advance exceeding Rs.25 lakh will be centralised at this one branch in order to facilitate processing and quick decision making. A computerisation exercise is also on the cards.

SURINDER GUPTA



Readers will not find this difficult to digest. A new chapter has opened up for Surinder Gupta's

International Book House (IBH). The company he and his partners bought over from the Theosophical Society in 1975 is celebrating its golden jubilee this year. Distributors of the Reader's Digest collection of books, legal and medical books, IBH has now become a Rs.9-crore turnover company. Despite these achievements, Gupta, an avid reader himself, modestly says, "I am happy about playing a part in the learning process of readers."

A.C. MUTHIAH

The vice-chairman and president of Madras-based fertiliser giant SPIC is smiling again, and for many different reasons. Says, A.C. Muthiah, the happy man, "The difficult days are over and we look forward to good times ahead." The difficult days he refers to are the two years of DMK rule, when Muthiah was the most hounded industrialist in the state. But that govern-

ment was dismissed in January this year and now, Muthaiah says, "the present government (headed by AIADMK's Jayalajitha) is definitely entrepreneur-friendly and things should improve".

The other factor gladdening Muthiah's heart is SPIC's financial performance. The results are satisfactory, despite erratic availability of imported raw materials. Again, the much awaited aromatics project, promoted by SPIC and Madras Refineries Ltd and which had the blessings of three successive prime ministers but is still awaiting clearance, is expected to receive the final green signal soon. For this, Muthaiah can expect the help of Jayalalitha, a strong chief minister whom the centre needs and cannot take for granted.

Muthiah is also now confident of being able to reopen Standard Motors in which he has the controlling interest. The friendly state government has promised to buy 1,000 light commercial vehicles from the company.

M.P.U. RAO

In his new role as vice-president, corporate quality, at International Computers Indian Manufacturers (ICIM), M.P.U. Rao's brief is to introduce a quality culture across the organisation. Says he, "Our objective is to ascertain that every activity is done right the first time." He is presently working in conjunction with the parent company, International Computers of the UK, mapping out the training needs for the organisation. Rao is also working towards making the software exports division conform to the ISO-9001 standard.

ADARSH GUPTA

Not for him a tie-up with any big name. "We do not need a collaboration with any multinational," says a confident Adarsh Gupta, executive director of Liberty Shoes (1990-91 turnover: Rs.80 crore). "Both Adidas

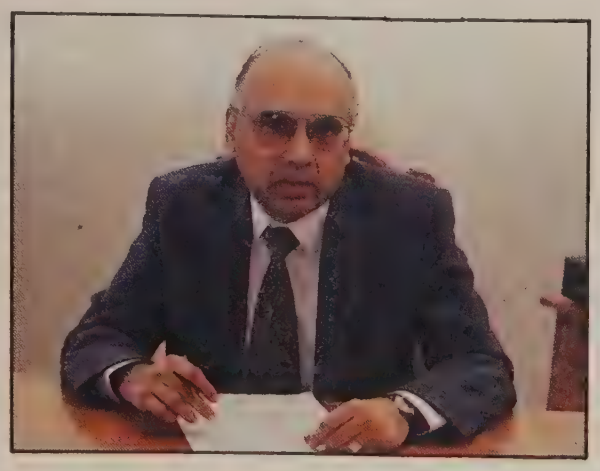
and Puma were interested in collaborating with us but we weren't," he claims. His company will soon start manufacturing its range of sports shoes at the Rs.4-crore Gorky project in the Soviet Union. Traditionally a supplier to the lower end of the market, Liberty's latest launch, Force 10, is priced at a high Rs.900 a pair. The shoemaker will now also start manufacturing beach shoes.

D.K. JAIN

Lumax Industries, the Delhi based automobile lamp manufacturer (1990-91 turnover: Rs.28 crore), is eyeing markets abroad. "High volumes is the key to competitiveness, for both cost and quality," says managing director D.K. Jain. "West Asia, Africa, the Far East and the replacement markets of Europe are where we are aiming to achieve the high volumes now."

Consequently, Lumax is promoting Lasor Lamps Ltd, a joint venture with the Haryana government, which will manufacture halogen lamps using Korean technology. Lumax made a small beginning this year with exports of Rs.1 crore and hopes to push it to Rs.2.5 crore by the next.

VIVEK MANNIGE



Bridging the communication gap between a computer professional's perception and the end-user's actual need is Vivek Mannige, managing director and promoter of Indus Software Pvt Ltd. The company has recently developed uBridge, a PC-based

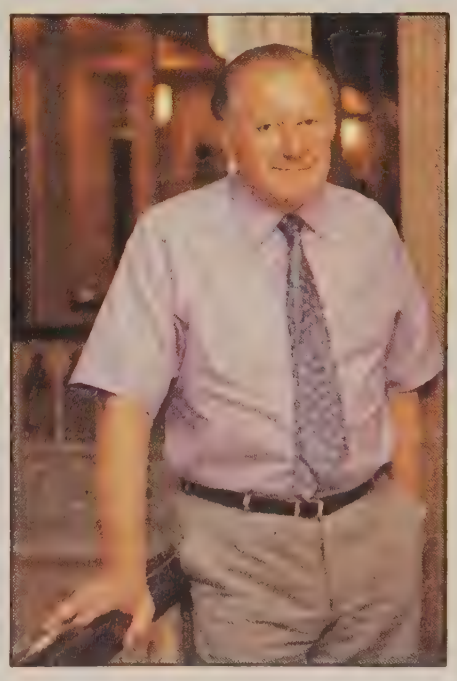
software package with which end-users — or even novices — can describe a model of their requirements accurately. Indus has sold more than 530 copies of uBridge in a little over a year. Of these, 400 have been sold in the US. It is priced at Rs.4,000 in India and $180 in the US. Besides selling packages, Indus develops software in C language for US-based companies and domestic customers like the Bank of America, Buckau Wolf and Citibank.

A.L. VADIVELU

The growth of Mercard, the credit card issued by Mercantile Credit Corporation Ltd (MCC) is phenomenal. Today there are about 15,000 Mercards in circulation which are honoured in more than 6,000 outlets. The tremendous growth shown by

the credit card since it was launched in 1986, according to A.L. Vadivelu, managing director of MCC, has necessitated the delinking of the credit card business from MCC so that the latter retains its identity as a hire purchase finance company. Hence, Mercard Ltd, a new company is entering the credit card market. "During the first year of the operation, the company proposes to issue 7,000 cards," says Vadivelu. By 1995 the company expects to issue about 50,000 credit cards.

M.G. RAMAKRISHNA



The Bahrain-based Bank of Bahrain and Kuwait's (BBK) India operation is priviliged in the sense that the bank operates in only three overseas locations — Oman, Kuwait and Bombay. With business out of the reckoning in Kuwait since the Gulf war, the India operation has gained in importance. Last year, its Bombay branch registered a 70 per cent increase in deposits. M.G. Ramakrishna, who was appointed general manager and CEO

last year, says that special NRI centres have been set up to facilitate NRI remittances. "Now we want to enter the capital market and undertake portfolio management," he adds. Another branch in New Delhi is also on the cards.

JOHN COWX

On a bright morning in March next year, Bombay harbour will play host to the ultimate in luxury liners — *Queen Elizabeth II. QE II*, as she is popularly called, was last here four years ago. In order to ensure that more Indians take the *QE II* this time, John Cowx, general sales manager of Cunard Line Ltd, was recently in town to promote his company's travel package. Apart from the *QE II*, Cunard, the world's oldest cruise company, also books for two other luxury liners — the *Sagafjard* and the *Sea Goddess*. For an Indian traveller, the average fare can work out to Rs.6,000 per day, says Cowx. The *QE II's* world cruise from New York to

New York via many exotic places normally lasts for 100 days. But Indians can board from Hongkong and sail to Bombay or sail from Bombay to New York with a stopover in Mombasa.

M.J. RICHARDSON

At a time when more and more Indian industrialists are taking the takeover route to expansion, there is a growing need for competent merchant bankers to tie up the deals. That is what M.J. Richardson, director of Chartered WestLB Ltd, the merchant banking side of the Standard Chartered Bank, recommended at a recent semi-

nar on "Growth through acquisitions". Since he is a merchant banker himself, one may discard this as self promotion.

But the reasons for which a company requires a merchant banker according to Richardson were quite interesting. He says, "The management does not require independent advice but the shareholders do as they beleive that the management can never be independent."

A merchant banker can also steer a company through a plethora of regulations — which also exist in the UK and Europe — and documentation. One more recommendation he makes to managements involved in takeover situtations is that they must communicate with and educate the staff. And, he adds, as a word of advice, "A marriage is a happy event, the same goes for mergers. A divorce is an unhappy event, and the same goes for mergers."

GULF FLIGHTS

Competition in the air

Travelling to and from the Middle East will never be the same again for the thousands of Malayalees flying in and out of Thiruvananthapuram. Since 1 July, they have been offered a new-found consumer luxury — choice. No longer do they have to fly the national carrier Air India perforce. They can instead opt for Gulf Air.

An AI aircraft: "the name of the game is co-operation"

This new development is the result of bilateral agreements signed two months ago between India and Gulf nations. Travellers are now hoping that other airlines will follow suit, while Air India is putting up a brave, grin-and-bear-it front even as its monopoly on this lucrative sector is dissipating. For 13 long years, it has enjoyed a monopoly on this route, impervious to clamours for a fare reduction from the Gulf Malayalees who have also often complained about shoddy and discriminating in-flight service.

For Air India, this sector has been a veritable cash cow, accounting for 22.6 per cent of its total capacity. It is the second largest route, behind only the India-US sector, and fetched Air India a total revenue of $16 million in 1990-91. And before the Gulf war, its Middle East operations were raking in Rs.1.4 crore a day.

Large revenue. Most of the money from this sector originates in Kerala, which has around 300,000 of its workers employed in the Middle East. By selling around 4,330 seats each week for the 20 flights that took off from Thiruvananthapuram, Air India controls 70 per cent of the Indian passenger traffic to the Gulf. Last year, Air India's gross revenue from its Kerala operations was Rs.35 crore, of which Rs.10 crore came from cargo, almost entirely vegetables.

With the entry of Gulf Air, passengers can expect easier days ahead. Fares, however, are not going to drop. Gulf Air charges the same fares as Air India ranging from Rs.6,300 to Rs.9,200 on economy class, which has dismayed several expectant passengers. But both Gulf Air and Air India are hiding behind the fare structures worked out by the International Air Transport Association (IATA).

The immediate advantages for passengers are additional schedule options and the likelihood of facilities being upgraded at the international airport in Thiruvananthapuram. According to E.M. Najeeb, chairman and managing director of Air Travel Enterprises, which had 75 customers on the inaugural Gulf Air flight from Thiruvananthapuram, many incoming passengers have said they find Gu Air timings more convenient, allowi them to land at Thiruvananthapura early morning.

Gulf Air now operates four week flights from Thiruvananthapuram, usir their new Boeing 767 ER aircraft. Two these are joint ventures with Air Indi which has all the handling contracts, vi traffic, cargo, ramp, engineering an cabin cleaning. Says George Tharaka Air India's manager — Kerala: "The nam of the game is co-operatio rather than competition."

Effects seen. But competi tion it certainly is, competi tion which has shattered monopoly. Says Tharakan "This is a market we hav served for 13 years against very heavy odds and lack o infrastructure. We don' think the market will de sert us." Adds Jitender Bhargava, Air India's chief public relations manager: "We are so accustomed to competition. On our London-New York sector, we compete against 100 airlines."

But the fact remains that the effects of competition have already manifested. Air India is hastening its own computerisation plans. It is also working to contain the Kerala market and not let passenger traffic get diverted through Bombay, as has been happening now. It will be able to do this better once the airport at Kochi is upgraded, permitting it to operate additional flights from the state's commercial capital.

Queueing up to enter Kerala are the other Middle East carriers — Emirates, Saudia and Kuwait Airways. The Dubai government is already negotiating for Emirates, which wants seven weekly flights to Thiruvananthapuram, and has reportedly offered Air India $350,000 a year for this sector. But the Indian side is said to have rejected this as far too low.

At any rate, as negotiations continue, the one thing that is far from low is the satisfaction of those who fly this sector. Not only do they now have a choice of airlines, but they can also entertain fresh hopes for a fare reduction in the future, when competition really hots up. ■

K.G. KUMAR

WASHING MACHINES

The new boom

While the seventies was the decade of mixers for the Indian middle class consumer and the eighties the era of television sets, the nineties are witnessing the emergence of washing machines. According to P. Chhibber, product manager of Singer, one of the new entrants in the washing machine market, this phenomenon has a twofold cause — the time saving factor where working women are concerned the increasing number of and the acute problem of getting housemaids in metros and bigger cities.

It all began when the introduction of a semi-automatic washing machine in 1986 by Videocon, in collaboration with Matsushita of Japan, activated the market. This resulted in a rise in the sales of all brands of washing machines. And with the sudden spurt in sales, new entrants appeared.

Palashranjan Bhaumick

Front-loading washing machines are becoming popular

There are now more than a dozen brands of semi-automatic and over five brands of fully automatic washing machines in the market. Videocon holds a 60 per cent share of the market followed by Maharaja with 12 per cent and Greysham with 10 per cent in the semi-automatic segment. In the automatic segment, too, Videocon has a market share of 60 per cent.

Foreign tie-ups. With the inclination of the market now towards fully automatic machines, the manufacturers have got into foreign tie-ups for technological knowhow. TVS has tied up with Whirlpool Corporation of the US, IFB (formerly Indian Fine Blanks Ltd) with Bosch of Germany and Intron with Services of the UK. Following an investment of over Rs.250 crore, the Indian washing machine market is now entering into a competitive phase. IFB, Intron and TVS are out to catch up with the market leader, Videocon. And in the process, each company is trumpeting the virtues of its products.

"Intron has the same technology as that which is being sold in the West. Also, it is the only machine in India to have a speed of 1000 revolutions per minute (RPM). And we have Indianised the machine up to 86 per cent," claims Rajeev Uppal, marketing controller of Intron. "By the end of 1991 our market share will be anywhere between 35 to 40 per cent," says A.K. Rathi, sales and marketing manager at IFB Industries Ltd.

With a licensed capacity of 200,000, IFB has produced 25,000 units in four months during the current year. As demand is picking up, the company hopes to fill the demand-supply gap by the end of the year. "TVS has modified the American technology to suit Indian conditions and we are doing quite well," claims S. Prasad, all India assistant general manager, marketing, TVS.

Front,loading machines are becoming popular among consumers both in India and abroad. "During our survey some women expressed the fear that the hatch could open in front loading washing machines. Nevertheless, these machines are becoming more popular due to the deck utilisation, which is not possible in the top loading machines," says Dinesh Sibil of Mudra Communications, which handles the IFB account.

With every company claiming to provide the best washing machine technology, it becomes difficult to judge the features of the different products. However, among the existing brands only IFB, Sumeet and Intron have heaters attached for washing at different temperatures of water. This feature is not available in TVS and Videcon washing machines.

Due to the recent curbs on imports, customers have been hit in terms of prices of the automatic machines. Videocon is now available at Rs.11,950, TVS for Rs.12,900 and IFB for Rs.13,775. Nevertheless, there is a vast potential for the future. According to industry sources, the market is expected to grow at a rate of at least 25 per cent over the next five years. Already the semi-automatic sector has shown a growth rate of 30 per cent and the automatic sector, a phenomenal 400 per cent. The latest boom in the Indian consumer market, thus, should last for some more time at least.

■ RAJESH PROTHI

DRAUGHT BEER

Young and fancied

Suddenly, a rush of new outlets serving draught beer has come up in Bombay, bringing bubble and froth into the lives of many middle and upper class young Bombayites. In a dark and cosy corner of Rasna Pub, in South Bombay, for example, youngsters sit sipping draught beer. They jostle each other for leg space at the crowded watering hole.

Catching the fancy. Apart from Rasna, many other restaurants like Cafe Mondegar, Leopold Cafe, Briton, Cafe General, and New York have now started stocking draught beer. The eateries attached to five-star hotels had been serving draught beer all along. But it is only now that this drink has caught the fancy of the clientele, particularly at discotheques.

Apart from these outlets, another beneficiary has been Associated Breweries & Distilleries, the only supplier of draught beer in the city. The company, known for

Deepak Tolani

Bubbly edge over bottled beer

such popular brands as London Pilsner and London Diet, has now introduced London Draft. "In the last six months alone, our sales have gone up from 50 kegs (50 litres to a keg) to about 200 kegs a day," claims Zeenia Lawyer, partner, Associated Breweries.

Freshly carbonated and chilled draught beer is bubbly and has a distinct edge over bottled beer. Its lower glycerine content makes it milder, tastier and frothier. And, not too expensive. While a mug of draught beer (350 ml) costs anywhere between Rs.11 and Rs.15, bottled beer (650 ml) costs around Rs.25. Another big advantage: since the drink is transported in wooden kegs, storage and breakage problems are minimal.

Bombay thus joins of Bangalore, India's draught beer capital. Bangalore has been the country's only pub centre where draught beer has been popular since 1980 — today, it houses as many as 109 pubs. Being a brewery town, home to both United Breweries and Khodays, the city has a distinct advantage. Draught beer, which is non-pasteurised, turns sour after 72 hours. Ideally, it must be consumed within 24 hours of being despatched from the brewery. Hence, having breweries close at hand ensures a consistent supply.

In Bombay, however, the scene was different with only Associated Breweries to maintain supply. And though draught beer was available in Bombay for many years in selected places, its sales never re-

ally took off. Primarily because "Our brewery was not geared to increase supplies," says Lawyer.

Pubs catching on. Moreover, Bombay has had more of a bar culture rather than a pub culture. "Executives like spending hours over martinis rather than beer," says Sarabjeet Singh, manager of Harbour Bar in Taj. Draught beer was introduced to five-star hotels in the late seventies. But sales was marginal.

A latent demand for draught beer has always been present. Says Rusi Yezdapardi, owner of Cafe Mondegar, "Tourists always prefer draught beer to bottled beer." The restaurant sells about two kegs of draught beer each day and operates on a 30 to 40 per cent margin. Enthused, Yezdapardi is now thinking of opening a pub.

At Bombay's first pub too, the mood is optimistic. With crowds surging — indoors as well as outside — it could not have been any other way. Says Manoj Kharbanda, owner of the Rasna Pub, "A person can easily relax here and have about two to three pitchers." (Each pitcher is equal to about five and half mugs.) Kharbanda had expected the pub to do well but he was simply not ready for the runaway success it has had. "We are selling nearly 450 litres of London Draft every evening," he enthuses.

Increase in sales of draught beer is, however, likely to eat into the market of bottled beer. "So far, only the other manufacturers are being affected. We will stop increasing the supply of London Draft th day it begins eating into our bottled be market," says Lawyer.

But this day could be very far off. Bot Yezdapardi and Kharbanda expect 1 more pubs to come up in Bombay befor the year is out in addition to various res taurants serving the drink in larger quan tities. So for hundreds of youngsters wh choose to indulge in this new found pas sion, it's pleasant times ahead.

■ SHAMPA KA

AGRI-PRODUCE PACKAGING

Waiting for sops

Paper box manufacturers in Maharashtra are feeling neglected. More than a year has passed since the government of India issued a notification on excise duty relief for agriculture produce packaging, yet this sector has not received any benefits. According to the notification, issued in March 1990, the excise concession given earlier for apple packaging in Uttar Pradesh, Himachal Pradesh and Jammu & Kashmir, was extended to packaging of all agricultural produce, grown anywhere in the country.

But to make the exemption available, the Central government had to pass on the excise relief benefit to the manufacturers through a state government agency. The Maharashtra government has not appointed any agency that can pass on the benefits to the manufacturers. This long delay, according to the packers, translates into a loss of two seasons.

The Market Planning and Design Centre — a joint project of Food & Agriculture Organisation (FAO), United Nations Development Programme (UNDP) and the government of India — has been attempting to bring about an overall improvement in marketing of fruits and vegetables across long distances in the country. This body had in the early eighties, pointed out the disadvantages of traditional packaging, viz, wooden or wire bound wooden boxes, for fruits and vegetables. The disadvantages range from high cost and lack of sturdiness of packing material to environmental hazards.

Substantial loss. At present, almost 50 per cent of the agriculture produce (fruits and vegetables) is transported loose; while the balance is packed in wooden crates. Every year, there is an estimated loss of as much as 30 per cent

(6.8 million tonnes), valued at Rs.5,200 crore. Absence of proper packaging results in marketing disadvantages. Moreover, environmental concerns and the ecological imbalance which the use of wooden crates perpetuate have led to substituting wood packaging with alternative modes. Paper boxes are found to be a better way of packaging horticultural produce for several reasons.

In order to prove the comparative advantage that paper boxes have over wooden crates, the Federation of Corrugated Box Manufacturers of India — the parent body of Western India Corrugators Manufacturers Association (WICMA) — in collaboration with a few fruit growing members of the Maharashtra Orange Growers Association, conducted a field trial in which oranges were packed in corrugated boxes.

Paper boxes: a better way to pack horticultural produce

The results were encouraging. Says a commission agent (fruits are normally purchased in bulk by these agents in the absence of a proper marketing set up in the state), "The trial was successful. Once water proofing is done and a further strength is imparted to paper boxes, they will surely emerge as a popular alternative to wooden boxes." The wholesalers and retailers who purchase this produce from the commission agents were satisfied with this packing too. Says a wholesaler, "The paper boxes are indeed very convenient as we don't have to repack the fruits further for retailing." Why then is the state government dragging its feet?

No organisation. Says T. Balaraman, secretary, food and civil supplies ministry, Maharashtra government, "Maharashtra does not have any marketing organisation that can be compared to those in HP." The paper box manufacturers, however, contradict this statement. There are at least four marketing agencies already in existence in the state which could perform the additional role of authorising paper box manufacturers, they say. Ironically, though the Maharashtra government has five marketing corporations — three in Pune and one each in Nagpur and Bombay — there is none that functions like, say, the Himachal Pradesh Marketing Corporation (HPMC).

The HPMC purchases the paper boxes in bulk and sells them to the fruit growers at a subsidised rate. "We want no subsidy," says a WICMA source, but has asked for an initial subsidy of 50 per cent only to encourage the fruit growers to use paper boxes for packing their produce. In the interest of the fruit growers, WICMA has also asked for sales tax exemption for boxes used for fruit packing. The exemption will reduce the cost of boxes by at least Rs. 3 benefiting the users.

The government understands this, assures Balaraman. But with the food and civil supplies minister changing thrice since March 1990, and issues like development of agriculture taking precedence, appointing a marketing corporation for passing on the excise relief benefit to the paper box manufacturers appears to have a very low priority.

■ ALPANA KILLAWALA

BOMBAY PORT

Losing traffic to JNP

It's bad news all the way for the country's premier port. Throughput at the Bombay Port has been dropping steadily since April. From a total throughput of 2.3 million tonnes in April, which was 100,000 tonnes more than that in April 1990, the figure dropped to 2 million tonnes in June 1991, substantially lower than the 2.3 million tonnes registered in June 1990. Total throughput for the period April to June 1991 dropped 5.5 per cent from the corresponding period last year to 6.4 million tonnes.

Imports at Bombay Port — which handles about 20 per cent of traffic to and from India — dropped by 15 per cent from the corresponding period last year to 2.7 million tonnes. Exports, on the other hand, registered a 6 per cent gain to 3.7 million tonnes.

Distorted figure. This latter figure, however, is distorted by a petroleum and petroleum products (POL) export figure that includes domestic crude and product dispatches from Bombay High and the two refineries in the city. The adjusted export figure is around 2.4 million tonnes. POL traffic — which accounts for 67 per cent of the traffic through Bombay Port — has increased marginally in the period. "So the port is actually not doing too badly," says Subrata Ray, Director of Planning and Research of the Bombay Port Trust (BPT).

But it is the remaining 33 per cent of the traffic — bulker and container — that has been hit. While the drop in bulk cargo handling (19 per cent of total handling) is negligible, the BPT estimates that about 45 fewer container ships have called in the period compared to the same period last year. (Average monthly berthing in the period is 45 ships.)

Container imports for the period fell 26 per cent to 423,000 tonnes while exports dropped by 14 per cent to 465,000 tonnes.

Ray says that the drop in overall port traffic is primarily a reflection of the drop in container traffic. The reasons, he says, could be possibly a diversion of container traffic to the two-year-old Jawaharlal Nehru Port (JNP) at Nhava Sheva across the harbour, or a general drop in trading.

Liner agents concur that imports into the country have been lean since March,

JNP: much faster turnaround than Bombay Port

when the effects of the country's tight forex position began to be felt. At Bombay Port, where container imports have generally tended to be higher than container exports, imports have dropped to less than exports. The export surplus increased from 3,000 tonnes in April to 32,000 tonnes in April.

Faster turnaround. At the same time the JNP (built at a cost of Rs.1,000 crore) does seem to be luring away some of Bombay Port's traffic. Dinesh Lal, the Indian representative of the Belgian liner company CMB — which has a weekly service to JNP — says that though the port has just three container berths, a loading/unloading rate of 25 containers per hour (four times that of Bombay Port's) makes a vessel's turnaround that much faster from JNP.

JNP's performance is reported to have improved and the port authorities now seem to be actively moving to improve, and make users aware of facilities at the port, and their cost-effectiveness. As a first step in this direction, the port will be holding a seminar in early August under the auspices of the Bombay Chamber of Commerce and Industry. The seminar will seek to acquaint potential users of the facilities and to discuss problems faced by current users.

Such bold moves could end up taking some revenue away from Bombay Port.

■ ALLAN ABRAHAM

RAJIV GANDHI RAHADARI

Road to prosperity

Large hoardings in Telugu welcomed the "*Telugu biddaku Telugu gadda* (the Telugu child to the Telugu land)". This was the warm welcome from the people of Andhra Pradesh to the prime minister, P.V. Narasimha Rao, on his first visit to Hyderabad. Part of the prime minister's busy itinerary was laying the foundation stone for the Rajiv Gandhi Rahadari, a 215-km road linking Hyderabad, Karimnagar and Ramagundam. The project for improving the road is being funded by the Asian Development Bank (ADB), Manila.

An Andhra Pradesh government official highlights the importance of road transport in his state and why external aid is needed for this purpose. "This state has a road network of about 130,000 km. The density of road network per 100 sq km is 47.3 km, against the all-India figure of 54.71 km. Without proper transportation, balanced regional development is difficult."

Scarce funds. But funds have always been a problem. Only 60 per cent of the funds required for the maintenance of roads is readily available. For a state like Andhra Pradesh, this means a loss of Rs.500 crore annually in terms of fuel wastage, wear and tear of vehicles, tyres, etc. Even from the Five Year Plans, allocation to the road sector has been abysmally low. Plan allocations were reduced from 3.07 per cent to 1.72 per cent from the Second Plan to the Seventh Plan. In the meanwhile, traffic has been growing at the rate of 12 per cent a year. Hence the state has had to seek loan assistance for road projects. Andhra Pradesh is one of the five states where road development is assisted by the ADB.

Why was this particular road — the Rajiv Gandhi Rahadari — chosen by the ADB? According to Bhaskar Reddy, project director of ADB projects in the state, three alternatives were given: t Kathipura-Kakinada-Amalapuram-Narsapur Ferry road; the Nalgond Miryalguda-Wadepally-Piduguralla roa and the Hyderabad-Karimnaga Ramagundam road. The last one was ch sen because of certain criteria like inte sity of traffic plying on the road, economi gains by its development, and inter-stat utility.

For example, Karimnagar, served b this road, is important because of the re cent completion of the Sri Ramsagar an Manair projects, built at a cost of Rs.30 crore. The cultivated area now is 215,00 hectares, from which the annual produc tion of crops like paddy and sugarcane i slated to be 2 million tonnes a year. So this agricultural produce can be trans ported on the new highway.

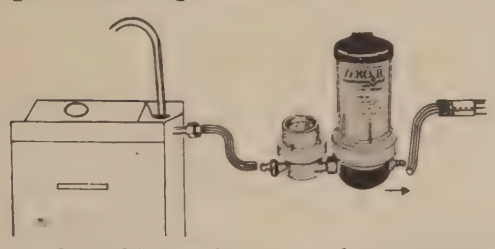
As far as industry is concerned, Ramagundam is strategically important for 90 per cent of the coal requirements o south India comes from the Singareni Collieries situated in this area. On a normal day, these collieries mine 183,000 tonnes of coal. The Fertiliser Corporation of India has also set up a plant here with an installed capacity of 2,000 tonnes a day. The National Thermal Power Corporation's super thermal power station, generating 600 megawatts per day, is also located here. Besides, there are a cluster of cement factories which have an installed capacity of 11,000 tonnes per day.

Sole means of transport. Further, this road passes through areas like Rangareddy, Medak and Karimnagar where there is no rail connection, which makes roadways the sole means of transport. As for the volume of traffic, the daily average traffic plying on this road is 6,800 fast and 3,300 slow moving vehicles; future projections are estimated at about 55,200 fast and 3,100 slow moving vehicles. Hence, the decision of ADB to focus on improving the Hyderabad-Karimnagar-Ramagundam road.

What does improvement of this road mean? Says Banga Raju, chief engineer, "At present it is mostly a single narrow road. We will strengthen and widen it, reconstruct the weak and narrow culverts, reconstruct 40 weak and damaged bridges and build a few bypasses."

The total cost of this project is Rs.131 crore. ADB assistance is to the tune of $38.5 million. The officials are optimistic that the entire project will be completed in the projected four years period. Is their optimism realistic? Only time will tell.

■ MEERA SHENOY



When it comes to providing safe drinking water, it's amazing how many companies are stuck in the 19th century.

Chances are, you may have already installed a water filter in your office or factory.

But here's a fact you should know: A water filter generally removes dust and suspended particles, but allows germs to pass through.

Introducing the Zero-B Online Attachment.

The Zero-B Online Attachment is ideally suited to purify water from any piped drinking water source.

It first filters the water by removing suspended and minute particles present in the water.

The clear water then flows through a unique purification medium which uses iodinated granules to eliminate disease-causing bacteria instantly. Water remains pure and safe for several hours on storage.

Leading scientific laboratories in UK, USA, Singapore, China as well as India have tested and certified the effectiveness of Zero-B.

No electricity required. No expensive plumbing too.

This is what makes Zero-B really modern.

Leading organisations in India have already installed the Zero-B Online Attachment. What about yours?

Make a move towards the 21st century. Install the most modern water purifier today.

The Board Of Directors Plans Another Mega-Crore Takeover

Our young executive talents are the stuff that future corporate leadership is made of. The young captains in today's executive force will tomorrow be the captains of industry. Making headlines. Scoring sensational victories.

Now they are busy learning many skills on the job. The simple solutions to complex problems. Those deft management strategems. The drive and stamina to scale the heights.

Ambassador is involved in the grooming of tomorrow's corporate achievers.

Sure, we make a wide range of executivewear, including accessories, for today's on-the-move executive.

But the commitment goes even deeper. We will be sponsoring events in management forums. Seminars. Quizzes. Debates. Management games. We will institute awards that recognise and reward our executive stars.

Just as we are increasingly encouraging potential in our management institutes.

All this so that the confidence of our young talents can take wing.

And discover new horizons of enterprise.

THE AMBASSADOR EXECUTIVE TALENT QUEST

Grooming tomorrow's executive high-fliers

"The gull sees farthest who flies highest"

Jonathan Livingston Seagull

Is the cost of replacement bearings driving you up the wall?

LOCTITE SUPERFAST BEARING FIT 641. IT HELPS YOU CUT DOWN COSTS DRASTICALLY

Loctite Superfast Bearing Fit 641 is an anaerobic retaining fluid. Its application gives 100% contact everytime (normal press fits would offer only 20% metal-to-metal contact or even less).

Cut-down costs
Because of increased bearing life, you use less number of bearings.

Simplify assembly
Only a slip fit is needed, machining tolerances can be relaxed.

Prevent...
...the onset of loose bearings, worn keyways, and fretting corrosion.

85% of the world industries depend on Loctite Adhesives to solve their assembly engineering problems. They are available for a wide range of applications like: Thread Locking, Retaining, Sealing or Liquid Gasketing

For further details contact:

Strength at work

Wanted: an exim policy

The need of the hour is to boost exports. On them will depend the economic prosperity of the nation. Admittedly, India with its current resources and achievements can carry on, but growth would be jeopardised and competitiveness and modernisation would remain merely exhortations.

The IMF loan, even if it is $ 7 billion, at best can take care of India's short-term debt repayments and interest, enable the country to import essential items like capital goods and give some respectability to the foreign exchange reserves position. But in the long run, the country will have to rely on a trade surplus to beef up its foreign exchange reserves.

India has been doing well on the export front only in the last few years. In 1985-86, exports declined by 7.2 per cent in rupee terms and 21.8 per cent in dollar terms, but the subsequent years saw them increase rapidly. Even after discounting for the fall in the value of the rupee in dollar terms, exports between 1985-86 and 1990-91 are up 100 per cent which means that the annual average growth rate was 15 per cent. Only in 1990-91, exports fell short of the target though they were up 17.5 per cent to Rs.32,527 crore.

On the other hand, imports over the last few years have been growing at a much slower pace. In dollar terms, between the period 1985-86 and 1990-91, imports have gone up by 50 per cent which is about half the growth rate of exports. In fact, there was a quantum jump in 1990-91 by 13.1 per cent to $24,060 million. This was mainly due to the import bill for crude oil and petroleum products, which was up 70.9 per cent in 1990-91 to Rs.10,800 crore against Rs.6,318 crore in the previous year.

Rationalise imports

Given the largely inelastic demand for imports and the fact that bulk imports constitute about 40 per cent of the total imports, it would be imprudent to rely on drastic cuts in imports. But there is scope for rationalising imports. For example, fertiliser imports in 1990-91 were Rs.2,700 — up 52 per cent over the previous year. Surely better capacity utilisation of public-sector fertiliser plants would go a long way in reducing imports. Iron and steel imports, though down over the previous year, still amounted to Rs.1,984 crore in 1990-91.

On the other hand, there is good scope for boosting exports. Export of readymade garments in 1990-91 amounted to Rs.4,640 or 14.3 per cent of total exports. But India has been concentrating on low-value downmarket items. A shift to high-value items would help in improving margins and also increase value added in exports. But this would involve improving quality and delivery schedules. Exports of engineering goods were up 37 per cent to Rs.3,221 crore. Despite the strong growth in this sector over the last few years, India only accounts for 0.09 per cent of world engineering exports. Better quality and reliability and greater emphasis on product design would help build confidence of foreign buyers in Indian engineering goods. There is good scope for increasing exports of leather manufactures, gems and jewellery and synthetic textiles too.

India has ample scope to boost foreign exchange earnings by developing computer software for foreign firms, rendering consultancy services and undertaking turnkey projects abroad. Because in these areas India enjoys a direct comparative advantage vis-a-vis cost.

India is still not a major exporting nation because exports of manufacture as a per cent of GDP is around 6 per cent. Even countries like Thailand, Malaysia, the Philippines and Sri Lanka have 10 per cent or more. Countries like Taiwan and South Korea have manufacturing exports in the region of 40 per cent of GDP.

If India is serious about exporting, it will have to restructure its industrial policy which allows successful companies to grow and flourish and laggards to go to the wall. Competition in the domestic sector is a prerequisite to boosting exports. Only a revolutionary pace of improvement will bring about the desired result because other nations are improving as well. The government has taken the first bold step of devaluing the rupee to a more realistic value. It will also have to spell out a bold exim policy that gives the right signals to Indian companies to get on with the job.

ASPI CONTRACTOR

Hurry to Haryana

ELECTRONICS CITY

A Modern Electronics Complex at GURGAON

Come & set up an Electronics Industry next door to DELHI

HARTRON offers **FLATTED FACTORY MODULES** at Gurgaon, to the prospective entrepreneurs in the field of Electronics on free hold basis under an instalment scheme on attractive terms.

Flatted Factory Modules offered are in the form of multistoreyed buildings.

FACILITIES BEING PROVIDED

Lifts, Standby Generator, EPABX, Telex, FAX, Bank, Post Office, Cafeteria etc. A satellite link with advanced countries is also being planned in collaboration with DOE, Govt of India, for software export units.

IDEAL SITE

- Is less than 3 kms from Delhi border and less than 10 kms from I.G. International Airport Delhi, on Delhi-Gurgaon main road.
- Has HARTRON R&D Centre and Precision Tool Room in the vicinity.
- Has already a large number of well known electronic units in the region. These include, Siemens, Weston, AKG Accounts. HCL, Delton Cables, Bharti Telecom, Olympia Electronics, DCM Data Products, Shyam Antenna, TCS, WIPRO, IST, DNES and several assisted/joint sector projects of HARTRON.
- Lies in pollution free belt.

INCENTIVES

Haryana Govt offers a wide range of incentives for electronics industry. These include, capital subsidy, generator set subsidy, feasibility report subsidy, sales tax exemption etc.

COST

Areas	Tentative Cost
3750 sq. ft. (Type 'A')	Rs. 14.80 lacs.
3120 sq. ft. (Type 'B')	Rs. 12.32 lacs.
1872 sq. ft. (Type 'C')	Rs. 7.40 lacs.
1560 sq. ft. (Type 'D')	Rs. 6.16 lacs.

HOW TO APPLY

Apply in the prescribed proforma latest by 5th August, 1991, prospectus and application form can be obtained at the following addresses on payment of Rs. 50/- by cash/DD in favour of the Corporation.

Haryana State Electronics Development Corporation Ltd. (HARTRON)

Haryana — The Home of Electronics

JAISONS H 291

India's long term debt has more than doubled in the last five years. Commercial borrowings rose by a factor of three. The debt-service ratio which was only 17.5 per cent in 1985-86 has now crossed the safe limit of 20 per cent and is currently around 22 per cent.

Interest payments on external debt have increased significantly in recent years. The sharp rise is due to a change in the borrowing portfolio. IDA, the soft loan window of the World Bank, accounted for only 12 per cent of the total aid authorised during the Seventh Plan as against 37 per cent in the Sixth Plan.

Wholesale price index: The wholesale price index of all commodities is marginally up by 0.92 per cent for the month under review. Primary articles is up 1.6 per cent, largely because of the sharp increase in the index of cereals and pulses. On the other hand the index of manufactured products is up only marginally by 0.7 per cent.

(1981-82 = 100)

	22 June '91	25 May '91	23 June '90	% change over month	% change over year
All commodities	195.7	193.9	177.7	0.92	10.12
Primary articles	203.0	199.8	180.5	1.60	12.46
Manufactured products	192.8	191.5	178.3	0.67	8.13

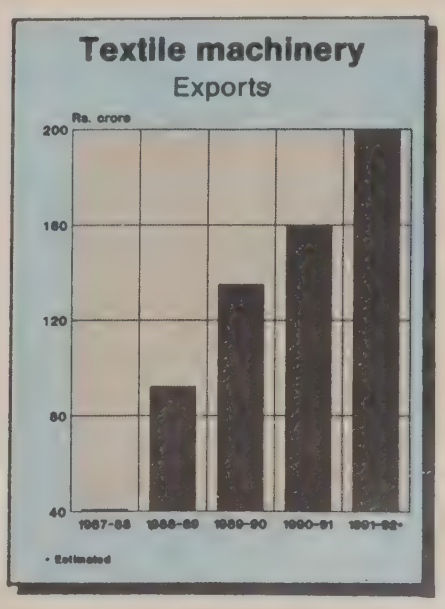
Money and banking (scheduled commercial banks): There has been a sharp fall in aggregate deposits which is reflected in the marginal decline in bank credit. Food credit has also declined, though on a year-on-year basis it is up 45 per cent.

(Rs crore)

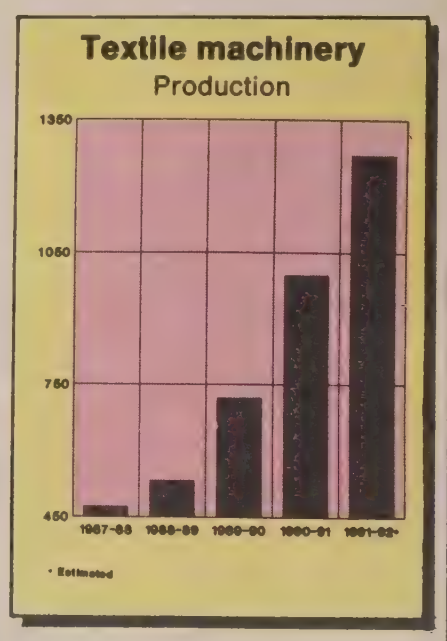
	14 June '91	17 May '91	15 June '90	% change over month	% change over year
Broad money (M3)	2,77,792	2,77,208	2,39,537	0.21	15.97
Aggregate deposits	33,484	34,061	28,764	– 1.69	16.40
Bank credit	1,17,997	1,18,231	1,03,593	– 0.19	13.90
Food credit	5,456	5,509	3,766	– 0.96	44.87
Credit/deposit ratio	59.64	59.89	60.83		

Bullion prices and stockmarket index: Gold during the month to 12 July 1991 was up nearly 7 per cent to Rs.4,000. Silver, on the other hand, is only marginally up. Both gold and silver were reflecting the impact of the rupee devaluation. The BSE index has shot up on expectations of greater decontrol measures for industry.

	12 July '91	14 June '91	14 July '90	% change over month	% change over year
Gold (Bombay)	4,000	3,749	3,300	6.69	21.21
Silver (Bombay)	6,925	6,831	6,776	1.37	2.19
BSE index	1,441.85	1,282.8	920.24	12.39	84.09



Price of gold is in rupees per 10 gm and silver in rupees per kg)



Textile machinery

The textile machinery industry has come of age. It is one of the largest producers of capital goods in the country and has a capacity to produce 2.2 million spindles annually. Though the period 1976 to 1981 was good, since 1982 however, the industry went into a recession and came out of it only in 1988.

Exports

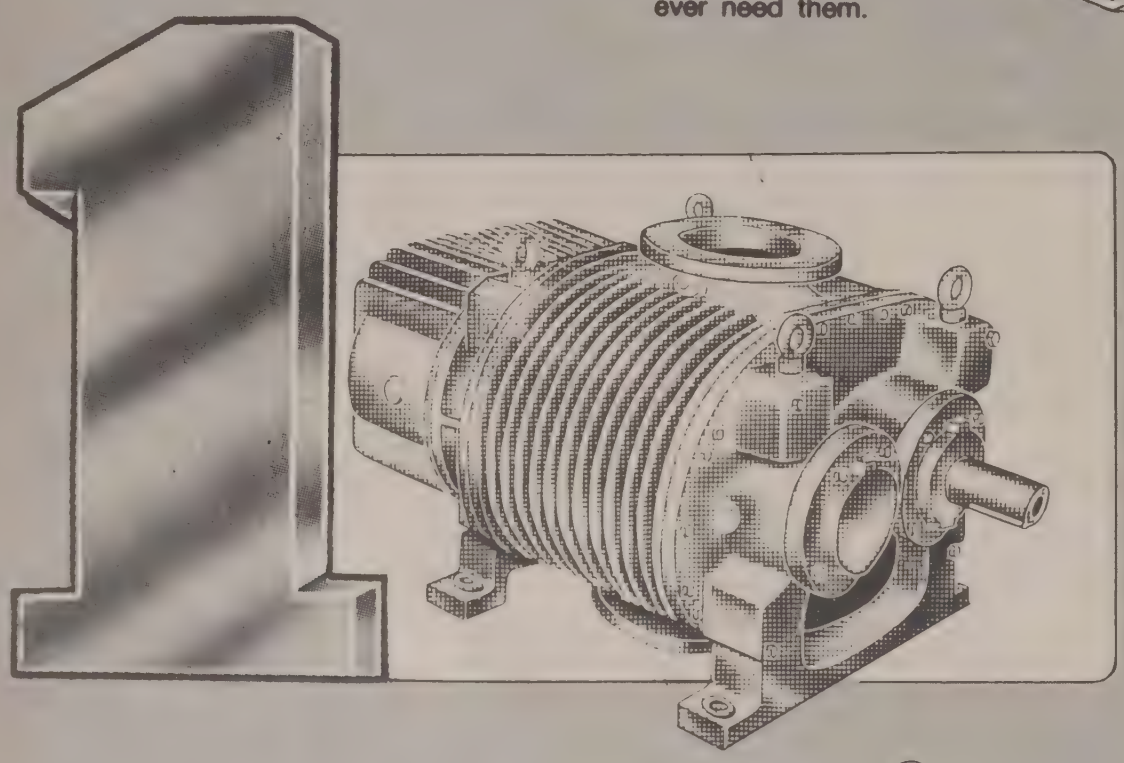
There has been a steady increase in the export of textile machinery over the years. In 1991-92 exports are expected to cross Rs.200 crore. The target is to export 30 per cent of production.

Production

Production of textile machinery which was only Rs.472.73 crore in 1987-88, has increased to Rs.1,000 crore in 1990-91 registering a 111 per cent increase in just three years. During the last two years production of spinning machines increased by 100 per cent.

The aces who've made us No. 1

Today with a great sense of pride and a deep commitment, we have reached the coveted position of being the leaders in the manufacture and marketing of Twin Lobe Compressors.



Pride because unstinting hard work, a dynamic vision and a capacity to take on challenges has earned us our place Commitment to all the industry's leaders who through their consistent faith in us have made us the No. 1

Our customers' faith in us is justified by the eagle eyed care that we take in ensuring that only the best products are called Kay. Products that are manufactured on very advanced imported machines, in a highly sophisticated & streamlined production environment at Sonepat.

- A state of art technology that gives a strong backing to the custom built products.
- Computer Numerically Controlled (CNC) production process to ensure zero defect performance.
- Stringent quality control measures that puts the products through the most vigorous of tests.
- A wide network of after sales service points that makes sure that our engineers are there....should you ever need them.

Our corporate character never allows us to compromise for short term gains. This is the iron strength that's become silver today. 25 years of a dynamic dream turned into reality with our taking on the mantle of the leaders.

NEW INDUSTRIAL POLICY

Appropriate for services sector

An earlier piece in this column made the point that service industries in terms of their key contribution to the economy are underappreciated in India.

Enterprises contemplating competing in the service industries globally require an appreciation of the technological changes in these industries as well. It is pointless waging battle with the equivalent of bows and arrows in a missile era. Specifically, service industries too are becoming increasingly capital-intensive through their use of tools such as those based on information technology (IT); this was inevitable in the developed countries where this segment has grown much faster than the manufacturing sector and yet people-costs which reflect standards of living are continually rising.

Importance of IT tools

Thus apart from the IT industry itself which has witnessed a growing use of computer-based tools to increase the productivity of the software industry, other service industries such as banking and insurance, fleet maintenance of aircraft as well as other transport equipment, health-care delivery, etc, all depend greatly on IT tools. Indian companies, to compete effectively in this milieu, must not only have access to these tools, but even more importantly have people who are fluent in their use. However much we may deny the very real need for these IT tools to bring our own economy under control, surely at least considerations of the vast export potential of these industries must awaken us to the need for widespread use of IT. As if competition were not reason enough, threatened new certification procedures in Europe 1992 for service industry professionals may demand that they demonstrate familiarity with these tools before they participate in the economy in these areas.

As to the problem of marketing, it would not be an exaggeration to say that the key to success in service industries involves, other than a presumed control of the basic technological aspects of the business marketing, marketing and marketing! Growth of markets both causes and is a result of such a marketing push that tends to focus attention upon the end-user. This makes the selling game increasingly consumer-goods like, even in what would hitherto be considered "industrial products" such as software and financial services. Unaccustomed as we are in India to real competition and given the contempt in which policy-makers hold the vital technology of marketing, we in India have a doubly difficult task ahead of us in global markets. This is particularly so because responsiveness is a key feature of the effective marketing company; responsiveness is a function of corporate culture, not merely the capabilities of an export department, and reflects the marketplace which gives no premium to responsiveness in a protected economy.

Even more important than changes in enterprise-level cultures are those in our policies. Today, the entire taxation structure favours tangible-manufacturing through its emphasis on depreciation allowances, investment credits, exemption of profits from exports of goods, the IDBI deposit scheme which permits tax deferral until funds are required for plant and equipment, and so on. It does not recognise investments in human resources to improve their skills, the key area of investment for the service industries. This structure makes it extremely difficult for service industries to generate internal cash resources for reinvestment in the business or market expansion overseas. A fairer mechanism would be corporate taxation based on distributions.

In the area of financing of service industries, the current structure of our policies is positively discouraging. The principal assets of a service industry tend to be office buildings and trained professionals on whom the organisation spends more money for further training. Neither is accepted as a basis for financing — the first because it is considered "commercial" and not "industrial" and so somehow unworthy of economic assistance, the latter because it provides no collateral. Yet it is known that on the one hand even tangible collateral provides little real security, while on the other hand favoured farmers do not seem to find lack of collateral any bar to receiving finance. In the end, despite all the talk of employment generation, this vital engine of employment generation finds it virtually impossible to get loan finances. Even state incentives, supposedly intended to increase employment, in fact only promote a poor surrogate for employment, viz investment in plant and equipment; it is hardly surprising that these incentives are increasingly paid to capital-intensive industries such as petrochemicals which generate little employment. Far better would be grants on a per-employee basis, especially for educated employment. The growth of these service industries would then also assist in the process of metropolitan decongestion.

Import restriction

Next, take capital goods related policies. It was pointed out that even this sector of the economy is witnessing technological change which makes it more capital goods intensive; yet the export import policy makes scant mention of this vital need and has few provisions to address it. The software industry has witnessed 17 years of such discrimination in importing its capital goods requirements, despite public avowals by policy-makers of its importance. In contrast, in one quick move in 1984, the hardware industry got a bagful of goodies for its capital goods requirements that it retains even today: no export obligations, OGL imports, low customs duties.

Lastly, take our small-scale reservations policy. This policy imposes an impossible burden on the capital-short small entrepreneur to put up increasingly capital-heavy manufacturing plants. Yet, it penalises the larger community of consumers by subjecting them to shoddy goods that are often actually dangerous, as the Lentin Commission report pointed out. Would it not be better if we recognised the potential of the small-scale industry to render services of a personal nature in close proximity to their customer base? Then we would insist that the small-scale stick to the service industries instead of venturing into manufacturing. The whole country would benefit from such a change.

All these policy changes taken together may seem like quite a job, yet they are hardly revolutionary or disruptive. More importantly, can we really afford not to make these changes so vital to the flourishing of the service industries given that they are perhaps the last major source of significant increases in export earnings?

Bhadralok economics

SUDHIR MULJI

What ails the Left? The general pattern of their various creeds is to oppose whatever the government does, and then provide the economic arguments to justify precisely what the government has done. In their latest epistle of disapproval, they tell us that devaluation is likely to be inflationary.

Yet, in their previous statement published in the *Business & Political Observer* on Tuesday, 14 May, they implied that inflation may not be a serious problem because, and I quote, "with the exception perhaps of edible oils, there is no shortage of domestic supplies of essential commodities in the economy at the moment". This was the basis of their argument for a larger fiscal deficit than that apparently required by the IMF.

Now the Left group cannot have it both ways. In fact the Left should support devaluation because it has consistently maintained that the foreign exchange profligacy of the eighties primarily benefited those who produced luxury goods and not those who toiled away to give us our daily bread. Surely the Left should not now object to that class of manufacturers of goods having to pay a bit more for their opulence. But in this context of supporting the poor against the rich the Left group of economists has adopted a curiously inverted position.

Mobilising NRI support

It is part of the Left solution to our balance of payments problem that we should, I quote again, "mobilise the support of the large number of Indian workers abroad who, through remittances, have contributed no small sum to support the balance of payments over the eighties". They accuse the government of failing "to garner what these workers were willing to transfer to India in the wake of the Gulf crisis".

Surely, the best way to garner these savings is to give these workers a better price for their foreign exchange — and that is precisely what devaluation does. These people are the poor of Kerala, some of whom have lived in virtual slavery under their Middle Eastern masters. We should give them a fair price for their earnings, and not exploit them when they have no other alternative.

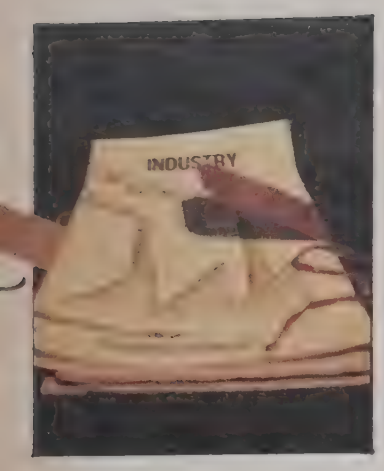
But the Left clearly does not believe in that kind of justice. They criticise the government for failing to take advantage of the opportunity provided by the Gulf war, that is when the Indian worker was frightened, to exploit their difficulties and garner their savings. And it is this Left, with this mentality, that now wants to appeal to the NRIs to come to the rescue of the Indian balance of payments.

As if this was not shameful enough, look at the other side of the coin: who benefits from an over-valued rupee? The answer is, those who can make sure that the bureaucrats allot foreign exchange to them. According to the Left, that is the upper income groups who spurred the consumption boom of the last few years by their foreign exchange profligacy.

Simple thinking

A normal person would conclude that the Left would openly support a move that benefits the poor of Kerala and hurts the dazzling yuppies of Bombay, but then that sort of simple thinking does not take into account *bhadralok* logic. What the Left would prefer is import controls, thereby creating further rents for luxury manufacturers, and at the same time appeal to the patriotism of the poor folk of Kerala to exchange their dollars for an over-valued rupee—in other words, manipulate the exchanges to fool the workers.

The truth about these paradoxes is that the Left has lost its bearing. Socialism is in retreat throughout the world, and entirely because of economic failure. The Indian Left has not yet learned the lesson that has emerged. On the one hand it blames past governments of committing financial profligacy, it argues against the poor quality of state intervention, and it claims that the mixed economy has been hijacked by rent seekers (see Arun Ghosh's article in *Business and Political Observer*, 15 May). Yet, on the other hand, it seriously recommends relying upon the same type of government to administer import controls in a way that would squeeze just the rich. It also expects the government to rationalise expenditure, and to do everything to steer the system in an optimal direction.



Yet the real lesson of the last 40 years was taught to economists many centuries ago. For it was Adam Smith who warned us that whenever governments and business get together there will be rent seeking, that governments are profligate, and that state intervention is likely to be unhelpful. That the only way to protect the consumer is to make business compete in an environment of total free trade.

If Manmohan Singh does what he promises, it will certainly make business sweat; but my friends in Bombay need not worry too much. My economic knowledge is limited to Keynes and Adam Smith, while the *bhadralok* economists from Calcutta with their subtle, clever minds and brilliant mathematical models will find a way to justify tinkering so that the old nexus between government and business will be re-established, and making money will be easy again.

The author is an economist and former chairman of the State Trading Corporation

THE ECONOMY

LETTING GO

In 1989, the Congress party went to the hustings proclaiming that their's was the only government that worked. Recent history proves that did not cut much ice with the electorate. That probably was why the the party did not use the same slogan for the elections this year. But it could well have. For the frenetic pitch at which the Narasimha Rao government has started its operations would entitle it to be described as the government that not only works but does so faster than most of its predecessors.

Capital watchers used to seeing governments struggling with decisions have been truly stunned at the speed adopted by this government. But in a way it is not surprising that things are moving at the pace they are. Even before the elections were over, and in fact even during Rajiv Gandhi's lifetime, a core team was constituted within the Congress party to draw up a plan of action which could be acted upon as soon as the party came to power. Such was its confidence. The team comprised of telecom whizkid Sam Pitroda, former SAIL chairman V. Krishnamurthy, former union home secretary R.D. Pradhan, the present editor of the *Financial Express*, A.M. Khusro, and the then Planning Commission official, Jairam Ramesh.

Groundwork in place

This cell had the benefit of a paper prepared by commerce secretary Montek Singh Ahluwalia on liberalisation — the paper which had created a controversy last year when it leaked out during V.P. Singh's regime. In any case, the cell quickly drew up a plan recommending ways and means to restructure the economy and put it on even keel. It is on the basis of this groundwork, already in place, that the government has been working as fast as it has been in recent days.

Another factor has helped the government to take new initiatives quickly. This is the fact that the liberalisation process has now been on for the last few years. A considerable amount of thinking had already been done on a range of issues in various ministries over the last one or two years. Official committees were working on various matters and a number of proposals had been taken up by bureaucrats from time to time. However, due to the absence of any government worth its name in New Delhi, most of these matters were kept pending.

For instance, there is now talk of abolition of the DGTD. The fact is that initiatives in this direction were taken by the industry ministry in 1988, and in 1989 the Scientific Advisory Council to the prime minister had also made a recommendation to this effect. Then again, the initiatives expected towards increasing the asset limits of companies coming under the MRTP Act, were actually being pushed by the Department of Company Affairs for the last two years. For some inexplicable reason, finance ministry was not keen on it.

Another example is the decision to go in for the fourth round of exploration for offshore acreages. This too has been pending for a long time, even though a committee headed by the former petroleum secretary Lovraj Kumar had identified the blocks to be auctioned. Initiatives are now being taken on this matter. An even more glaring example is the new trade policy pushed through by P. Chidambaram, for which he has won accolades. This is actually the result of initiatives taken by the previous commerce minister, Subramaniam Swamy.

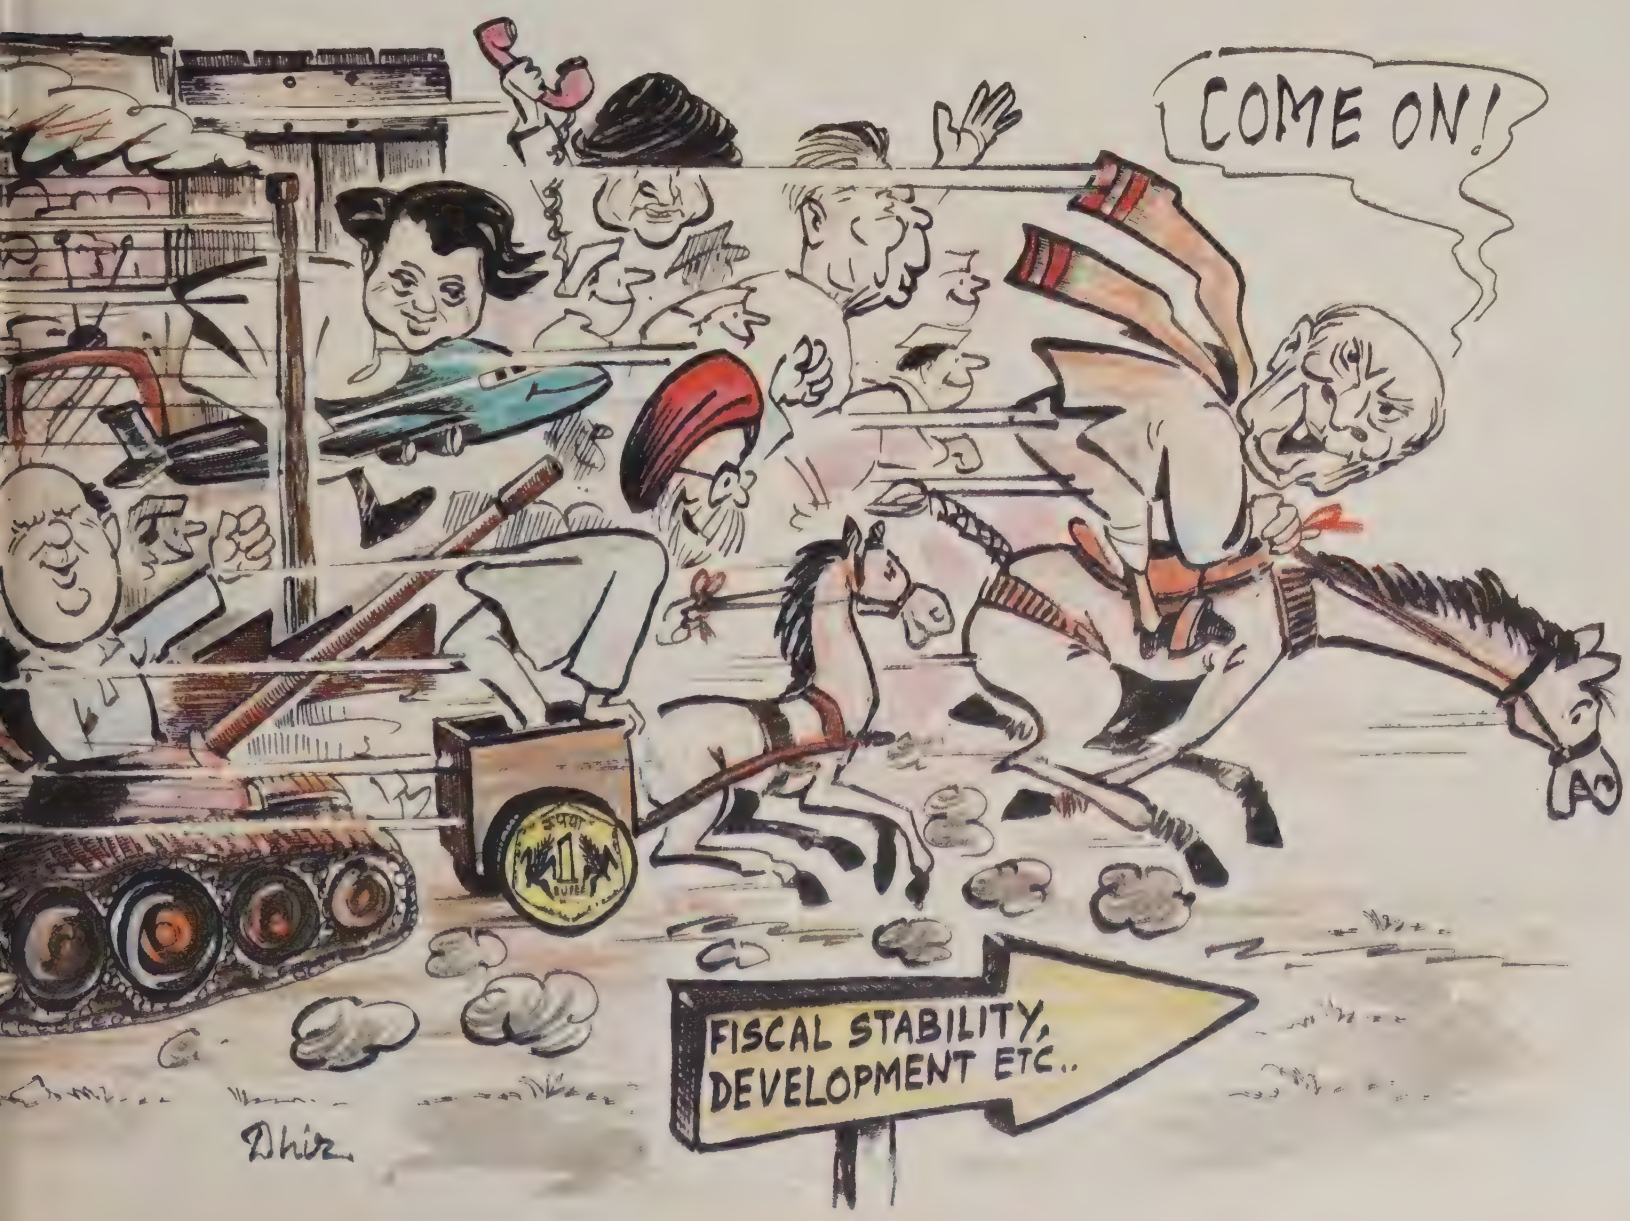
The new ministers of the Narasimha Rao government, who took over recently, found that there were a lot of files and proposals that needed attention and could be dealt with immediately. Says the private secretary of a new minister: "Our ministers were undoubtedly helped by the fact that they were clearly told by the prime minister about the general directions which the policies would have to take." This quick enunciation of the philosophy of the government undoubtedly spurred on the ministers to take bold decisions and take them quickly.

If, even in spite of being a minority one, the government was able to quickly get its philosophy in place, the credit for that should actually go to the plummeting fortunes of the Indian economy and prime minister Narasimha Rao. The combination of a collapsing economy on one hand and an insistent IMF on the other

made the government take quick decisions on matters which had been pending for years. And credit should go to the new prime minister too, because he mustered up the requisite political will, something his predecessors could never organise.

In a way, the rapid changes initiated are also part of a deliberate policy. It was the strategy of the new government to offer its package as a *fait accompli* even before the Parliament met for its new session and a vote of confidence was passed, so that opposition parties, even if opposed to these measures, would be overtaken by the speed at which it is undertaken and too numbed to even react.

The strategy has obviously paid off, initially, at least, and the announcement of different policies in quick succession at least left the main opposition party, the BJP, grappling with the implications.



Narasimha Rao knew from the very beginning that a radical industrial policy would face opposition. That was why he wanted to push through as much of liberalisation as possible before any concerted opposition developed. In fact, when the first draft of the policy was made by the prime minister's office — and not by Udyog Bhawan though its officials contributed parts to it — Rao rejected it by terming it as "not radical enough". Thereafter a more liberal draft was produced and accepted for action. But to be on safe grounds, the government deliberately leaked out a substantial part of it to test the reactions that it would evoke (*see companion story*).

The reactions were mixed. Though industrialists and economists seemed to be welcoming it, trade unionists, left parties and more significantly even some Congressmen seemed to have reservations. This mainly concerned the exit policy being envisaged by the government. Even K. Ramamurthi, the present union labour minister and earlier a labour leader, is on record saying that he had not been consulted about the changes in the industrial policy. If not anything else, that would point to some dissension on the issue within the cabinet.

Faced with the situation, Narasimha Rao started talking to some pro-liberalisation opposition leaders, hoping to get them to support the new policy proposals, cutting across party lines. At the time of writing, efforts in this direction were continuing. In the meanwhile, the PM has announced that he would in fact come out with a new policy "in the next few days".

What seems likely now is that the new policy will be a truncated one; one which will skirt the issue of exit of industries. But that will be a half hearted effort not in keeping with the newly found image of the government. ■

KINGSHUK NAG

PROPOSED INDUSTRIAL POLICY

Hints of big things to come

The much talked about new industrial policy was to be presented in Parliament on 15 July 1991. At the time of writing, four days have passed after that date and the policy is not yet out. In fact, it is now learnt that the policy will only be tabled next week, beginning 22 July. The reason for the delay, say political insiders in Delhi, is a difference of opinion on the exit policy for sick units.

The government proposes to make it easy for industrialists to wind up their companies if the latter turn sick. But the 'socialists' within the Congress party and members of the left front, fearing abuse of such a policy by industrialists and large-scale retrenchment of workers, are opposed to the move. This lack of consensus has delayed the announcement of the policy.

Despite this, the major features of the proposed policy are already known. The details were leaked out to the press over the last ten days in an attempt to gauge the political reaction. But observers feel that this move backfired. In the new policy, investment in projects up to Rs.200 crore will no longer require a licence, the asset limit for MRTP companies will be substantially hiked, and foreigners will be allowed higher equity holdings in Indian companies. And, besides allowing sick companies to close down easily, the new policy also reportedly seeks not only to reduce the number of industries reserved for public sector, but also abolish the phased manufacturing programme (PMP) for industries.

Departure from tinkering

Clearly, the new industrial policy will be a major departure from the tinkerings of the past and certainly revolutionary when compared with the first industrial policy of 1956. That had relied heavily on the public sector for industrial development and tried to contain the private sector through numerous restrictions.

The changes made in the investment limit imposed on the delicenced sector is a fair example of this departure. It was raised from Rs.3 to 5 crore in 1983, from Rs.5 to Rs.15 crore in 1988, and further to Rs.25 crore for the projects in economically developed areas and to Rs.75 crore in backward areas. Now, in one stroke, the limit is to be raised to Rs.200 crore without any locational restriction. (But industry will still not be permitted within 20 kilometres of the four metros.) Licences are also not required for projects requiring imported capital goods of up to Rs.50 crore.

However, this doesn't mean that it is going to be a free for all. Any new project included in the 96 industries where the minimum economic scale (MES) of production has been specified (Appendix 9 of Industrial Policy) will have to conform to that size. This alone will raise the project cost easily above Rs.200 crore. In case of polyester staple fibre (PSF), for example, the MES is set at 60,000 tonnes; a new project of this size will cost nearly Rs.400 crore. Similarly, if one were to comply with the MES set out for a new project for PVC, PTA, caprolactum, electric motors, or a gas or naphtha cracker, the project cost will be much above Rs.200 crore and therefore require a licence.

Nevertheless, for a large number of less capital intensive industries like two-wheelers, VCRs, refrigerators, a project will cost under Rs.200 crore even after compliance with MES limits. This will provide easy entry for entrepreneurs. To make delicencing more meaningful, it is also proposed to drop a few industries from the list of 26 industries where licences are compulsory. The list may now be pruned to 14.

Asset limits

Another important proposal in the new policy is to raise the asset limit of MRTP companies to Rs.1,000 crore from the existing Rs.100 crore. A company comes under MRTP Act of 1969 when its asset or the total assets of the group of interconnected companies touches the asset limit. Also, if a company controls 25 per cent or more of the market of a particular product it is considered "dominant" and comes under the purview of the MRTP Act. It is not known whether the latter limit will be hiked, but the asset limit is almost certain to go up. If the left front were to have its way though, the limit will be raised only to Rs.500 crore.

If the limit is raised to Rs.1,000 crore, only about 12 business houses — like the Tatas, Birlas, Reliance, Thapars, Singhanias, RPG, L&T, Mafatlals and the Mahindras — will remain within the MRTP net. If one were to take into account the individual companies controlled by all MRTP groups in the country, the total number of companies registered under the Act is about 1,800; these will now be reduced to about 300. What this means is that except for the top 12 or so really large houses, all other companies will now be free to take advantage of the liberalised industrial policy. The government may even enhance the list of 52 delicenced industries where no MRTP clearance is required.

In the case of the Foreign Exchange Regulation Act (FERA) too, the government is planning to bring in major changes. At the moment, a company comes under FERA when foreigners hold 41 per cent or more of its equity capital. The government wants to raise this limit to 51 per cent. In some high technology industries, the limit may even be

increased to 100 per cent, provided there is a net foreign exchange inflow.

Also being contemplated is an increase in the number of delicenced industries for FERA companies and a relaxation of restrictions on technology imports. These changes, hopefully will make multinational companies from Europe and the US take more interest in their Indian operations. This is because a 51-per-cent holding would enable them to consolidate the financial results of their Indian companies into their books of accounts.

Inherent contradiction

And of course, there is the controversial proposal for an easy exit route for industrialists from sick units. What this means is that to liquidate a sick company, the promoter will not have to go through the usual grind of BIFR procedures. Exact details of this policy are not yet known, but R. Kumarmangalam, minister of state for law, justice and company affairs, is reported to have said that "only those companies that have no public debt will be allowed to liquidate themselves without fuss". There is an inherent contradiction here, since almost all sick companies have large debts to the public, banks and financial institutions. Result: they will all have to go through the usual BIFR route in any case.

According to the new policy, inefficient public-sector undertakings will no longer be the "holy cows" of the Indian economy. The number of industries reserved for the public sector, like mining for coal, iron ore and non-ferrous metals (like copper and zinc), and manufacture of arms and ammunition for defence, will be significantly reduced. Many industries, where large investments are required, will now thus be open to the private sector.

The question that must be asked is whether the government, however reluctantly, is giving up the idea of the "commanding heights of the economy". It is clear to all that in several key areas such as power generation, telecom and electronic equipment, the public sector has simply failed to deliver. At another level, there is absolutely no reason why the public sector ought to have the exclusive right to integrated steel plants. Last, but not the least, the government must just not be in the business of making bread or bicycles.

If the new industrial policy does turn to be what it promises to be, it, along with devaluation and the new trade policy (which is expected to increase exports), will undoubtedly open new horizons of faster and freer growth of industries. And that is what industrialists have been crying for. Though it will be naive to expect overnight changes, it is quite clear that the new policy will quickly shift the economy into a higher gear. A clear signal will be sent to industrialists, both local and foreign, that the government really means business.

Once the climate of investment so changes, worldwide experience has been that in spite of any short-term shakeouts, investment quickly picks up and even the old established industries get a fillip. There are few simple key issues. How soon will new jobs be created? How soon will new investments materialise to raise output quickly? It is only by such rapid expansion that prices can be kept in check. These will be the tests of the new policy.

Changes all around

It is not just the finance and industry ministries that are agog with talk of liberalisation in New Delhi. Here is a brief scenario of what is happening elsewhere in the government

CIVIL AVIATION

Now that the new economic dispensation has triggered hopes of quick and across-the-board privatisation, the public sector Indian Airlines and Air India can be counted out of the new scheme of things, though "selling these airlines is not on the immediate agenda," reiterates new civil aviation minister Madhavrao Scindia.

The minister, however, has been concerned with complaints from private air taxi operators, which include exorbitant parking charges at airports and allegations of wilful acts of interference by Indian Airlines. Says Scindia, "Air taxi licences under the 'Open Sky' policy were issued by my predecessor governments and I am not against the policy at all. I feel they should be encouraged and I have promised to remove any impediments they may be facing."

But the real problem, not being addressed by anyone openly, is the fact that air taxi operators have to make arrangements for all the foreign exchange through NRIs. How can anyone earning in rupees remit instalment or lease payments on aircraft from their earnings in foreign exchange? The result is that few mainstream business houses have chosen to enter the business. Incidentally, UB Air's Dornier was paid for in rupees.

Government helpless. The main grouse of air taxi operators, though, is that they are finding it more difficult to break even, as they earlier anticipated. And this is one area where the government cannot help. Says Union civil aviation secretary A.V. Ganesan, "We will provide all opportunity, but the government will not stand guarantee for the air taxi operator's loans." Adds Scindia, "To be honest, I don't know how bright the figure is for them, but we will give them all encouragement. It is up to them to make it commercially viable."

When Scindia took over last fortnight, his plate was full of decisions waiting to be taken. The fate of Vayudoot, the loss-making feeder airline, had to be decided, the future of Pawan Hans, the public-sector helicopter corporation, had to be charted out, Indian Airlines needed a replacement for its ageing Boeing 737s and Air India was long awaiting a governmental nod for its proposed purchase of four new Boeings. Moreover, his other responsibility of heading the tourism ministry meant Scindia had to decide quickly on how to get foreign visitors and foreign exchange into the country and also set a new pace for the sluggish Indian Tourism Development Corporation (ITDC).

Despite several reports to the contrary, the government's thinking on Vayudoot continues to be against selling it lock, stock and barrel. Says Scindia, "I know it's in a bad shape. We have three options — run it as it is, restrict its operation to routes which are needy, or wind it up. I would personally prefer the second option."

The only reason for this appears to be the political pressure on sustaining lines of communication with the North-East and other such areas. No private air taxi operator is willing to step in there because it is economically unviable, and the government is wary of attracting criticism if Vayudoot suspends the only air link to these places.

Fleet replaced. Meanwhile, Pawan Hans, whose profitability was severely affected by the fleet of malfunctioning Westland choppers, has managed to convince the civil aviation ministry to replace the grounded fleet. The Helicopter Corporation's good performance with its fleet of 14 Dauphins has prompted the Planning Commission to approve the acquisition of 17 more. Says Scindia, "The Westlands, as you know, were giving too many problems, but Pawan Hans has been making money in its Dauphin fleet. It should do better, once it has the new helicopters."

An earlier proposal seeking finance from the Oil & Natural Gas Commission to purchase the new fleet has now been shelved in favour of external commercial borrowing. "I don't like to run to the government for soft credit. If Pawan Hans thinks it can run its business profitably, then it should borrow from the market," adds Scindia.

The minister feels the first thing to do with Air India is to appoint a permanent chairman and managing director. "We should first put a competent man on that chair and then make demands from the airline," he says. But he concedes that with the cut-throat competition among international airlines, Air India needs to quickly improve services and its image on reliability. "Its a major task, but it can be done with a little motivation," he adds hopefully.

If the new economic dispensation has little to offer in terms of any changes in the aviation sector, Scindia is promising to make up in the tourism sector. He has recalled the 1986-vintage Mohammed Yunus report on tourism which recommended a national tourism policy, and has promised to bring out such a paper within three months. The new government has three objectives here — to accelerate the development of infrastructure, to project a positive destination image of India abroad and to cater to the aspirations of the 150-million strong middle class in domestic travel. To achieve all these, the new government has offered much to the private sector. "I want to remove all obstacles on the path of the private entrepreneur in the tourism industry," says Scindia.

■ R.S. VENKATESH

COMMUNICATIONS

This highly visible and media-sensitive ministry is again in the throes of change. But in the last two years, as ministers changed, chairman of the Telecom

Commission, Sam Pitroda, stayed put. Unfazed by the controversies surrounding him, Pitroda strove to keep the telecom sector entirely dependent on the indigenous production of the necessary equipment.

The new minister Rajesh Pilot was known for his efficiency as minister for surface transport in the earlier Congress (I) government. Pilot and Pitroda differ on certain issues such as the entry of multinationals into the sector. While Pitroda would prefer to keep them out and let C-DoT take the leading role, Pilot thinks that India's telecommunication requirements are large enough for everyone to have a share of the cake.

Another major decision the ministry will have to take soon concerns the implementation of the Athreya Committee report. The committee set up by the former communications minister, Sanjay Singh, had favoured the disbanding of DoT and the constitution of the Indian Telecom Operating Corporation reporting to the Telecom Commission. It had also recommended the setting up of four zonal subsidiary corporations — one for each region and one Long Distance Connector Corporation. However, the implementation of the report was postponed as elections were round the corner and it was left to the new government to take a decision on this major issue.

Goals set. In his first press conference, Pilot indicated the direction in which the telecom sector would be moving and set the goals for his ministry. The new minister does have his hands full, if one goes by his line of thinking on the restructuring of the telecom sector. He wants efficiency, consumer awareness and more opening up. Among others, the major decisions that DoT has already taken concern privatisation, pricing policy, capacity utilisation for equipment manufacture, notably large switches, and (apparently) restructuring, though a final cabinet clearance is awaited on the last.

Pilot's 26-point programme is indeed ambitious. It talks of providing 700,000 new lines this year against 464,000 last year. The investment required in toning up all aspects of the telecom services is a mind-boggling Rs.20,000 crore. It is no wonder then that telecom officials are spending sleepless nights. Though Pilot says resources would be generated internally and through public bonds, it seems it would be difficult to do so until the pricing policy is changed.

According to the BICP report on the pricing structure for the telecom sector, cross-subsidisation could be one way to generate increased revenue. For the time being, Pilot has allowed mobile telephones to be made available against foreign exchange payment and is allowing networking by bulk and business subscribers at higher rates. As it is the plan is to ask business subscribers to pay more than residential consumers for telephone facilities.

According to Pilot, private participation is being invited for building and operating networks in "growth centres and satellite towns". Value-added services like E-mail, and video conferencing are also being offered and the 10,000 line C-DoT exchanges will be available for manufacture by the joint/private sector. And, for the first time, the private sector has received large orders to export telephone instruments to the US.

All these are encouraging signs, but the major issue of breaking up DoT still haunts Sanchar Bhawan officials. And while there is little option except opening up to grow, doubts still persist. The sooner a decision is taken in this regard, the earlier the targets can be met. It, therefore, remains in Pilot's hands to make do with what is available. A good beginning would be to meet the target of providing OYT telephone connections in the stipulated period of a year in Delhi and Bombay.

■ RAHUL SHARMA

PETROLEUM

The story of petroleum is one of delayed decision making — more so than other ministries — whether it be the offshore development projects, ONGC's programme to reduce gas flaring, the much delayed bid for the fourth round of exploration blocks' auction or the acceptance of the Bombay High Review Committee to restore the damaged wells. All these projects are behind schedule and petroleum minister B. Shankaranand has promised that he would act with the greatest speed to decide on all these. The ministry is awaiting the announcement of the Industrial Policy Resolution as well as the Union budget, which will also decide the future status of the Oil & Natural Gas Commission.

As in other infrastructure industries, pricing will be a critical issue over which the petroleum ministry is debating. The Congress manifesto had promised to roll kerosene prices back to the level prevailing to June 1990, but finance minister Manmohan Singh is skeptical. Should the government take away the Gulf surcharge following depressed international prices to help industrial and agricultural costs? That will certainly mean demand growth returning to its former level of 8 per cent. This is clearly unacceptable especially since production from Bombay High is slipping. The budget is expected to announce this change.

Now, with production falling at the country's most prolific wells, demand management again occupies centre-stage. An integrated energy policy is crucial now — an idea which the government woke up to during the Gulf War. An inefficient power and transport sector reflects on demand for petroleum products which is expensive considering our dependence on imports. Until now, there has been little effort to evolve any such co-ordination.

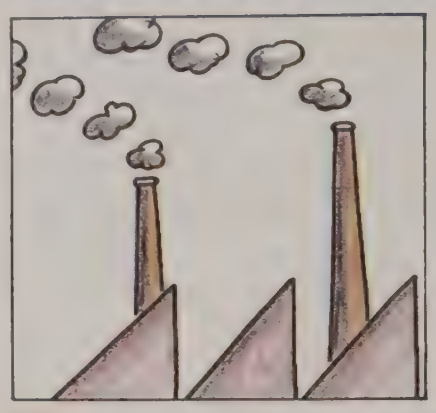
For many years, a helpless government had watched the demand for petroleum products grow at an alarming 7 per cent each year overall (13 per cent for diesel and kerosene). The sizable Bombay High discovery in the mid-seventies had brought with it a careless acceleration of consumption. It was never seriously believed that climbing prices would discourage demand significantly. That perception has changed with the 25 per cent Gulf charge added to the price of petroleum products. Growth in demand has slowed to barely 1 per cent. That may not affect the bill for petroleum imports significantly, but it, nevertheless, is a heartening development for the nation's energy profile.

Main issue. The declining performance of Bombay High in the country will be at the top of the agenda that petroleum minister B. Shankaranand needs to decide on. He promised a quick decision on it last fortnight. The deadline set for ONGC's programme to restore the health of the Bombay High wells was 1 July — to decide from among a series of options that will mean different quantum of

production cut backs and different time frames. A decision on this issue is yet to be taken by the Cabinet committee on economic affairs.

In all likelihood, foreign help in terms of expertise and money will be necessary to implement the project, which necessitates international tendering. ONGC estimates its losses of crude during this period of restoration to touch 13.4 million tonnes (mt) while certain international companies expect it to reach 150 mt. Accordingly, ONGC has reduced its target for 1991-92 from 34.14 mt to 27.1 mt.

Some changes will necessarily be forthcoming within the exploration industry in the country. Since the sixties, two oil exploring companies, ONGC and Oil India Ltd, have held a monopoly over exploration. It is now time, perhaps, for the oil industry to follow steel and cement among infrastructure industries towards deregulation and competitiveness. ONGC itself is pushing towards greater autonomy, which it feels, will improve efficiency. With an average time of 11 months for project clearance by the government, exploration delays are enormous which the economy can not afford now.



Wants a change. ONGC desires a change in status to a corporation; some disinvestment is being toyed with too. There is a likelihood that the commission may shed some of its functions to reduce size. ONGC will like nothing better than the freedom to raise its resources directly from the market in India and overseas. It is prepared to support the gas flaring programme (first proposed in 1984 that delayed over six years by the government) as well as a country-wide gas grid in collaboration with the private sector. Rather than the quantum of investment (in any case ONGC has its budget slashed by Rs.1,700 crore) in the petroleum sector, it's delays in decision making that the government must avoid.

Otherwise, 73 drilling and exploring blocks will be offered to international oil companies through international tendering on the fourth round of bids. As many as 58 of these blocks are offshore. The onshore blocks are likely to see Indian private companies enter drilling for the first time. Several onshore blocks are also expected to go to overseas oil companies.

Addition to refining capacity is another necessity. Decision on several expansion projects and the three greenfield refineries at Karnal, Mangalore and Assam is awaited. The private sector is keen to participate in two of them, Aditya Birla at Mangalore and Tata Chemicals at Karnal. For the moment, Indian Oil is likely to set up Karnal by itself. Resource constraint, the one problem that the rest of the economy is straddled with, the petroleum sector does not face. It has, within itself, some of the economy's largest profit makers.

■ ARIF SHARIF

TEXTILES

Privatisation is the new buzzword in many ministries in the capital but this is not true of the ministry of textiles. This does not mean that the ministry wishes to formulate its own policies which would run counter to that of all other ministries. Rather, privatisation in the context of textiles means, selling off the sick mills of the National Textile Corporation (NTC), for which there will be no buyers. Says minister of state for textiles (with independent charge), Ashok Gehlot, "What can I do, half the mills of the NTC have come from the private sector and some of them are just being run by the NTC. They have not been taken over. However, we have to take a decision sooner or later. In three months time we will do something."

Central to the question of privatisation — or possible closure of the loss-making NTC mills, will be the question of dealing with surplus labour. And even private sector millowners would confess this is not an easy issue to resolve. In the last few years many millowners have wanted to close down their mills only to be thwarted by the state governments whose concurrence is required for winding up.

But Gehlot is hopeful. Says he, "We are drawing up a scheme which takes the state governments into confidence. A trust will be set up to take care of the rehabilitation of labour displaced. An experiment is being started in Gujarat with the state government taking the lead." Perhaps with the announcement of the new industrial policy which is expected to clarify the government's stand on "exit" of industries, things would be easy for the new textiles minister, who is a former youth Congress leader from Rajasthan.

Recommendations. Privatisation apart, the ministry proposes to revise the textile policy in light of the recommendations of the Abid Hussain Committee which was set up to review the working of the textile policy of 1985. Says Gehlot, "The report was submitted early last year but it was gathering dust for so long. Now we want to act on it. Within three months we will introduce a revised policy." However, it seems that the new policy which is likely to be announced may not mean a drastic revision. For it is the opinion of the minister that, "The policy of 1985 was fine, only there have been problems in its implementation. The basic structure of the policy would remain the same."

One of the things that is high on the new minister's agenda is to include the order reserving items for the handloom sector in the ninth schedule of the Constitution. This would make it "non-justifiable" ie, the order cannot be questioned in a court of law. This move was actually initiated by the Janata Dal government when millowners all over the country had obtained a stay in the courts for the order. But nothing was implemented by the JD government.

Generally, the mood in the textile industry is upbeat, not because of the new trade policy but, because of the speculation that devaluation of the rupee will give a boost to textile exports. Says Gehlot, "We are trying to formulate a new thrust for exports. The new policy that will be announced will come in the way of exports. In view of the foreign exchange crunch I have made it known that all future contracts for exports should be made only in hard currencies."

Gehlot will also have to resolve the sensitive issue of cotton exports while insufficient stocks are available in the country. The new minister, dismisses the problem however, with a "political decisions created the problems," but in resolving the issue he is going to find the going tough as he will have to contend with a strong agriculture minister, Balram Jakhar, the representative of the farm lobby.

For all purposes, Gehlot is trying to refurbish the image of his ministry, till now perceived as being not so dynamic. That will be more in keeping with the projected image of the new government — one that works at breakneck speed.

■ KINGSHUK NAG

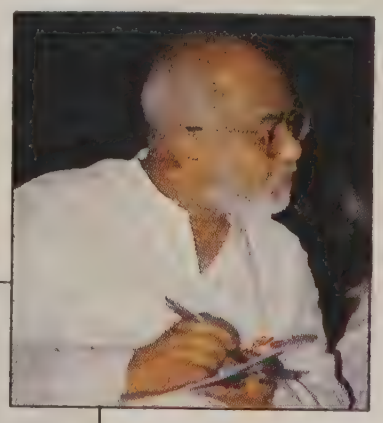
RAIL BUDGET

An opportunity lost

When your options are limited, you can only do the obvious. Railway minister C.K. Jaffer Sharief did just that last week when disclosing his estimates of railway revenue and expenditure for 1991-92. When his predecessor Janeshwar Mishra presented the interim budget in March, he had left a deficit of Rs.512 crore uncovered, with a statement that this would be "made up for" later — a euphemism for impending hikes in tariffs.

Jaffer Sharief has fulfilled that promise. By increasing freight and passenger rates, he has acquired an additional Rs.584 crore which adequately bridges the gap that Mishra had left uncovered. Otherwise the minister's proposals comprise cosmetic changes to the earlier truncated budget, and have little in terms of any serious change in policy. As one opposition MP said, "It is such a bland budget that we can neither praise it nor criticise it."

A goods train and (inset) *Jaffer Sharief: lack of direction*



Obsolete locos

The Seventh Plan period (1985-90) created records in freight and passenger receipts but at the cost of flogging existing locos and coaches on existing tracks. In fact, the backlog of old coaches which needed to be phased out was so high that the entire Plan could effectively increase the number of coaches by just 167. And yet, more than 6,000 coaches, of a total of 28,000, still need to replaced. Similarly in locomotives, the railways is still short of 1,000 electric and diesel locos, which means that a 1,000 obsolete steam engines continue to be run at the cost of efficiency.

So Jaffer Sharief had his priorities laid out for him. What the railways needed was a massive dose of capacity generation through accelerated acquisition of rolling stock (locos, wagons and coaches), laying new lines and electrification of new routes. This would, of course, have entailed substantial investment, which could come only from the passenger sector (which is subsidised heavily, especially second class travel). The minister, however, has chosen the softer option of a mild hike in fares, combined with the bare minimal addition to rolling stock.

Railway Board officials point out that there was little else that the new government could do. Against the original Eighth Plan estimate of Rs.41,600 crore, the railways reduced its demand to Rs.36,500 crore, in view of the country's resource constraint. But the Planning Commission has said it will accede to only between Rs.28,000 and Rs.30,000 crore. Thus, for 1991-92, the railway plan outlay has been pegged at Rs.5,325 crore. In real terms, this would be about the same or even less than the previous year's outlay of Rs.5,000 crore. "There is only so much you can do with so little," says one railway official.

Jaffer Sharief has attracted criticism for having lost an opportunity to take a bold step in tune with the new economic dispensation of the Narasimha Rao government. Most of the railway's rolling stock comes from the public sector, and demands to allow the private sector to participate in this segment have been ignored. The minister's only announcement of privatising the catering services is viewed as a rather feeble attempt in the face of the opportunity lost.

This lack of direction in the railway budget proposals can prove more detrimental because it comes at a time of crucial importance to the nation's economy. With a serious balance of payments position hanging over the country, and, importantly, with the government's other ministries doing their best to encourage a speedy rate of economic growth, much will hinge on how well the railways can perform in transporting coal, steel, fertiliser, cement, petroleum products and other infrastructural items.

Threshold levels reached

In the Seventh Plan, rolling stock additions went up by just 1.1 per cent at a time when the average rate of economic growth was 5.4 per cent. In fact, the railways carried 5 per cent more freight during the period despite a depletion in wagon strength by 4.3 per cent. This was possible because of improvements in productivity — by reducing the time run and increasing traffic on lines. But the railway's Eighth Plan document itself concedes that the system's threshold levels have been reached and that the need of the hour was a massive increase in capacity generation.

With this background, the important question is whether the existing railway infrastructure can endure an economic growth rate of 5.5 per cent as targeted by the Planning Commission. In 1990-91, the railways carried 318 million tonnes (mt) of freight, and the target for this year is 335 mt, which Jaffer Sharief admits is a "stiff one". With a never-ending demand for more and more passenger services (where the railway makes no profit), the minister will have to play a difficult balancing act to see this difficult year through.

■ R.S. VENKATESH

INTEREST RATES

Turbulent times

With the entire economy in a state of flux, and greater liberalisation seemingly inevitable, higher interest rates too seem inescapable. Although there are different views on how long the financial crunch and the high interest rates will last, one thing seems clear — they will bring about structural changes in the financing patterns of companies.

The financial markets have been volatile for some time now. What, till late last year, was considered a very high rate, has now come to be accepted as 'normal'. The rates in the call-money market, for instance — the barometer of liquidity in the financial markets — have risen from an average 8 to 10 per cent last year to an average of 20 to 25 per cent now. In May, several banks raised lending rates using different benchmarks. ANZ Grindlays and Standard Chartered pegged their rates to the call-money market rate. Some nationalised banks — Bank of Baroda for one — linked it to the Reserve Bank of India's discretionary refinance rate. Other banks simply use their cost of funds as the yardstick for across-the-board or selective increases.

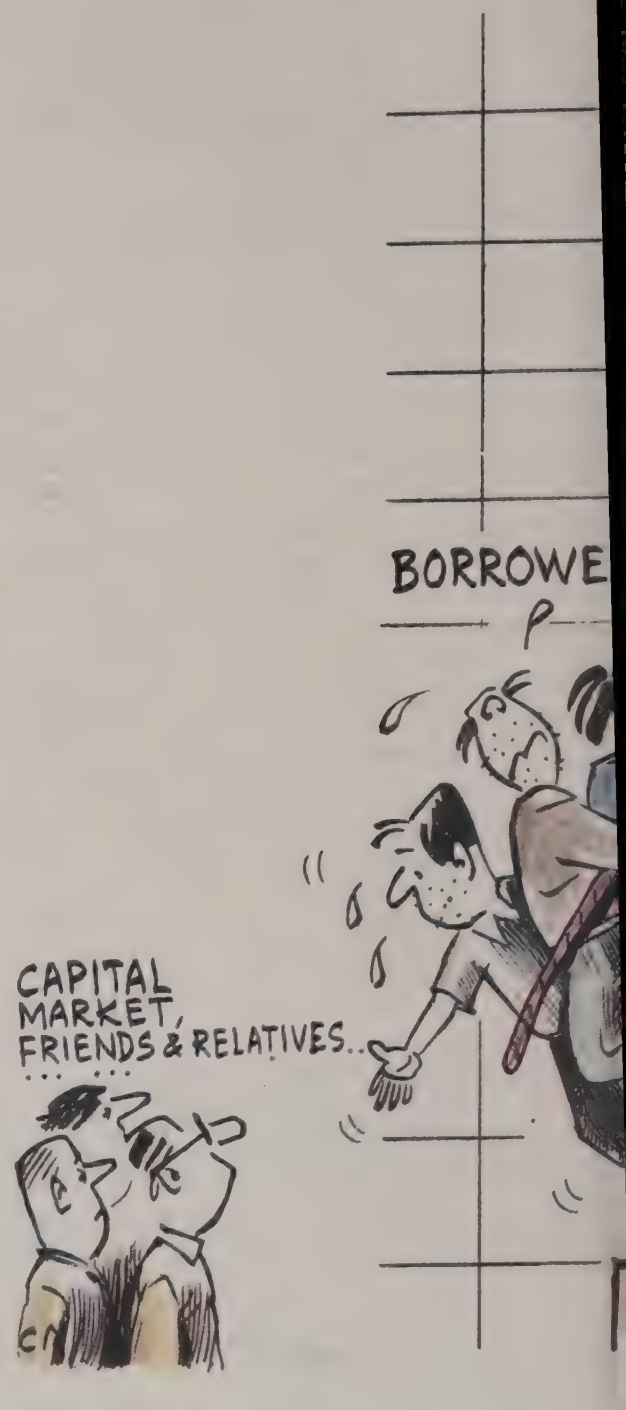
This means that bank finance previously available at around 17 per cent, now costs anywhere from 20 to 30 per cent. As if to recognise this rise, the RBI itself raised the minimum lending rates from 16.5 to 18.5 per cent on 3 July, as part of its tighter credit policy.

Shortage of funds

Financial institutions (FIs) that provide long-term finance to companies are also facing a shortage of funds. However, unlike banks which raise funds directly from savers at RBI fixed rates, FIs have no control over the cost of funds and as this cost keeps increasing, they cannot keep their lending rates low. Their plea for the floor rate to be raised from 14 per cent has been pending government clearance since January this year.

Finance companies, the next layer of the financial markets, have also been affected. As they depend on bank finance for their funds, their rates move with the bank lending rates. Lease rentals have moved up from Rs.22 per 1,000 to Rs.28 per 1,000 and bill rediscounting rates from 24 to 28 per cent. Consumer finance on the other hand, has taken the back seat. By raising the rates sky high banks and finance companies are, in effect, discouraging consumers from borrowing. The rates even touched 38 per cent at one point of time and have now stabilised at around 27 per cent. Rates of commercial paper and certificates of deposits have not remained far behind — both having gone up from the earlier 12 to 13 per cent to 16 to 17 per cent.

Observers, including some in the RBI, believe that these high rates are temporary and the rates will come back to earlier levels (pre-August 1990) as soon as the country's economy stabilises.

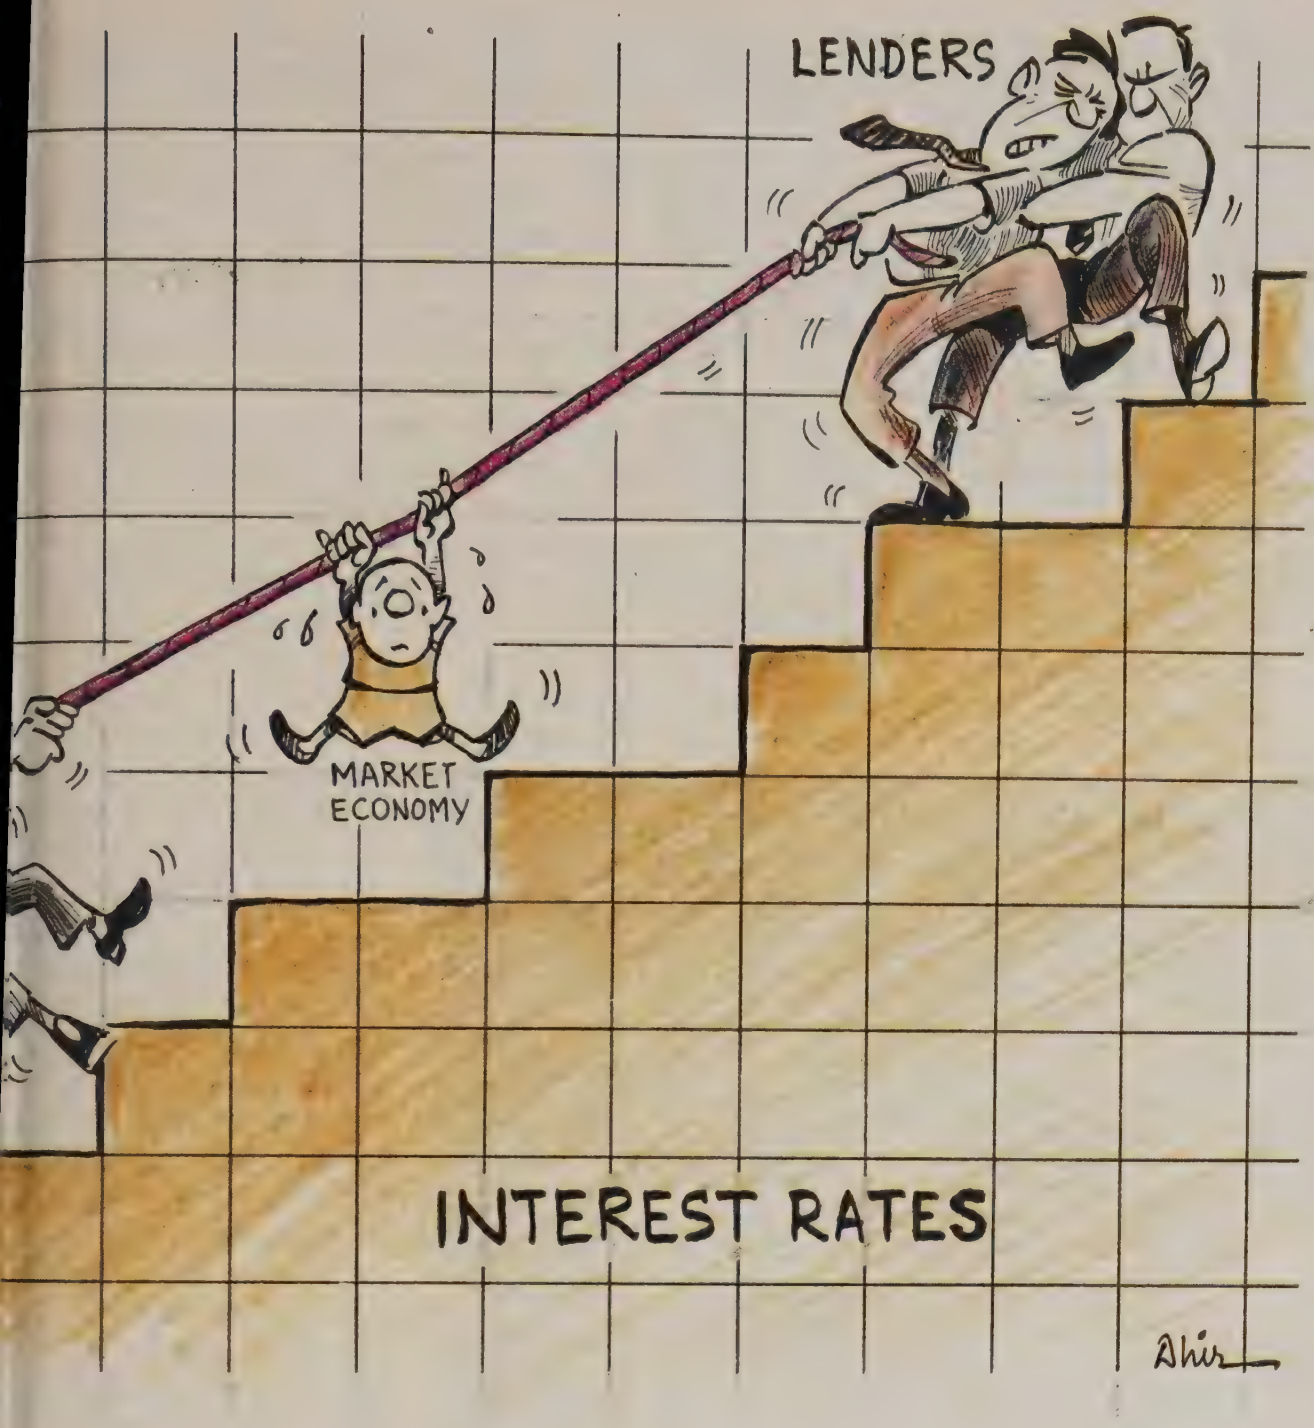


Says N. Vaghul, chairman and managing director, Industrial Credit and Investment Corporation of India (ICICI), "We can't afford such high rates." But what can be done about them? Banks can't do much because they are bound by RBI diktats, and FIs can't do much either because their cost of funds is market determined. Some banks and FIs which want to hold rates down are compelled to let go by others who don't. If they insist on not following the high rate trend, they have to borrow their funds at a higher rate from the markets.

As the rates zoom, the RBI sits back and smiles. "We have done our job." For decades, the RBI has followed a tight monetary policy to control inflation. High lending rates to discourage borrowings and high deposit rates to encourage savings. In other words, a fall in demand will lead to a fall in the inflation rate.

Harsh implications

In reality, the equation is not so simple. As a senior banker explains, "The rate increase may not translate into shut-downs as long as the costs can be passed on to the customer. And this becomes possible because in our economy demand surplus and monopolistic competition exists." The implication: higher prices.



Such a policy can also spell a long stagnation period for the industry if it does not watch out. The corporate sector understands this threat too well. Funds managers in companies have already started looking at ways of raising money other than through the formal banking channel. Of course, efficiently managed companies and cash-rich companies are in a fairly comfortable position. As Anand

Raathi, senior president, Indian Rayon and Industries Ltd, says, "Our liquidity is good, so we haven't really had any problems." Anil Singhvi, senior finance manager, Gujarat Ambuja Cements Ltd, is also quite confident. "In fact, we are still cash flush." But these companies may be exceptions.

As the pool of lendable money shrinks and banks and other lenders — including the informal sector — become more choosy and stingy, it will be the smaller companies which will face the shortage of working capital funds. Gujarat Ambuja, for instance, has stopped lending to smaller companies because of the uncertainty of repayments.

Delaying payments and expediting receivables, often euphemistically termed 'improving funds flow' by the corporate funds managers, is just one way of getting short-term funds. The fallout of this, though, is positive. Most bankers agree that companies are looking inwards to improve their fund flow before looking

outwards for funds. Factoring, the new finance activity, for instance, is picking up suddenly. SBI Factoring and Commercial Services has already made business deals with six clients. The earlier scepticism of someone else collecting the bills has been given the go-by. Small-scale units, on the other hand, are looking to friends and relatives, to bridge the short-term gap.

Now that the prospect of interest rates returning to previous lower levels (pre-August 1990) hardly seems feasible, companies have started looking at long-term sources of finance too. Many of the blue chips, for instance, are considering accessing the capital markets. Says N. Sriram, general manager, SBI Mutual Fund, "There is a marginal shift as companies look towards non-convertible debentures for long-term working capital requirements and project finance." Agrees Anand Mahindra, vice-chairman, Mahindra Ugine Steel Company, "We are considering non convertible debentures with private placements as one of the sources of raising fresh funds."

Rights issues are another attractive avenue, although there haven't been many issues recently. Says A.S. Thiyagarajan, Citibank's head of investment banking, "Companies are waiting for the budget and other changes to be announced before deciding on the capital market way." Raathi of Indian Rayon feels that it would require a change in dividend-tax policy to make the capital market even more attractive. And, as an analyst points out, better capitalisation should do much good to our companies which are grossly undercapitalised, compared to the international markets.

Besides, the capital market option still offers funds at 14 per cent. Add the cost of an issue to this and the rate would be about 17 or 18 per cent, at least 2 per cent lower than the commercial lending rate. There are other advantages, such as no servicing liability from day one or increased debt raising capacity (as once the equity base goes up, the debt raising capacity too rises). Even if the debenture rates go up, companies will manage to raise money directly from the savers at a rate lower than bank finance, opine many.

In any case, the consensus is that companies — large, small, or medium — will have to be efficient to survive. If they can't, Rajendra Tamaskar, chief executive, Apple Industries' financial division, even foresees smaller companies possibly opting for amalgamations and tie-ups.

The efficiency rule applies to the financiers too. As the blue chip accounts threaten to move away from the banking sector, banks will have to reassess their position. "With growing financial disintermediation in the last few years, the role of banks in the lender-borrower relationship has reduced in importance. The present situation has only aggravated this. Banks will now have to turn to financial services rather than merely providing finances to companies," says K. Kannan, general manager, Bank of Baroda.

Need for realignment

Clearly, considerable realignment needs to take place on the interest rates front. Except for bank finance, other avenues have market-determined rates. Deposit rates also are still controlled, as are the lending rates applicable to the preferred sections (the priority sector) of the economy. So far as such preferential treatment is necessary, lending rates will never be completely freed.

Everyone seems to agree that high interest rates are here to stay. The fact that after almost a decade, the central bank has once again raised the bank rate from 10 to 11 per cent — the last time it was raised in 1981 from 9 to 10 per cent was also done in similar circumstances — bears testimony to this. Though the term deposit rates were also raised by 1 per cent simultaneously, compared to the inflation rate of 11.5 per cent and the high returns that banks get, the depositor still gets a raw deal.

Imbalances between the various interest rates in the market may also be expected. According to knowledgeable sources it will be at least six months to a year before interest rates stabilise in a way that even the depositors' interest is taken good care of. And as we move nearer a market economy, temporary imbalances will have to be tolerated and inefficiencies sacrificed, and all for a better tomorrow.

INFRASTRUCTURE INDUSTRIES

A worrying situation

Inadequate investment during the Seventh Plan period and long gestation, coupled with labour problems, have led to a Catch-22 situation

The times they may be a-changing. But around several ministries in New Delhi, among them power, coal, steel, transport and railways, the changes have left bureaucrats worried. Alterations to regulations governing Indian industry over the previous fortnight have been admittedly brave. But a rapidly expanding industry can be expected to strain the economy's fragile infrastructure further.

There is growing concern that the enterprise released by the liberalisation process will be nullified by unavailable inputs from power, steel, coal and the railways. The pressure is evident from the fact that the government has had to call weekly meetings at the cabinet secretariat, since a year now, of the secretaries of all infrastructure ministries. The object: to achieve better co-ordination. Dislocation in a single service travels like a wave across all industries.

Power shortages stall mining operations; lower coal output affects power generation in turn, as well as production at the steel plants; and insufficient rakes and railway wagons mean lower coal being transported to the consuming industries such as paper, rayon and fertiliser manufacturers. Infrastructure shortfall was placed at 7.8 per cent in fiscal 1990-91. And this, after the infrastructure sector grew at a reasonably healthy 6 per cent over the eighties and manufacturing industry at 8.7 per cent. "If industrial growth accelerates, we need to push additions to infrastructure capacity to at least 10 per cent," says an analyst

Unrealistic power tariffs prevent the sector from being self-sufficient

Caught unprepared

What makes the situation worse is that capacities cannot be added rapidly enough in these industries. As a member of the railway board in New Delhi said, "The gestation for the railways to improve freight capacity as also the speed of delivery is almost ten years. And nobody in the last decade visualised the rate at which demand would accelerate. We had no notice of the coming liberalisation."

Said a senior official of the government who attends the weekly cabinet secretariat meeting: "I shudder to think what will happen. Even now things are so bad. I will give you an example. Singareni Coalfields in Andhra Pradesh has a targeted production of 25 million tonnes per annum (tpa) but has managed only 17 in each of the last three years. As a result, all the southern power generating plants have been starved of coal resulting in serious losses in power generation. To correct this situation it was decided to send coal from the mines of the western coalfields. This, however, affected the power plants of the western region. Moreover, precious railway freight capacity was used to transport coal to the south. This meant that some other goods could not be transported. It is really a Catch-22 situation."

There is not much hope the situation can improve very soon, in fact, it might get worse. Across the industries of the core sector, most notably power generation, the mother of all the infrastructure industries there has been inadequate investment during the Seventh Plan. Similarly in railways and steel and to a lesser extent in coal and cement.

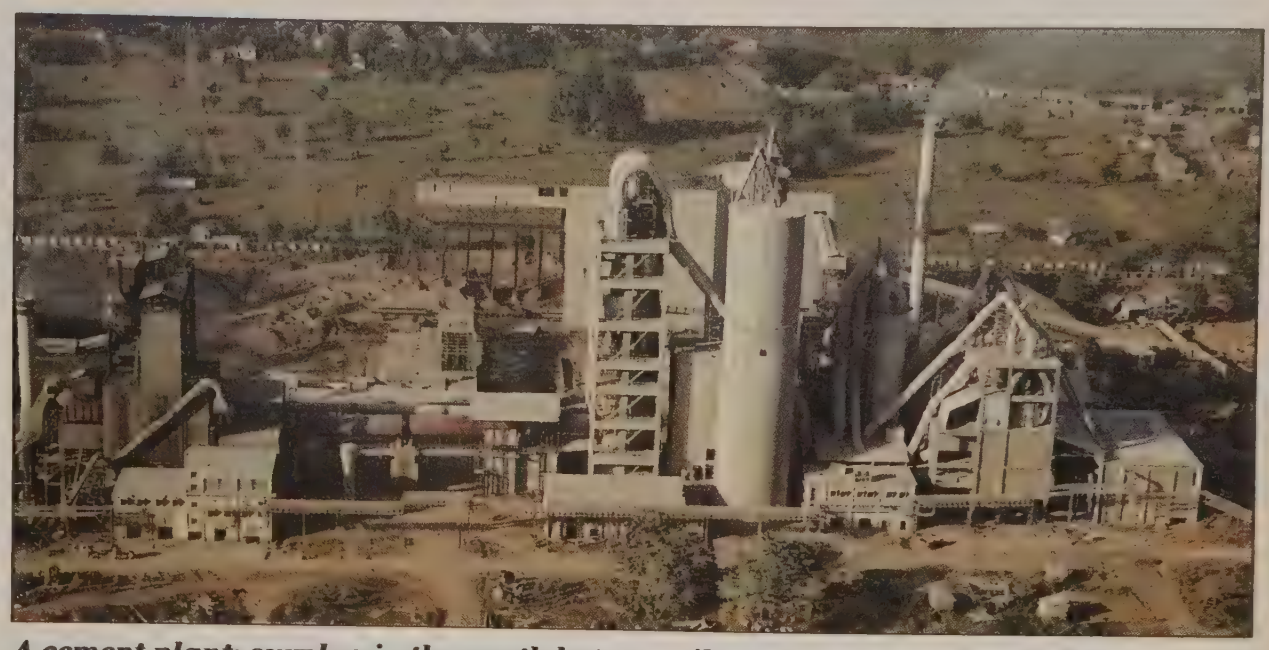
To cap it, is the problem of the long gestation associated with most of these industries. This implies that the economy already facing resource constraints, will increasingly be pressured to devote more to these industries as demand for their products accelerates. Add to this the staggering demand for grants from these sectors. Power generation alone will need Rs.115,000 crore to add 38,000 mw of generating capacity. This figure is based on estimates made prior to the recent devaluation of the rupee. (Devaluation that can now be expected to add up to 20 per cent to costs across all industries.)

So long as the infrastructure remains deficient, the railways, although officially only a transporter of goods will continue to be a 'marketer' of goods. Under a policy called 'route rationalisation' the railways decide which goods to carry and where. Cement manufacturers know this only too well. There is surplus cement capacity in south India but the railways are ruining their markets under the pretext of a shortage of railway wagons. They refuse to transport their cement to the north where there is excess demand. 'What can we do? We do not have wagons," says B.B. Srivastava, advisor (transportation) railway board. But all the same the fact that the railways are effective marketers and continue to do so is counter to the spirit of liberalisation and free market competition.

India has installed 61,000 mw of generating capacity over the 43 years since independence. In the next five years the country needs to add another two-thirds to this capacity. The railways demanded Rs.42,500 crore — a little over 13 per cent of the country's GDP each year — for their needs over the Eighth Plan, but were allowed only half that figure. The integrated steel plants of the Steel Authority of India Ltd need close to Rs.13,000 crore to modernise the plant, long reaching

bsolescence owing to neglect. Finally, oal production has wilted under the train of disruptive labour relations.

"The only way the government can come lose to fulfilling any of these targets is by withdrawing entirely from all other sectors and restricting itself to these five industries," says T.K. Bhaumik, assistant secretary general of the PHD Chamber of Commerce and Industry. As only one per cent of agriculture is within the private sector, according to Bhaumik, it makes the case for withdrawal from agriculture fairly strong. For the moment, though, this step may be difficult as government investment as well as its commitment to agriculture remains strong.



"Nevertheless," says V. Sriram, economic adviser to the Associated Chambers of Commerce and Industry, "there is a strong case for the government to restrict itself to infrastructure and withdraw entirely from other areas progressively, at least over a period of three years." Central to all these industries is the issue of pricing that will allow all these industries to earn adequate returns on capital invested — power, steel and the railways all suffer from poor administered pricing and low efficiencies. And it is these two areas of pricing and efficiency that ought to demand the government's earnest attention.

Electricity badly priced

Nowhere is the problem of pricing and efficiency better illustrated than in the condition of the state electricity boards (SEBs). Unremunerative pricing of electricity to the agriculture sector has severely affected the viability of the state electricity generating agencies. Power is supplied to agriculture at almost a fifth of the cost of generation and the corresponding subsidy always promised to the SEBs by the state government is never made up through the state budget.

Inadequate revenue of SEBs has meant that Rs.1,500 crore of coal bills to Coal India Ltd have not been honoured. Another Rs.400 crore is owed to the railways for coal movements. The foremost task, then, of the department of power is to insist that state governments compensate SEBs for the subsidy awarded to the agriculture sector.

In fact, with the existing unrealistic tariffs, the entire power sector is rendered unself-sustaining. "The problem is compounded with the increasing dependence of agriculture on power for irrigation. Agriculture used two to three per cent of power in 1965-66; this progressed to 15 per cent in 1989-90," says Bhaumik of PHDCCI. The situation is aggravated by the enormous leakages from the supplies to agriculture and from thefts during transmission. Transmission losses alone account for about 20 per cent of the power generated. Besides, the average plant load factor of the generating plants is barely 52 per cent. Improving PLF itself will add substantially to power generation.

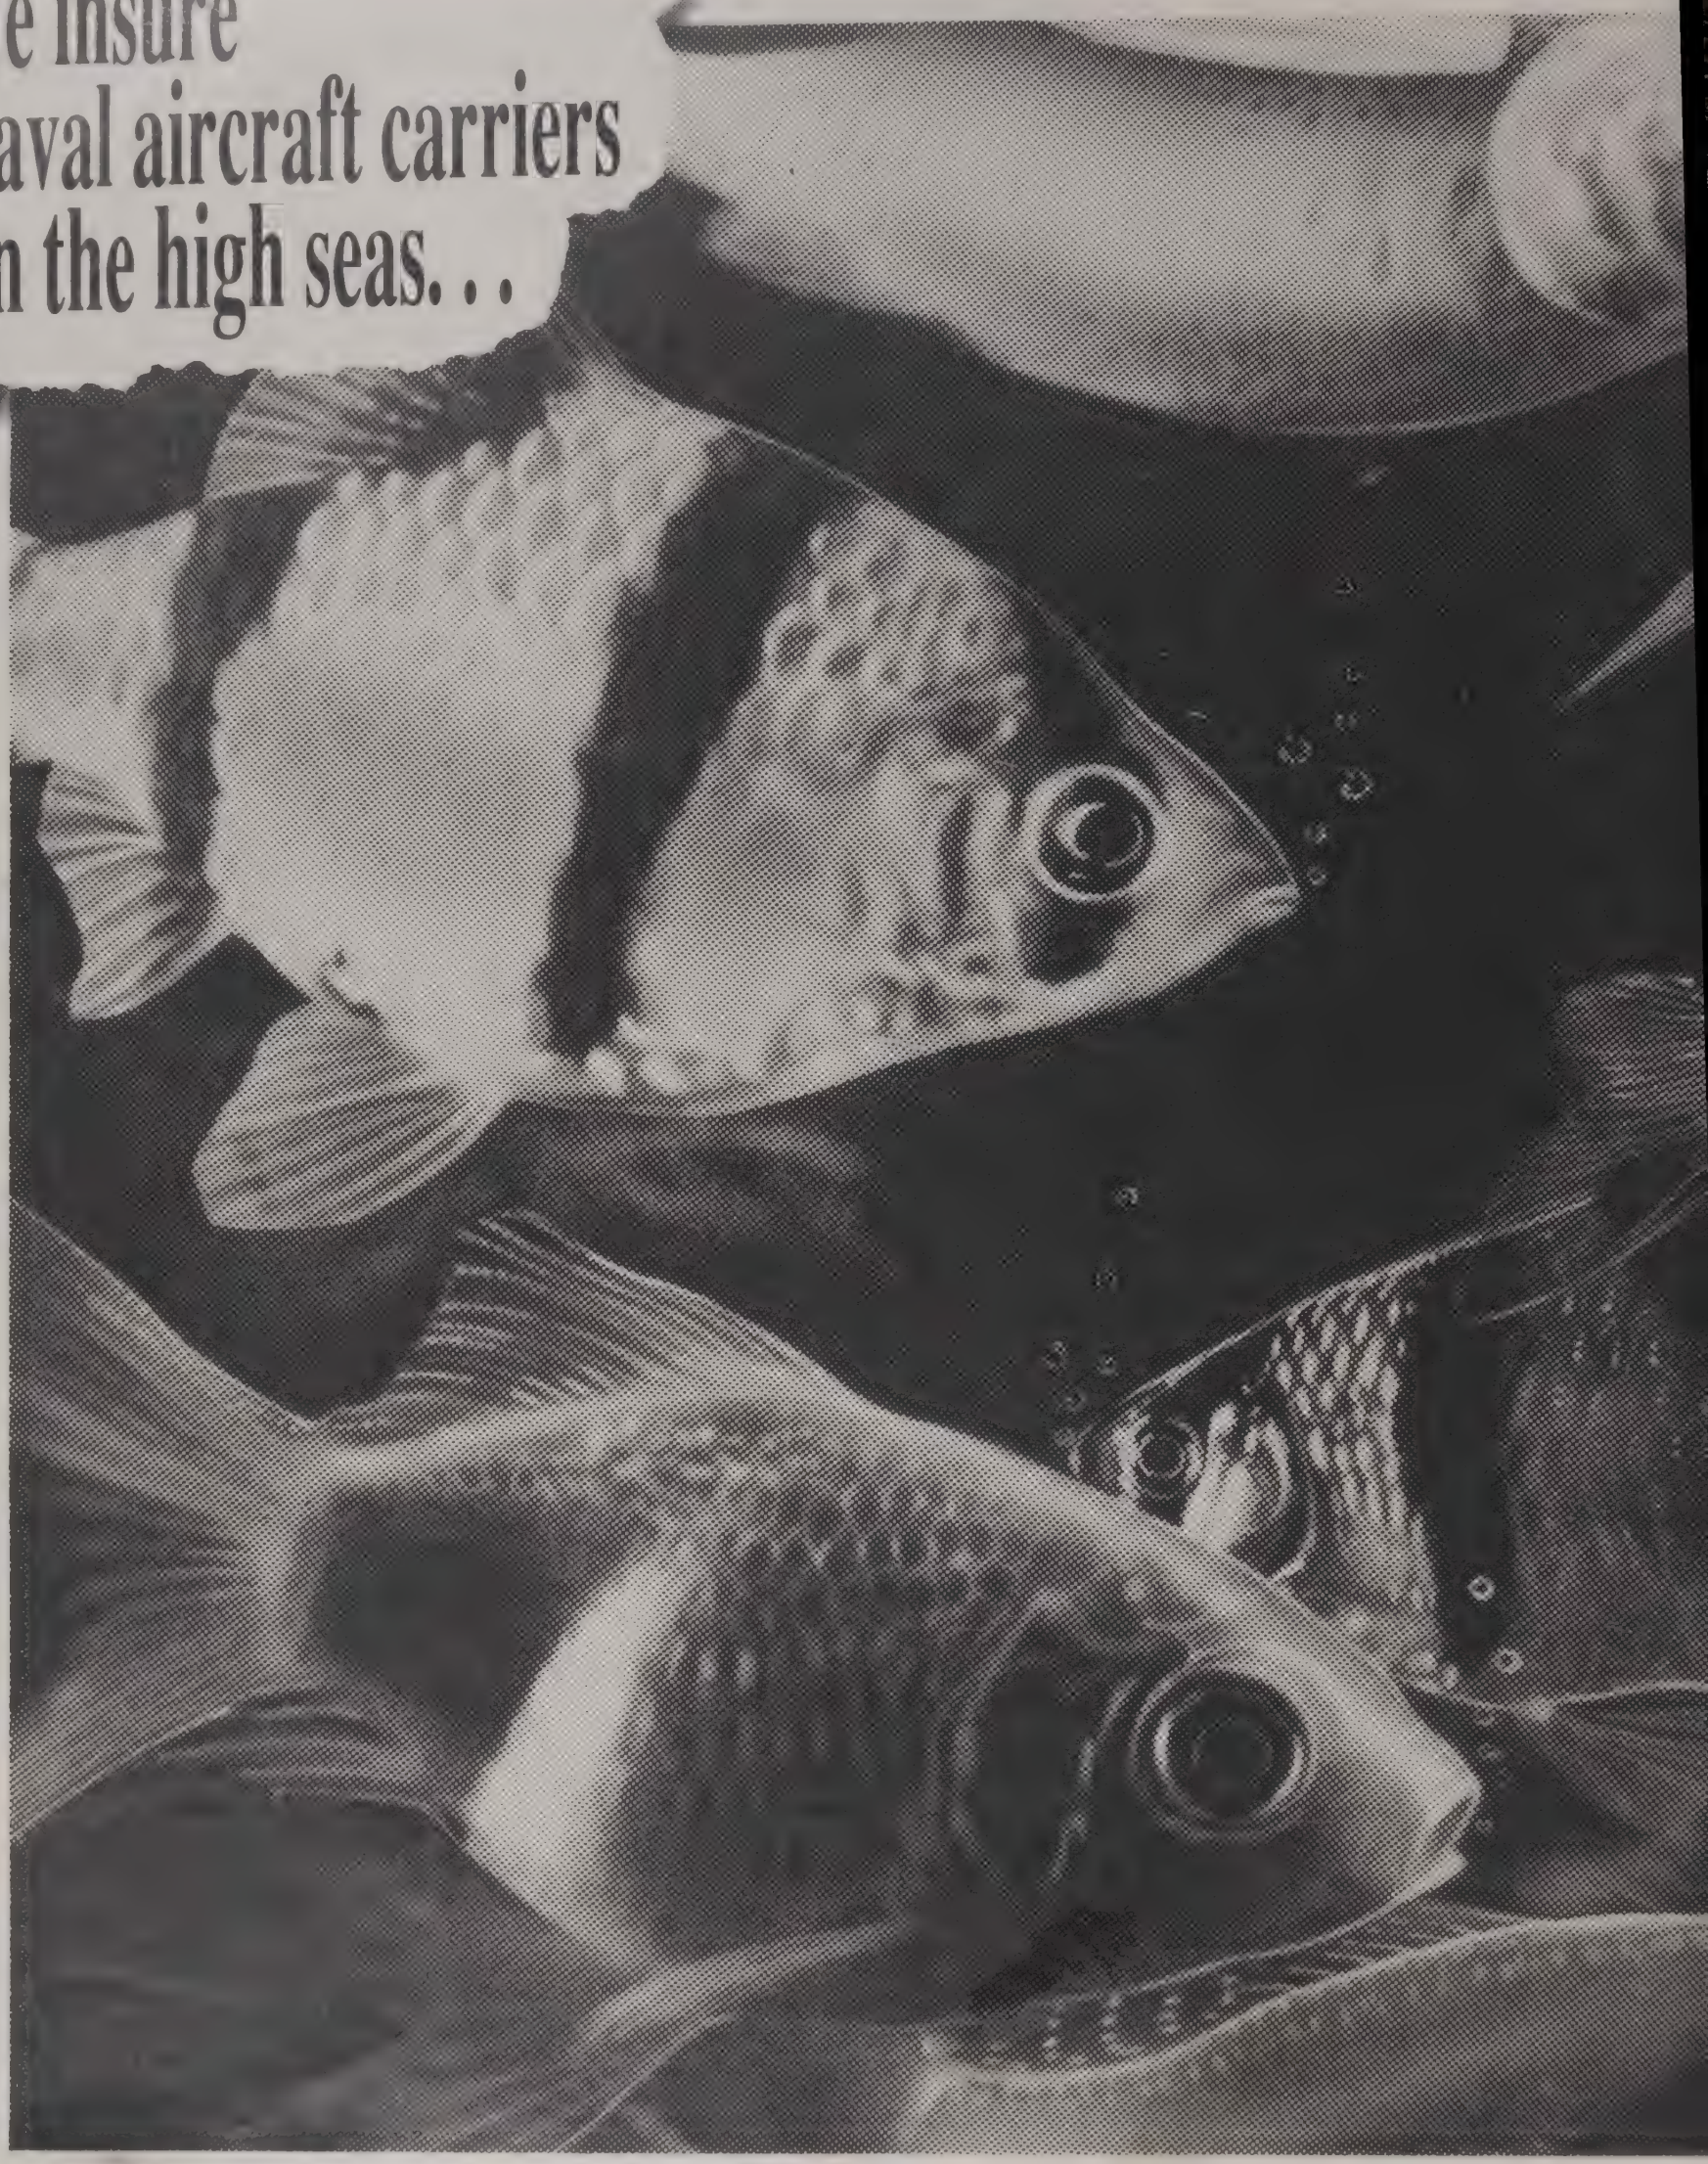
A cement plant: surplus in the south but no railway wagons to transport it

Lower efficiency, to some extent, is contributed by the lower coal availability at some of the power plants. NTPC's Ramagundam plant is producing at half its installed capacity of 2100 mw. Other plants, Vijayawada in Andhra Pradesh and Kota in Rajasthan, too suffer from the same disability. All the power stations linked to the Singareni, Western and Central coalfields possess barely one or two day's stock of coal each.

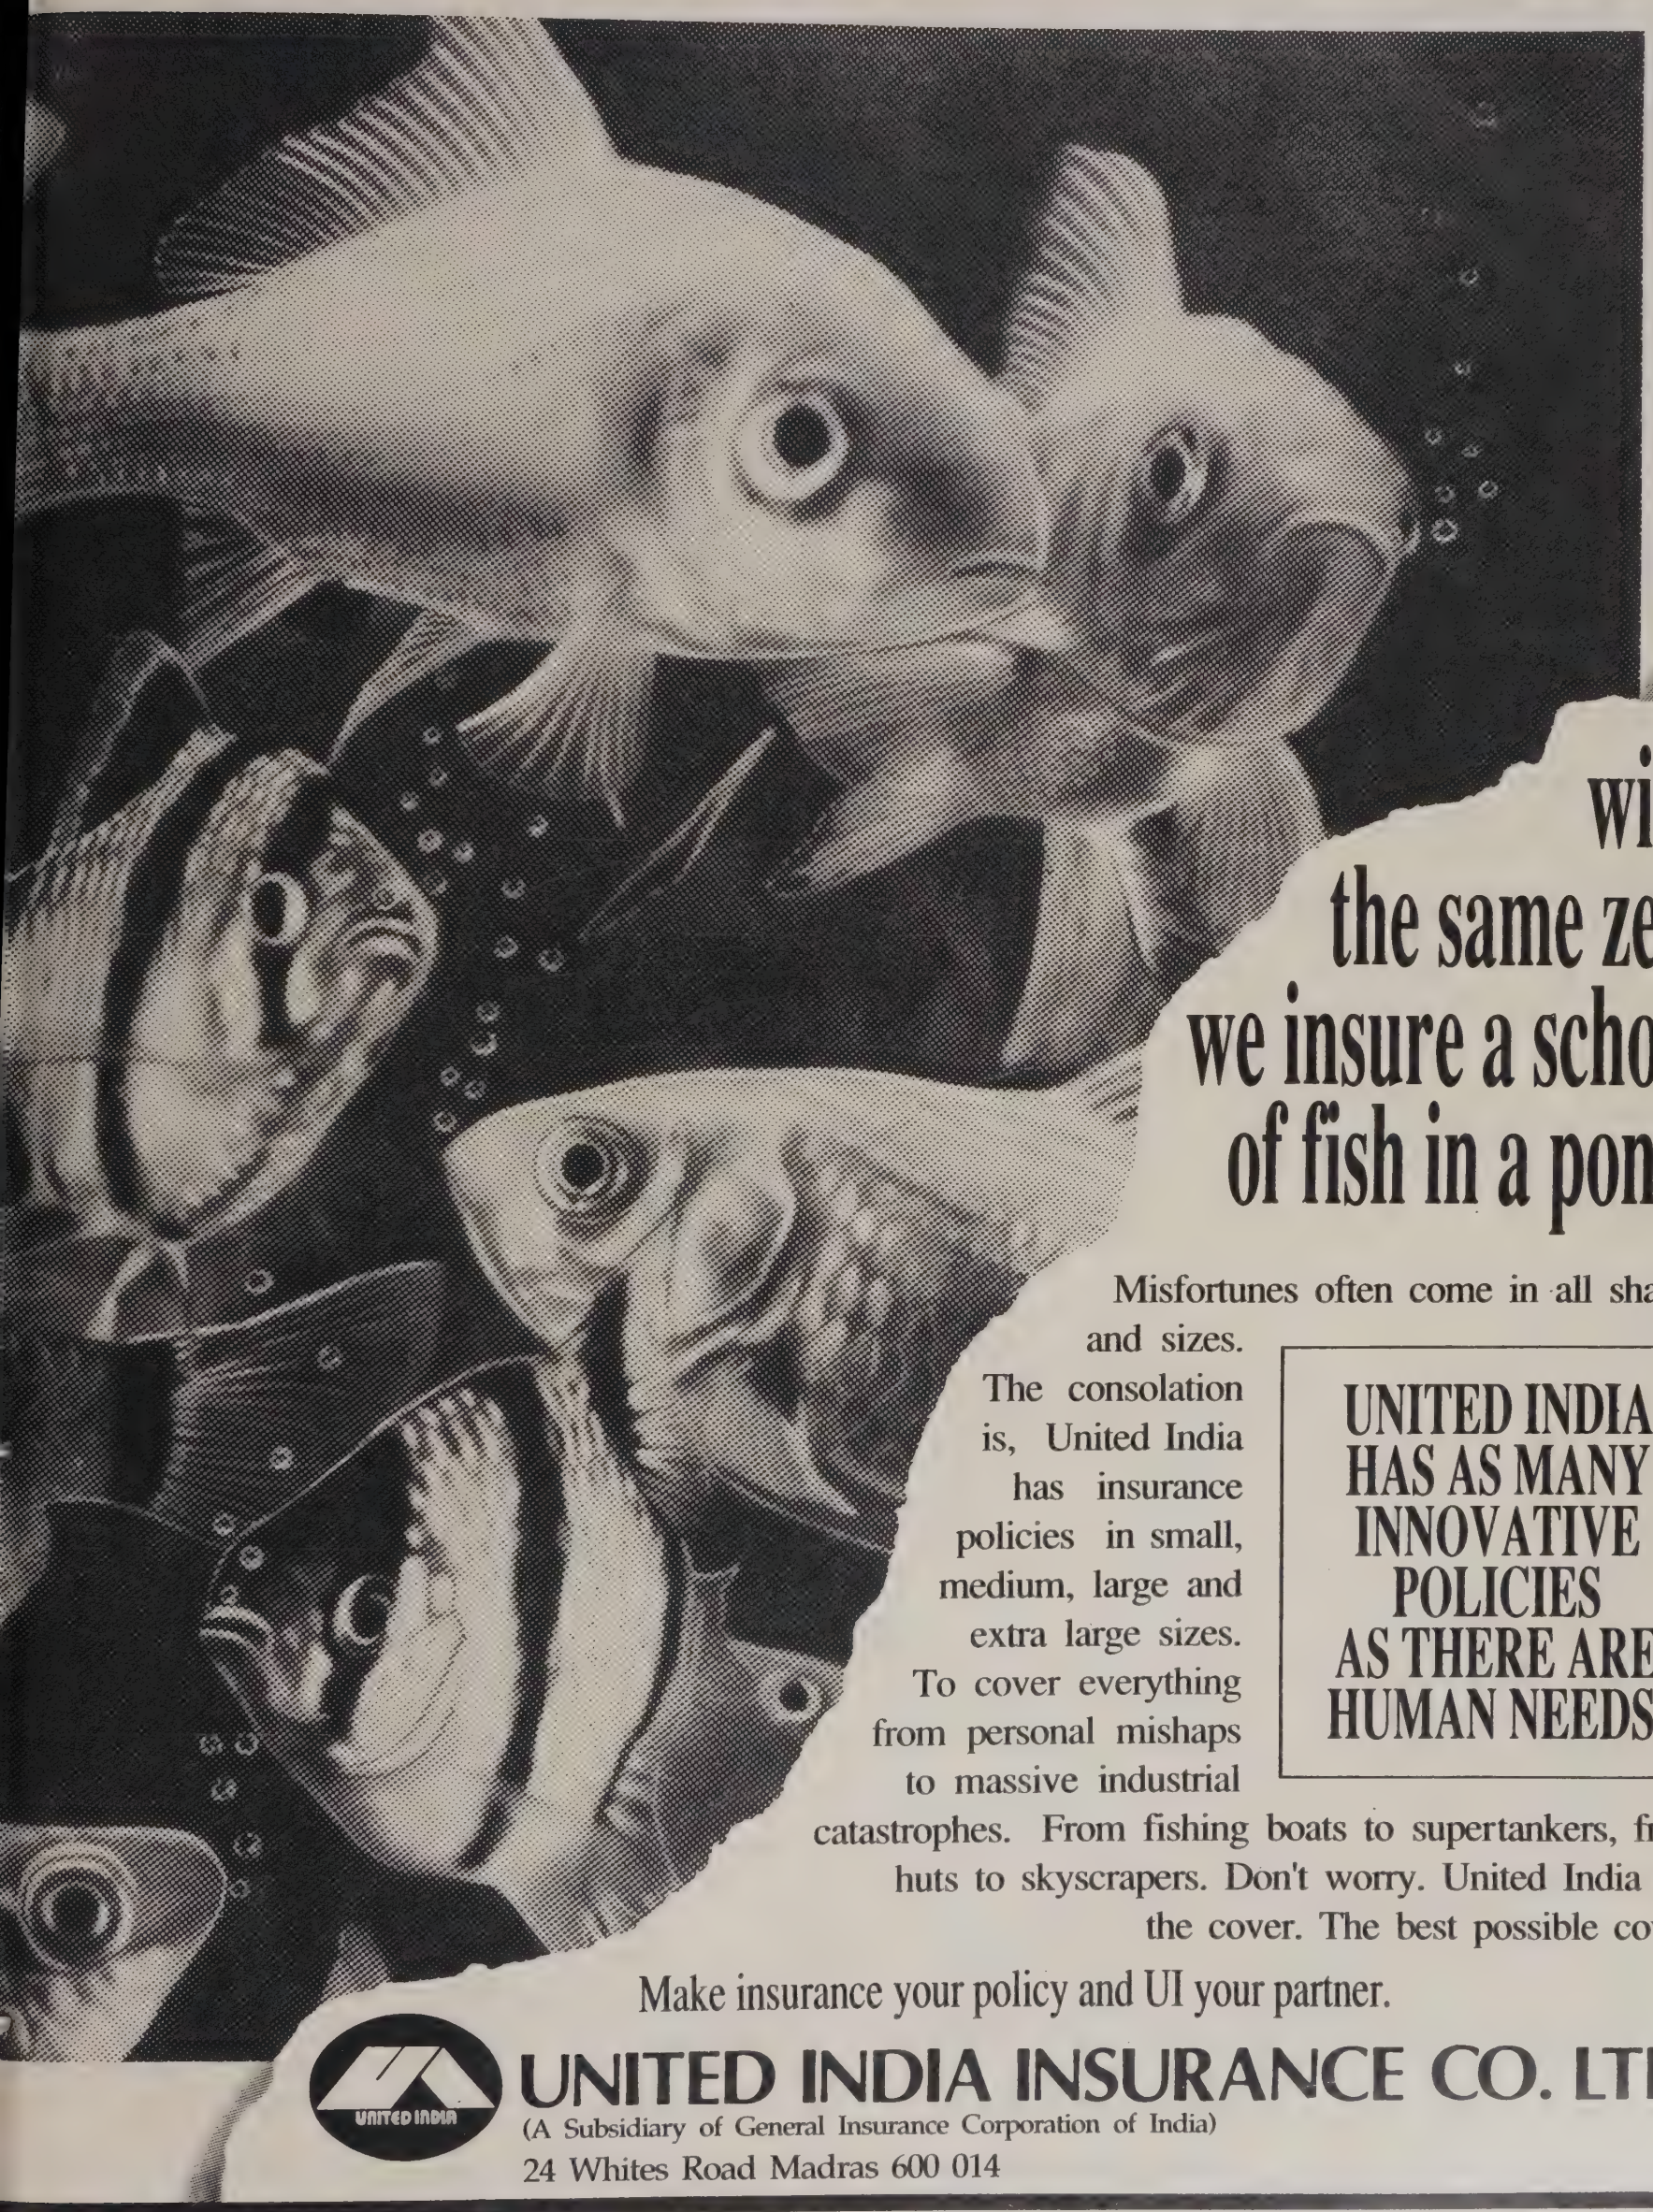
Another crucial issue central to the performance of these infrastructure industries is the problem of labour. Practically the whole of the infrastructural sector is plagued by labour trouble — excessive manning, abysmally low productivity etc. All these factors will continue to act as a brake on the performance of the sector even if the government were to withdraw from it. Especially acute is the problem in the ports.

Ban strikes

All these constraints has caused many to recommend that the infrastructural sector should be declared an 'Essential services' sector where strikes, go-slows and the like are banned. But this measure will draw stiff opposition from trade unions.



For the railways the nineties have begun rather badly, with their supply of freight capacity falling far short of the demand. Demand for coal movement alone is of the order of 34 mt of which the railways can supply only 30 mt. "All because of faulty planning," says a railway official.



The situation that faces the railways has come about primarily due to shortages in the wheel and axle manufacturing capacity in the country. Most of the wheel and axle capacity is in the private sector and since, throughout the eighties, demand for this was less than capacity there was no incentive to the private sector to create additional capacity. During the Seventh Plan the net capacity increase by the railways was a mere 1.1 per cent each year, but accomplished a 5 per cent increase in output by replacing slower wagons by faster bigger ones. Consequently, now the railways have adequate capacity for bodies of wagons but insufficient capacity for wheels. A demand of the railways for importing wheels and axles has been turned down owing to foreign exchange constraints.

There are also constraints on the wagon and engine capacity in the government sector. Judging by the procurement over the first two years of the Eighth Plan it is unlikely that the targets for the next two years will be fulfilled. Some 150,000 wagons are to be procured over the period 1991-95 and, up to now only 45,000 have been procured; this leaves over 100,000 wagons to be procured over the next three years. "It is highly unlikely that this will happen," says a cynical railway official. A similar case obtains with diesel and electric locomotives. The railways need 220 electric and 200 diesel locomotives each year but have supplies of only 120 electric and 96 diesel locomotives. It is in bridging shortages of this nature, it seems, that the quantum of growth over the next few years will be defined.

DD news

Security for the director general of Doordarshan, Shiv Sharma has been beefed up since the terrorist attack on him last month. Sharma was attacked by unknown assailaints as he was leaving for office from his house in Kaka Nagar in Central Delhi. Since then, Sharma has been asked to keep an erratic schedule.

He attends office for only three hours a day, and the time is not fixed. His appointments too are fixed only at the last minute and people desiring to meet him are asked to come over at a moment's notice. This has naturally thrown Mandi House into chaos. More so, as hundreds of proposals for various programmes are pending clearance since the costing committee of Doordarshan has not met for over two months.

Speculation is also rife as to who will be the next boss of the idiot box as Sharma is to retire this month end. Shashikant Kapoor, currently additional director general, seems to be a leading contender.

Czar no more?

Sam Pitroda always manages to be in the news. The telecom czar these days is waiting for a chance to fit himself into the scheme of things. Pitroda, apparently, has again got into trouble with the new minister Rajesh Pilot, minister of state for communications.

At a recent meet, while Pilot informed the press about keeping his options open about bringing in foreign technology to save the sinking telecom sector in the country, Pitroda vehemently declared that multinationals are out and will remain so. In fact, Pilot has been trying hard to get rid of him.

Initially, Pitroda was directed to Santosh Mohan Deb, minister of state for steel. But Deb refused to entertain him. Then there were rumours that Pitroda might find a place in the Planning Commission. In fact, it seems as if this was almost finalised, when even Pranab Mukherjee refused to have anything to do with him. Why Pitroda is unacceptable to most politicians, however, remains a mystery. Especially since he is a political appointee, brought in by the late Rajiv Gandhi. At last count, even the PMO wa busy searching for a solution to the prob lem called Sam Pitroda.

Craving audience

Does the presence of a minority government at the Centre have any advantage? Most people would say unequivocally, no. But members of the Fourth Estate might think otherwise especially since a minority government has come to power.

Scribes are in great demand — something which leaves journalists themselves pleasantly surprised. Congress ministers who were inaccessible when they were in power last time, have suddenly become very warm and are busy holding lunches and dinners for presspersons.

Festering wounds

It's an old war. State civil services officers are still stiff about directly recruited IAS officers, as the latter, on account of their Central government connections, get all the plum postings in state government departments much to the dissatisfaction of the latter. This is something which even state level politicians have not liked.

The reasons are simple — being Central government employees, IAS officers are less amenable to discipline at the state level. Things may now be changing. Over the years, state governments have found a way to discourage IAS officers. Governments in many states have decided to hike the salary levels of state civil service officers so that they get a salary higher than that of the IAS cadre. IAS officers in many states like West Bengal, for instance, are quite unhappy. But there is very little that they can do.

AMANI GROUP

Gone with the wind

he last of the major Kamani enterprises, KMA Ltd, is out of the family's ontrol, but the legal battles among them continue. What for? Business India *inds out*

s a scenario for a great corporate tragdy, this may not win points for originality. It is likely to strike the discerning s hackneyed, director Shyam Benegal having already fleshed the theme in his moderately successful *Kalyug*. However, ike many weak scenarios, it is rescued by he terse but prominent note which says t is a true life story.

It concerns the Kamani group, though o refer to them as a group is a tragic misnomer. They have lost almost all their companies, either through closure or akeovers. If they had stayed as one, they would not find themselves at bay, their packs to a promising hinterland rendered allow by deadly family squabbles. Nothng but that has brought them to their current pass.

Amazing losses

When the MRTP Act was promulgated in 1969, the Kamanis were listed as one of the largest industrial groups in the country. Barely 21 years later, they are examining the prospects of life outside industry: an amazing saga of avoidable losses.

There have been losses as dramatic and tragic as the death of Poonamchand Kamani in 1972, clearly the turning point in their fortunes. The moment he collapsed, after naming brother R.R. Kamani his successor in the board room of Kamani Chambers, fissures appeared.

Till then the Kamani name had remained a phenomenon. The peak group turnover of Rs.75 to 80 crore in 1969-70 may not have been substantial but the areas of industrial activity they were associated with were important enough for the Shah of Iran to call on them when in Bombay.

That is how it was, in the days of founder Ramjibhai Kamani, an industry builder, philanthropist and visionary in the Gandhian mould and his eldest son and successor Poonamchand Ramji Kamani, an ambitious image builder, whose style saw him rechristened Public Relations Kamani. Between them they had managed to lend an aura to their name.

P.R. Kamani, of course, was easily accepted as the father figure and leader, largely because of his ability to delegate powers while retaining control through senior professionals appointed by him in various companies. All his five brothers were happy with the arrangement. But Rasik Kamani's accession in October 1972, though in keeping with tradition, led to instant resentment among the other brothers. Complaining against his style of functioning, they said, he wanted to centralise all power with himself sometimes overruling not only professional managers but also them. This was something the brothers were not used to.

Suddenly, a flourishing organisation turned cancerous, and the story of greed, intrigue and intense power struggles began. The first serious blow was the abortive attempt made by Rasik Kamani to sell off flagship Kamani Engineering Corporation to the Birlas in 1973. KEC had begun incurring serious losses particularly in its exports, even before Poonamchand's death. But the brothers opposed it and the deal fell through.

Immediately after this event, the family got polarised — one group led by Ramjibhai's third son, Hasmukh R. Kamani, and the other by a reluctant Rasik Kamani. Hasmukh had with him younger brothers Chandravadan and Navnit. Still young, Poonamchand's sons, Ashish and Deepak, aligned themselves with uncle Rasik to "get a slice of the cake".

Pointless arbitrations

The polarisation led to the beginning of a series of pointless arbitrations in 1973. Apart from lawyers, friends and financial experts, several eminent personalities, including Arvind Mafatlal, Viren J. Shah, Sathya Sai Baba, Chimanlal C. Shah, K.M. Diwanji and Indulal S. Shah, tried to intervene to settle their mushrooming differences.

The sequence of events between 1973 and 1975 are not very clear. Even today, the Kamanis are unwilling to disclose what happened behind those closed doors at Kamani Chambers and Kamani House, the family residence. But by 1975, the rifts had widened and the rivalry had

The Kamanis in the heady pre-1970 days

acquired self-destructive proportions. Each one wanted a larger share of the companies and each was willing to fight for it.

Says Jaffar Imam, a long-time friend of the family and public relations manager of the group for 15 years, "After Poonamchandji's death, there was no feeling of give and take in the family; everybody wanted something, without giving anything." One senior executive who was also very close to the founder and was considered part of the family says, in disgust, "All of them were playing games; the financial consultants, the legal advisors, family friends, the whole lot of them; it was a very disheartening experience."

In June 1975, at the instance of godman Sathya Sai Baba, by whom they swear fervently, the Kamanis agreed to a temporary division of companies. Rasik got Indian Rubber Regenerating Company and Kamani Metallic Oxides, Ashish got KMA's Bangalore unit and X-Ray Engineering and the rest went to the Hasmukh group. In that group, Navin managed Kamani Tubes Ltd, Navnit and Hasmukh managed Kamani Engineering Corporation and Chandravadan was entrusted with Kamani Metals and Alloys' Bombay unit.

None of the brothers was content with his share and the "so called family arrangement" broke down within four months. They all wanted to take the battle to its 'logical' conclusion. "Money they all had, it was a struggle for power," says Jaffar Imam. The 'personality clashes', as Ashish Kamani calls them, had completely diverted their attention and the "companies were going to the dogs". So immersed they were in the internecine war that they could hardly react before the financial institutions moved in to take control of KEC in September, 1975. Their united but clumsy effort to restore the company to the Kamani fold was unsuccessful.

That was in 1976, the year in which Hasmukh Kamani, the most brilliant of the surviving brothers, left the country with his family, never to return. He is said to be living in the US, though it cannot be confirmed. In a fit of rage, Rasik Kamani wrote to, of all people, the Kamani Employees Union, already a powerful body which later played a major role in shaping the future of Kamanis, that Hasmukh had misappropriated Rs.2.5 crore of the group's foreign assets. While the results of an investigation by Enforcement Directorate are not known, an Indian court is said to have declared him an absconder.

The magic fades

In the absence of Hasmukh, Navnit took charge of the former's group. But by then there was no group. Navin had taken independent charge of KTL, Chandravadan had taken over X-Ray Engineering, and

Committed to reviving KMA

Ashish Poonamchand Kamani *is the only member of the family to still own a Kamani company in its corporate premises at Kurla, Bombay, but he is not running it. His unit, KMA Ltd, has closed down and its future will be decided by the Bureau for Industrial and Financial Reconstruction (BIFR).*

He plans to get the company back and is working on a rehabilitation plan. But he is reticent about it, for he is unsure if his warring uncles, brothers and cousins and the trade unions will let him run the company peacefully even after that. Even though members of this once illustrious family say they are willing to thrash out a compromise after 18 years of quarrel, Ashish Kamani prefers to wait and watch. Excerpts from an interview with Business India:

What led to the closure of KMA's operations?
The Bombay unit is locked out since 3 April and the lockout continues. The Bangalore unit is operating. Some reports had said that this unit was also locked out.

Were you not aware of the impending situation?
No, I was not. We were hoping that a solution to the issue would emerge in the meeting with the Regional Labour Commissioner. There were several meetings and both the labour leaders and the bankers had promised full co-operation. And since the banks had already approved our loans in principle, it was only a question of their releasing it.

But a company goes to BIFR only after some years of loss making. Why did you not take the banks and trade unions into confidence earlier?
The year 1989-90 was a loss year. Both the banks and the union were aware that we were working under great production strain with our capacity utilisation at only 25 per cent. Both were also aware of our high overheads. Personnel cost itself comes to Rs.35 lakh. Other standing costs come to Rs.30 lakh. That means we are talking of a monthly loss of Rs.25-30 lakh. We were trying to find a quick revival package. If we had the finance we could have broken even.

What are the accumulated losses of KMA?
The estimated losses as we have given to the banks is Rs.7 crore.

You are alleged to have siphoned

Poonamchand Kamani (left) with the Shah of Iran, circa 1969

off funds from the company. What do you say?
It has been part of the union's strategy to keep making various allegations. The first of them was voiced in August, 1990, when they alleged that the Rs.250 lakh non-convertible debenture money is not accounted for. This was sorted out before the labour commissioner and the bankers. The union gave an undertaking before the minister that any press statement made will be by mutual consent. However,the union continues to make allegations.

The company is now with the BIFR. Are you confident of getting it back?
We are confident of getting the company back on the rails, as soon as possible.

Have you submitted a revival plan?
We are expected to submit a revival plan to BIFR. This is under preparation.

Can you give a brief outline of the revival plan?
No, not yet. It is being worked out.

Are you willing to put in your own funds, if need be, to revive the company?
As soon as the package is ready, the quantum of funds required will be considered.

You are willing to put in your own funds...
I am committed to reviving the company.

Whatever the cost?
Yes.

All your group companies seem to have either closed down or been sold. Why?
Basically personality clashes. I can't think of any other reason.

But what exactly contributed to the closing down of so many companies?
Same thing...

Ashish Kamani was "appointed" managing director of KMA. And Rasik Kamani made another abortive bid to sell off Kamani stake in KEC to Birla group's Texmaco. The takeover of Jaipur Metals and Electricals by the Rajasthan government brought the curtains down on the eventful 1976.

Navnit also had to watch KEC slipping out of his hands. He learnt that the Kamani name no more held any magic. KEC was sold to the RPG group in 1982, completely severing this Sai Baba-fearing Kamani's links with group companies. Meanwhile, other strange things were happening in other group companies. One by one they too were moving towards closure or takeover. In 1979, Kamani Brothers, the most important export house in the late sixties and early seventies, now managed by Ashish Kamani, closed down amidst serious allegations of siphoning off of funds. Lack of a united export effort in the group also affected it badly. It is currently under liquidation. In 1981, both the companies, IRRCO and KMO, being managed by Rasik Kamani, also closed down.

It seemed logical that the remaining units also follow the trend set by these

Kamani group: a picture of decline

Company	Products	What happened/Present status	Year of Closure/ takeover	Kamani heading Company at the time
Kamani Engineering Corporation (Now KEC International Ltd) — 1945	Transmission towers	Flagship. Began incurring losses in 1970. Taken over by FIs in 1975. With RPG group since 1982. Doing well	1975	Navnit
Jaipur Metals & Electricals Ltd — 1943	Electricals meters, power cables	Taken over by Rajasthan government and workers. Doing well, though some trouble recently *(BI, 8-21 July 1991)*	1976	Hasmukh
Kamani Tubes Ltd — 1960	Non-ferrous metal tubes for engines & refrigeration	Taken over by workers co-operative. Good demand for its products. Has begun making profits	1988	Navin
Indian Rubber Regenerating Company Ltd — 1962-63	Reclaimed rubber for tyre industry	Made lot of profit for Kamanis before its operations were 'Temporarily Suspended'	1981	Rasik
Kamani Metallic Oxides Ltd— 1955-56	Zinc oxide for paints and pharmaceuticals industry	A profitable company once. Closed down mysteriously	1981	Rasik
X-Ray Engineering Ltd — 1960	Specialist in non-destructive testing methods. Pioneered the method for shipping and petroleum industries	—	—	Chandravadan
Kamani Metals & Alloys Ltd (Now KMA Ltd) — 1944	Brass, copper, copper alloys and steel strips	The longest surviving Kamani company now with BIFR	1991	Ashish
Kamani Brothers Pvt Ltd — 1944	Holding company of the group once largest government recognised export house	Under liquidation	1979	Ashish

How it all happened

October 1975: Ashish Kamani appointed managing director of Kamani Metals and Alloys Ltd under the "so called" family arrangement. Uncle Rasik Kamani continues as chairman. Losses of the company estimated at Rs.50 lakh.
1976-77: Losses wiped out. Ashish alleges interference by uncles.
May 1977: Rasik Kamani removed as chairman.
1978: Ashish sets into motion a massive public relations and image building programme.
June 1979: Arbitration agreement with Viren J. Shah signed along with other group companies.
September 1979: Viren Shah announces 14 interim awards. They are challenged by Rasik Kamani.
1980: The first phase of modernisation programme completed. A new continuous casting plant is acquired.
June 1982: "Minor" family shareholders bring injunction on a public issue announced by Ashish. The issue was abandoned.
1983: Company's name changed to KMA Ltd to dissociate from the Kamani family. It wins major defence contracts. Retired judge A.C. Gupta appointed mediator to resolve family disputes by Supreme Court.
1984: The board of directors is restructured to bring in more pro-Ashish men. But legal impediments to raising more resources continue.
1985: Implementation of the second phase of modernisation programme begins. Plans include introducing high value alloys and acquisition of new rolling mills.
1987: Metal prices double to Rs.90,000 per tonne. Mounting industrial overheads prompts management to introduce a voluntary retirement scheme. Several workers leave.
1988: Workers movement gains momentum in KMA. Kamani workers co-operative takes over sister concern Kamani Tubes. Banks requested to revise company's working capital requirements.
November 1989: Rs.2.5 crore raised through an issue of non-convertible debentures.
May 1990: Money raised through a rights issue. But other shareholders in the family bring injunction. KMA requests Bombay high court permission to dispose of its shareholding in KEC.
June 1990: Banks approve higher credit facilities.
August 1990: Workers, led by D. Thankappan, accuse Ashish of misappropriating money raised through non-convertible debentures; demand joint management.
September 1990: Series of meetings with Regional Labour Commissioner and the Maharashtra labour minister held to discuss long-term viability package. Workers as well as bankers assure all assistance.
December 1990: The board of directors is restructured. Well known merchant banker and long time friend Bhupen Dalal takes over a chairman. Ashish continues as managing director. Half-yearly results show that the company has accumulated losses of Rs.1.23 crore.
June 1991: BIFR declares KMA Ltd sick and says the management has understated losses. The losses are estimated at Rs.7 crore.
July 1991: Ashish says he is working on a rehabilitation plan for KMA.

companies. Navin Kamani, who was never too interested in running a company, was the first casualty. He had to give up control of KTL after its Kurla unit in north Bombay closed down in 1984. The battle for this company was probably the most unique. Arraigned against the family members, each of whom suddenly wanted the company for himself, was the powerful Kamani Employees Union led by D. Thankappan.

The four-year-long battle, probably the most widely written about BIFR case ever, brought into open, once again, all the torrid details of hatred, treachery and greed of the Kamanis. It saw the emergence of Ashish Kamani, the only Kamani still running a company, and Sangita Kamani, wife of Chandravadan and niece of one of the London-based Hindujas, as the only noteworthy forces in the family. But, in a landmark judgement, the Supreme Court handed over the company to the workers and the Kamanis retreated to their quieter lives in Bombay.

Ashish Kamani remains the only Kamani with industrial ambitions, his company, KMA's uncertain future notwithstanding. He has also been accused of more or less the same things his uncles were. As recently as in June, this year, Ashish and friend and company chairman Bhupen Dalal were accused of having understated losses. Therefore, Ashish will first have to convince the BIFR of his intentions. He just might be able to do that, what with his assiduously built up image of being a genuine industrialist. Taking a leaf out of father P.R. Kamani's book, he launched a carefully orchestrated personal image building campaign in the late 70s. The effort may pay off when BIFR takes up KMA's case for hearing.

Eager for peace

Most of the other members of the family have lost interest in industry. They also seem tired of the never-ending legal battles and are eager to settle their differences. Navnit and Rasik have even expressed their willingness to thrash out a solution across the table. What are they going to talk about: the companies they so foolishly let go or the future of their families. Ashish Kamani feels the empire can be rebuilt. He is carefully nurturing the third generation Kamanis, his cousins, though none of his uncles are on talking terms with him.

Today, apart from the innumerabl court cases they have got involved in ove the years, neither Rasik, Navin or Navni are known to have any other occupation At the instance of his wife Sangita, know to be an ambitious lady, Chandravadan i trying to keep X-Ray Engineering, thoug its turnover is said to be negligible. Poor amchand's younger son, Deepak, an elec tronics engineer, after being thrown ou of KMA's management by brother Ashish is "keeping afloat" by becoming a profes sional. Right now, a family friend says, h is helping out a friend in his export busi ness. But surprisingly, even without an industry, all of them seem to be wealth enough to sustain such expensive lega battles, the sheer number of which make it impossible for the Kamanis to seek an easy resolution, even if they are in com plete agreement with one another.

The story of the Kamanis has no ended, though Ramjibhai's dream ha Dear industrialist, even if you are not Ramjibhai, there must be the profit mo tive, if nothing else. But how does one te you, an industrialist in whom rest s many responsibilities, not to kill th goose that lays golden eggs.

■ MADHAV REDD

STRIKE GOLD. ON YOUR ROAD TO SUCCESS.

The road to success is never smooth. And no one knows it better than you. You've packed every bit of energy into your work. Always turning problems into opportunities. With your ability to think beyond the ordinary. The Citibank Corporate Card. Specially designed as a corporate perk. For you. And your organisation. A recognition of your efforts. Your achievements. And your potential. The milestone of gold. On your road to success.

The Corporate Card
from

CITIBANK

Available through company nomination only ✦ Honoured at over 15,000 establishments all over India ✦ Cash withdrawals between Rs.10,000 and Rs.20,000 at Citibank's 24-hour ATMs ✦ Instant information on card related queries on the phone ✦ For details, just call: Bombay 202-2233, Delhi 371-2277, Calcutta 29-2002, Madras 47-3344.

MAHINDRA SINTERED PRODUCTS

Innovating for success

A pioneer in the field, the company has popularised the concept of powder metallurgy. The recent boom in the auto industry has benefited it immensely and made it financially sound

It's a company with a difference. While other engineering companies make components by machining, it makes them from powdered metal. And it was among the first to bring powder metallurgy technology to India. Today, Mahindra Sintered Products Ltd (MSP) is the largest and one of the few companies which have this technology in the organised sector and doing well. At Rs.30.1 crore, sales are up by 19 per cent from 1989-90 as against a net profit rise by 24 per cent to Rs.3.15 crore.

Powder metallurgy is a specialised technology in which the metal powder, either in its pure form or mixed with another metal powder, is pressed in a die at a pressure of 6,000 to 7,000 atmospheres. The compacted metal powder is then passed through a furnace at temperatures which are about two-thirds of the melting point of the metal. In this process known as sintering, the metal particles fuse together to form a strong homogenous component having the desired shape and strength.

Most profitable venture

MSP is a joint venture between the Mahindras and GKN Powder Met Ltd of the UK, a world leader in production of sintered parts with plants in the UK, Italy, and Mexico. The collaborator which supplied most of the initial technology holds 49 per cent of the company's Rs.2.26 crore equity, the rest being with the Mahindras. Now, 30 years after incorporation, MSP is one of the most profitable companies in the Mahindra & Mahindra stable. And despite being a subsidiary, it is almost entirely run independently.

The management team is led by long-time executive director Brij Kataria. A metallurgical engineer from Indian Institute of Technology, Kharagpur, 51-year-old Kataria is one of the most experienced professionals in the field of sintered technology in the country, having worked with the company since 1963. MSP's success in new product development and profitability, according to insiders, is almost entirely due to Kataria's foresight and vision.

Initially, MSP was dependent on imports for its tools, dies and its main raw material — metal powder — as well. But Kataria realised that the company can survive only through self-reliance. So, in 1965, he set up a toolroom which has since been upgraded on a continuous basis. Today, it boasts of the latest machines, fully backed by CAD/CAM design facilities. "We now make precision parts with tolerances as close as 0.006 mm," says Kataria.

Kataria: experienced professional with foresight and vision

In 1967, the company started making copper and tin powders. It introduced electrolytic iron powder in 1973, largely through indigenously developed technology. Ten years later, MSP brought in the latest technique of powder-making — water atomisation — which involves melting and refining of steel scrap in a furnace, before blasting it with a jet of high pressure water to get very tiny droplets of metal which form the powder. MSP is the only powder metallurgy set-up in India which makes its own powders. It has a separate factory at Ahmednagar, where it now manufactures powders of iron, copper, tin and lead.

Modern powder metallurgy was invented in the early thirties to tackle the problem of forming high melting metals, like tungsten. During World War II, the Germans discovered that controlled powder metallurgy could be used to make metal of desired porosity. They impregnated porous iron bushes with oil to invent self-lubricating bearings. Powder metallurgy even today is the only method to manufacture such bearings. MSP makes over 4,000 different sizes of bearings, to be used in fans, automobiles, etc.

A versatile process

Microporous filters, made from bronze powder, is another speciality product made by MSP. Fine metallic filters with pore sizes of a thousandth of a millimetre are manufactured by the sintering process. They are used in chemical, cement, plastic, machine tools and instrumentation industries. MSP makes a large number of cupronickel flame arrestors used in oxy-acytelene cylinders which are porous plugs allowing flow of gas in one direction, but preventing the flame flow in the reverse direction.

The process of powder metallurgy is very versatile and lends itself to easy mixing of not only different metals, but also of metals and non-metals. As such, MSP mixes iron powders with graphite to make electrical contact bushes for dynamos, electric motors, etc.

Besides all these specialised applications, the sintering process is also ideally suited for making any component which is subjected to low or medium stresses. "The awareness of powder metallurgy amongst

Indian engineering designers has been quite low," says D.S. Mrig, general manager (design & development). "Otherwise, several parts used in automobiles, two wheelers and machines can be made by this process."

MSP's R&D engineers have developed high-precision timing pulleys for the Maruti 800 and the Tatamobile, sprockets for Contessa, oil pump gears, bearing caps for several automobile engines, besides many intricate parts for two-wheelers. Of late, it has also developed parts of Maruti 1000 and is likely to develop parts for Maruti's brand new YE2 export model which is being designed by Suzuki in Japan for export to Post-1992 Europe.

The MSP plant: pioneering powder metallurgy to lead the field

Efficient process

Powder metallurgy is very efficient and gives a very high yield of 95 per cent, whereas in other forming processes like machining, forging, casting, etc., the yield varies between 40 per cent and 60 per cent. "Environmentally speaking, it is one of the cleanest processes," says A.L. Deuskar, general manager (sales). "The emissions are very low in a sintering furnace, and the scrap generated is negligible. In fact, metal scrap gets recycled as metal powder." Especially in case of intricate shapes, this process generates a lot of saving in energy, time, machines and manpower. It is a huge cost saver and where the volume of production is large, like in the automobile industry, designers are increasingly switching over from conventional manufacturing to powder metallurgy.

The company has been riding piggy back on the boom in the automobile industry during recent years. All major automobile manufacturers are now its customers — Maruti, Bajaj Auto, Telco, Kinetic Engg, Bajaj Tempo and Mahindra & Mahindra. Says R.A. Jain, general manager (purchase) of Bajaj Auto, one of MSP's largest customers, "Mahindra Sintered is our oldest supplier of sintered parts. We buy more than 50 per cent of our requirement from them. Price-wise and quality-wise, we are quite happy with their products, and we have excellent relations with them".

Some executives of Telco, another large customer of MSP, laud MSP for giving excellent service and willing to take up developmental work. "They are ready to develop new components and price-wise also they are the most competitive," says a Telco executive.

Due to the exponential growth in the automobile industry as well as a desire to lower costs, automobile manufacturers have increasingly turned to powder metallurgy as a cost effective solution. MSP, the major beneficiary of this trend, has therefore been able to triple its turnover in the last five years from Rs.10.88 crore in 1986-87 to Rs.30.11 crore in 1990-91. Profits have seen a commensurate rise from Rs.54 lakh in 1986-87 to Rs.3.15 crore in 1990-91. It took MSP 27 years to cross the Rs.10 crore mark because the awareness of powder metallurgy was lacking until recently in the engineering industry, and MSP was pioneering a new technique.

International standards

Today, however, MSP has come a long way. It makes over a thousand types of engineering components, of varying sizes. The largest component that it has made weighs 1.5 kg, which compares well with international standards. It has a large number of presses with capacities ranging from 3 tonnes to 500 tonnes.

Financially, the company seems to be on a sound footing with a healthy reserves position of Rs.10.19 crore — over 4 times the equity. Says Arun Nanda, company secretary at the parent Mahindra & Mahindra, "With a consistent return of an investment of around 10-15 per cent every year, it is one of the most profitable companies amongst our subsidiaries and associate companies".

MSP makes about 2,000 tonnes per annum of sintered parts — anywhere between 200 to 2,000 parts per hour (depending on the size), in some of its latest automated lines. Says Kataria, "We hope to double our output to 4,000 tonnes in the next four or five years, assuming that the Indian industry grows at a reasonably healthy rate".

Exports is an area which MSP has been concentrating on of late. In 1990-91, its exports amounted to Rs.1.57 crore, which, during the current year, is expected to go up to Rs.2.5 crore. "Most of our exports are to advanced countries like England, Germany, Italy, Australia. We also export to countries like Yugoslavia, the Far East and the Middle East," says Kataria. The company's target is to export 15 per cent of its turnover within the next two years.

Today, in the domestic market, MSP is a leader in powder metallurgy, though it has competition in the organised sector, from companies like, Sundaram Fasteners, Stovec Engg, Flexicon, and Andhra Sintered. Sundaram Fasteners, which has a powder metallurgy division, second largest after MSP, has a turnover of about Rs.10 crore. "Since we entered the market in 1983," says V. Srinivasan, senior marketing manager, Sundaram Fasteners, "it has expanded three times in real terms, which is far more than the sectorial growth of industry. This is because of expansion of the application of powder metallurgy. MSP has taken our entry into the industry in the right spirit. Our entry has given a positive impetus to the market".

MSP being a pioneer in its field, is also the founder member of the Powder Metallurgy Association of India, as well as a member of Metal Powders Industries Federation, USA, and Institute of Metals, UK. "In the future, we are committed to improving our capabilities, and to excel not only in India but abroad also," declares Kataria.

Give your motors the 'NO-FUSE' advantage

M&L Series MCCBs with type-C co-ordination. From Crompton Greaves.

Announcing a powerful leap towards fuse-free motor control.

Now a tiny contactor of 16 amps or a bimetallic overload relay of 0.25 amps can face faults upto 50 kiloamps and still meet the safety and co-ordination standard type-C as per IEC292-IA. Which means no more irritations of fuse maintenance and single phasing.

The M&L Series MCCBs can protect Motors from 0.2 KW to 200 KW. Thanks to precise overload settings and matching type-C co-ordinated contactors and bi-metal relays upto 400 amps. Furthermore, they are lightweight, cost-effective and save space in Motor Control Centres.

Above all, the Crompton Greaves M&L Series MCCBs are backed by a nationwide support network of 18 branches and service centres plus a helpful team of dealers spread all over the country.

So switch to the Crompton Greaves M&L Series MCCBs today.

M.A.M. RAMASWAMY

Reluctant industrialist

With the kind of resources at his disposal, this southern gentleman could have taken his group to the top of the corporate sweepstakes, but he chooses otherwise.

Racing horses and cement companies don't exactly go together, or so M.A.M. Ramaswamy, south India's most successful race horse owner and breeder, has found out. Though he has made into the Guinness Book of World Records for winning 150 classics, he has had nowhere near that success in the industrial sweepstakes. And Ramaswamy is quite forthright about the reasons; "Industry is only one of my interests," he says. "Sports is the major passion."

Ramaswamy* (right) *leads in one of his winning horses

In the current year, however, the changing fortunes of the cement industry has given Ramaswamy some reason to be happy about his industrial inheritance. Rising cement prices has ensured that Chettinad Cement Corporation Ltd (CCCL), his flag ship company, has turned its Rs.13.5 crore loss last year to a profit of Rs.6.5 crore, on a turnover of Rs.87.47 crore for the year ended March 1991. This improved performance has given a sudden respectability to the Chetinad group's entire bottomline. The group — which includes trading companies, fabrication units and even a stud farm — has recorded a total turnover of Rs.142.54 crore and a net profit of Rs.8.4 crore, with CCCL contributing the bulk of it.

Very successful cousin

The Chettinad group's lacklusture performance before this becomes even more conspicuous when compared with that of Ramaswamy's cousin's — A.C. Muthiah and his SPIC empire clocked in a turnover well in excess of Rs.1,000 crore last year. Ramaswamy and Muthiah are the grandsons of the legendary Sir Rajah Annamalai Chettiar of Chettinad. Sir Annamalai had parlayed the money his ancestors made out of lending activity in Burma, Malaysia and Sri Lanka in the 19th century into one of the largest business fortunes in south India. He established numerous trading companies, banks like Bank of Chettinad and Indian Bank, and also built up sizeable holdings in companies like Madura Coats and Consolidated Coffee. In 1955, the business empire was partitioned among his three sons: Rajah Sir Muthiah Chettiar (Ramaswamy's father), M.A. Chidambaram (Muthiah's father) and M.A. Ramanathan Chettiar.

The major companies which came to the Rajah's share were the South Ind Corporation Ltd, Madura South Ind Corporation Pvt Ltd, South India Corpo ration (Madras) Pvt Ltd (voluntarily li uidated in 1966), Lotus Agency Pvt Lt (sold), and the Chettinad Corporatio Pvt Ltd. CCCL and South India structura Corporation Ltd were added later, i 1962 and 1966, respectively.

Those in the know say that eve Ramaswamy's father did not make a seri ous attempt at creating an industrial em pire. Says an industry observer, "While the M.A. Chidambaram branch of the family felt it had to prove its mettle, and went about setting up new industries, the Rajah's branch of the family felt they had it made. They did not feel the need to consolidate and expand." As Ramaswamy now says, "As far as industry is concerned, my prime goal is to safeguard my inheritance."

Ramaswamy makes no bones about his role as a reluctant industrialist. CCCL is really run by L. Sabaretnam, kingpin in Ramaswamy's business enterprise. Sabaretnam goes by the designation of executive director, while Ramaswamy himself is managing director.

Established tradition

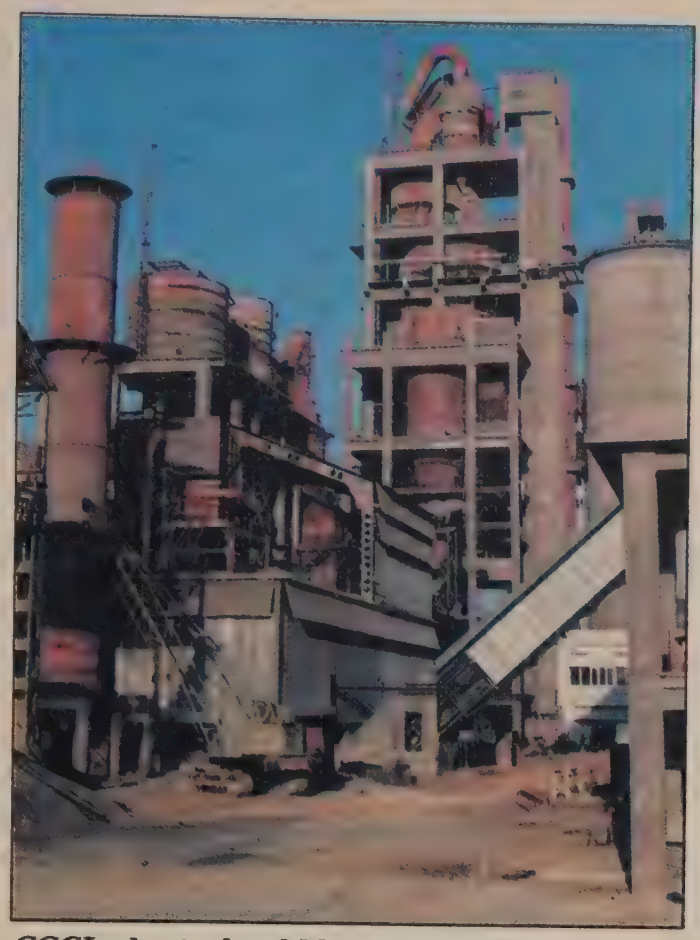
Sabaretnam's family has been associated with the Rajah's family for four generations. "The system of managing the business centres around dependence on trusted retainers," explains Sabaretnam. This is a throwback to the tradition established by Sir Annamalai, who depended greatly on his agents in various locations in Indo-China, Burma, Malaya and Ceylon (*see box*), to deliver the goods.

However, since the family holding in each company is substantial, Ramaswamy exerts overall control through his presence on the board. CCCL is a case in point. In this company, the promoters hold 39 per cent of the equity, banks and financial institutions take 36 per cent, the remaining being held by the public. The other companies are all very closely held.

CCCL was the group's first foray into manufacturing, since earlier ventures were related to construction, trading or banking. "Kamaraj asked us to set up a cement manufacturing unit and my father obliged," recalls Ramaswamy. A wet process unit was set up near Karur in Tamil Nadu.

Cement was a controlled commodity in the seventies and CCCL could not operate profitably under these conditions. By June 1981, CCCL's accumulated losses

ouched Rs.1.24 crore. But with the introduction of partial decontrol in 1982, the unit started generating profits, and for the year ended 31 March 1982, CCCL earned a net profit of Rs.2.87 crore on a turnover of Rs.16 crore.



Dividend payments were fairly regular until 1987-88, when the company embarked on an ambitious modernisation-cum-expansion programme. This involved a changeover to the dry process, and an increase in installed capacity to 2,000 tpd. However, high customs duty burdens pushed the project's originally estimated cost of Rs.64.90 crore to Rs.82 crore.

High cost funds

Of the final project cost, Rs.60 crore was raised as term loans from banks and financial institutions, Rs.2 crore by increasing the equity capital, with the remainder accruing from internally generated resources. The consequent increase in the depreciation and interest costs played havoc with CCCL's bottomline. For the year ended 31 March 1990, the company recorded a net loss of Rs.13.65 crore on a turnover of Rs.44.20 crore. Accumulated losses totalled close to Rs.9 crore.

Relief came only when cement prices were jacked up. From a level of Rs.60 per 50 kg bag only 18 months ago, prices currently rule at around Rs.106 per bag in Tamil Nadu. Government purchases have also picked up. Currently, 40 per cent of CCCL's production is consumed by this sector. Says Sabaretnam, "Better price realisations, a switchover to the dry process, increased dependence on lignite instead of coal to meet energy needs, along with increased capacity utilisation of 98 per cent have pulled the company out of the red. If the present price levels continue and input costs do not increase, accumulated losses will be wiped out by 1992."

As long as demand persists, most cement units will be on velvet. "Since no new capacity is being commissioned, a severe shortage is likely to develop by 1992-93," maintains a cement manufacturer. Given these portents, the price of CCCL's Rs.10 share has been ruling at Rs.98 per share. Says K. Gopalakrishnan, managing director of Data Scan Ltd, a Madras-based investment consultancy, "The share is overpriced, but, given the fact that no new capacity is coming up in the cement industry, the company's performance will continue to look up. Share prices could increase to Rs.120 or 130 by October 1991," he predicts.

CCCL plant: should keep up performance

CCCL for its part, is ready to take on this situation. Power, a major bottleneck, has been taken care of by installing generators. And already, the company has switched over to the cheaper lignite from coal for its energy requirements. Hauled in from Neyveli, which is 200 km away, the landed cost of lignite is Rs.650 to Rs.700 per tonne, against Rs.1,300 per tonne of coal." As a percentage of manufacturing expenses, fuel costs have declined from 30 to around 19 per cent.

"Our main markets are in Kerala and Tamil Nadu," says financial controller L. Muthukrishnan. The company sells 45 per cent of its production in Tamil Nadu, 45 per cent in Kerala and 10 per cent in Karnataka. Competitors, however, are of the opinion "that CCCL has to tone up its marketing. It has to adopt a professional attitude, without resorting to large discounts".

Repaying loans

Starting next year the company will also have to repay its loan instalments at the rate of around Rs.7.5 crore a year for a seven-year period. Considering the past financial performance of the company, that would be a tall order, especially if there is a down-turn in the notoriously cyclical industry.

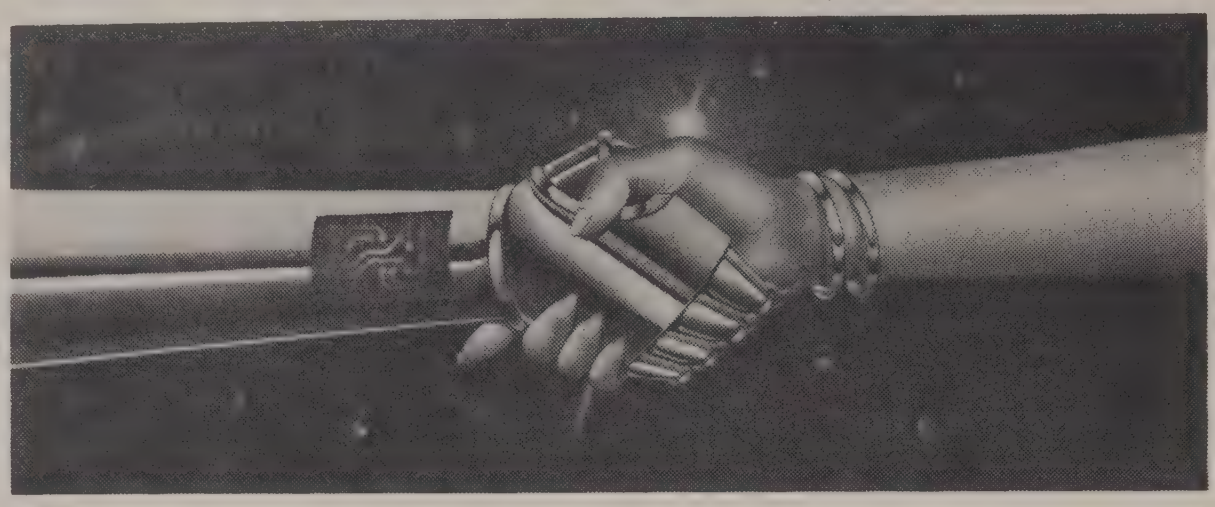
Like CCCL, the other companies in the Chettinad group are also run by loyal retainers. South India Corporation Ltd, for example, is under the stewardship of its general manager, Ranganatha Chettiar, while the South India Structural Corporation Ltd is run by A. Ganapathi Chettiar. Ramaswamy's own contributions to business are related to his interest in racing. The Chettinad Stud and Agricultural Farm was set up in 1985, while the Sholavaram Stud Farm was set up in 1990.

"Ramaswamy is probably the largest owner of race horses in the country," says K. Balaramadas, director of the Dasaprakash group, a former race horse owner himself. He says, "Ramaswamy is not in it for the money, but the prestige. He has been involved in racing for over three decades. Few individuals, apart from Ramaswamy and Vijay Mallya, have the sustaining power to remain on the scene for so long." There are allegations of rigging in the races, but perhaps that is inevitable.

Another new venture floated recently is Chettinad Granites Ltd, involving an investment of Rs.10 crore. "Friends persuaded me to make an entry," says Ramaswamy.

Major preoccupation

Apart from races, another major preoccupation is the Annamalai University founded by Sir Annamalai in 1929. Ramaswamy took over as pro Chancellor of this University in 1984, and is credited with implementing the establishment of the medical college at the University. Both this college, set up in 1984-85, and the dental college, set up earlier in 1982, are self financing. The capitation fees at the medical college are Rs.4 lakh per seat. Yet, "this is hardly sufficient to meet the expenditure per student for six months," says an official of the university. Grants from the state government and the UGC are other sources of income, in addition to trusts created by the family. "Under Ramaswamy's guidance the University has grown in popularity and prestige," says the official quoted earlier.



Ramaswamy is truly an industrialist with a difference. Says a well-known banker, "Given the resources at his command, the house of Chettinad under Ramaswamy could have emerged as a leading industrial house in the country." But Ramaswamy chose otherwise. And it was a conscious choice.

A FEW YEARS FROM NOW, YOU'LL BE GLAD YOU REGISTERED AT TECHNOPARK

Electronics Technology Parks-Kerala. Situated in the lush green environs of Trivandrum. An autonomous body set up by the Govt. of Kerala with the active support of the Department of Electronics, Govt. of India.

TECHNOPARK provides the environment and infrastructure required to set up high technology electronics manufacturing, research, design, development and training establishments.

Infrastructure

Comprehensive facilities. Built-up self-contained modules of 2000 sq. ft. Developed plots of 1, 2, 3, and 5 acres. Continuous power. World class testing facilities. R&D incubator. Pilot production facility. Customs bonded warehouse. Library and information bureau. Banks. Post Office. Auditoria. Conference facilities. Restaurant. Shops. Recreation Centre.

Special Incentives

Investment subsidy of 20%, subject to a maximum of Rs. 15 lakhs.

5 years sales tax holiday.

5 years exemption from electricity duty.

Reimbursement of 50% of the costs of market and feasibility studies.

Project Finance

TECHNOPARK has tied up with major financing institutions to ensure availability of project finance.

Total Support

TECHNOPARK will provide all necessary assistance in obtaining the required clearances and approvals.

Communications

State-of-the art voice and data communication facilities.

If you want to play a role in the electronics industry of tomorrow, register today at **TECHNOPARK.** It's where the future of electronics is.

Breakthroughs in exports

KALYAN BANNERJI

The breakthroughs achieved in Indian exports are unlikely to continue, unless exporters can act with increased freedom. There has been a breakthrough in the export growth rate between 1987 and 1990. During the sixties and seventies, India's export performance was modest. The average annual growth rate of exports, in dollar terms, between 1977 and 1986 was 4.06 per cent. The share of manufactured exports in total exports was also not remarkable. In total exports, the share of manufactured goods was 53 per cent in 1984-85 — these chiefly include engineering goods, chemical and related products, gems and jewellery, leather goods, garments.

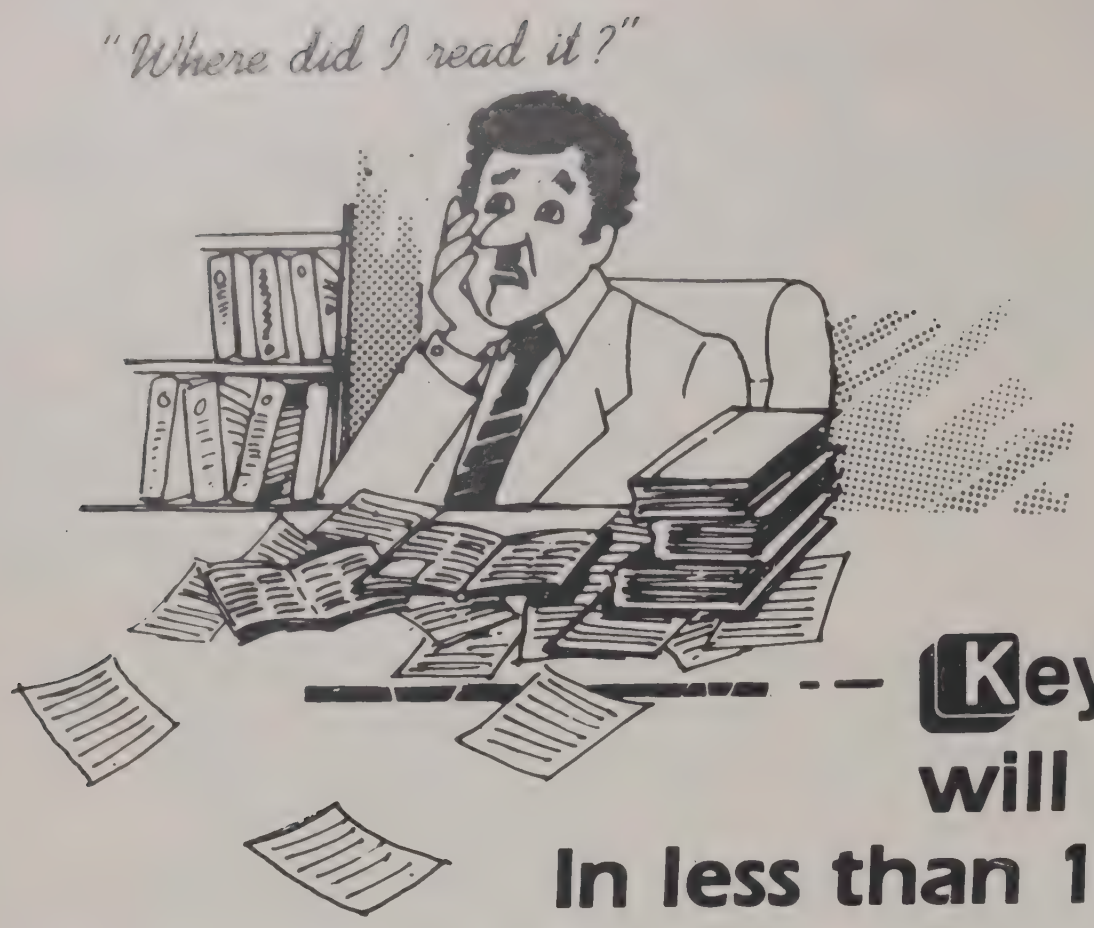
Between 1987-90, Indian exports have achieved a breakthrough. The export growth rate in 1987, in US dollar terms, was 24 per cent. In 1988-89 and 1989-90, the comparable rate was 15.5 per cent and 18.7 per cent, respectively. There has also been a brisk growth in the share of manufactured goods in total exports, from 53 per cent in 1984-85 to about 68 per cent in 1988-89. The Export Marketing Fund programme, introduced by Exim Bank in 1986 under a World Bank export development loan programme, has grown in tandem with this.

Clear export plan needed

Firms wishing to export manufactured goods in industrial market economies experience a high cost of entry and demanding user expectations. Hence the need to design a clear export plan reflecting an appreciation of major factors that are likely to influence success in exports. Firms aiming to export into industrial market economies need to first study the features of the target markets. Market size, competition, end-user requirements, distribution channels, safety and test standards, patent registration and legal issues, warehousing needs, after sales service, warranty and product liability are factors germane to any export plan. Systematic marketing activities may not be essential when exporting commodities but are hardly optional when exporting manufactured goods.

The Bank has offered since 1986 both advisory support and finance to Indian firms keen on undertaking systematic marketing activities with a clear focus on products and markets. This has been an endeavour in institutional support to firms undertaking export marketing of manufactured products, with industrialised market economies in view.

The export marketing fund programme provides advisory and financing support at six key stages in the export marketing cycle. First, at the stage of market research, inputs are sourced for formulating an export marketing strategy. Second, minor product adaptation is facilitated. Third, sales and promotion are made possible through establishing overseas operations, travel to India by overseas buyers and the like. Fourth, the programme, through financing appropriate consultants, helps reduce costs, improve quality and productivity. For plan modernisation and capacity upgradation, which constitute the fifth and sixth stages in the export marketing cycle, the Bank offers financing to improve, amongst other things, international competitiveness.



Clear advantages

What has been the impact of this modest programme? A study covering the period 1987-89 on the impact of the export marketing fund programme has established four clear advantages. First, the 155 firms that participated in the programme generated incremental exports upwards of Rs.2,200 million over 1987-89. Second, the programme appears to have enabled incremental exports to grow at around 35 per cent per annum. Third, the industrialised markets of the US and the EEC accounted for nearly 80 per cent of their total incremental exports. Fourth, improvement in product quality, awareness of new technologies, cost effective methods of production are some other advantages derived by the participating firms, according to the study.

The export marketing fund programme appears to have succeeded in assisting participating Indian firms in gaining a link with distant markets. Encouraged by the results of a modest scale export development initiative, the bank is now extending loans to particular industries for activities that promote export of manufactured goods. This initiative is based on the evidence that through specific institutional initiatives, supply-side export capabilities can be enhanced. This is part of the bank's enlarging role to package the relevant knowhow with domestic endowments and financing for successful and increased exports. With improving policy environment in favour of exports in the country, the bank perceives an increasing scope in the role of a catalyst for increasing manufactured goods export. However, a barrier has been observed.

The future lies in exporting manufactured products. Export of commodities the world over is declining. With industrialisation, the effort is to export processed commodities, manufactures. The share of manufactures in India's export basket is increasing. Two factors can accelerate the momentum. First, absorption of technology in industry is essential to produce for exports. Second, there is a need for strategic alliances.

ADFEEL/DT&T/91/1

What we are seeing is the growth of economic/trade blocs. The US is implementing a North American Free Trade area encompassing the US, Canada and Mexico. Europe next year will declare open the European common market with twelve members. In the developing countries, we see trade/economic blocs in Latin America, Africa. Within each trade bloc, the aim is to maintain a borderless universe. For India it will be difficult to export/sell more from outside each trade bloc. How does one set up presence within a trade bloc? The answer is in strategic alliances and acquisitions of companies within a trade bloc. A strategic alliance is more than a mere joint venture or a long-term contractual relationship. Glaxo, a British pharmaceutical company, recognised that it is unnecessary to establish a full business system in each country where it did business. Hence, it decided to tie up with leading partners in Japan and swap its best drugs with each of them, and concentrated its own resources on generating greater sales from its established network in Europe. Strategic alliances make for value creation and delivery, around the globe.

The other method to set up ground presence within a trade bloc is to acquire companies. Acquisition can be a way to accelerate export growth, providing a quick way to secure access to channels of distribution within a trade bloc. Through acquisition of a running company, it is possible to gain a skilled business team. Additionally, setting up a new firm abroad for gaining access to market and skilled team can be cost ineffective and risky. Acquisition of companies abroad has become an accepted route for foreign entrants.

The Exim Bank's export marketing fund programme provides evidence that in the next stage of export development, a strong local presence in developed countries is essential. When one excludes export of commodities and focuses on skill-intensive products like engineering goods and computer software, the need for a strong local presence is essential. India needs to build up a network of at least 150 companies in the industrialised countries to fuel the next stage in momentum for export growth in manufactures. It has been said that faint hearts make no conquests. It can be said that in Indian exports, the time has come to think in non-traditional terms. Commodities can be sold and despatched from distant boundaries. When it comes to manufactures, the handling has to be different. Export promotion in an import-substitution regime can be a zero sum game. More of the same will not do.

RETIREMENT AGE

A breather at last

Early this year, the Reserve Bank of India extended the retirement age for class I officers — this time from 58 to 60 years, making it on a par with the retirement age of other employees (class III and IV) of RBI. This benefits nearly half of the 6,600 officers currently employed in RBI, who had joined RBI before 19 July 1969.

This announcement marks the end of a two-year struggle by the RBI officers. But as things stand, the extension might well set a precedent of sorts for yet another struggle in various related sectors.

The first demand

When the matter was first raised during the RBI officers' strike in 1989, the then RBI governor R.N. Malhotra was willing to take the risk and grant the extension, but this meant that the officers will have to concede some of their monetary demands. This they refused. As a result, RBI relented on the monetary demand and the extension was relegated to the background. However the officers soon realised their folly of giving up the extension of retirement age demand and began pressing the matter again. Finally RBI had to give in.

According to R.P. Donde, advisor, All India Reserve Bank Staff Officers' Association, RBI had accepted the demand in 1990 itself. But since the government had not cleared the matter, RBI was helpless. It was only in January this year that the government cleared the matter and the officers were given the extension. So RBI could comply with the contract terms which these officers had signed at the time of recruitment only in 1991.

Interestingly, this is the second time that RBI has extended the retirement age. The first time the retirement age was raised from 55 to 58 years, after RBI was nationalised in 1947. The contract signed by officers who joined nationalised banks before 1969 gave the retirement age at 60. However, in 1976, the Pillai committee, set up to determine uniform salary and service conditions for public-sector bank officers, suggested in its report that, like the public-sector employees, bank employees should also retire at 58.

The recommendation of the Pillai committee, if adopted, would have created a conflict with the contract already signed by officers who had joined before 1969. The committee therefore laid down three conditions: officers recruited before bank nationalisation — 19 July 1969 — and those who joined prior to nationalisation and subsequently received promotion will retire at 60; and officers recruited after 1969 will retire at 58.

This obviously caused much resentment among bank officers who joined after 1969. It also meant that there was no uniform retirement age for bank employees. As a spokesperson from the Indian Banks Association (IBA) says, although the unions demand a uniform retirement age for all employees, there cannot be one.

The officers feel that with the retirement age reduced, each officer loses as much as Rs.1 to 2 lakh in his provident fund and gratuity, in addition to two years salary at the rate of Rs.4,000 to 5,000 a month

Wave of resentment

However, while the RBI officers benefit from this recent announcement, officers from other nationalised banks do not, and this has sparked off a wave of resentment among officers of other nationalised banks who retire at 58. Says S. Dabholkar, secretary, All India Bank Officers' Confederation, "The officers feel that with the retirement age reduced each officer loses as much as Rs.1 to lakh in his provident fund and gratuity, addition to two years salary at the rate Rs.4,000 to 5,000 a month."

According to a spokesperson from the IBA, however, this decision gives RBI an edge as it has retained the right of granting extension on an annual basis, which would enable RBI to create more jobs and induct fresh appointees as and when wanted. As was expected, the bank unions have already taken up the matter of extending the retirement age though they are not pushing the matter hard as yet. It is felt that RBI has kindled a hope among the bank employees countrywide that it will definitely raise the retirement age to 60 for public-sector banks as well.

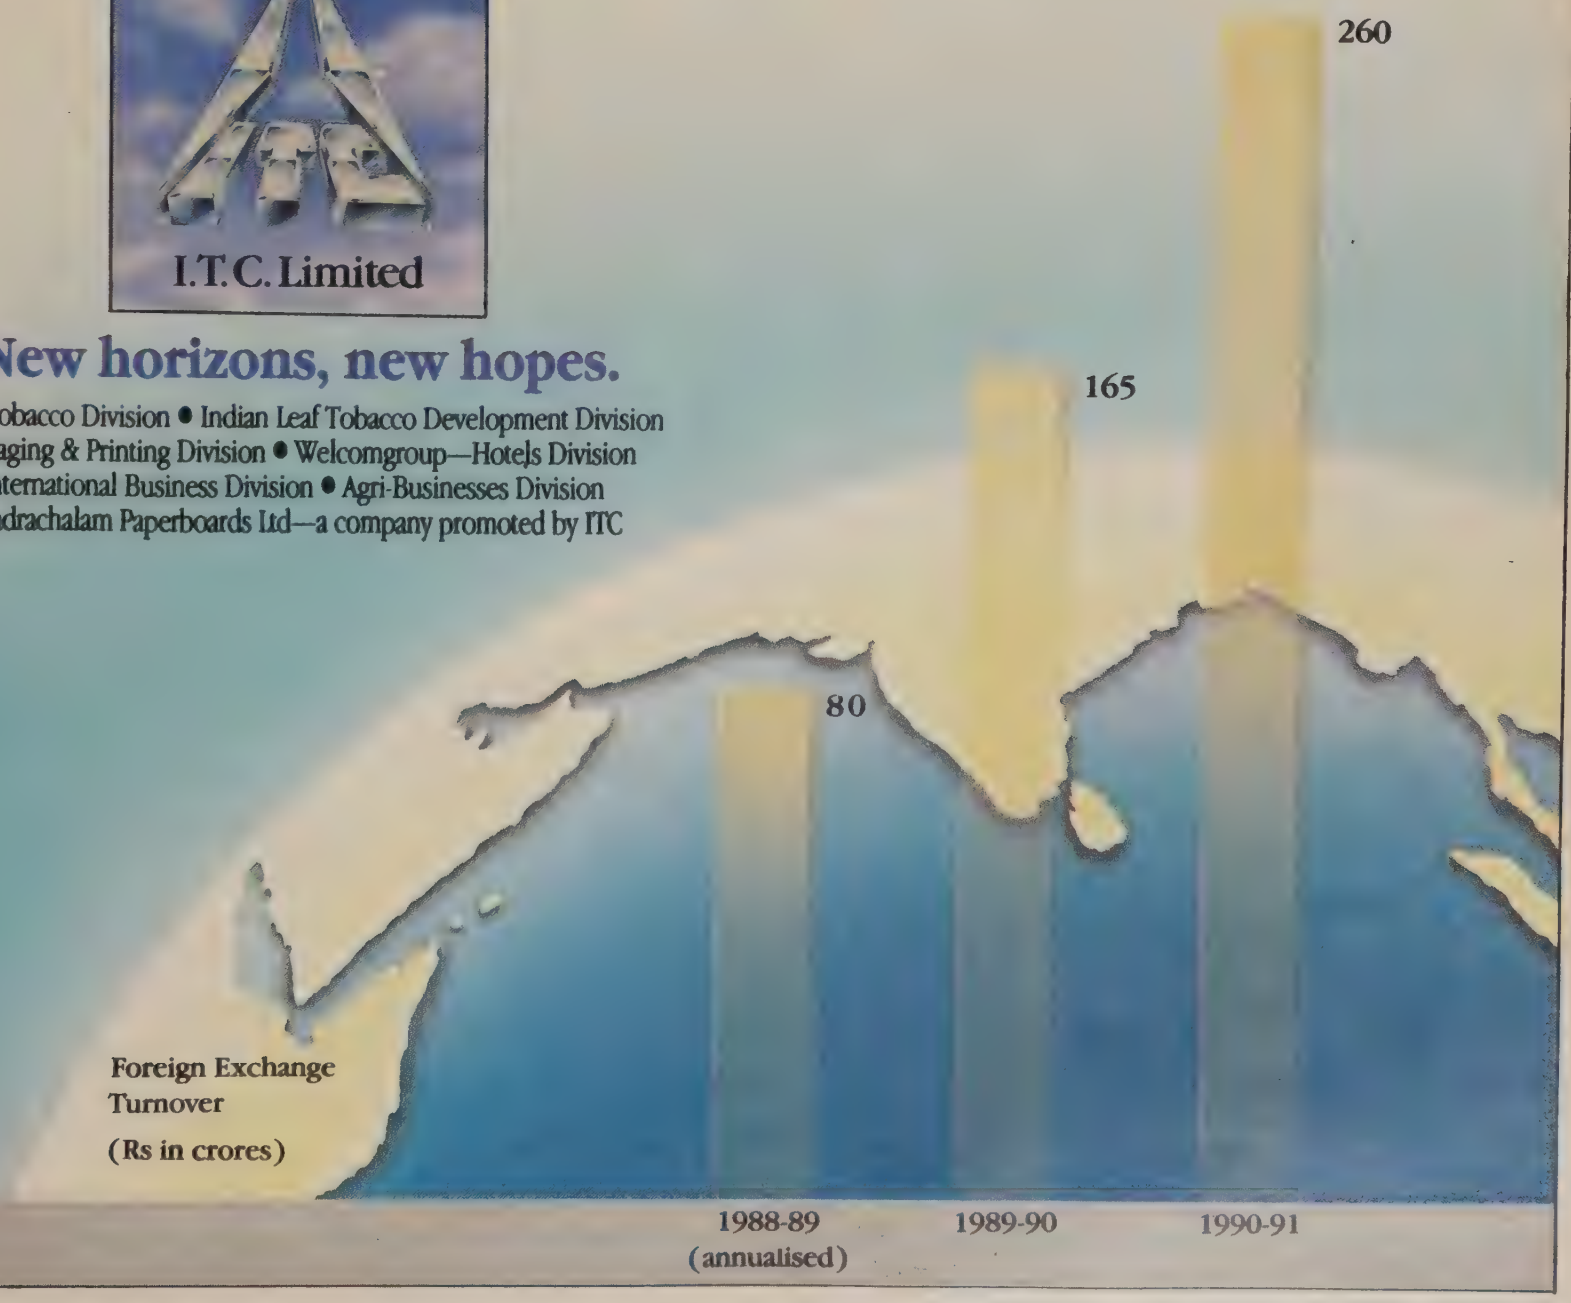
Record Rs 260 crores foreign exchange turnover by ITC

1990-91 Highlights	
Gross Income	Rs 2316.38 crores
Net Income	Rs 1014.46 crores
Net Profit	Rs 77.52 crores
Foreign Exchange Turnover	**Rs 260.00 crores**

In the unaudited financial results for 1990-91, ITC has registered significant growth on all fronts—with a record 58% increase in foreign exchange turnover being the high point. For ITC, the Rs 260 crores turnover in foreign exchange is the outcome of an increased thrust in the international business arena.



Working closely with domestic producers to attain world standards, ITC is carrying the 'Made in India' mark with pride across the globe. Among its diverse trade ambassadors are quality tobaccos, oilseeds, tea, coffee, spices, marine foods, home furnishings, leather goods and garments. Additional foreign exchange is earned by its Welcomgroup hotels in India and through the Bukhara chain of restaurants abroad.

Turning potential markets into advantages with strategically-located foreign offices, ITC is well set to further consolidate its position as the 'Indian International'.

MOVE UP IN STYLE

ONE OF THE MOST PROGRESSIVE GROWTH COMPANIES IN INDIA BELIEVES THAT ALL ITS ACTIVITIES SHOULD SUBSERVE THE BASIC NEEDS OF OUR PEOPLE

"At Century, we are the first to admit that our manufacturing units are not in what most people call glamour or high profile industries. On the contrary, we are in the basic industries: the kind that are at the heart of national economic growth.

Our commitment to the country's economic priorities has made us the largest manufacturer-exporter in India. This year alone, we will earn about Rs. 140 crores in hard currency. And we are progressively expanding our cement production to help bridge the widening demand-supply gap.

We believe that we should strike a harmonious note between our shareholders' and workers' interests and the interest of the nation. Our workers are happy and proud to belong to us.

Often three generations of the same family have been working with the company. Our shareholders too have a reason to be happy. After all, the value of Century's shares over the last 40 years has appreciated over 340 times, considering issue of bonus and right shares. And in the last decade alone, Century has contributed over Rs. 660 crores to the national exchequer. And now, to create vitally needed productive assets for the country, we propose to move into the critical areas of power and petrochemicals."

CITIBANK'S AUTO FINANCE

Caught in a jam

Instant finance, even for a motor car, has become the order of the day. Walk into an auto dealer's showroom with your papers in order, you will have clinched a deal, with the bank or the finance company giving you anything from 70 to 100 per cent finance for the purchase of a new car.

Being the aggressive marketing bank that it is, Citibank naturally took the lead in this business. Having started the Citifinance scheme in 1986, Citibank can boast today of financing the sale of one out of every six cars manufactured in India. Things were just fine till suddenly they struck a bad patch. This quick finance scheme seemed to have brought to Citibank a heavy load of repossessed cars.

Though defaults and repossession are considered to be a part of the finance game, the numbers in the case of Citibank seem to be unusually large. Market sources say that in recent times Citibank has had to repossess cars from defaulters at the rate of around 120 a month.

Citibank director for Auto Finance, Deepak Verma, was rather vague when asked to confirm this. In a written reply to a question whether it was true if his bank had recalled 150 cars recently, he said, "We recall cars at various locations as and when borrowers default. I am not aware of the specific instance that you refer but what I can say is that recalls are at random and are related simply to the number of customer who have defaulted." And when pressed to be more precise about the normal percentage of default, he was as ambiguous. "The percentage of default would vary significantly depending on economic conditions, the strength of the lenders credit process and the infrastructure which supports collections and recovery efforts. In an economic downturn, defaulters are much higher since earning levels unfortunately fall."

No drastic step

Curiously enough the other finance companies into auto finance seem to have gotten away without much of damage. Both C. Jayaram, vice-president, Kotak Mahindra Finance Ltd and Ajit Engineer, vice-president, 20th Century Finance Corporation Ltd, claim that they do not have to take the drastic step of repossession. This has been possible, say the finance companies, because they verify the prospective client's antecedents much more thoroughly, before a loan is given. Citibank, on the other hand, depended largely on middlemen — be it the dealer, agent or even appointed 'consultants' or chartered accountants — according to a source closely associated with Citibank's finance scheme. Financial circles see a clear case of Citibank "going overboard" with its scheme.

Yet, they do affirm that there is a likelihood of defaults in this business. Explaining the constraints in the business Jayaram states, "You have to realise that car financing concerns a retail product. We are dealing either with an individual or small proprietary/partnership concerns. Also our volumes are large, therefore we cannot do credit appraisals as thoroughly as we want to." And they try to plug the loopholes as well as they can.

Pankaj Desai

Cars for sale at Autoriders

Says Atul Nishar, managing director, Apple Industries Ltd, " We are protected by the Hire Purchase Act." Under this act, the lenders are the owners of the financed asset. In case of default, they have the right to repossess the asset. As most financing agencies take post dated cheques for repayment, they also have the option to institute criminal proceedings against the borrower for cheque bouncing. Besides, they take a general power of attorney from the borrower so as to repossess the car if need be.

Legal restrictions

However, being a bank, Citibank has had it tough due to legal restrictions. RBI rules do not permit banks to engage in hire-purchase directly. Citibank and other banks like State Bank got around this by treating hire-purchase as one of their loan schemes. The loan agreement makes repossession difficult, if not impossible. To protect against defaults, Citibank gets a signed blank transfer form from the borrower.

For the financing agencies, repossessing assets is unpleasant business involving the police and the repossessing agents. Once that is done, selling the asset off and adjusting the amount towards the loan dues is the next step. The financing agencies prefer to write off the rest, says Nishar, for the dues are too small to be recovered through court proceedings.

But the finance agency's woes do not end with repossession. The problem of resale has to be dealt with. An auto dealer says, "Though the vehicle is repossessed, the documents, like the RC book, necessary for transfer are still with the original borrower." Getting the duplicate documents made costs money and is a hassle. Moreover, the price of a second hand vehicle is difficult to ascertain.

Again the cost of seizing, storing and reselling vehicles taken together results in the resale value being higher than their current market price. Till all this is determined, the finance agency's money is locked up. And though Citibank would not confirm it, financial circles estimate the amount locked up in their auto scheme at several hundred crore. Of course, now that the market price of second hand vehicles has gone up considerably, Citibank is all set to begin its resale through Autoriders Trading Company in Bombay.

AD-INDIA

Deregulation and legal system

One of the late Rajiv Gandhi's most important item on the agenda for reform was to be the overhaul of the legal system. The manner in which the legal system was to be reformed was never made very clear, except that he, like many others, was concerned with the time factor in disposal of cases. This, perhaps, is a throwback to the notion that legal reform approximates to reform of the court system. However, it is the test of the efficiency and effectiveness of a legal system that people have the minimum recourse to litigation.

With the opening up of the Indian economy, the extraordinary inefficiency of the commercial legal system — and the poor drafting of many of our laws, coupled with an ignorance of business realities — will come into sharp focus. The legal system must be viewed as a whole; the non-litigous part is, perhaps, even more important than reforms of the court system.

The government, too, must understand the consequences of some of its actions. Such as in shipping law for example, where the government insists in the arbitration clause that charter parties restrict choice of arbitrators to the Indian Council of Arbitrators. The consequence has been that foreign shipowners charge an increased rate of around $10 per tonne shipped, where reference is made to such a clause. Thus, foreigners are encouraged to either seek to circumvent an India-based resolution or in the alternative, build those costs into the contract or commercial arrangement. Something needs to be done and, very dramatically, to improve this state of affairs.

Lawyers will benefit

If, as seems likely, deregulation is taken up in earnest in India, the first group of people to be reassured about its consequences are lawyers. It is often suggested that lawyers benefit most by controls and absurd laws. This is only partly true. Clearly, if much of the labour legislation were to be abolished, many labour law practitioners would be briefless. However, this notion does not square with the fact that countries where deregulation is the norm lawyers enjoy the highest earnings, the US for example, and now UK. In UK the deregulation of the financial services market, company legislation and trade regime sparked off the great boom in city solicitors who have grown at an unprecedented rate and whose earnings now compare well with US law firms, at least on the commercial side. Why is this so, and who benefits?

First, deregulation necessarily involves devolution of sorts, permitting commercial men to arrive at their own bargains without having the necessity to check out whether this course is permitted by law or not. But increasingly, businessmen turn to lawyers to structure and work out prudent ways of making such deals work. In fact, in the UK, commercial solicitors were much sought after to structure transactions which businessmen had little experience in doing.

The major consequence of deregulation will not just be the reduction in protection for certain groups in society, it will also be the empowerment of certain other groups

Secondly, the other consequence of decontrol is the substitution of discretionary rules with rule-based norms. The reduction in the scope of discretion in public policy must have important implications for the legal system. For one, it will mean that the government can be made more accountable where it departs from its own norms. The hope is that by promoting more rule-based norms there is not only the possibility of introducing more certainty in law-making and interpretation, there is a good chance of reducing the scope for corruption and unnecessary litigation.

The other way in which deregulation should benefit lawyers is through privatisation and the contraction of the state. As so much of our economy is in state hands, the enlargement of the private sector will at a stroke benefit many law firms and lawyers. The reason being that the private sector generally has a tradition of consulting lawyers to working out their strategies. The other fall-out may, perhaps, be a more aggressive takeover regime, with companies on the prowl for other companies which are either undervalued or poorly managed or both, which again will involve lawyers in respect of working out takeover strategies.

The major consequence of deregulation will not just be the reduction in protection for certain groups in society, it will also be the empowerment of certain other groups. One such group which will benefit from any large-scale privatisation will be the consumers of public-sector goods and services who at present have no redress under existing law.

The other consequence inherent in liberalisation is liable to be the steady diminution of what is termed the parallel economy. Having a black sector of the size we have in India affects the extent to which businessmen consult lawyers in working out transactions. A reduction in the black economy can only benefit the formal sector which would require such transactions to be framed in legal terms. This again must benefit lawyers who may be called upon to draft such arrangements as well as litigate in the event of disputes.

New instruments

Moreover, in view of the expected increase in the creation of wealth which should ineluctably follow liberalisation, lawyers will be expected to craft newer and more sophisticated instruments of managing wealth, as the massive decontrol of the financial services sector in the UK bears out.

However, all these factors which make a liberal economic regime good for lawyers does not preclude a drastic overhauling of our legal structure as it exists. In fact, there is good reason to argue that such reforms are a necessary condition of liberalisation working, particularly if we are to open our economy to foreign investors and companies.

A legal system tends to reflect the dynamics of its society; till now no one really bothered about ours because the pace of our overall development was abysmally slow. Now foreigners, in particular, are going to be very impatient with our legal process and the lack of clarity of many statutes. Even though infrastructural costs are rather prohibitive in India the reform of the legal system is absolutely vital. In any event, we enjoy several advantages over other countries having based our legal system on common law principles, being English-speaking and having a tradition of the rule of law. In fact, by doing nothing we are throwing away an excellent advantage which could make India a more attractive place to do business in than Eastern Europe or China.

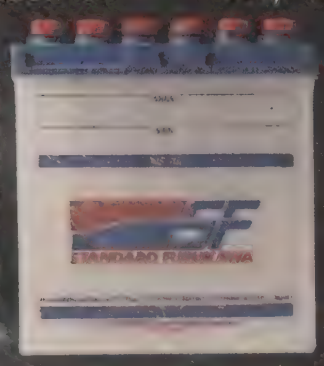
Shhhh.



Discover the secret that Telco, Maruti, Premier, Ashok Leyland, Eicher, Bajaj, DCM-Toyota, Escorts and Mahindra & Mahindra share.

There are whispers in the automotive industry. Whispers about the Standard Furukawa battery's outstanding performance.

And that's not very surprising, really. Considering that the battery is made by The Standard Batteries Limited, an associate of the Macneill and Magor Group, in technical collaboration with The Furukawa Battery Company Limited of Japan.

Furukawa is the largest supplier of O. E. (Original Equipment) batteries to Suzuki, Japan, and is also a supplier to Honda, Nissan and Toyota.

What's more, the Standard Furukawa is made with 1.8% selenium. It has the lowest antimony content amongst all Indian batteries. Which means, it needs topping up less frequently and less maintenance. That's why the last 18 months have seen more and more leading manufacturers using Standard Furukawa as O. E. batteries.

So if you're replacing your vehicle's battery, listen to what the manufacturers are whispering about. The performance of the Standard Furukawa battery.

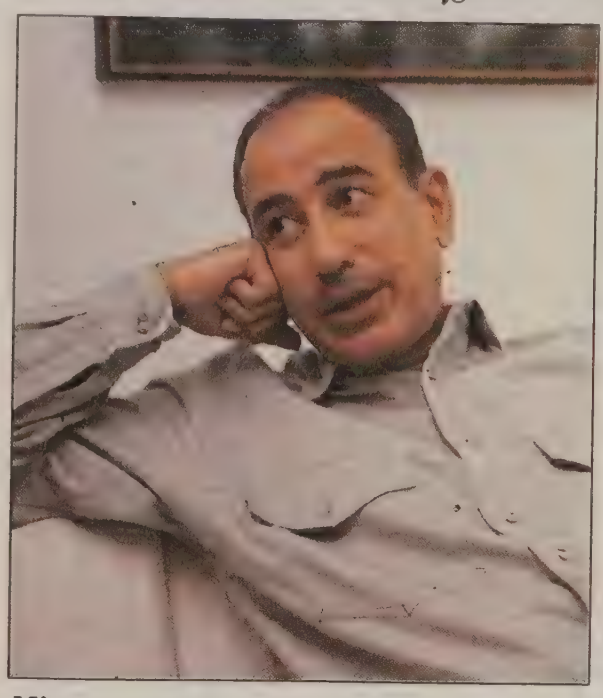
BREAKAWAY AGENCIES

The spirit of freedom

The 1,200 sq ft office of Triton Communications, a fledgling advertising agency set up in March this year, is bursting at its seams. There are about three people to every chair in this 45-member outfit. "Initially we'd thought we could operate from here for at least three years," says Triton's founder director Munawar Syed. Rapid growth has, however, compelled Syed & Co to rent more space elsewhere.

Syed's brisk progress is not surprising for he's no greenhorn in the business, having spent over 20 years at Everest Advertising. Ali Merchant, Syed's partner has a long track record too — 14 years with Everest. Indeed, Triton is full of people previously spotted at Everest and its dismantled subsidiary agency, The Edge. Syed's former agency also had to part with some precious accounts — Eureka Forbes, Shyam Ahuja, Leela Kempinski, S. Kumar (from Edge).

Names to reckon with



The birth of a 'breakaway' agency like Triton is not a new phenomenon. MCM — formed in the late sixties — was the first. It had an abundance of creative talent — Kersey Katrak, Kamlesh Pandey, Mohammed Khan, Ivan Arthur and Vikas Gaitonde — all names to reckon with today. The agency collapsed due to financial mismanagement giving rise to a clutch of new agencies: Rediffusion (Arun Nanda), Enterprise (Mohammed Khan) and Trikaya Grey (Ravi Gupta). Enterprise itself went on to spawn Nexus-Equity, and Rediffusion brought forth Milestones and Ambience.

Syed: no greenhorn

Why did established professionals decide to risk it alone? For some, it was clearly the lure of bigger bucks. Others wanted to overcome a professional dead end. Disenchanted with working for a large organisation Rumi Mistry ended his 20-year stint at Ulka Advertising and set up Rhizic Communications in 1987. Ulka had become such a monolith that it began to drift and sail," feels Mistry, whose agency now handles Premier and Zodiac, former prize accounts of Ulka.

Breakaway agencies tend to be formed by two or more like minded people. A case in point is Nexus Advertising (1990-91 billing: Rs.4.5 crore) which came into being in September 1985. Its founders were colleagues at Rediffusion Advertising; Rajiv Agarwal, currently managing director, had also been the founder director of the successful Enterprise Advertising. The others were David Innis (who left to achieve greater recognition in Canada), Bhargava Krishna (who is back at Rediffusion now) and Arun Kale.

Mistry: content with modest growth

"Starting a new agency was relatively simple," says Agarwal. "We began Nexus with a paid up capital of Rs.300. But there is a 1,000 day syndrome before a new agency can establish its credibility. Getting new business or soaring to great heights, in fact, is an unreal expectation." Nexus has just managed to trudge along. This April, the agency merged with Equity Advertising, co-founded by M. Raghunath and Rajan Nair, ex-Enterprise men.

Success is not guaranteed when top advertising talent gets together. Neena Varma, who quit Clarion last year, made two unsuccessful bids to start off on her own — first, with Chris Passanah (currently in Australia), attempting to run Vision Advertising which was ultimately sold off to Mudra; then again with Brendan Perriera and Rashid Ibrahim to start Ad Palace, only to leave within months. "I found that it is much more exciting to work on a large canvas," she reveals. Varma now heads Tara Sinha McCann-Erickson's Bombay operations.

Most breakaways seem quite happy with modest growth. Mistry says, "My clients have come to expect a degree of personalised service which large organisations may not be able to provide. Besides, my profitability is very satisfactory."

The original agencies, of course, have to learn to accept that people and accounts will come and go. Ahmed Ibrahim, chief executive, Everest, nonchalantly shrugs off the departure of Syed and Merchant. "Organisations are bigger than people. Once an agency establishes itself, there's more to it than just a few smart people. The losses of people and accounts then becomes only a temporary problem as they are then replaced by others." The same could probably not be said about Clarion which suffered for many years following the departures of Tara Sinha and Sudhir Lal. When Tara Sinha left Clarion, she succeeded in not only taking away major accounts but also the foreign agency collaboration of McCann-Erickson, which now has a 40 per cent stake in its Indian counterpart.

While they may not yet be in the rankings game, breakaway agencies realise the importance of holding on to talent. Apart from providing the usual benefits, Nexus plans to set up subsidiary units where senior managers will be given equity along with independent charge.

Whatever the problems, enterprising admen have little regret. Meanwhile, last year Enterprise Advertising's in-house recruitment ad joked about the phenomenon of ad professionals deserting the agency. Probably, the ad industry has finally reconciled itself to this irreversible trend.

■ DEVENDRA TAK

Subsidy-dominated loans

"How is your shop doing?" asked a worker of the Aga Khan Rural Support Programme (AKRSP). Keshabhai Polabhai was nonplussed by the question. "But I have no shop!" he answered. With some help, he remembered, "Yes, I had taken a bank loan for starting a shop, but closed it down after six months."

Ramasinh Bhimji likes the Integrated Rural Development Programme (IRDP), because, "You get a subsidy, and as far as loan is concerned...." He couldn't continue what he was saying because he was overcome by a fit of laughter.

These cases represent the prevailing climate in the second half of 1990, when, at the instance of the State Bank of Saurashtra, the AKRSP conducted a study of the bank's involvement in the IRDP. The study was conducted — in nine villages of the Surendranagar and Junagadh districts in Gujarat where the AKRSP is working — through personal contacts with 39 villagers who had availed of bank loans under the IRDP. AKRSP workers contacted the bank staff of six branches in these two districts. They also interviewed the *taluka* development officer and officers of a district rural development agency.

Stepping stone or crutch?

It was not a structured study with an elaborate questionnaire. The intention was to understand the attitude of the villagers, development officers and bankers towards bank loans and subsidies under the IRDP. Did these people view the loans and subsidies correctly as an initial booster to bring their poor rural families into the orbit of the bank credit system? Or as crutches to limp along for a while and then again to relapse into a low level of productivity and income, regardless of whether the latter is below or above the poverty line.

The study was therefore an exercise to gauge the effectiveness of the IRDP in improving the living standards of the rural poor in the two sample districts. It was to evaluate the role of the State Bank of Saurashtra in resource mobilisation through deposits; lending such funds to "worthwhile borrowers who have viable projects"; and after prompt and full recovery, putting the recovered funds back into the credit cycle. The success of such activity can be judged in terms of the number of needy rural families brought into bank credit system, and their "graduation" from being subsidy linked borrowers to business credit borrowers.

The findings, to say the least, were disturbing. Duda Talsi repaid two loans obtained for a tannery he said he wanted to set up, in order to get a third. He availed of all the subsidy due to him. And then he stopped repayment. Did he really use the previous loans to set up the tannery, when a fresh loan was sanctioned for the same purpose? "The bank manager is not concerned with use of loan but only with its repayment," was Duda's cynic reply.

Mukesh Waland's experience corroborated Duda's understanding of bank loans. Waland never used the sewing machine subsidised under IRDP for business. But no one questions him for using it only for stitching clothes for his family,

The dominant idea is to use the subsidy not as a stepping stone into the mainstream of the credit system, but as a one-time crutch. Many of the beneficiaries would not have bothered to take a bank loan at all if they could have availed of the subsidies without it

In case after case, a singular motive emerges behind taking a bank loan — IRDP subsidy. The dominant idea is to use the subsidy not as a stepping stone into the mainstream of the credit system, but as a one-time crutch. Many of the beneficiaries would not have bothered to take a bank loan at all if they could have availed of the subsidies without it.

Of course there are exceptions. Devsi Purshottam took a loan of Rs.6,800 for electric carpentry tools in March 1984. In early January 1987, the bank manager pulled him up for irregularity in repaying the loan. Purshottam felt offended and promptly repaid the balance amount. He philosophises on the loss of waiver benefits — it was not in his luck!

AKRSP could contact only one *taluka* development officer and officers of one district rural development agency. It was found that development officers thought that banks are playing a reluctant, passive role. They reject applications just as casually as they sanction others, "judging from the look of the applicant"!

But the six bank managers contacted by the AKRSP staff had a different view of the situation. The IRDP is a government scheme and it is for development officers to sponsor applications. Bankers only scrutinised them to see if the damage done by wrong applications passed earlier could be reduced. A fact that became obvious was these officers often act under pressure from various sources. Bank staff in the area consider subsidies as the villain of the piece. "Abolish the subsidy!" shouted one agitated manager.

Structural inadequacies

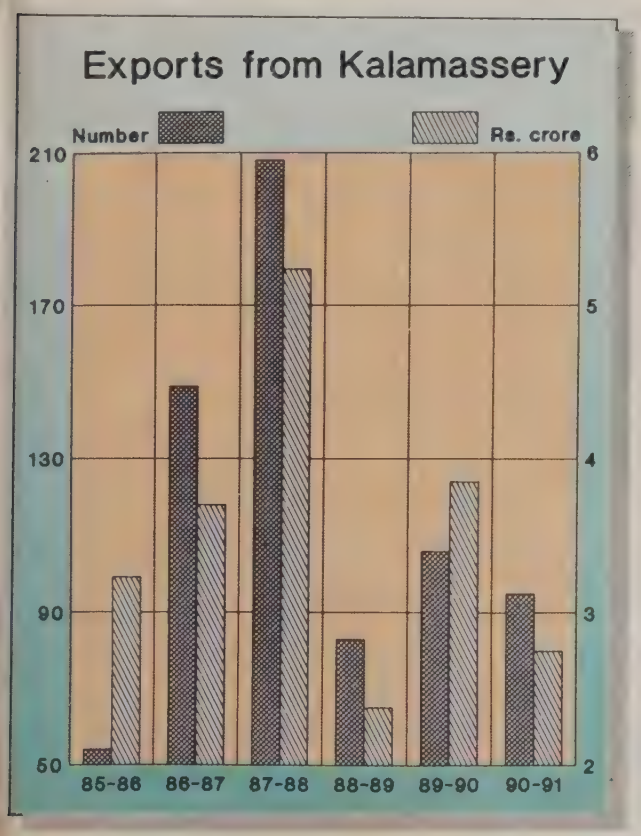
All this points out to the inadequacy of the present banking structure, its culture and its style of functioning as an effective development banker for the rural sector. There is obviously need for some experimentation and a change in both the approach and the schemes. For instance, the AKRSP workers did not come across a single case where the application of a villager, entitled to IRDP subsidy, was sponsored by bank staff. According to one branch manager who tried that, the experience was extremely frustrating on account of the non-cooperative attitude of the development staff.

In this regard, the Agriculture Credit Review Committee, 1989, of the government of India, strongly recommended, "Instead of adjusting the subsidy to the unit cost at the beginning, the same should be retained as a fixed deposit at the normal rate of interest with the bank in favour of the beneficiary and adjusted towards the last one or two instalments of loan repayment. That is to say, the bank will have to extend the full unit cost as loan at the beginning and recover the last instalment(s) from the subsidy deposit."

The typical village borrower will obviously be much better off with an assured long-term association with banks. In other areas, where independent rural development schemes have had some success, despite their higher interest rates, the villagers have been found to appreciate the benefits of a long-term business relationship. And that gives alone hope for improvement.

■ ANIL C. SHAH

The author is chief executive of the Aga Khan Rural Support Programme



MACHINE TOOLS

From Kalamassery with pride

The machine tool export business in India is not spectacularly large. In 1989 it came to just Rs.80 crore (excluding diamond tools and testing equipment) out of a total production valued at Rs.733 crore. Last year it crossed the century mark by reaching Rs.119 crore. But compared to the global production figure of US $46.5 billion, India's standing is at a pygmy level — ranked 21 with production worth $0.24 billion.

The only encouraging trend is that the past decade has seen a tenfold increase in exports. Though the Indian machine tool industry began shipping out its products as far back as 1955, the real thrust came only in 1975, when exports crossed Rs.8 crore.

If there is one company which can claim to have done more than a fair amount for Indian machine tool exports, it is HMT, which accounts for over 40 per cent of the business. That is a widely recognised corporate fact. Less well known is the fact that from among the 16 units and 22 divisions of HMT (1989-90 sales turnover: Rs.715 crore), a substantial contribution to the export performance has come from the unlikeliest of places, Kalamassery, in the industrial belt off Kochi in Kerala. This is where is sited HMT IV, the fourth unit of HMT set up in 1963 with an investment of Rs.7.5 crore for the machine tool division and Rs.4.28 crore for the printing machinery division.

Over the last five years HMT-Kalamassery's exports have ranged in value from Rs.2 to Rs.5 crore (*see chart*). In its best year so far, 1987-88, its export value accounted for 20 per cent of the unit's sales turnover. The mainstay of exports has been machine tools, principally central lathes. But recently the Kalamassery unit was

Jayadevan: early recognition

A Soviet delegation at the plant: encouraging enquiries

able to ship to the USSR the first Indian two-colour sheetfed offset printing machine for the Pravda Publishing House, Moscow. (A later machine of smaller size, the SOM-125, won for HMT-Kalamassery the PRINTEK 1990 technology award, and has since been inviting encouraging customer enquiries).

But at Kalamassery the buzzword these days is CNC (computer numerical control). Says outgoing general manager C.P. Jayadevan, who has been with the Kalamassery unit from the very start, "The most significant thing is that we foresaw the importance of CNC lathes as far back as 10 years ago." Production has increased from just two CNC machines in 1981-82 to 95 last year.

Another important fact which Jayadevan stresses is that these machines have been developed inhouse. In the beginning the CNC systems were imported but because of poor technical support, HMT tied up with Siemens to become self-sufficient in systems. But the situation is far from one of total indigenisation — around 35 to 40 per cent by value of the final product is still imported, mainly special parts like curvi-couplings and ball screws.

Last year, HMT-Kalamassery broke new ground when it made an entry into the European market by exporting a CNC lathe to the Austrian engineering company, Weber Hydraulics, manufacturers of all-aluminium hydraulic power packs and taillifts for trucks. For the Kalamassery unit, this sale is an encouraging move away from overdependence on its traditional export market, the USSR. Along with this Austrian sale, about a dozen CNC lathes have been shipped to customers in the US, Switzerland, Malaysia and Iraq. The HMT-Kalamassery management reckons that by indigenising production of these CNC lathes in just three years, nearly Rs.30 crore in foreign exchange has been saved.

GULF FAST TRAC
2-STROKE ENGINE OIL

Petrosil introduces Gulf Fast Trac. The first new generation synthetic based 2-Stroke engine oil.

Gulf Fast Trac is specially formulated to give an extra surge of raw power and speed to your motorcycle.

The Gulf Fast Trac advantage

What makes it far superior to conventional 2-T oils is its state-of-the-art technology. Gulf Fast Trac is blended with an advanced synthetic base and hi-tech ashless additives to ensure complete combustion and a dramatic reduction in friction. And virtually no smoke emission.

For you it means power-packed acceleration. And for your bike, longer engine life.

Approved by Bajaj Auto Ltd.

Bajaj Auto Ltd., India's largest manufacturer of two-wheelers have tested Fast Trac under the toughest conditions – and have fully endorsed its benefits.

Try it in your bike. And feel it turn into a clean, throbbing power machine!

Banking on big bucks

Unlike the old time die-hards who preferred security more than anything else, the new breed of youngsters in the financial services business have a simple motto: grab some experience in an established organisation and then go for it — alone

Time was when professional *nirvana* was equated with a secure job, a high salary and perks galore. Today, however, there are professionals in their twenties and thirties who think differently enough to break out of their corporate cocoons and plunge headlong into business. One area where start-ups and consultancy shops are becoming increasingly common is the financial services sector. Young professionals see this field as one of unlimited opportunities and worth giving up their yuppiedom for. Indeed, some say they earn as much in a month on their own as they would earn in a year on the job.

"Three years ago," says Shankar Sharma, an MBA from Manila, "the financial markets here were nascent and unprofessional; today India offers tremendous opportunities to entrepreneurs." So firm was this belief, that Sharma chucked up a cushy job as manager with the merchant banking division of Citibank to set up First Securities which is involved in equity broking, money markets and government securities broking. Sharma is not alone in his optimism.

"There are so many new things happening in financial services," says 27-year-old Nirav Panchmia, a chartered accountant who left the merchant banking division of ICICI last June. "Financial markets are much more complex; existing merchant bankers handle existing markets such as leasing, but I saw tremendous new opportunities." Enough, presumably, to propel him to launch Finesse Financial and Money Management Services offering "utility oriented, strategic, financial and corporate law services". That includes a vast array such as project finance, capital structuring, bill discounting, as well as consultancy on collaborations, mergers and takeovers.

Restricting progress

"The economy is going to open up in the next few years," feels 29-year-old Sanjiv Saran Mehra, former Bombay representative of Creditcapital's Venture Fund India Ltd. Mehra started Vision Financial Services, another such financial boutique specialising in debenture and equity placements and industrial licence clearing.

Many youngsters feel, however, that organisational structures restrict opportunities to progress. "Merchant banking is a very diverse field," says Mehra, "but I soon found myself getting compartmentalised." This was despite his diverse responsibilities handling public issues for Creditcapital's merchant banking division and developing a marketing network of sub-brokers for an associate broking firm.

Similar sentiments are echoed by Panchmia's partner, P. Chandrasekhar, a 31-year-old chartered accountant and company secretary who left ICICI's merchant banking division after a three-year stint. Says he, "I was doing the same work in the third year that I was doing in the first, and I was sure if I'd stayed on I'd be doing it in the 10th year too."

Reasons for leaving

Among other things, he was involved in conceptualising and preparing feasibility studies for the setting up of finance companies by industrial houses. Obviously his findings encouraged him to make that decisive break. Slow growth prospects also compelled Harsh Vardhan Roongta to leave ICICI despite a good salary and a "professional atmosphere" to start Anik Financial Services Private Limited. "In a large organisation," explains V. Srikant Rajan, Roongta's current partner and former colleague at ICICI, "if you come up with a good idea, at the most you'll get a double increment."

Panchmia and Chandrasekhar's Finesse offers "utility oriented, strategic, financial and corporate law services" including project finance, capital structuring, bill discounting, and consultancy on collaborations

The younger crop is obviously impatient to make it big. Twentyfive-year-old Manoj Kanaya didn't think twice before quitting his first job at Infrastructure Leasing and Financial Services Ltd to team up with Sharma of First Securities to float a new merchant banking venture. Kanaya, who would rather call his own tune in an organisation, says, "You can grow only when the management decides that you

will." Delhi-based chartered accountant Percival Billimoria too would rather dictate his own pace at work. Which is why he left Arthur Andersen & Company where he was senior consultant in Bombay to set up independently in Delhi. "The long-term goal is to create my own empire," he says. Even if he had progressed upwards at Andersen to become partner, he would have been just one among many worldwide.

Kanaya and Shankar Sharma chucked up their jobs because they would rather call their own tune in an organisation and floated First Securities, which is involved in equity broking, money markets and government securities broking

Yet another problem is pointed out by Dilip Bhat and Amisha Vora, who quit JM Financial and Investment Consultancy Services Ltd, to start Network Investment and Financial Consultancy, which has a portfolio management cell and a research division manned by chartered accountants specialising in stockmarket analysis. "In a personalised service like ours," they say, "you have to be in a position to take decisions on the spot, otherwise the client is dissatisfied. If you're in a job, you have to keep referring matters to the top authorities."

One immediate advantage of being able to take their own decisions was that Vora and Bhat could set up an on-line computer service for their clients. At JM, they say they were allowed limited access to computers. They also build better bonds with their clients through a newsletter that focuses on company and stock-market prospects.

Drawing on the valuable experience and contacts gained on the job, most young entrepreneurs in the financial services field initially offer clients exactly the same services they had performed for their organisations. Being ambitious, however, they diversify at some stage. For instance, Mehra did not handle industrial licences at Creditcapital, but he does these today. At ICICI, Panchmia was in the merchant banking division, and was involved with the conceptualisation and creation of the OTC Market, and in discussions with the ministry of finance and SEBI on legislation for primary markets and new sources of finance. A far cry from what he is doing today.

Though the urge to be one's own boss is a strongly motivating factor, prospects of greater earnings are no doubt alluring, particularly given the high tax structure for the salaried class. Exact earnings of these independent operators are difficult to quantify, but most say monthly profits are several times what their annual salaries used to be. "If you're with an organisation," says 29-year-old Sandeep Sharma, "at the end of the day you're a salaried guy." Sharma quit his job as assistant vice-president, Citibank, turning his back to a Rs.15,000 salary, house, air-conditioned car and club membership. Having started ABC Investments, he has reason to be happy with his earnings. Chandrasekhar, for example, is now in a position to buy his own house in Bombay within three years.

Personal skills

Salaries look pitiful when compared to the commissions that can be earned from pushing a deal through. Mehra cites the example of a Rs.15 crore debenture deal at Creditcapital, for which the company raked in Rs.7.5 lakh. In a service industry where much depends on personal contacts and rapport, Mehra says that he began to wonder whether, "the client got money because of my organisation or because he deserved it or because of my own skills in conducting the deal." Mehra was inclined to believe in his own skills, considering the personal nature of the work.

As Shankar Sharma puts it, "If you're backed by a large organisation, doors open quicker, but finally it is the individual who counts more than the institution. On our own, we do exactly what the large banks do — match two parties, the lender and the borrower, and collect our commission. And then, I can offer the client money at a better rate since I don't have to spend as much on infrastructure as a bank like Citibank would." Delhi-based P.N. Vijay, who quit as head of Citibank's merchant banking division 18 months ago adds a note of caution: "Many people start well but don't sustain it. In a service industry every day is a new day, unlike in industry where you establish a product and keep it going." In any service business a client or two can keep the venture going and cover overheads in the first few months. But what thereafter?

Such issues were no doubt debated upon by the fledgling entrepreneurs — rarely is the decision an impulsive one. Shankar Sharma was quite definite when he joined Citibank that he would quit to

start his own venture after gaining experience and contacts. He gave himself a three-year time frame and ended up leaving in two. Roongta says he let the idea brew for a year before taking the plunge. In retrospect, Vora and Bhat wish they hadn't taken a year to make the move; "when we decided to leave, the market was buoyant, but by the time we left it had almost hit rock bottom," they sigh.

The right time

People tend to wonder as to when exactly to break away. Some feel that the longer one stays on the job, the more contacts one can make. Others believe that job security is most important. Mehra, meanwhile, points out that it's only when you're young and have no commitments can you afford to take chances with your career; the longer you wait the more difficult it becomes. Apart from taking advice from experienced people like Mani Subramaniam, a banker, Mehra wrote 500 letters to his contacts, including brokers and institutions, informing them of his decision to leave the bank. He received a 40 per cent response but that was enough to set him off.

Most also make sure they have some financial cushion to fall back on, for as Srikant Rajan explains, "During the first six months, it can be a touch-and-go situation." Kanaya worked out his expenses and decided he could survive for six to eight months without earning anything. Chandrasekhar got retainerships such as one with Choksi Tubes offering advice on company law.

Fortunately, the financial services field requires the minimum of infrastructure, though lots of personal goodwill. Chandrasekhar's only investment was Rs.10,000 for a telephone connection in his home which initially doubled up as his office. However, space seems to be the biggest constraint; most financial services agencies have perforce to be located in Bombay, the commercial capital where space commands an astronomical premium especially in areas close to the Stock Exchange or at Nariman Point, the city's prime commercial district.

Fledgling financial service agencies take time to build up their client base, often relying on people they have known through their organisations, or on family circles. Most young entrepreneurs hesitate to reveal clients' names to avoid jeopardising relations, or losing them to competition. Bhat and Vora had a "gentleman's agreement with the boss to not inform clients they were leaving" as the organisation was afraid of losing them because of the personal rapport they had with the two. Instead, Vora and Bhat approached relatives, among other people. Mehra's first client was one that Creditcapital had rejected — G. Sivaprasad Reddy of Niraj Petrochemicals. Today, his clients include the Tatas, the Manu Chhabria group of companies and Enkay Texofood. Chandrasekhar's Erudite Corporate Counsel Private Limited provides structuring and arrangement of finance for companies with turnovers ranging from Rs.10 crore to Rs.100 crore.

Mehra set up Vision Financial Services because he found himself getting compartmentalised

Bhat and Vora of Network feel they have to be in a position to take decisions on the spot in a personalised service like theirs, otherwise the client is dissatisfied

What it takes

Srikant Rajan and Roongta provide capital structuring, among other things, for large public limited companies like West Coast Paper Mills. Many clients initially place their confidence on more high-profile large institutions, but are drawn by personal goodwill to the people who leave these organisations. Young entrepreneurs also benefit from the fact that their larger counterparts refuse to handle deals they consider too small.

What does it take to succeed in this competitive field? Chandrasekar talks of Three Cs — confidence, competence and contacts — in that order. Mehra refers to Four Ds—dedication, determination, discipline and desire to succeed. Shankar Sharma, meanwhile, advises that it is important to forge contacts, and not only those that depend on the institution one has left.

In a fast growing money market, where money rotates at lightning speed, many young professionals are lured by the vision of the big buck. There are the honest as well as the unscrupulous fly-by-night operators. There are failures too and instances of people who have gone back to assume their corporate roles. But the youngsters who have left the security of well-paying jobs find little cause for regret — for now. ■

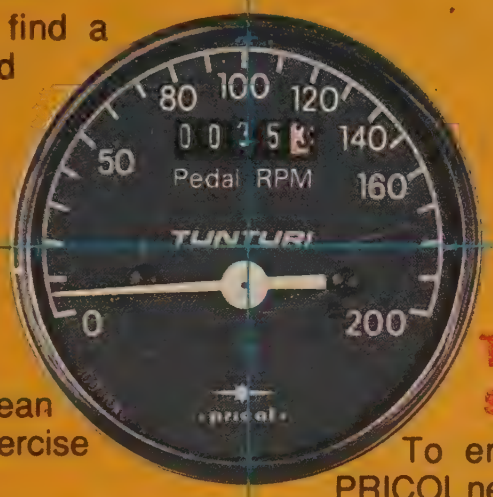
The EXIM Bank Casebook

How PRICOL Zeroed In On An Export Niche

In the early 80s, when the Indian automobile industry opened up to Japanese technology, PRICOL was one of the first to upgrade its plant. The company entered into a collaboration with a Japanese firm, and developed a new range of dashboard instruments.



Now PRICOL could reach out for new markets. But, instead of satisfying itself with relatively easy markets, it took a strategic decision to target hard-currency nations.

Seeking out a niche

While many Indian engineering exporters cater to replacement part markets, PRICOL chose to build on its strengths as an OEM supplier.

The company could have aimed at the high-volume, price-sensitive automotive markets, where it would have been one among many vendors.

Instead, PRICOL chose to find a position from which it could dominate.

Hitting the target

In just two years, PRICOL achieved an annual export turnover exceeding Rs 1 crore.

Now, with an assured market in Europe, PRICOL is reaching out for bigger game: the truck and heavy vehicle builders of the USA.

Zeroing in

PRICOL zeroed in on European manufacturers of boats and exercise cycles.

Each of these required custom instrumentation. And the volumes they demanded did not call for major increases in PRICOL's production capacity.

PRICOL had found its special position.

The right kind of support

To enter these difficult markets, PRICOL need to develop special products for each customer — an activity where conventional financing sources are of limited help.

And an area in which EXIM Bank's presence made a real difference.

1982-1991

An open challenge

Has any tyre company made All Steel Radials for truck The question now is : *why not?*

For most tyre companies, radials made with textile casing and steel belts represent the limits of tyre technology. The only company to have gone beyond these frontiers into the realm of All Steel Radials, combining steel casings with steel belts, is Vikrant. Vikrant makes these tyres for heavy commercial vehicles whose demands are greater than those of LCVs and cars. Why is it, then, that Vikrant has succeeded and others haven't? The answer lies in Vikrant's approach to the radial challenge. Vikrant went about it with the single mindedness of an inventor. It tapped the vast technica resources of Avon, bui prototypes, followe their performance, wer back to the drawin board and carried ou improvements. In othe words, it didn't merel 'borrow' the technology it tailored it, made i workable. In a sense, Vikran invented this technology for India

Vikrant's All Steel Radial

At Vikrant, each and every Radial tyre goes through an X-ray c

from Vikrant.

and buses? Has anyone followed Vikrant's treadsteps?

The result is that India now has access to a special tyre that can bring down fuel bills by 4%. Consider this logic: if a transport corporation were to radialise 10,000 buses, it could, with the savings on fuel alone, add more than *one hundred new buses* to its fleet every year. In additon, the corporation would reduce annual tyre expenses because Vikrant's All Steel Radials travel twice as far as conventional tyres. The expected lifespan of a Vikrant All Steel Radial can be a staggering 200,000 kilometres or more. If this is the case for All Steel truck and bus Radials, as indeed it is, then why haven't other tyre companies invested in this technology? One wonders. Vikrant has shown that the Radialisation of public and goods transport isn't a simple matter of technology transfer. It requires the spirit of a pioneer, a deep understanding of the severe conditions and loading practices prevailing in the country. It requires expertise to create an All Steel Radial for this environment. The challenge is really that. A challenge that the others haven't yet been able to meet.

40,000 Vikrant Radials are already in service

Technology no one else has.

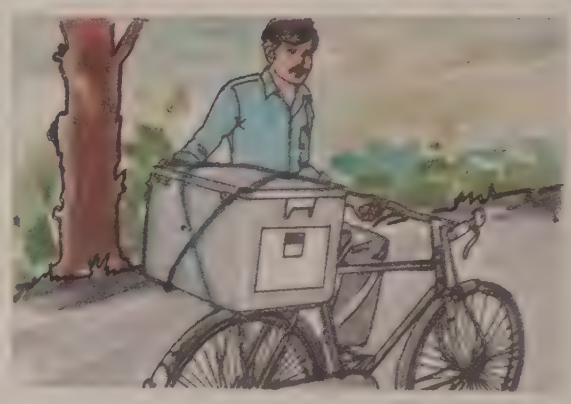
Sintex Insulated Boxes

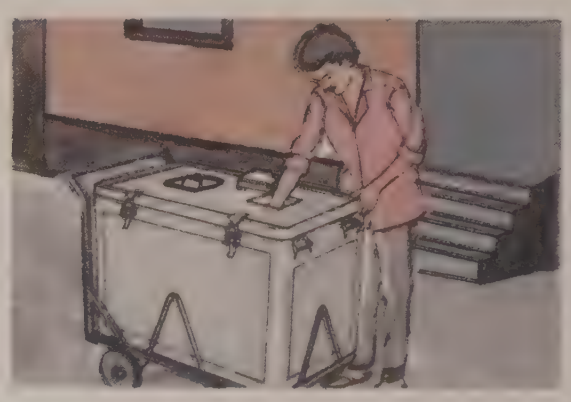
The unanimous choice of the leaders

Leaders are the first in recognizing another leader.

Sintex Insulated Boxes. The unanimous choice of the leaders. Pepsi, Thums Up, Cadbury, Nestle, Vadilal, Kwality...



Made from FDA approved grades of polyethylene, in double-wall construction, by a unique moulding process, the Sintex Insulated Boxes have PUF as the insulation material. Assuring enhanced performance. Moreover, they are leak-proof, rust-proof, corrosion-free, light-in-weight, strong and extremely durable.



Available, in elegant colours, the Sintex Insulated Boxes come in various sizes. From 20 Litres to 325 Litres. An additional feature is the built-in space where your message and brand name can be printed in the desired colour scheme.

PARADIP PORT

Doing well despite...

The Paradip port modernisation plan, presently lying with the public investment board, will be cleared soon, according to the Paradip Port Trust (PPT) chairman, P.K. Mishra. Encouraged by its continuous impressive performance in the last five years despite infrastructural constraints, the PPT has projected a sum of Rs.900 crore in investment during the Eighth Five Year Plan for modernising and expanding the port. Says Mishra, "The development projects, which are at various stages of completion, will begin to show results soon and I am optimistic about the outcome. The traffic handling capacity of the port will, also, definitely improve."

The projected investment includes a sum of Rs.560 crore for deepening, expanding and modernising the harbour. This is aimed at handling 170,000 dwt (dead weight tonnage) ships for export of iron ore and transporting coal from Orissa's Talcher mines to feed the three thermal power plants being set up in North Madras, Tuticorin and Mangalore.

The feasibility of deepening the port was established in the detailed project report prepared by the Hyundai Corporation of South Korea. Hyundai had offered substantial concessional credit and a long-term commitment to buy six million tonnes (mt) of iron ore that could be shipped from the modernised port. The proposal was shot down by the surface transport ministry. But with the new government in place a decision is expected to be made soon on how the modernisation plan will be implemented.

The aggregate capacity of the port was 6.05 mt at the beginning of the Seventh Five Year Plan. Since then there has been no addition to the capacity which comprises a non-interchangeable capacity of 5.2 mt for handling dedicated cargo like iron ore and fertiliser raw materials at their respective berths, and a residual capacity of 0.85 mt (in general cargo berths) for handling other bulk and break bulk cargo.

In 1990-91 the port handled 6.88 mt of cargo, thus considerably overflogging existing capacity. Says one PPT official, "The increase in the average waiting time for vessels, with the consistently high berth occupancy over the years, indicates a high growth potential. However, the existing capacity is a constraint on further growth in the port's traffic which affects its revenue earning capability."

Idle capacity

Paradip port opened in 1964 and was intended to mainly handle the export of iron ore. (The port was taken over by the Central government in 1965.) The last 25 years have seen considerable fluctuation in iron ore exports. The port, apart from three general cargo berths, has one mechanised iron ore berth with a 3 mt capacity per annum. The highest recorded export figure was 2.7 mt during 1975-76 and the least during 1983-84 at 929,000 tonnes. In 1990-91, it handled only 1.7 mt of iron ore, exported mainly to Japan. Says Dilip Mishra, traffic manager, "We are using only 40 per cent of the capacity. The rest of the iron ore handling capacity is idling."

However, the situation is exactly opposite when it comes to coal. The port is now busy handling thermal coal for the Tamil Nadu state electricity board which wants 4 mt immediately. The port can handle only 2 mt annually, due to lack of capacity — coal from Talcher goes all the way to Vizag port at an enormous cost. The immediate need is a bulk coal-handling system requiring three berths and mine loading systems — a proposal for these has been hanging fire for many years.

Another problem is the railway linkage — the route to the main iron ore mines is long and circuitious — 652 km to Barajamda via Kharagpur, 664 km to Bansapani and 661 km to Barbil. If the proposed Bansapani-Daitari link does come through, the distance from Paradip to Bansapani will be 324 km, to Barajamda 370 km and Barbil 379 km. But, this long standing demand remains a far cry. Besides, whereas the requirement of

The increase in the average waiting time for vessels indicates a high growth potential, but the existing capacity is a constraint on further growth in traffic — affecting its revenue earning capability

railway rakes for the port are 85 a day, the port gets only 50 rakes, lament port officials.

Despite these constraints, there has been a substantial improvement in the financial position of the port in the last few years. Its rate of growth of traffic handling at 11.3 per cent is the highest among all ports in India. According to R.N. Routray, financial adviser and controller of PPT, the income projected for 1990-91 is Rs.79 crore, expenditure around Rs.68 crore, net surplus Rs.11 crore and operational surplus Rs.23 crore. For the year 1989-90, the net surplus was Rs.8.03 crore and the operational surplus stood at Rs.23.56 crore. However, till 1989, the accumulated losses amounted to Rs.50.22 crore, which will reduce to Rs.45.22 crore in 1991. Says Routray, "By 2001, our accumulated losses will be wiped out. We are definitely in a good position, especially since 1988-89. Even if there are accumulated losses, my cash balance today is about Rs.60 crore in the bank."

One venture that has definitely helped the port strengthen its bottomline in recent times has been Paradip Phosphates

There has been a substantial improvement in the financial position of the port in the last few years. Its rate of growth of traffic handling at 11.3 per cent is the highest in India

PRIDE

Why you won't let even your Scandinavian furniture come in the way of showing off your floor.

Ltd, a company set up as a joint venture between India and Nauru, has come to the rescue of the port. It pays around Rs.3.65 crore per year to Paradip port for use of the fertiliser berth and Rs.50 lakh towards hire charges for the conveyor belt system, totalling Rs.4.15 crore per year.

However, port officials say that for any further improvement in PPT's financial situation, it is imperative that it gets at least a part of the national oil product traffic. The investment for an oil terminal will be around Rs.8 crore. According to internal projections, Indian Oil Corporation (IOC) and Hindustan Petroleum Corporation Ltd (HPCL) have committed some oil product traffic to the port. By 1994-95, PPT will be handling about 5 mt of oil products annually from IOC and HPCL.

Natural constraints

The port has also to cope with in-built constraints like the siltation caused by the littoral drift towards the coast and the consequent deposit of sand in and around the port channel. Full-time dredging is necessary and the cost in 1990-91 amounted to Rs.5 crore — mainly because the Dredging Corporation of India increased their rates. The recurring expenditure to maintain a wall constructed to protect the area from erosion amounts to Rs.40 lakh annually.

Another handicap is that the port cannot accept ships beyond a certain size. The harbour can, at present, accommodate 60,000 dwt maximum size vessels, though users contend that the port limits entry to only 45,000 dwt vessels. After modernisation, the PPT hopes to accommodate 170,000 dwt ore carriers, with a loading draft upto 20.5 metres for year-round operation. The proposal is lying with the public investment board.

Despite the negatives it is hampered by, the port's growth potential is immense. The working group on the port sector for the Eighth Plan has projected a traffic of 21.56 mt through Paradip port by 1994-95. The Asian Development Bank which made a detailed study on the ports and shipping in the country (in conjunction with the Planning Commission) projected Paradip port to be capable of handling 44 mt by 2000 AD. A feasibility report by Haskoning of the Netherlands has recommended a three-phase development of the port to handle a consolidated requirement of coal to the thermal power stations of 10 mt per annum by 1994-95, 22 MPTA by 1997-98 and 36.8 MPTA by 2000 AD.

Container service

Paradip port is shortly going to introduce a container service for Nalco's aluminium ingots and the products of sea-food exporters. Sea Land, the giant American container operator, which withdrew its operations from the Calcutta port a few years ago, now proposes to serve the Paradip port.

If all the facilities are augmented as required — like increasing the draught from 14 to 17 ft and at some points to 21 ft, and building two multipurpose cargo berths, the oil terminal and a fishing harbour, then, "Paradip port will transform itself into the most important bulk handling port in the country," says Dilip Mishra. Adds P.K. Mishra, "This is the beginning of the real development of the port. I am optimistic that the Centre will clear our modernisation and expansion plans."

■ NAGESH RAO

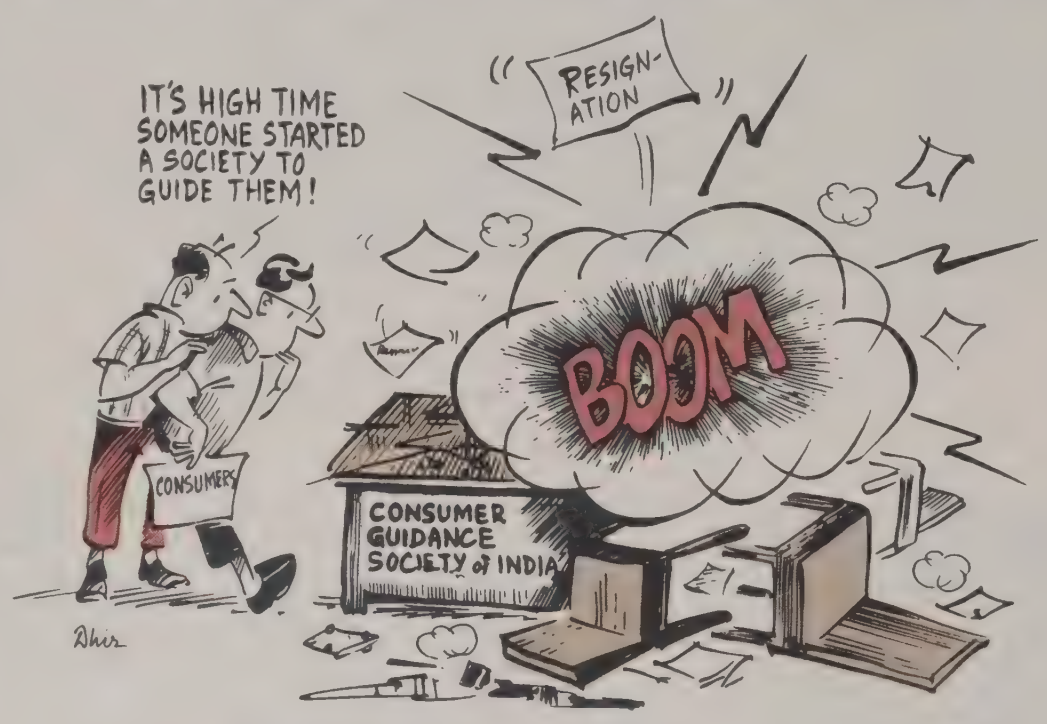
CGSI

A facade crumbles

At the tiny, sparsely furnished office of the Consumer Guidance Society of India (CGSI) on Bombay's Azad Maidan, the atmosphere is as gloomy as the weather outside. Honorary treasurer A.M. Mascarenhas has just submitted his resignation in protest against the appointment of 24-year-old social worker Sobhana Williams as executive director of the Society.

Mascarenhas is the third senior official of CGSI to do so in the past six months; freelance journalist Sakuntala Narasimhan, who was one of the two vice-presidents of the consumer body, quit in December 1990 and Bakhtawar Lentin, a retired judge of the Bombay high court, stepped down as president barely three months later.

Worse, honorary general secretary Jehangir Gai is threatening to complain to the Greater Bombay Charity Commissioner's office about a number of irregularities alleged to have been committed by chairperson Chitra Sirur and former chairperson Renu Talwani. Clearly CGSI, formed 25 years ago to advise people who had suffered because of substandard goods or services, can use some guidance itself — particularly since it is no longer the colossus it used to be, in those days.



For the best part of last year, and perhaps for much longer, CGSI managing committee was able to keep the growing discontent firmly under wraps. But now in the harsh glare of adverse media publicity in the past two weeks, its facade of unity is being ripped apart.

Falling membership

The fear is that ordinary membership of the society, which has dwindled from 299 in June 1986 to a miserable 80 in March 1990, might go even further down. Obviously a lot of people decided not to renew their memberships at the end of the year — perhaps, because they do not receive so much as a letter acknowledging their membership.

When it was set up in 1966, CGSI was the premier consumer organisation in the country. But over the years, while newer organisations in cities like Ahmedabad, Jamshedpur and Bombay itself — Mumbai Grahak Panchayat is one — have turned highly vocal in their representation of consumer interests, CGSI has largely faded into the background.

Office-bearers, however, take solace from the fact that the number of life members has shown a slow but steady rise — from 859 in June 1986 to 1149 in March 1990. Not surprisingly, the funds available to CGSI have not gone up in the past few years; its income was Rs.1,39,721 in the year ended March 1987 and Rs.1,37,397.50 as on 31 March 1990. The only bright spot was 1987-88 with Indu Kale as chairperson, when its income had shot up to Rs.2,27,231. Its budgetary deficit too has swollen from Rs.1,675.50 in 1986-87 to Rs.39,504 in 1989-90. And there is no prospect of improvement in the near future.

The single most important reason for this sorry state, some insiders say, is that a small coterie among its office-bearers is lording it over the rest of the managing committee. A few examples:

• Vice-president Sakuntala Narasimhan was not informed of a managing committee meeting which the president Lentin, was expected to attend. When she protested, vice-chairman P.C. Batra, told her that she was only supposed to attend when she was invited, not otherwise. A day earlier chairperson Chitra Sirur had apologised to Narasimhan, saying that she (Sirur) had "forgotten" to tell Narasimhan that Lentin was coming. Soon afterwards she resigned as vice-president.

• Honorary treasurer Mascarenhas was pulled up for directly contacting Lentin and seeking his advice on a legal matter. The reason: Mascarenhas is also a member of CGSI complaints committee, and he had not sought permission from committee chairperson Pushpa Motwani. An acrimonious exchange of letters followed after which Lentin gave up the presidentship.

• When S.B. Sukthankar, a trustee of CGSI, requested a special meeting to discuss Lentin's resignation, he was ignored. His scathing letter on the subject to chairperson Sirur is expectedly gathering dust in CGSI office.

• Social worker Sobhana Williams was promised a job as executive director on 28 April, 1991 but the managing committee was informed only on 10 May. A number of committee members who opposed the appointment, saying they thought the society could not afford to pay her salary, were ignored.

• Honorary general secretary Jehangir Gai wrote several letters to Sirur, pointing out that a number of rules were being flouted but has received no replies to date. On the contrary, he was ordered not to have any correspondence with outside parties on behalf of CGSI.

• Vice-chairman P.C. Batra refused to talk to the media in the light of recent reports, preferring instead to wait for the chairperson to return from abroad.

Better organisation

Interestingly, the beneficiary of all this bickering has been the Ahmedabad-based Consumer Education and Research Centre (CERC), which has been going from strength to strength. At least two people, earlier associated with CGSI, have now forged closer links with the CERC. One is Narasimhan, who has attended several CERC workshops of late, and the other is Swaran Kohli, whom Narasimhan had once invited to join CGSI. With its annual budget of Rs.25 lakh and one of the largest legal libraries in the country, the CERC is obviously a better organisation to work with, than CGSI.

"A LEGEND WITH LEGEND"

INDIA'S FAVOURITE CAR TYRE

MRF RH L1

Of what use is Motorola's paging technology to a man whose life hangs by a thread?

There are times when a patient requires urgent attention and a doctor is hard to find. Life is at stake here. Which is why Motorola has just introduced the paging system, for hospitals. It's a people-finder and a potential life-saver. In times of emergencies it helps you page for a doctor immediately. This not only helps to save lives but also gives the doctor the freedom to go about his other businesses and yet be on call. At Motorola we have many such advanced solutions that can better the human experience. So that high-technology isn't just relevant to industry.

But also to every Indian.

RADHAKRISHNAN GROUP

Working wonders

Caught in the folds of business early, the young entrepreneur, through hard work and a shrewd business sense, has achieved success in good measure

At an age when Raju Shete should have been dreaming about weekend parties and flashy cars, he became preoccupied with other priorities. His father died suddenly and the responsibility of running the family business fell on Raju Shete, then only 17.

Shete involved himself in its management headlong, and now, twelve years later, the results are there for all to see. He has not only turned Radhakrishnan Offshore Pvt Co Ltd (ROL) into a money spinner, but has helped the company diversify into a new, profitable venture, Radhakrishnan Foodland Pvt Ltd (RFL). The combined turnover of the two companies last year touched Rs.13 crore.

Today, ROL employs 400 persons and provides offshore catering services to over 20 India-based foreign companies involved in onshore and offshore drilling and related activities. And Foodland's store, established three years ago in the posh Bombay suburb of Juhu, heralds the concept of elite supermarkets in Bombay city.

In command

When Shete took over the reins, not only had he to forgo his ambition of becoming a cadet but also had to quit academics to involve himself in the business. Many hardships had to be overcome — the most difficult one was to keep ROL going. His first major decision was to drop the idea of taking over a Madras-based company — a deal which his father had been negotiating shortly before his death. Says Shete, "I was in no position to take over another company, when I did not know how to run my own." Lack of professional help only aggravated the situation. "My father ran the company the way he felt like. He had his own set of rules. It was basically a one-man show," he adds.

Shete's first contract involved selling catering services to a ship. With no experience to back him, the only way he could bag the contract was by quoting a very low figure. In fact, after the contract had been executed, Shete realised that instead of having made money, he had lost a sizeable amount — about Rs.2.5 lakh. Says Shete, "It was a learning experience. I had to accept the contract in order to remain in business." However, the next year, in 1980, Shete bagged his first catering contract from the Oil and Natural Gas Commission (ONGC), to cater to Indian Petrochemicals Ltd (IPCL) officers in a small guest house.

What really got ROL going was a pres-

Shopping at Foodland: exotic products for status-conscious housewives

Shete: looking ahead to a bigger boom

tigious assignment to cater to 300 Japanese personnel of the Hitachi Zosen Co working in the Bombay High offshore oilfield. "It was a very difficult contract, which involved a lot of co-ordination. We had to even fly down two Japanese cooks," says D.P. Dalal, who looks after the entire offshore activities of the company. This helped to increase the turnover of the company from Rs.10 lakh to Rs.40 lakh in 1982.

The successful handling of the job proved a vital breakthrough for ROL in the area of providing contractual services to foreign companies in India. Thereafter, a number of foreign contracts were handled in direct competition with foreign contractors. The company also catered to American, French and Norwegian companies.

A go-getter

The reasons for success are apparent. Shete has the entrepreneurial drive of a go-getting businessman. Yet, unlike his father, he takes the advice of a core team of professional managers. This is in addition to ROL's good infrastructure facilities — its own warehouse for meat and canned goods, freezer and supply trucks. It has its own very high frequency (VHF) telecommunication network and also holds a licence for the import of foodstuff.

ROL has catered to several types of installations operated by foreign companies — geological survey vessels, onshore pipelaying camps and process platforms, among others. The companies which have availed of ROL's services include Global Marine Deep Water Drilling Co of the US, Hyundai Heavy Industries Co Ltd (South Korea), and Richter Drilling International Pvt Ltd (Australia). ROL operates also in the offshore areas of Madras, Paradip, Calcutta and Vishakapatnam and the onshore areas of Gujarat, Rajasthan, Orissa and Madhya Pradesh.

Shete realised in 1986, however, that with the offshore business boom stabilising, the scope for further growth was limited. But by then, his company had reached a turnover of Rs.4 crore and the only way out was to diversify. Hence he acquired the Gift Holding Co. The takeover enabled him to acquire a shop area of 3,500 sq ft in Bombay.

Located in Bombay's prime residential locale — Juhu — he had the benefit of several options. He toyed with several ideas one after the other — of starting a specialised restaurant, an exhibition hall, a business centre and a safe deposit vault. Although all the schemes seemed lucrative, Shete did not go all out on these ideas. It was then that the thought of a supermarket came to him. With government-run co-operative stores doing reasonable business, Shete felt that supermarkets — the western concept of stores — would be appreciated more.

So he launched RFL on 20 June 1988. With about 1,000 customers availing of the self-service system at the store every day, the Foodland supermarket has a daily turnover of about Rs.80,000. Apart from stocking a wide variety of food items available in grocery stores and vegetable markets at other outlets, Foodland stocks exotic products for the upper-income levels — broccoli, cherries, flavoured cheese, asparagus, bamboo shoots and bean sprouts. It is not surprising therefore to find the store exuding snob appeal. The "I was at Foodland last week", refrain is now common among status-conscious housewives residing in Bombay's posh localities.

Always prepared

Shete is prepared for this development. Says he, "People are beginning to understand the 'value added' concept. For it's not just the cost plus margin that decides the final price but also other tangibles and intangibles like hygiene and sanitation, the cost of service and the way you present and market the product." On an average, gross margins work out to between eight to ten per cent, which, after accounting for overheads, drops to between one to two per cent.

The success of Foodland prompted Virendra Doshi of Khaitan and Doshi (KD) Constructions to set up a similar superstore in Andheri. The builders were finding it difficult to sell the shop area at the residential building they had constructed. "We saw the success of Foodland and decided to keep the shop area for a superstore," says Virendra Doshi, partner of KD. Another outlet, Garware Supermarket, which opened two years ago is located in the posh Warden Road locality in Bombay. They have since opened two more stores in the middle-class localities of Malad and Borivali.

In a short span of three years, the city is suddenly flooded with supermarkets. But as Rajesh Chellai, manager, Garware Supermarkets, puts it, "Since the stores are located at different places, they cater to different clientele and each is successful in its respective area." The mushrooming of these stores is no deterrent to Shete, who hopes to increase the number of Foodland stores.

Says Shete, "I don't want Foodland to remain a one-store unit." He looks ahead, and believes that in 20 years, the country will be ready — both in terms of infrastructure and the attitude for organised retailing — for a bigger boom in supermarkets.

Whatever may be his plans, Shete is sure that he will deal with food. For it has been by supplying food — first to sailors and then to housewives — that the enterprising young man made his millions.

■ MAHIRA SHEIKH

A brilliant new name shines brightly on the Indian sugar horizon

Sree Kailas Sugars

Sugar. It forms an integral part of our daily life. And with growing population and increase in standard of living, the per capita consumption of sugar is increasing steadily.

In this scenario, a modern new sugar company makes its debut — **Sree Kailas Sugars & Chemicals Ltd.** — a 2500 TCD Sugar unit, being set up at a total outlay of Rs. 2800 lacs. The plant is located in the sugarcane rich area of Khammam District of Andhra Pradesh, thereby assuring the Company of abundant supply of high quality sugarcane.

Thanks to the foresight of the promoters, the Company has **already obtained licences for setting up a distillery and alcohol based chemical units,** that will, subsequently, be integrated with the sugar plant for higher profitability.

The project incorporates the latest plant and machinery from Buckau Wolf India Ltd — a world renowned sugar machinery manufacturer. Project implementation is in an advanced stage and production is expected to commence as per schedule by end **November, 1991** — in time for the next crushing season, 1991-92.

Sree Kailas Sugars has been promoted by **Sri Kailas S. R. and associates** — a dynamic, fast growing group of Andhra Pradesh. Managed by top notch professionals, the Company has an eminent board which includes **Sri Baldev Pasricha**,(Former Chairman, IFCI), **Dr. N. A. Ramaiah** (Former Director, National Sugar Institute), **Sri G.C. Baveja**(Former Finance Secretary, Govt. of India) and **Dr. Ram K. Vepa** (Former Chief Technical Advisor, UNIDO).

With such credentials, Sree Kailas Sugars looks forward to a bright future. A future it would like to share with you.

"With proper effort for exploiting the cane potential, the mill can easily expand its capacity to 10,000 TCD."
Vasanthdada Sugar Institute, Pune

THE BEGINNING OF A SWEET SUCCESS STORY

PRESSMAN

Old aches, new remedies

Popping a pill into the mouth has never been a particularly good way to relieve the nagging ache of arthritis, the persistent agony of spondylosis, or the sudden excruciating pain of a sprained ankle. Relief is usually temporary, side effects numerous and damage to other organs of the body extensive.

Yet, for many decades, there was no alternative to the powerful painkilling medicines that most doctors continued to prescribe. Now there is. For the past five years, Bombay physiotherapists — Rambhai Patel, with his "hammer tone" and Ali Irani, with his "micro-electro-therapy" (MET) — have been offering effective nonmedicinal solutions to the thousands of people suffering from a wide variety of aches and pains.

Hammer tone involves literally hammering the painful joint with a soft rubber instrument. Millions of people develop minute scars in their muscles, cartilages and joints, as a result of microscopic injuries. These scars usually make any movement of the affected shoulder, ankle or knee extremely painful. In hammer tone therapy, these scars, or adhesions as they are called, are broken by gentle tapping at carefully selected spots. Treatment is usually given for durations of five to seven minutes each. Some feel better after one or two sessions. More chronic cases may need as many as 12 to 15 sittings. But virtually everyone gets some relief.

MET, on the other hand, is based on the fundamental assumption that the feeling of pain is an electro-chemical phenomenon and, is therefore alterable by applying electric current of the right magnitude. A conducting pad is placed on the skin where the pain is felt and electric current of one millionth of an ampere is passed through it. Each treatment session takes about 20 minutes, with the average patient requiring about five sessions.

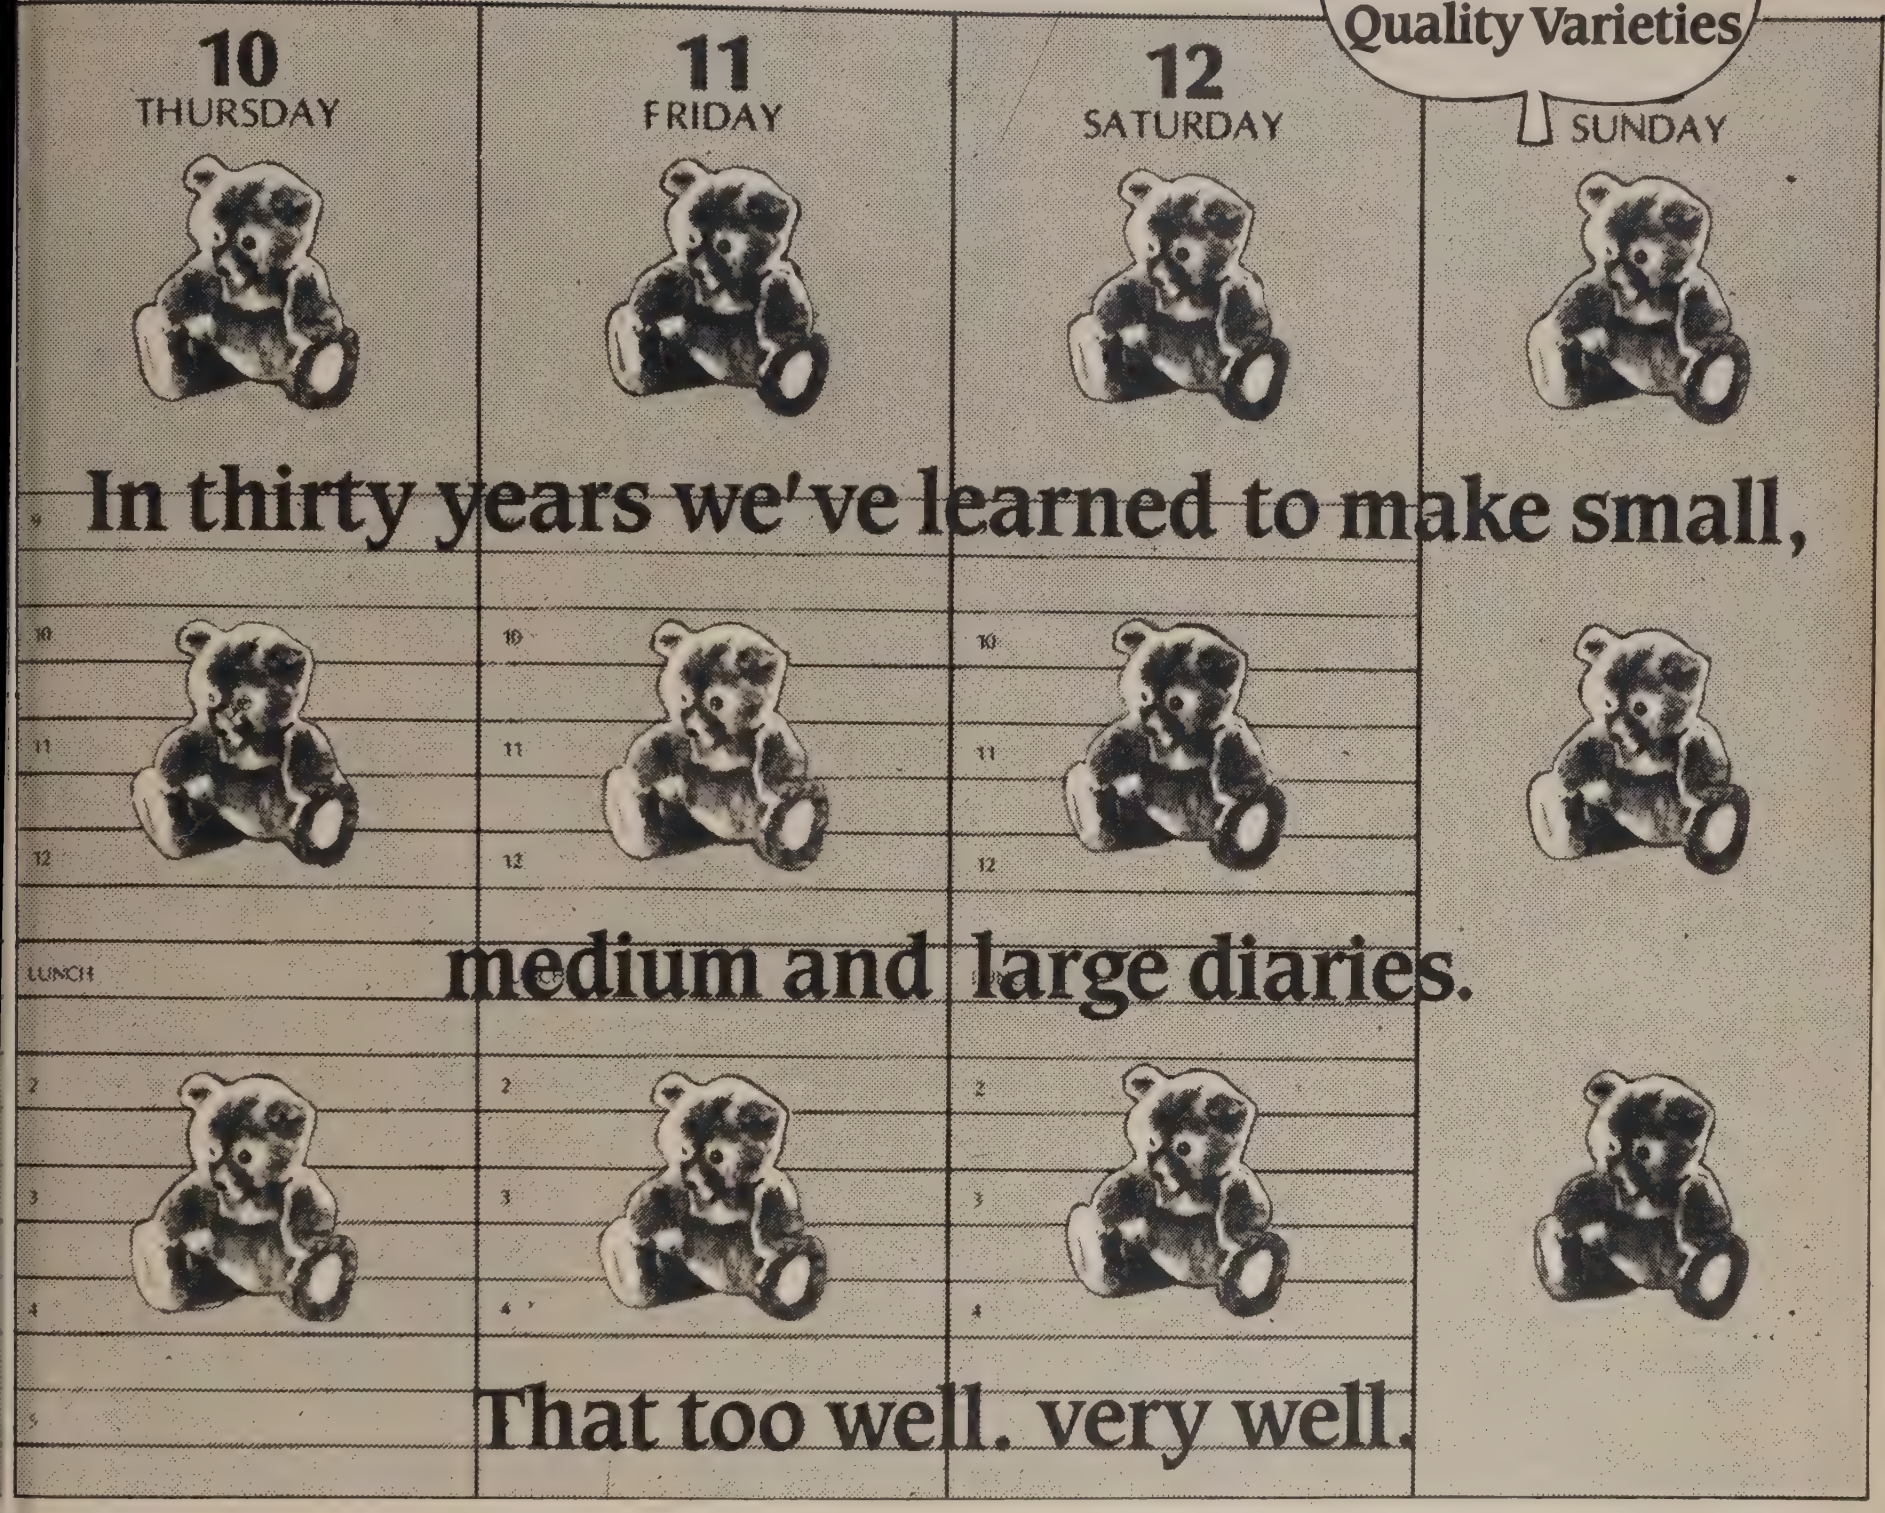
Complementary therapies

In a sense, hammer tone and the more sophisticated micro-electro-therapy are complementary to each other. While hammer tone works better on the nagging backaches that affect most suburban commuters at some time or the other, MET is more effective on the sportsperson with a torn ligament who must get back to action before the hour is out.

Ali relates the case of a squash player of national repute who came to him with a twisted ankle. After just one sitting of MET, the sportsman called up to say that he did not feel any pain! Sangeeta Nayyar, Ali's colleague at Nanavati Hospital, Bombay, once treated a middle-aged lady who complained of shooting pains in her elbow. After one 15-minute session of MET, the pain which had tortured her night and day for more than a month disappeared without a trace. "I have seen joint swellings subside even before the treatment session got over," says Nayyar.

MET also works fairly well against persistent aches and pains. Ali's case files contain the story of Zenia Ayrton, who in 1986 was a 15-year-old aspirant to P.T. Usha's place in Indian athletics. But a few months after she nearly broke the national women's record for the 100 metre and 200 metre sprint, a nagging pain in her left calf threatened to keep her away from the tracks forever. For almost a year, a desperate Zenia tried every available means to overcome her disability. But when nothing worked, she reluctantly agreed to try MET. After just two sittings, her pain disappeared and Zenia was back on the tracks.

There are several such instances among the 200-odd cases in which Ali and his team have tried MET. Now, they have upgraded their equipment through a collaboration with the Institute of Biomolecular Education, California, which enables them to use a device called the "electro-acuscope" which analyses the electrical status of the diseased joint with the help of a microprocessor and designs the treatment accordingly. The results are naturally much better. In a recent study of 50 patients of chronic backache treated at Nanavati Hospital, nearly 45 got completely cured. Another 50 who received traditional forms of therapy found that their symptoms had returned within three months.



Patel, too, has come a long way with his hammer tone treatment in the half decade that he has been practising it. He had started with the sole of a rubber slipper which he had cut in half along its length. The kit bag he now uses contains at least half a dozen hammers of different shapes and sizes — all designed personally by him over the years. "Once in a way, a patient comes, whose needs are not fulfilled by the existing instruments and I end up designing a new one," explains Patel. Meanwhile Sai Surgicals Ltd, the Bombay firm which stocks Patel's kit has sold hundreds of them in both Maharashtra and Gujarat. And the physiotherapy departments in at least two medical college hospitals in Bombay (G.S. Seth and Lokmanya Tilak Memorial) have begun using hammer tone regularly. "I hope many more people will benefit in the years to come," says Patel.

BCCI

Mysterious to the end

On 5 July 1991, the lights stayed on all night at the Bank of Credit and Commerce International (BCCI) in Bombay as bank officials waited for the hammer to fall. That evening, there had been news on the Reuter's screens in the bank's foreign exchange department that its branches in London were being shut down by the Bank of England. Also, regulatory authorities in seven countries where BCCI has its largest operations — Luxembourg, the UK, the Cayman Islands, the US, France, Spain and Switzerland — resorted to direct action to take over the assets of the institution. Regulatory authorities in 60-odd countries where the bank operated, including India, were also informed.

Official notification

In Bombay, the first official notification of trouble came as a fax from the company's headquarters in Abu Dhabi early on the sixth morning asking its Indian branch to suspend operations. On the same day, the Reserve Bank of India issued a terse press release which said, "The Reserve Bank of India has been advised by the Bank of Credit and Commerce International (Overseas) Ltd that under instructions from their head office, consequent to the actions initiated by the regulators at Cayman Islands, the Bombay branch of the bank has suspended all payments and other transactions from 6 July 1991."

And thus was the bank, whose rise in the seventies and eighties was meteoric, to say the least, brought to a grinding halt. Started in 1972, by Aga Hassan Abedi, a Pakistani national, with a capital of only $20 million, it had acquired deposits of over $23 billion by end-1989. Its operations spanned 77 countries, including India.

For Brij Mehra, 31, an officer at the branch in Bombay, this was not trouble for the first time. Mehra and the other officials in the bank, have seen many ups and downs at BCCI. Mehra had joined the bank when it first opened its doors in India in 1984. It was extremely aggressive in its approach and the bank won, fairly rapidly, a large base of corporate clients.

In 1986, BCCI had its first run-in with the law here. The bank had committed a technical violation of banking regulations by conveying unsigned foreign travellers cheques to Al Saya, a Bombay-based travel agency, for a group of Haj travellers. When the agency was raided by the enforcement authorities, they found these. (It must be said in all fairness that there was no intention to defraud, because the cheques were being handed to the people named in the application forms.) But, BCCI, being the bank involved, got dragged into the fracas and subsequently investigated.

Some believe that the real target of the authorities at that time were the Ambanis of Reliance Industries. They were routing their share transactions, and reportedly some offshore deals, through the bank. The then chief executive, according to some employees (not Mehra), acted arrogantly and did not respond to requests for information. He later absconded. Mehra was only marginally involved: he had gone to help his colleague after the branch was raided by the enforcement authorities, found himself behind bars under COFEPOSA for his troubles. His crime: backchatting the enforcement authorities.

Later, though, when chargesheets were filed, none was filed against Mehra. The bank also decided to pay the fines that the enforcement directorate chose to impose. "What I really liked was the way the bank backed us. I know some other cases where banks chose to fire their employees," says Mehra.

BCCI has always had a reputation for sailing close to the wind, world wide. Before 1988, this could be dismissed as malicious propaganda. Abedi was a visionary. He was capable of urging all his bank's employees to donate 3.5 per cent of their salary to charity, when he designated 1984 as the "giving year". In a note to the employees, which was a homily on giving, he said, "It is in the medium of giving that life flows into life and God's divinity in all its embracing fullness, shines and rains softly, smoothly and blissfully on his creation."

Hardheaded tilt

But Abedi was not mysticism alone and even the bank's tilt towards Third Worldism could be hardheaded. For example, the bank stepped in to aid Jamaican prime minister Edward Seaga with $48 million when the latter's failure to repay old debts prevented the release of an IMF credit. BCCI brokered the credit's release and in return insisted that Jamaica's central bank put future business in its hands.

Abedi's close contacts in the Middle East enabled BCCI to tap the petro-dollar market. It also catered to the needs of migrant trading communities, especially from India and Pakistan. While they could not produce the traditional evidence of credit worthiness, BCCI considered them good credit risks.

The bank's strategy and rapid growth were bound to attract the ire of the international banking community. Then in 1988, some employees got involved in an elaborate sting operation mounted by the FBI. Nine bankers were arrested on charges of laundering drug money for agents posing as Colombian drug dealers. By then, Abedi had withdrawn from operations due to ill health.

Other American banks like the First Bank of Boston, Bank of America and Crocker National Bank have been charged with failing to report cash deposits and withdrawals of more than $10, 000, typically a sign of drug transactions. Yet, in their cases courts had accepted that these

Deepak Tolani

BCCI, Bombay: in the aftermath of the closure

were honest mistakes and there were no conspiracies at senior levels to launder drug money.

In the case of BCCI, the US customs officials insisted that the conspiracy went right to the top. The amounts involved in the BCCI case were small — $14 million over two years. Yet the repercussions of the episode were severe and BCCI's reputation as a pariah was confirmed. In the eyes of the international media it became the "cocaine bank". Much was made of the bank's connections with President Noriega.

Further humiliation

In 1989, the bank had to suffer the further humiliation of a bail-out. The Abu Dhabi government took over 77 per cent of the shareholding and pumped in fresh capital after the bank had to make loan loss provisions of $600 million.

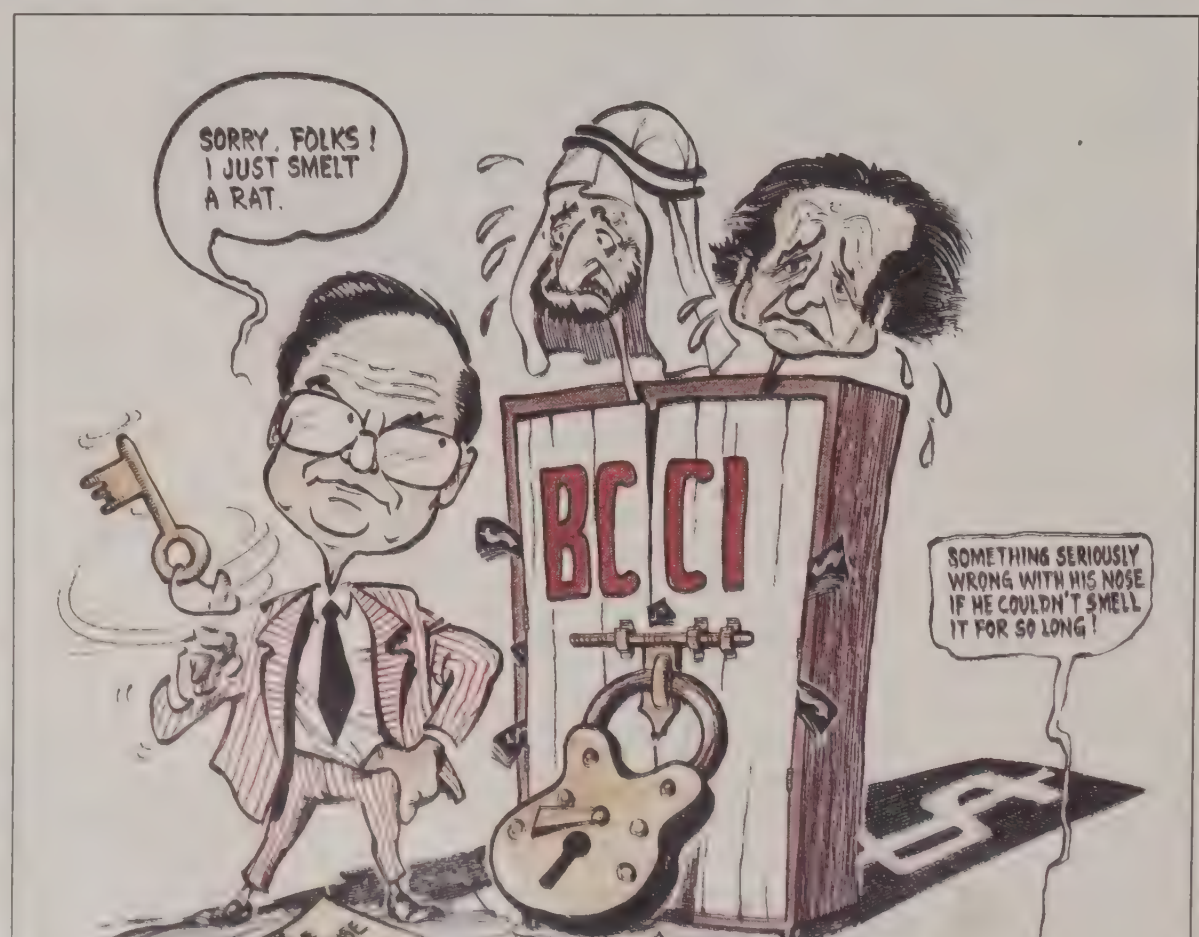
In addition, BCCI's image took a further beating a few months ago when it was revealed that BCCI Holdings had surreptitiously acquired a controlling interest in First American Bankshares of Washington DC, one of the largest holding companies on the east coast. This acted to the detriment of both BCCI and the chairman of the bank, Clark Clifford. Clifford, a stalwart of the Democratic Party, denied any knowledge of the actual ownership of Bankshares. Subsequently, BCCI became the target of an investigation by a US subcommittee. In the final analysis, it may be said that American pressure has played a major part in the recent closure of the bank.

Yet, there were signs that major structural changes were being made in the bank. Both in India and abroad, a concerted attempt was made to clean up the image of the bank. The earlier "can do" attitude was dropped and every attempt was made to follow both the spirit and the letter of the law. B.N. Chowdhuri, who took over as general manager and chief executive officer in India, brought in his own team of senior executives.

The bank's major source of deposits is non-resident Indians, who account for Rs.225 crore of the total Rs.285 crore in deposits. The bank has been highly profitable and last year made a profit of Rs.5.23 crore. Price Waterhouse, auditors of the bank, refused to comment on its operations in the country, but it appears that they have been fairly tough and demanding. It is generally believed that the Indian branch's balance sheet is clean. While it is impossible to make out the extent of bad loans in the banks books, the auditors have been compelling it to write off bad loans against the bank's income.

In the week that followed the closure, Reserve Bank authorities examined a number of options about how to proceed with BCCI. One proposal has been that small depositors be paid an amount up to a maximum of Rs.10,000. The bank's depositors in India or those abroad who have invested in FCNR accounts have little to worry about. All FCNR deposits are guaranteed by the Reserve Bank. The bank is also highly liquid, with Rs.190 crore of its total deposits held in cash or near cash with the Reserve Bank as part of its statutory reserves.

Another option was to let the branch continue operations but as one of either a nationalised bank or another foreign bank. Says S. Murlidharan, manager and cour head, corporate banking, BCCI, "Our ture is closer to that of an internatio bank. It could be an interesting option a bank which doesn't yet have a branch the country." But that was not to be, for RBI has decided to liquidate the ope tions; The State Bank of India has been pointed as the liquidators.



Slim chances of survival

Even abroad, the chances of the bank s viving as an entity are very slim, becau its greatest asset — ie, its good reputati - has been eroded over the years and n finally destroyed.

The severity of monetary authorities' a tion against BCCI is unparalleled. The i mediate provocation for the closure w allegations of fraud in England and a fe in Luxembourg that the huge operati loss suffered by BCCI in the year ende 1990 would impair the bank's viability. A cording to news reports — and these a conflicting — the action came after th discovery last March of "unrecorded d posits"; apparently, the bank had built a edifice of fraudulent loans and deposits t prevent discovery of serious flaws in it balance sheet.

The Bank of England was apparently in formed of these deposits by the new man agement of the bank, subsequent to th Abu Dhabi govern ment's takeover. Th British central ban then asked Price Wa terhouse, who too over BCCI's audit i 1988, to conduct a investigation. Th contents of auditors report have not beer made public, but th impression created i the western media b these two bodies i that a fraud of enor mous proportions was being perpe trated by BCCI.

One part of this was a 'Ponzi' scheme by which the bank at tempted to hide its losses. It took de posits but didn't ac tually report them in its books, and used them repay earlier deposit holders. It is said in certain circles

A branch in London: fraud charges unspecified

hat the very complexity of BCCI's organ-sational structure made it possible for it o carry on a long-running deception; it ould veil irregularities with funds being huffled from one subsidiary to another.

nsufficient funds

after the fraud was reportedly discovered, rice Waterhouse decided that BCCI's cap-tal was not sufficient to meet capital ade-quacy norms established by the Bank of nternational Settlements at Basle in witzerland, though not by a large margin.

BCCI did have a complex structure but t was in the process of being strengthened with the entry of the Abu Dhabi govern-ment. Earlier, BCCI SA Holdings, the uxembourg-based holding company, had wo major subsidiaries — BCCI SA at Lux-mbourg, and BCCI, Cayman Islands. hese subsidiaries, in turn, had either wholly-owned subsidiaries or affiliates in 6 countries.

After the holding company suffered ma-or losses in 1989, the government of Abu Dhabi bought into the bank. The head-quarters of the bank were moved from ondon to Abu Dhabi and a major reor-anisation was being put in place. Unfor-unately, the Bank of England did not pproach the new owners of the Bank and ee whether they would be willing to bail it ut.

Comments in the Asian community bout the role played by the British mone-ary authorities and Price Waterhouse nave been acerbic. Most Asian business-men feel that the true story will never emerge. A chartered accountant in London, contacted by *Business India*, pointed out that the Bank of England was willing to keep a British bank like Johnson Mathey afloat when there had been clear indication of fraud in its operations. Interestingly, the shareholding of the bank was recently taken over by the Bank of England for the princely sum of one pound. Again, while the Americans had been screaming from the rooftops that there was something wrong with BCCI, there was no indication of anything of the sort from the US auditors. They had signed three sets of accounts, in 1987, 1988 and 1989. These were not even qualified in any substantive manner.

The auditors' report attached to BCCI's 1989 balance sheet clearly mentions, "In our opinion the consolidated accounts give a true and fair picture of the financial position at December 31, 1989." A note to the accounts only stated, "The government of Abu Dhabi has subscribed $400 million for new shares and acquired a major holding from an existing shareholder, such that together with related institutions they now hold 77 per cent of the holding company. They advised the directors of their intention to maintain the group's capital base whilst the reorganisation and the restructuring necessary for its continued development is undertaken."

Pointer to wrongdoing

Ian Brindle, a senior partner of Price Waterhouse, told the *Financial Times* in London, that very fact of the government of Abu Dhabi pumping in such a huge sum points to something being seriously wrong at BCCI. "If people don't find that interesting, it would take a lot to get them excited," he said.

In the meantime, Asian businessmen are struggling to find new banks to bank with which is proving no easy task. The government of Abu Dhabi may cobble together a mosaic of the few profit-making banks still left in the group. Yet, the dream of putting together a large, truly Third World bank is surely destroyed for the time being. And in Bombay, Brij Mehra and his colleagues at BCCI are wondering what the future will bring.

■ EAPEN THOMAS

IBM & APPLE

Foes turned friends

After a decade of establishing their hegemony in their respective spheres, the two rivals, International Business Machines (IBM) and Apple Computers Inc. have joined forces to develop a range of hybrid personal computers. These former competitors were pushed into this alliance due to the rapid changes in the computer industry. Both face similiar problems: declining market shares, relentless low cost competition and rapidly aging technologies. Market shares of both the companies together add up to 38 per cent in the PC segment, down by 20 per cent in recent times. And now, consumers base their preferences not on the brand name but on the price tag. In this context competition between the two had become pointless, and they began to contemplate the unthinkable joining forces.

The partnership deal

The terms of the potentially powerful partnership were drawn up after weeks of negotiations to plug large loopholes in their product lines and product positioning in the future. The agreement includes developing an advanced operating system, which will work on both the Apple and IBM line of computers. It also provides for Apple's user friendly Macintosh system to be fully integrated into the IBM product line. Apple will also have access to IBM's advanced high-speed microprocessors. Lastly, the two companies will jointly develop a range of high powered, multimedia hardware and software products.

The latest of IBM's alliances (it has partnerships with Siemens, Wang and Motorola, among others) with Apple is the most tenuous to date, as it has to stand the test of two totally different corporate cultures. But if it succeeds, it will have very far-reaching consequences for the computer industry worldwide. As it stands the alliance seems right for now and both have vested interests in making the marriage work.

■ AROON SARKER

Bellary Steels

A 10 per cent maiden dividend; change in depreciation policy pushes up profits by Rs.1.71 crore; the company holds five months scrap stock; plans backward integration by setting up sponge iron project; rights-cum-public issue of convertible debentures proposed

Bellary Steels, a south-based mini steel plant, has declared a maiden dividend of 10 per cent, perhaps with a view to its forthcoming rights-cum-public issue of convertible debentures during the last quarter of 1991. The funds so raised (Rs.12.77 crore including 15 per cent over-subscription) will be utilised to part finance backward integration plans of setting up a 60,000 tonne per annum sponge iron project costing Rs.45 crore.

During the year ended 31 March 1991, the company's bottomline rose fourfold, on account of lower depreciation and tax liability and also due to write back of excess depreciation provided earlier (Rs.1.33 crore). The company changed the depreciation method from the written down value method to the straight line method resulting in depreciation charges being lower by Rs.38 lakh. But for this piece of window-dressing, EPS would have been Rs.3.3 as against Rs.7.8 declared.

Capacity utilisation improved from 58.6 per cent to 75 per cent as production of steel ingots/billets increased to 36,187 tonnes (28,110 tonnes). Due to competitive market conditions, the company could not fully pass on escalation in production costs. However, the company pushed up sales volume of its steel ingots and billets by 12 per cent and that of steel structurals and re-rolled products by over threefold times. Despite the declining value of the rupee, the company's average cost per tonne of steel scrap declined by 2.3 per cent to Rs.4,348 (Rs.4,448).

In a move to improve profitability, the company has taken up production of alloy and special steels. In order to step up production and broad-base the product range, the company plans to install secondary steel making facilities through the ladle refining furnace route. The company is not likely to be much affected by the RBI's measures to cut down imports. It has already built about five months' scrap requirements and is hopeful of obtaining another four months' requirements from MMTC. However, the company's working is likely to be affected by a month of labour problems that lasted till mid-April 1991.

The scrip's 1990 high-low quotations being Rs.45 and Rs.19, it firmed up during the last few months on expectations of maiden dividend.

Madras Cements

Capacity utilisation up 5 and 9 points respectively at the Tamil Nadu and Andhra Pradesh plants; average price realisation per tonne up 27 per cent; carry forward deficit wiped out; re-entry into dividend list

While demand projections for cement by the end of the Eighth Plan, ie by 1994-95, vary between 64 to 69 million tonnes (mt) per annum, the effective installed capacity is put at around 57 mt. Given an average industry capacity utilisation of 80 per cent, the additional capacity of around 25 mt needs to be provided for to keep pace with demand during the Eighth Plan, of which, say, 12 mt capacity is under creation. The likely development in new areas such as concrete roads, canal linings, exports and strengthening of the rural marketing network will all go to ensure a steady growth in demand which in turn will keep price realisations propped at remunerative levels.

For Madras Cements, the year end March 1991 has seen a dramatic improv ment in performance. Capacity utilis tion at the Tamil Nadu and Andh Pradesh plants stood at 119 per ce (114 per cent) and 83 per cent (74 p cent) respectively. The average price rea isation hardened considerably Rs.1,272 per tonne (Rs.998.90 per tonne These factors apart, a 3 point drop power and fuel charges, a 7 per cent d cline in borrowings and the interest bu den declining by 4 per cent, all improve efficiency at the operating level. The co lection period in terms of debtors also d clined by nearly 5 days being at a average of 12 days (17 days) leading to tighter working capital management.

Market price (Rs.):			
Current	4,700.00		
1990: High	4,100.00		
Low	500.00		

Profit margins at operating and gross level rose by 5 and 9 points respectively On a low equity base of Rs.3.02 crore, the company earned Rs.590 per share of face value of Rs.100 (as against a below-par earnings of Rs.22.67 in the previous year). The carry forward deficit of Rs.5.74 crore has been comfortably wiped out and preference dividend arrears have been cleared making way for a swollen book value of Rs.1,115.67 per share (Rs.542.67). A dividend of Rs.30 per share (nil) requires a payout of merely 5 per cent.

The scrip has been scaling dizzy heights

in the last one year. Lying subdued at Rs.550 in January 1990, it touched Rs.4,000 by November and subsided again to around Rs.3,300 in December 1990. Opening at around the same level in January 1991, it moved up steadily in anticipation of a good performance and shot through the Rs.5,000 mark in end May 1991. It now quotes at Rs.4,700 (12 July 1991) discounting latest earnings eight times.

For the first two months of the current financial year, production got off to a good start totalling 207,000 tonnes at both plants. Capacity at the Tamil Nadu factory is being enhanced by 100,000 tonnes (to 513,000 tonnes per annum) at a cost of around Rs.23.5 crore. Financing will be by way of internal accruals and assistance from financial institutions. While this will increase the interest burden, equity will remain the same. The additional capacity is expected to go on stream during the second quarter of 1992 and will thereby add to the turnover for the year ended 1993.

Bajaj Auto

Announced a dividend of 100 per cent for the year 1990-91, which is 10 points lower than the previous year's dividend; performance too has slipped compared to the previous year; the Gulf-War, the political uncertainty and the hike in petroleum prices have taken their toll on the company; swollen inventories, 92 per cent higher than the previous year, have led to production cuts, as a result of which 4,000 temporary workers had to be laid off

On the positive side, Bajaj Auto has managed to reduce the imported content of its raw materials from 30 per cent to 20 per cent. This has caused a 46 per cent drop in the need for foreign exchange for raw materials. Even though this has not shown up in the final analysis for the year 1990-91, it should make a big savings for the year 1991-92. On the other hand, even though exports make up less than two per cent of sales, they have doubled from Rs.10 crore to Rs.21 crore in one year.

The sum total is lower margins for Bajaj Auto. Margins have shrunk from 19 per cent to 16 per cent, and 16 per cent to 14 per cent respectively. The net profit margin has dropped from 6 per cent to 4 per cent.

The company is of interest to an investor because it is operating on a very low equity base of Rs.18.9 million shares of Rs.10 each, its shareholders earning Rs.29.97 per share. This is lower than the previous year's EPS of Rs.34.63 per share, but the company has maintained its payout ratio of 33 per cent. The company will make up for its lower dividend to its shareholders by capitalising Rs.18.81 crore from its healthy reserves and presenting it to the shareholders in the form of a 1:1 bonus.

Bajaj Auto's prospects will depend on the ability of the company to maintain the leadership position in the industry with its newly introduced models of scooters (50cc and 150cc) and motorcycles (the 100cc four stroke Kawasaki Bajaj). The company is already showing its muscle in the motorcycle industry by increasing its market share from 19 per cent in the July-December 1989 period to 27 per cent in the corresponding period of the year 1990. The company already has 90 per cent of the three-wheeler market.

ECE Industries

Maintains dividend despite 21 per cent decline in net profit; borrowings substantially higher due to delay in payments from electricity boards; elevator division likely to turn corner; improved working expected

ECE Industries has suffered a setback for the year ended 31 March 1991 on account of higher interest and depreciation charges. The company, however, maintained dividend of 18 per cent.

Of total sales of Rs.89.35 crore, transformer sales account for 43 per cent and the lamps division another 29 per cent. Sale of meters and switch control boards to various electricity boards also contribute 17 per cent of total sales. The working of the transformer division of Sonepat factory was, however, affected by communal disturbances and a transporter's strike affected flow of raw material and finished products.

The working of the lamps division, on the other hand, was affected due to non-availability of LPG and other petroleum products. The company could not commence using the newly imported lamp blowing machine as arrival of the old furnace was delayed. Production of fluorescent lamps was affected by local disturbances and the non availability of fluorescent powder. Unit sales realisation improved by 21 per cent in case of GLS lamps and by 24 per cent in case of fluorescent lamps.

During the year, income from sales and services (net of excise) improved by 17 per cent and other income more than doubled. The company was able to pass on escalation in input costs and other overheads as indicated by a 22 per cent

rise in operating profit. Gross profit declined by 4 per cent as interest costs increased by 78 per cent. Profit before tax declined by 23 per cent as depreciation charges were substantially higher.

There has been delay in payments from various electricity boards. Sundry debtors during the year increased from Rs.22.77 crore to Rs.33.38 crore. Additions to gross block amounted to Rs.3.61 crore. As a result, the company's borrowings was higher by Rs.19.41 crore. This resulted in higher interest charges during the year under review.

The company is hopeful of achieving better results during the current year. The lamps division is expected to improve its working further. The elevator division is likely to turn the corner. Work on railway electrification will be completed during the current year and the company has received a contract for Rs.8 crore.

TRENDS

Tata Press

Tata Press is in the business of printing documents like annual reports, prospectuses of capital issues and other stationery goods. The company has announced its results for the six months ended March 1991. Sales have diminished slightly for the current six months compared to the corresponding six months for the previous period.

Profitability has been very low for the company, but they have managed to keep afloat thanks to their profit from operations. However, with 63 per cent of their operating profit being eaten up by interest (last year's interest put them in the red), gross profit for the current period has shrunk to a dismal Rs.0.53 crore. However, it should be noted that the company has decreased its losses from the corresponding previous period.

Inspite of the poor performance, the Rs.10 scrip reached a high of Rs.55 and a low of Rs.35. Currently the scrip is trading at Rs.45.

Mahavir Spinning Mills

Mahavir Spinning Mills produces cotton and acrylic yarn, as well as sewing thread. The company has improved its performance for the period ending March 31, 1991 compared to the corresponding period of the previous year. Even though the company is not a large exporter, sales have risen by a healthy 21 per cent. The unaudited results show a surprising 3 per cent drop in cost of materials. This has led the cost of materials as a percentage of sales to drop by 10 percentage points.

Profitability however, has strengthened for Mahavir Spinning Mills, in line with other mills in the industry. Operating profits soared by 55 per cent from Rs.12.59 crore to Rs.19.52 crore. Similarly, operating margins too have increased by 5 percentage points. But a larger interest burden, and a doubling of the depreciation expenses have brought the net profit margins down to previous year levels. However, cash earnings per share have shot up from Rs.141.98 in the current six months, compared to Rs.222.43 in the corresponding previous six months.

The scrip has moved between a 199 high of Rs.103 and Rs.230. It is currentl trading at Rs.190 (7 June 91) discountin earnings 1.25 times.

RESULTS ANNOUNCED

Tata Tea

Dividend up 41 points; export earnings around Rs.90 crore; completes acquisition of Conscofe

Tata Tea has posted a 13 per cent higher income of Rs.307.10 crore with net profit up 24 per cent to Rs.51.58 crore for the year ended March 1991.

With this, the EPS is Rs.30.18 (Rs.24.28) and payout has almost tripled to 70 per cent (25 per cent) to pay a dividend of Rs.10.10 per share. The share price at Rs.325 discounts earnings 10.8 times.

Consolidated Coffee has now become a subsidiary of Tata Tea who has acquired a major shareholding of 52.40 per cent. The company's Haldia project is under implementation while the rights issue to part finance the same awaits CCI consent.

Bharat Forge

Dividend maintained at 30 per cent; impressive export performance; EPS up by Rs.4

Bharat Forge, of the Kalyani group, has emerged as a leading forging company in the country. The company's turnover for the year ended March 1991 is pegged at Rs.247.09 crore, representing a growth of 26 per cent. At net levels, profit after tax has increased by 46 per cent to Rs.14.42 crore yielding an EPS of Rs.10.12.

The company's exports have recorded an increase of 68 per cent, from Rs.16.92 crore to Rs.28.45 crore.

TISCO

Saleable steel declines marginally by 3 per cent; profit margin at gross level rises by 2.3 points but stagnates at net level

Turnover at Rs.2,330.83 crore (up 9 per cent) yields a gross profit of Rs.375.16 crore (Rs.294.62 crore). With tax provi-

sion almost trebling on account of the abolition of investment allowance and the restriction to 75 per cent of the claimable depreciation allowance, net profit margins have remained static at 7 per cent. EPS at Rs.6.96 has also therefore stagnated while dividend is up by one point to Rs.3.10 per share (Rs.3). With exports pegged at Rs.206 crore, net forex earned is a mere Rs.58 crore.

During the period under rewiew, the 80-tonne energy optimising furnace has been commissioned. Work on the blast furnace, the hot strip mill and the split location cement plant is underway.

Bombay Dyeing

Exports up 36 per cent; profit margins firm up

Gross profit margin is up seven points to 13.7 per cent on a turnover of Rs.457.17 crore (up 16 per cent). On an ex-bonus equity of Rs.22.48 crore, the company has earned Rs.15.97 per share (Rs.19.59) which works out to Rs.31.95 on cum-bonus equity. Dividend per share at Rs.3.00 (Rs.4.00) equals Rs.6.00 on cum-bonus equity. Payout has eased to 18.8 per cent (20.4 per cent). The scrip quotes at Rs.197.50, discounting these earnings 12 times. Exports at Rs.69.68 crore has made a significant contribution to the bottomline. Meanwhile, the foreign collaboration proposal for the expansion of the DMT plant to 100,000 tonnes a year has received clearance and implementation is underway.

J.K. Synthetics

Even cement, being an integral part of this Singhania group company's product-mix, fails to prevent the bottomline from slipping deeply into the red for the year ended March 1991

Excise duties on PFY/NFY have been hiked while the market for nylon tyre cord and acrylic fibre was sluggish. This is while interest and depreciation charges rise steeply due to the new complex for the latter two products commissioned at Jhalawad. Small wonder then that cement was unable to exert its influence on the overall performance. With sales down by 22 per cent to Rs.643.4 crore, gross profit earned was Rs.25.28 crore (Rs.33.68 crore). With a higher outgo on depreciation, the net loss was Rs.45.50 crore as against a net profit of Rs.7.02 crore in the previous year. The scrip now quotes at Rs.33.

Reliance Industries

Turnover crosses the Rs.2,000-crore mark; margins look up; dividend maintained at an easier payout

For the year ended March 1991, Reliance earned a gross profit margin of 23.14 per cent (22.90 per cent) on a turnover of Rs.2,104 .89 crore (up 13 per cent). On an equity base of Rs.152.14 crore, the company has earned Rs.8.25 (Rs.5.95) per share and will distribute Rs.3 per share as dividend. Payout has eased from 50 to 36 per cent. The scrip currently hovers around Rs.136.50, discounting these earnings 16.5 times.

IN BRIEF

Indian Charge Chrome's plant has achieved 93 per cent capacity utilisation by producing 3,875 tonnes in May 1991. It has also been granted a reduction in transmission loss charged on the power fed by it to the state grid. In monetary terms this will result in savings of more than Rs.5 crore annually.

BSES has been sanctioned foreign currency loans aggregating $268 million to part finance its 500 MW power station at Dahanu by both the World Bank and the International Finance Corporation.

Bajaj Auto has recommended the capitalisation of Rs.18.81 crore, of the free reserves amounting to Rs.297.90 crore, by a bonus issue in the ratio of 1:1.

Deepharma is going in for expansion and diversification in injections, capsules and tablets for which it will issue rights shares in the ratio of 2:1.

Suman Motels plans to diversify into the chemicals and computer parts business. The company's EPS for the year ended March 1991 works out to Rs.2.09 (31 paise).

G.M. Mittal Stainless Steel is replacing its ingot casting with continuous casting machine at a cost outlay of Rs.11 crore. To part finance this, the company will make a rights cum public issue of convertible debentures aggregating Rs.6 crore.

Ross Murarka Finance

Ross Murarka Finance Ltd, an eight-year-old leasing and hire purchase company, issued fully convertible debentures of Rs.200 each for cash at par totalling Rs.10 crore.

The company will offer Rs.5.26 crore worth of debentures to its existing shareholders through a rights issue by issuing one debenture for every five shares. The balance of Rs.4.74 crore will be offered to the public. The debentures will be fully converted to 10 equity shares of Rs.10 each at a premium of Rs.10 per share six months after allotment or by end March 1992.

The company has two divisions — leasing and hire purchase and publications. It also offers property development schemes — Swargapuri township in Madras is one of them. Its profits have grown from Rs. 1.08 crore in 1985 to Rs.4.83 crore in 1989-90 (18-month period). The dividend declared has risen from 21 per cent in 1985 to 30 per cent in 1989-90. Says Ross Deas, managing director, "We have tied up Rs.10 crore worth of business already with blue chip clients to be able to give returns to our investors from day one."

Sree Kailas Sugars & Chemicals

The first company of the south-based Sree Kailas group (with interest in alcohol, finance, bio-gas and transport) to go public, SKSC is setting up a 2,500 tcd sugar factory. According to Kailas Ravi Shankar, the company's executive director, the agricutural lands around the site are predominently sugarcane growing areas and as per the Vasanthdada Sugar Institute report the SKSC's sugar mill can easily expand its capacity to 10,000 tcd.

Meanwhile, the company plans to commission the mill by November 1991 in time for the 1991-92 crushing season. "The company also has licences for alcohol and alcohol-based chemicals units which will be implemented after the first year of operations when the company expects to clock a turnover of Rs.18 crore", adds Ravi.

Sugar, of late, has been in short supply. As per the latest figures available, in the year 1988-89, the production was 8.75 million tonnes as against the consumption of 9.86 million tonnes, the shortfall met by imports. The prospects of the sugar industry are also dependent on the climatic conditions which have an impact on the availability of good quality cane and the policy of the government of India in regard to the fixation of price of sugarcane, ratio of levy to free sale sugar to be sold by sugar units besides the incentives offered to new units by way of higher quota of free sale sugar.

Currently, as per the sugar policy, the ratio of levy to free sale is fixed at 45:55. The company is eligible for incentives for a period of 7 years by way of additional free sugar quota.

G.M. Mittal Stainless Steels

G.M. Mittal Stainless Steels (GM) set up in 1980 is an established manufacturer of high alloy stainless steel castings. Periodic expansions have taken its present capacity to 18,000 tpa.

A technology upgradation cum expansion programme was undertaken in 1988 and the vacuum oxygen decarburisation technology (VODC) obtained from Leybold of Germany was installed. The facility of VODC allows the company the use of mild steel scrap and high carbon ferro alloy instead of high value stainless steel scrap and low carbon ferro alloys for the manufacture of higher grade of stainless steel.

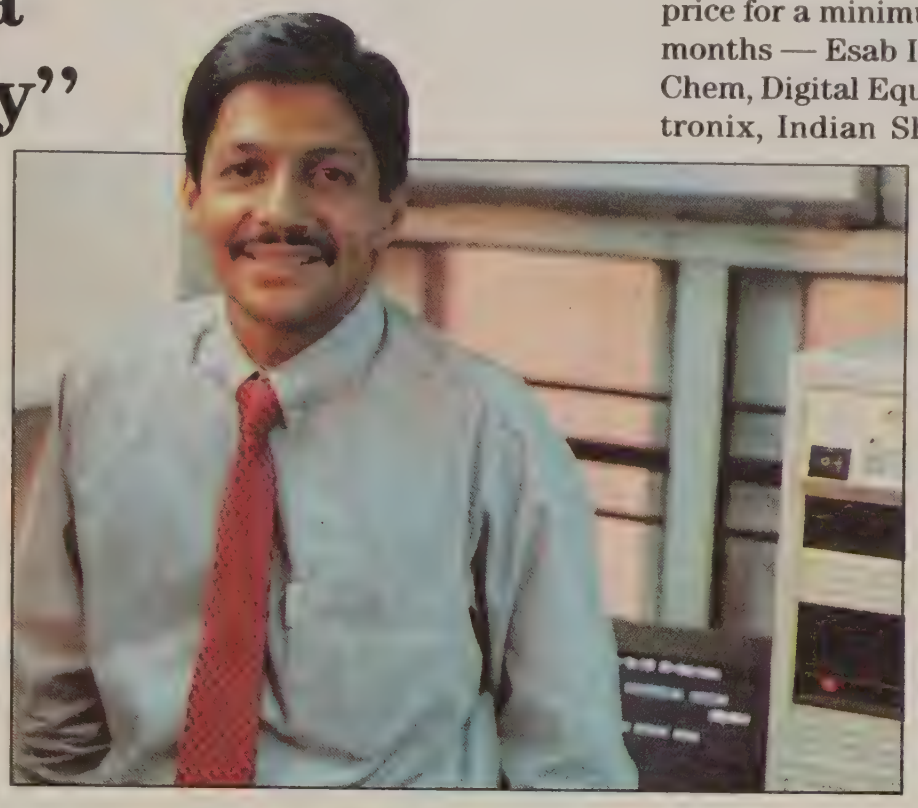
Under the new programme, GM proposes to improve its yield and product quality with the installation of a continuous casting machine capable of casting billets up to 140 mm. This programme expected to cost Rs.7.10 crore, is being funded by term loans of Rs.5.25 crore from financial institutions while the rest will come from a rights cum public issue of convertible debentures.

Each debenture of Rs.250 will be converted into 10 equity shares of Rs.10 each at a premium of Rs.15 per share, six months from the date of allotment. The present issue will raise the company's equity to Rs.3.83 crore. The market value of GM's share is Rs.34 (15 July '91).

G.M. Mittal Stainless Steels	
Issue opens	: 1 August 1991
Size of the issue	: Rs.6 crore
To Indian public	: Rs.2.11 crore
Instrument	: 14 per cent convertible debentures of Rs.250
Promoter	: Ramesh Chandra Mittal
Project	: Modernisation scheme by replacing present ingot casting with continuous casting machine
Plant location	: Dhar, Madhya Pradesh
Listing	: Bombay, Ahmedabad, Delhi and Indore

Since 1986, GM's sales have risen from Rs.7.01 to Rs.33.75 crore for the year ended March 1991. Profit after tax has gone up from Rs.22.8 to Rs.70.69 lakh. The EPS as at March 1991 was Rs.4.9.

However, for the same year (1991), the company's interest costs have grown to Rs.2.14 crore (Rs.21 lakh as at December 1985). With new loans this will go up even further. Also, basic raw materials being ferrous scrap and ferro alloys, where part of the ferrous scrap is imported, raw materials costs are also expected to increase.



According to R.C. Mittal, GM's chairman and managing director, sales for March 1992 will be around Rs.45 crore but net profit at Rs.70 lakh will be same as last year.

"We have to be a market economy"

At this stage, no portfolio manager would risk recommending any particular scrips for long-term. The whole economy is in a flux and to top it all, politics interferes in decision-making a bit too much.

The portfolio managers choice in the changed environment, is not only difficult but he would have to watch his step every day as things would be different with rapid changes in the government policies.

So we have **Parag Parikh** *talk to Lancelot Joseph on what the possible short-term investment strategy could be without going into stock picking. Parikh feels that total liberalisation will take place only if the stars of the Indian population are bright.*

We are caught in a triangle between the politicians, bureaucrats and the industrialist and getting out is going to be very difficult. Each one has his own interests and as they stand to lose rather than gain, total opening up can be ruled out. Devaluation alone won't help unless accompanied by a breaking down of barriers and tariffs. The IMF has not asked us to devalue. In reality it is teaching us how to run the economy. Till now we have the same old system of planning, development, taking the loan and then making merry with it. When we speak of opening up our economy, it is, in a way Schumpeter's 'creative destruction' wherein new technologies destroy the old.

Even as far as the system is concerned we are currently talking of a global economy where everything is open and is in a way replacing planning. Planning causes misdevelopment. If we liberalise, it must be total. We have now gone in for devaluation along with which all trade barriers must be opened. If it is a half-hearted measure then the devaluation will backfire on us.

Once you are thinking in terms of a new world economy, then planning has to be eradicated, which means that licensing and monopoly have to be ended. And no industrialist would be game for total opening up. They will want it in a phased manner.

The new scenario would mean no planning, no licensing, no FERA and no MRTP. This will bring in a competitive market with higher productivity. Hi-tech will automatically flow in as new strategic alliances will be drawn up giving competitive advantages. Until now, in our system, planning has meant licensing and tarriffs which in turn have created monopolies. These have led to corruption, capital flight, inflation and overall inefficiency.

We believe in protecting infant industries, but we cannot protect them in the changed situation; each should fend for itself.

Just now the stockmarket feels that we are in the process of opening up the economy. The market is therefore booming but the reality is that this move will lead to grave consequences. For example, the petrochemicals sector which is now protected by large giants may even have to close shop. You have to be tuned to realities. Without trade barriers the fate of the rayon and petrochemical shares is unthinkable. But the market is going up because this market has a short-term outlook.

Peculiar behaviour

Our Indian market has a peculiar way of behaving. For example, when on 2 August, Sadam Hussein invaded Kuwait the repercussions it would have on the oil prices was ignored. In general the market is not a well educated one. A few people are obviously there but it is the mass hysteria that follows which decides issues. The market does not think that opening up of the economy is the solution to all problems.

If the change is total, the following could be good picks at the present market price for a minimum lock in period of six months — Esab India, Astra IDL, Colour Chem, Digital Equipment, Hinditron Tektronix, Indian Shaving Products, Modi Xerox, Nestle, Siemens, Wartsila Diesel and Birla 3M. At this stage we cannot say that total liberalisation is not going to take place. Hence a little bit of caution will be required.

In the Indian market, investors generally talk of the replacement cost of plant and machinery while making investment decisions. But they fail to realise that inflation has always been a world-wide phenomenon and prices have been going up. They talk of the replacement cost being higher and so the share prices keep going up in relation to the replacement cost.

False euphoria

Replacement should always be taken from the point of view of the productivity. Today a 50-year-old plant has a different type of productivity though you may pay five times more for its replacement. The production efficiency of a new plant is forgotten. There is no meaning in the way the market analyses replacement costs. For example, in the recent shipping shares boom, the market feels that they will have hard cash foreign earnings. Yes,that is true but what about the replacement cost of the ships which has to be financed from the foreign exchange. So both have to be judged from that point. There is no doubt that the earnings could exceed the replacement cost but it is really the punters of the market who created the euphoria leading to the shipping shares flaring up.

Ultimately we have to be a market economy, where political will is very important for liberalisation. Like when we talk of FERA — 51 per cent and letting anyone start whatever they want to with the market forces deciding the outcome.

So, if liberalisation is going to take place then the market is going to see a different picture. Some of the non-starters of today could well be the blue chips of tomorrow and some of today's leaders could be out of the scene totally.

STOCKMARKET REVIEW

Bullish swing

(For the fortnight ended 28 June 1991)

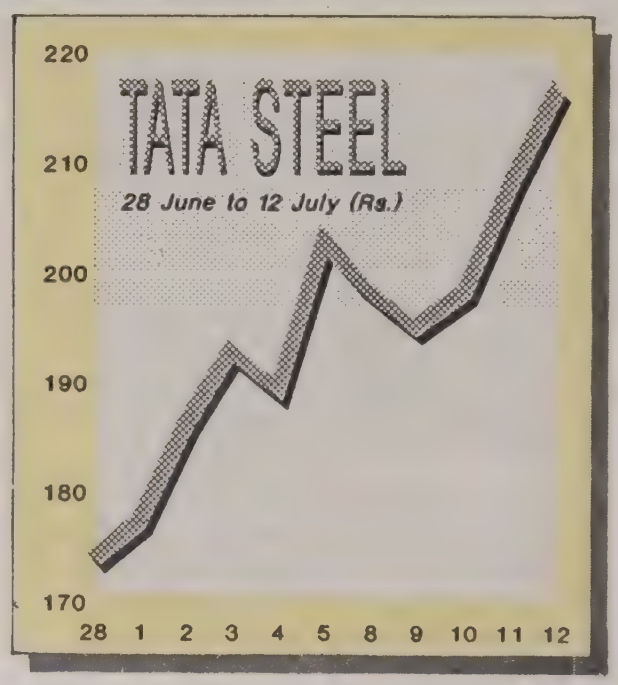
	12 July	28 June	Per cent change over fortnight	year
BSE Sensitive Index	1441.85	1269.91	+ 13.5	+ 56.0
BSE National Index	702.91	628.75	+ 11.8	+ 47.5
Vol (Rs.cr) fortnt. ended	177.80	160.11	+ 11.0	+ 16.7

The market surprised analysts who went by the previous fortnight's fall to predict further declines in the face of a liquidity crisis overcoming the economy. But the finance minister's quick devaluation, rumoured to be occasioned by FCNR repatriations, was followed by the commerce minister's *jugalbandi* in the form of trade liberalisations. This revealed unexpected qualities of firmness, sensibility and speed on the part of the government, which, while lacking in the first two qualities, has traditionally, had the speed of a snail and a tortoise over such matters. This was followed by almost unbelievable rumours of bureaucrats burning the midnight oil to reform their departments.

All this sent bulls on a rampage who even took on financial institutions. Bears dealing in multinational or pharmaceutical companies' shares and had safely short-sold them in expectation of stagnant earnings in 1991 were particularly caught in hibernation. They rushed to cover their short positions sending some shares to unsustainable heights (*see table 1*).

Share prices up. Several synthetic fibre shares rose on reports of price hikes and improved offtake. While Century Enka moved down marginally from Rs.2,550 to Rs.2,500 over the fortnight and Reliance from Rs.136.50 to Rs.136, Baroda Rayon rose from Rs.490 to Rs.530, Indian Organic from Rs.36.50 to Rs.45.50 and J.K.Synthetics from Rs.31.00 to Rs.34.50.

Table 1:
The rise of multinationals



Company	Prices on 12/7	28/6	P/E
Atlas Copco	84.00	71.00	106
Colgate	337.50	302.50	33
Eskayef	200.00	172.50	18
Glaxo	130.00	95.00	25
Hoechst	3200.00	2500.00	46
ITC	201.00	161.00	17
Parke Davis	96.25	72.50	36
SKF Bearings	2600.00	2310.00	36

Note: P/E is based on 1990-91 earnings

Aluminium, tea and other export-linked shares increased as a result of devaluation (*see table 2*). In the case of Hindalco and Indian Aluminium, exports are significant (though less than 15 per cent of turnover) only for the latter. However, domestic producers were able to raise prices by 8 per cent following the increased protection afforded by devaluation. Tea companies, on the other hand, are significant exporters, with India having 15 per cent of world trade; hence, they are direct beneficiaries of devaluation.

Table 2:
Benefactor: 20% devaluation

Company	Prices on 12 July	28 June	Per cent change
Century	6300.00	5310.00	18.6
Chowgule Steam	45.50	30.00	51.7
G.E.Shipping	73.50	56.50	30.1
Hindalco	302.50	247.50	22.2
Indian Aluminium	182.50	152.00	20.1

Tata Steel was actively traded, overtaking ACC in trading volumes for the first time since mid-March. One reason was the official nod for its Rs.680 crore loan application from the Shipping Development Fund. This news, along with rumours of steel price decontrol, sent Tisco's share price rocketing to Rs.217 (and Rs.221 in kerb), at the close of the fortnight up from Rs.174 (*see chart*). The jump translates to a market value gain of Rs.1,070 crore.

The 1 per cent rise in deposit rates at banks announced on 4 July did not hurt stockmarkets as these rates (13 per cent maximum on a 3-year fixed deposits at regular banks) remain uncompetitive. In addition, the low 10 per cent *badla* rate in Calcutta at the close of the fortnight also spurred bulls.

Inconsistent moves. The Bombay Stock Exchange came forth with its version of trading reform: options on stocks, non-voting shares and freedom to price new issues at what the market would bear. The mix of two liberalisations and one protectionist move was surprisingly inconsistent.

Meanwhile, the Securities and Exchange Board is likely to be empowered in the current session of Parliament. SEBI chief G.V. Ramakrishna is close to finance minister Manmohan Singh, who is believed to have over-ridden finance ministry bureaucrats on wrangles over giving SEBI wide ranging powers.

The new issues market started picking up again, but the real momentum will be noticed in August. Meanwhile, Reliance Industries has applied to the Controller of Capital Issues for its Rs.900 crore public issue, the largest to date.

Towards the end of the fortnight, the BSE tried to control the bull fever by raising speculative margins on forward purchases. With an all-round high expectation level, this is unlikely to matter much until the industrial policy and budget are announced. ■

RAFIQ DOSSANI

GREAT EASTERN SHIPPING

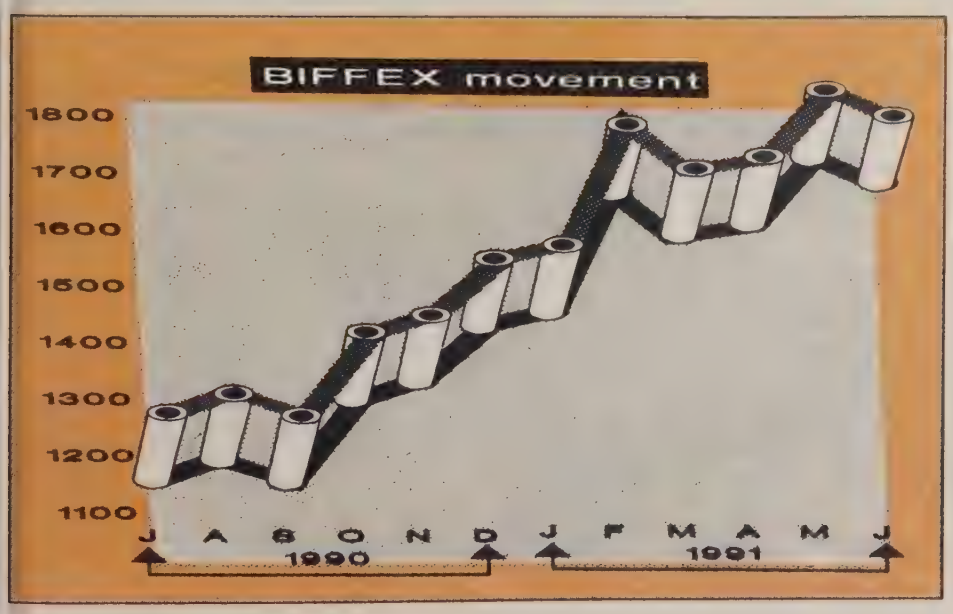
Smooth sailing, but...

All those investors, who think that the shipping industry is in the midst of one of its cyclical booms, should think again. The better managed companies look fundamentally strong for the long term, and some, like Great Eastern (GE) Shipping, are even cash rich. Still, turnover cannot safely be projected too far into the future.

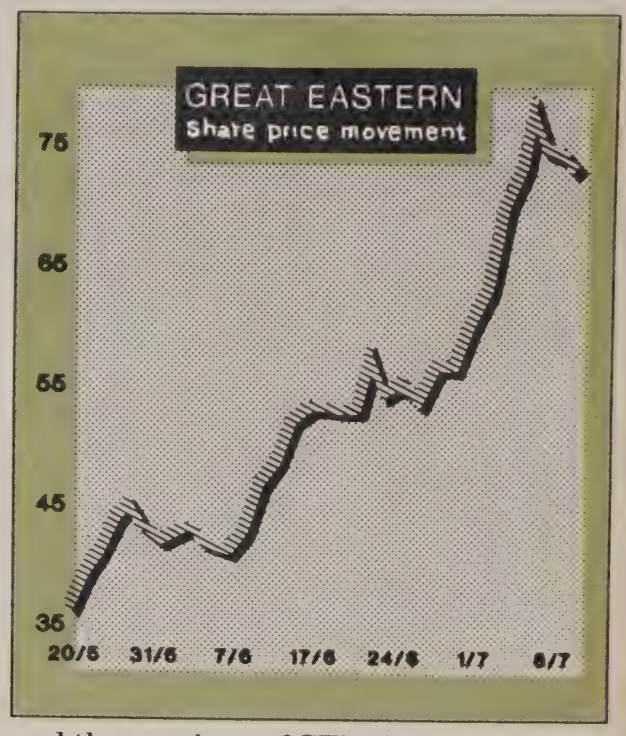
Scrips skyrocket. After the first stage of the two-stage devaluation on 1 July, companies with large dollar-linked businesses went on a roll. Great Eastern jumped 3.50 points to Rs.60 as volumes doubled from the already high previous trading day's 890,000 shares. Chowgule's scrip spurted 6.50 points to Rs.45.50 and South India Steamships climbed 50 points to Rs.1,625. The rise continued through the week, boosted along the way by the second devaluation on 3 July. Chowgule's was the biggest gainer, putting on 67 per cent over the week. GE continued its steady progress with a 39 per cent gain (*see chart*).

The devaluation news followed better than expected bulk freight rates that had decisively turned industry fortunes around mid-April. But these rates have since firmed as recession-induced cutbacks in world steel production (which moves substantial world trade) did not materialise and grain transports over the lengthy South America-Mediterranean run shortened tonnage supply. News of a World Bank-sponsored $ 1.5 billion credit line for grain purchases to the USSR also helped strengthen rates. (This translates to about 13 million tonnes of cargo at current rates.)

Speculators in shipping stocks have started keenly tracking the Baltic Exchange Freight Index (Biffex) which reflects dry bulk freights on international routes. But, the Biffex is only a partial guide to Indian shipping companies' performance. It is a spot rate based on about a dozen international routes and weighted heavily on Panamax (60,000 to 75,000 dwt carrier) contracts.



Bharat Sheth, executive director of Great Eastern Shipping, points out that of GE's 25 dry cargo carriers — that contribute over 50 per cent of the company's earnings — not one is a Panamax. Most are 'handysize' carriers, in the 30,000 to 40,000 dwt category.



Deepak Tolani

Sheth: "all a question of nerves"

The company has, in addition to its dry cargo ships, eight offshore supply vessels on charter to ONGC and nine tankers (one crude and eight product) committed to Transchart, the government's charterer. These 17 vessels are paid for in rupees, though the rate is dollar-linked. Sheth points out that Biffex levels and the earnings of GE's ships are imperfectly co-related.

Forex levels low. Most of the dry cargo fleet — which nets all of the company's foreign exchange earnings — tramps, and is thus exposed to international freight fluctuations. Here too, though rates have been firm, the forex content is not high: Sheth says that forex contributes between 15 and 20 per cent of total earnings.

This means that further ship acquisitions are difficult without a line of credit in forex. And acquiring more ships has become imperative since the average age of the GE fleet, at 14 years, is high (the highest in India). There are now plans to acquire a Panamax since younger tonnage is needed. GE is currently negotiating a line of credit with the International Finance Corporation, a 10 per cent equity holder in the company, to raise the required foreign currency.

So, what is the bottomline of GE? Devaluation, agrees Sheth, will immediately raise rupee turnover by 25 per cent to Rs.340 crore. In addition, he notes that GE has hedged its future liability and covered about 97 per cent of its foreign loan. A look at the balance sheet indicates that the company also has about Rs.70 crore in cash and a creditworthy debt-equity ratio of just over 1:1.

It looks like smooth sailing, with one major risk. The shipping industry is finely balanced with demand equal to supply at current rates. With parts of the world still in recession, Paresh Khandwalla, a Bombay based portfolio manager, says shipping shares could move quickly either way. It may be, as Sheth says of his industry, "all a question of nerves". ■

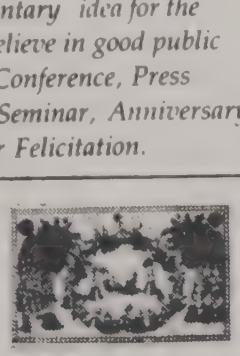
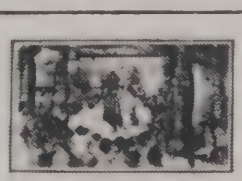
Note: EPS: This represents the earnings after tax for the full year divided by the number of shares outstanding. EPS half year: after tax earnings per share for six months taking into account announced half yearly profits. PE: ratio of market price to after tax per share. Yield: dividend as a percentage of market price.



Timeless Art !



Precious as collections.
Priceless as gifts.

Screen Printed reproductions of ancient & contemporary master paintings

The all-time complimentary idea for the business world, who believe in good public relations, like Dealer Conference, Press Conference, Farewell, Seminar, Anniversary, Birthday, Wedding or Felicitation.

Raasaleela
Rajasthani Painting in Nath Dwara Style. reproduced in thirteen colours
Size : 29.5" x 21.5"
Price : Rs. 225/-

Bharat Natyam
Painted in Charcoal medium reproduced in dual tone
Size : 27.5" x 18.5"
Price : Rs. 140/-

Obtainable by V.P.P./M.O./D.D. P.O./Cheques
(Add Rs. 15/- for outstation cheques)

Art Prints will be despatched by Regd. Parcel in unbreakable P.V.C. tubes

FREE Write in for a colourful booklet.

Hats off to the ladies duo

ave for Punjab tractors that went up smartly y 20 per cent, all the other scrips registered light declines. For the contest under review IC345) we have two winners — Gayathri henoy and W. Fernandes. Congrats!

Scrips	Prices as on Friday 31 May 1991 (Rs.)	Prices as on Monday 1 July 1991 (Rs.)	Ranks
Asian Cables	39.00	35.00	6
Bhadrachalam Paper	162.50	150.00	4
Brittania Ind	147.50	135.00	5
Punjab Tractors	225.00	270.00	1
Shree Cement	66.00	61.00	3
Voltas	121.25	115.00	2

Given here is a new list of six scrips, and their closing prices on 12 July 1991. Pick the share that you think will rise the most in percentage terms by 12 August 1991 and rank it number one. Then choose the one that you expect will rise the second most and rank it number two. Then number three, and so on till rank six. It's as simple as that!

So, in this Investor Contest, you don't have to predict the price of shares; you merely have to rank the performance (in percentage terms) on the basis of the prices you expect each to reach on 12 August 1991. You don't have to tell us the prices nor even the percentage changes you expect — only fill in the ranks from one to six.

Please note that if you assign the same rank to two scrips, then the following one should be ranked the next consecutive number. For example, if you rank two shares at number three, the next will be number four (in which case, of course, your last rank will be five).

ules:

. There is no entry fee.

. The price mentioned last in the official uotation list will be taken as correct for the urposes of calculation. If the stock exnange remains closed on the stated last ay, the closing price on the prior day will e used.

. Entries must be on the printed form given elow. Any other entries will be disqualified.

4. Only one entry will be permitted per form.

5. Envelopes sent in should be marked Investor Contest. All entries should be sent to: Investor Contest, **Business India**, Wadia Building, 17/19 Dalal Street, Bombay 400 001, by 5 pm, 8 August, 1991.

6. Business India's decision on the winning entries is final and binding, and no correspondence in this regard will be entertained.

7. The contest is open only to residents of India. No employee (or any direct relation of an employee) of the **Business India group of publications** is entitled to enter the contest.

8. The prize of Rs.5,000 will not be carried forward if there is no winner. In the event that there is more than one winner, the prize will be shared equally.

Towards a harmonious society

NIPPON, NEW SUPERPOWER: JAPAN SINCE 1945
By William Horsley and Roger Buckley
BBC publication, distributed by UBS, 1990, pp 278, Rs.570

One is impressed by the quality of writing and research that goes into modern western journalism at its best, as in the case of the book under review. Too often, there is a dichotomy between scholarship and journalism, at least such as is evident in our journalism.

Written by TV journalists in a style that is easy to read, this book is studded with many interesting observations about Japanese life and society. It covers the period from the surrender of Japan at the end of World War II to the present day.

The authors trace one of the most spectacular economic success stories in the annals of economic history: the transformation of a small rocky island nation of rice farmers and fishermen to the most formidable economic power of the 20th century. The book, however, is not just concerned with narrating this saga of unparalleled economic growth and prosperity, it is concerned with the future, how this prosperity is to be used by Japan in the modern power equations and how the Japanese see themselves in the next century.

Economic power rules

Perhaps one can start analysing the authors' perceptions as to what the Japanese want. The authors are clearly of the view that the talk of Japan emerging as a major military power in its own right is unfounded. Yet it is not that the Japanese see themselves playing no role in the international polity — far from it. The Japanese consider that economic power is the decisive power in today's world, and this conforms with their vision of society as being one of harmonious relationships, leading perforce to order and prosperity.

The most interesting aspect of this book is the early part. How did this feudal authoritarian society become a democracy with civil rights? It must be said that much of what modern Japan is today owes itself to the US occupation after the last war and to the enlightenment of US officials of the calibre of General Douglas MacArthur.

The role of politicians in Japanese public life is not dissimilar to that played by Indian politicians. They act as arbiters of conflicting interests in society, attaching themselves to various special interest groups such as the rice lobby or the telecommunications lobby, where they openly receive financial contributions, which permit them to enrich themselves. The authors dissect the various scandals that have plagued Japanese public life,

The authors trace one of the most spectacular economic success stories in the annals of economic history: the transformation of a small rocky island nation ... to the most formidable economic power of the 20th century

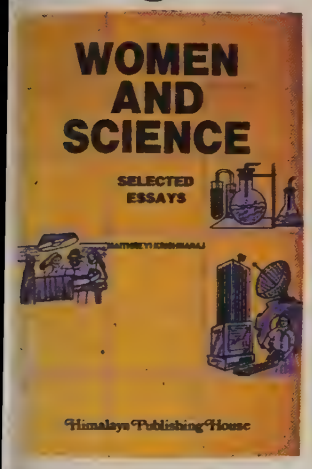
such as the Recruit Scam which put our Bofors scandal into the shade.

However, the discussion of Japanese economic policy interwoven with the social system in this book is exemplary. What is interesting is a discussion of the goals that Japan had set for itself in the middle of the 19th century. Apparently, the aim of the Japanese rulers had been to avoid the fate of other Asian countries, principally India. India had been colonised, and its mainstay, cotton, had been ruined by being exposed to British free trade.

This book should be required reading for those on the Indian right who keep on castigating Nehruvian economic policies for being influenced by Fabian socialism. Whether Fabian socialist or not, for any country requiring to industrialise, role of the state cannot be wished av The early Japanese policy on ind trialisation was not dissimilar to Ind policies of the same period, the only ference being that the capital mark and trade were liberalised radically 1960, giving greater impetus to growt

This book should be required reading for those o the Indian right who keep o castigating Nehruvian economic policies for being influenced by Fabian socialism

The aims of the Five Year Plans we remarkably similar to those in India modernising Japan's production faci ties, boosting exports, reducing impor encouraging household savings we some of the goals of central planning. B this system of planning was engrafted a social system which was based on profound sense of harmony and c operation, perhaps stemming fro Japan's agrarian origins. The cultivatio of rice, Japan's staple food, requires ha monious communal effort for irrigatir the fields, planting and harvesting.



Anarchic society

Moreover, the education system was ce tral to the economic transformatio something we have neglected in India t our detriment. The point which emerge is that much of the criticism of econom planning rests on the Indian exampl which owes perhaps more to the anarch nature of Indian society than any inhe ent flaws in central planning.

At the beginning of the review, it wa mentioned that books like this, whic purport to be country studies, are excel lent examples of the quality of wester journalism. Such books are not easy t write. Often, they can be superficial to th point of redundance. But to cover a coun try's economic and political system to gether with history, some sociology an anthropology, plus a review of inter national relations and history, all in jus over 270 pages is a remarkable feat o concision and lucidity. Particularly whe that country happens to be as comple and alien as Japan.

■ JAVED GAYA

Calling for systemic changes

WOMEN AND SCIENCE — Selected Essays
By Maithreyi Krishnaraj
Himalaya Publishing House, Bombay, 1991, pp 332, Rs.275

The Indian woman's involvement in scientific endeavours, what science means to women scientists, the problems faced by them in professional environments, job satisfaction, demands of career and home — these are the crucial issues Maithreyi Krishnaraj examines in her book. She uses the history of women in science (in the West and India) to answer questions like: Does working in scientific establishments promote rational thinking and practice among women scientists? Do women scientists differ from their male counterparts? Are women less tuned to a "scientific temper"?

Sample survey. What stands out in *Women and Science* is the examination of the relationship of women scientists between career motivation, societal expectation and social conditioning. There is a sample survey of 400 women scientists and in-depth case studies of 30, which give personal profiles of the respondent, her family, career status, and her approach to her career.

The study reveals that women are less represented in science. It is very difficult for women scientists to reach the top despite ability, qualifications and creative potential. The author also notes that compared to the West, India has more women in science because the middle-class Indian woman has kin or domestic servants to help at home. Krishnaraj also points out that Indian middle-class husbands allow their wives to pursue a profession, because they look at it as a status symbol.

Women and Science has considerable historical background. Using evidence from Europe, America and other countries, Krishnaraj explains how women's contributions to science remains obscured. Inadequate opportunities and training, career interruptions, the masculine bias in science and other hindrances account for the low career status of Indian women scientists. Even the Indian Women Scientist Association (formed in 1975) exhorted women scientists to be "superwomen" instead of questioning the "institutional framework" that hides discrimination within a supposed equal opportunity facade.

Krishnaraj recommends overall systemic changes that would question gender discrimination in the family and in the society, in scientific institutions, government policies and finally in our value system that treats women as an auxiliary force, not as half the potential human resource of the country. She proves that without challenging the subordination-domination relationship between women and men in our society, it is not possible to enhance the status of women in science.

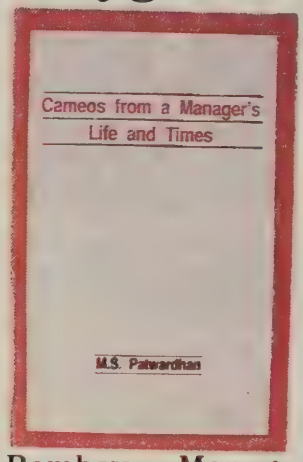
Providing a structured approach

TEACHING HARD, TEACHING SOFT: A structured approach to planning and running effective training courses
By Colin Corder
Gower Publishing Company, pp 187, Rs.1,125

One of the major areas of concern of management trainers is the methods to be used for improving the effectiveness of training. This book attempts to provide a structured approach to planning and running effective training courses. The author classifies the teaching approach into hard and soft categories — hard teaching concerned with facts, techniques and methods that involve answers, figures, proof or mastery of skill and soft teaching covering ideas, concepts and attitudes where argument and opinion prevail.



Soft subjects being more abstract, are more difficult to teach. They are to be hardened so that the teaching becomes easier. It's in the light of this central theme that the author examines learning and teaching styles.

The author has discussed the various types of learning styles of the participants. But he has not touched upon the management games, exercises and instrumentation which are more commonly used in the present day training programmes. The book tries to look at the subject from a new perspective, which could make it useful for trainers.

The reviewer is manager (training and recruitment), Bharat Petroleum

Reflections of a bygone era

CAMEOS FROM A MANAGER'S LIFE AND TIMES
By M.S. Patwardhan
Bombay Management Association, pp.96, Rs.90

Bombay Management Association (BMA) is to be complimented for bringing out this elegant publication. The book, released recently by the celebrated 'steel' man, Russi Mody, turns out to be a blue-chip investment.

The time frame of the events is the sixties. The experiences, episodes and the anecdotes reflect the images of the bygone era. Throughout the book, the author has achieved genuineness, authenticity and openness in his narrative, applying the transactional analysis (TA) as parameter. His diction is excellent. There is no attempt to preach, pontificate or debunk. Patwardhan comes through as a Doyen Emeritus among the chief executives India has today.

The chapter on games, providence and eternal faith in human mortals adds a punch, the recipes for which can come only from a connoisseur like Patwardhan. But the pageant would have been more picturesque if a few pencil sketches, *a la* R.K. Laxman, had been included in the book. In fact, a creative publisher would have put a cartoon in every chapter.

The book is laid out and printed well, justifying the exclusion of an errata page.

Towards a new paradigm

Andhra Pradesh Paper Mills Ltd (APPM) is an exemplary turnaround story. In March 1991, for the first time in four years, the company posted a record net profit of Rs.13.22 crore and declared a dividend of 25 per cent. The unit's present capacity utilisation, at 90 per cent of its installed capacity of 85,000 tonnes per annum, shows a 25 per cent improvement over the 1986-87 value.

That was the year of reckoning for APPM. Saddled with cumulative losses of Rs.7 crore, restive labour and a flight of managerial talent, the promoters of the company decided to withdraw from the scene of action and hand over charge to professional managers. The turnaround was immediate and cumulative. Besides circumscribing the various corporate functions under specific wings such as works, marketing, finance, inventory control, etc. "the most formidable turnaround task," according to M.V.G. Rao, the author of a case study on APPM, "was remoulding the quarter-century-old culture of the company." Rao writes that, with the introduction of a bold human resource development (HRD) drive, the first of its kind in the company, a judicious redeployment of manpower was undertaken. This enhanced capabilities and engendered amiable industrial relations, which translated into higher profits and productivity.

Tool of change

Similar instances of successful corporate restructuring have begun to surface — SAIL, Modi Xerox, Sundaram Fasteners and others; organisations that have characteristically employed HRD as the chief tool of management change. Indeed, of late, the use of HRD as an integral part of corporate functioning is gaining currency in the country. T.V. Rao, professor of organisational behaviour at the Indian Institute of Management, Ahmedabad (IIMA), says, "Managers no longer perceive HRD as merely dealing with personnel issues like performance appraisal and promotions. Instead, it is appreciated as a tool capable of rendering organisational changes to promote overall efficiency."

In fact, Rao advocates a larger role for HRD beyond the confines of the corporate world to non-profit areas such as health, policy formulation and education. One of the perceived important areas of HRD application is the development of teachers. This, feels Rao, will generate a cascading effect. This and other objectives, primarily the generation, storage and dissemination of HRD-related knowledge, form the mission of the recently constituted Academy of Human Resources Development at Ahmedabad.

The academy receives support from both the IIMA, which has loaned the services of T.V. Rao as honorary director as a part of its ongoing institution-building activity, and the Ahmedabad Management Association (AMA), which has provided it with working space. The academy will eventually move into its own set of classrooms and residential buildings, proposed to be erected on a 10-acre stretch of land at a capital cost of about Rs.1.5 crore. The state government has been requested to allot it adequate space in Gandhinagar. At the operational level,

The establishment of the academy is most opportune. Academics however feel that the academy must steer clear of reducing HRD into routine appraisal exercises

the academy will employ ten full time HRD specialists drawn from industry and the academic world for a two-year teaching spell. Other visiting faculty will participate for shorter durations. The academy commenced its first session in June 1991, when it held its two-phase HRD facilitators' programme. Aimed at improving the organizational development skills of personnel, training, HRD and other line managers, it drew 35 participants from all over the country. The academy's one-year diploma course in HRD has also taken off. Designed as a distance education programme, with contact sessions in the form of regional workshops, it will provide a theoretical base for practising HRD managers.

By 1992 the academy proposes to offer enrolment for Ph.D. as well. Besides undertaking R&D, the academy will establish an HRD data bank, where information on HRD practises and experiences will be available in both the documented and audio-visual forms. Select information is intended to be disseminated through the academy newsletter and other publications.

What started it off

The establishment of the academy has been the logical outcome of a nation-wide HRD network that took root in 1985. That year, in March, at the concluding session of the first national seminar on HRD held at Bombay and jointly organised by the XLRI Centre for HRD, Jamshedpur, and Larsen & Toubro Ltd, the idea of forming an HRD network was mooted. Says professor Narendra Dixit of IIM Lucknow, "The participants decided then to set up a body of people interested in HRD, who would meet on a continuous basis and regularly exchange and share their experiences in HRD."

To facilitate the process, the network established chapters in the metropolises, started the publication of a newsletter (it will now be published by the academy) and has by now enlisted almost 700 members from the Indian corporate and academic worlds. The network actively collaborates with various professional bodies such as the Confederation of Engineering Industry, Indian Society for Training and Development, National Institute of Personnel Management, and conducts symposia and conferences regularly.

The establishment of the academy is most opportune. The World Bank in its World Development Report, 1991, listed development of manpower as one of the parameters among the four spelt out for the economic and national well-being of a developing country like India. To quote a recent press report, "the Bank states that investing heavily in people makes sense not just in human terms, but also in hard-headed economic terms." Academics however feel that the academy must steer clear of reducing HRD into routine appraisal exercises.

"The approach in HRD needs to be more organic," says Pradeep Khandwalla, director at the IIMA. "It should be one that fosters innovation as compared to the mere form filling and evaluation techniques." The academy certainly has a great deal of work ahead of it if it is to establish a new HRD paradigm. It will need support from all quarters if it is to really get its act together.

■ NEERA SETHI

Senior executive positions

A compilation of executive positions advertised in *Business India* and other major publications between 2 and 14 July 1991.

THE FOUR BEST JOBS

- EXECUTIVE DIRECTOR (Technical) * Delhi * *Sal* Comparable to the best * *Age/Qlfn* NS * Electronics engineer * *Reqd* 20 years experience * *Cont* Ashok K. Malhotra, Director, Dalmia (Bros.) Pvt Ltd, Telecom House, L-12 South Extension II, Delhi 110049 (ToI - 8.7)
- PRESIDENT * Alwar * *Sal* Outstanding * *Age/Qlfn* 40-45 years * MBA/CA/graduate * *Reqd* 15-20 years at senior level including 5 years as head of production engineering in a synthetic spinning unit * *Cont* The Executive Vice-President (HRD), Modern Group of Industries 709, Ansal Bhavan, 16 Kasturba Gandhi Marg, New Delhi 110001 (ToI - 7.7)
- CHIEF EXECUTIVE * Bombay * *Sal* Attractive * *Age/Qlfn* 35-40 years * NS * *Reqd* Experience in a reputed bank/finance company * *Cont* The Executive Director, Wall Street Finance Ltd, 21 Lakozy Mansion, Chowpathy Seaface, Bombay 400007 (ToI - 8.7)
- PRESIDENT (Technical) * Ahmedabad * *Sal* Excellent * *Age/Qlfn* 40-45 years * B.Tech * *Reqd* 15-20 years experience in large textile units including 5-7 years as head of production * *Cont* Executive Director, Modern Denim Fabrics, B/201, Popular Centre, Someshwara, Complex No.1, Satellite Road, Ahmedabad 380015 (ToI - 8.7)

NATIONAL

- GENERAL MANAGER * NS * *Sal* Attractive * *Age/Qlfn* NS * PG in microbiology/biochemistry * *Reqd* 12-15 years experience in antibiotic production, including 5 years at senior level * *Cont* Director-in-charge, Torrent Gujarat Biotech Ltd, Torrent House, Ashram Road, Ahmedabad 380009 (ToI - 8.7)
- VICE-PRESIDENT * NS * *Sal* * *Age/Qlfn* NS * Engineer MBA * *Reqd* 15 years marketing and sales experience * *Cont* Ashok K. Malhotra, Director, Dalmia Brothers (Pvt) Ltd, Telecom (ToI - 8.7)
- COMPANY SECRETARY * NS * *Sal* NS * *Age/Qlfn* 35-40 years * Company secretary preferably LLB * *Reqd* 10 years experience in a reputed organisation * *Cont* CS/91/26, Lakshmi Card Clothing Mfg. Co. Ltd, Human Resources Development Department, Kuppuswamynaidupuram, Coimbatore 638662 (ToI - 8.7)
- VICE-PRESIDENT (Consumer) * NS * *Sal* Attractive * *Age/Qlfn* 38-42 years * MBA * *Reqd* Experience in consumer products marketing * *Cont* Nobel House, Management Placement Consultants, P.B. No.3531, New Delhi 110024 (BI - 21.7)

WEST

- DEPUTY GENERAL MANAGER (Commercial) * Bombay, Gujarat and MP * *Sal* Rs. 1.75 lakh pa + car * *Age/Qlfn* * Graduates * *Reqd* 10-12 years experience * *Cont* Ms Pratibha Sheta, Executive Director, Shilputsi Consultants, P.B. No.9386, Bombay 400026 (ToI - 1.7)
- VICE-PRESIDENT * Bombay * *Sal* Best in industry * *Age/Qlfn* NS * Graduate mechanical engineer, preferably MBA * *Reqd* 15 years experience, including 5 senior level * *Cont* Boyden International, 616 Maker Chambers V, N.Point, Bombay 400021 (ToI - 1.7)
- VICE-PRESIDENT (Operations) * Bombay * *Sal* Comparable to the best in industry * *Age/Qlfn* mid-thirties * NS * *Reqd* 10 years professional track record, including 3 years as regional manager * *Cont* Intec Systems, 1st floor, Marwah House, 3 Marwah Estate, Saki Vihar Road, Andheri (E), Bombay 400072 (ToI - 8.7)
- SENIOR MANAGER * Taleja * *Sal* Not limiting factor * *Age/Qlfn* NS * Chemical engineer * *Reqd* 15 years experience in process industry * *Cont* Nision Management Services Pvt Ltd, 72/A, Advent, General J B Marg, Opp Mantralaya, Nariman Point, Bombay 400021 (ToI - 8.7)

NORTH

- CHIEF - INDIA OPERATIONS * New Delhi * *Sal* Reflecting the position * *Age/Qlfn* NS * Technically sound in garment production * *Reqd* Knowledge of US retail markets. 7-10 years experience in senior management position * *Cont* CMS, MVL Narasimhan, Capital Management Services, HS-28 Kailash Colony Market, New Delhi 110048 (ToI - 1.7)
- VICE-PRESIDENT (International Marketing) * New Delhi * *Sal* NS * *Age/Qlfn* 45 years * Engineers with business management or foreign trade * *Reqd* Should possess a successful track record in leading dynamic team of pros in international marketing * *Cont* The Executive Director, Mohan Exports (I) Ltd, Mohan House, Zamrodpur Community Centre, Kailash Colony Extension, New Delhi 110048 (HT - 3.7)
- VICE-PRESIDENT (Finance) * New Delhi * *Sal* Attractive * *Age/Qlfn* Around 45 years * CA or MBA (Finance) * *Reqd* 15 years experience with at least five years in overall responsibility in a large industrial company * *Cont* Post Box No.676, New Delhi 110001 (BI - 21.7)

EAST

- VICE-PRESIDENT (Operations - Refractory/ceramic/cement industry) * Rourkela * *Sal* NS * *Age/Qlfn* 45-50 years * Graduate engineer * *Reqd* Should be a strong manager and administrator with proven skills in the areas of resource and project planning * *Cont* VPOR/BPA/3083, ABC Consultants Pvt Ltd, 6A Middleton St, Calcutta 700071 (S-7.7)
- CHIEF EXECUTIVE * NS * *Sal* Attractive * *Age/Qlfn* * BE/CA/MBA * *Reqd* 20 years experience including 5 years in senior position in reputed engineering industry * *Cont* Dr.K.K.Anand, Anand Consultants, 914, Maker Chamber V, Nariman Point, Bombay 400021 (ToI - 1.7)

SOUTH

- GENERAL MANAGER * Hyderabad * *Sal* NS * *Age/Qlfn* NS * Mechanical engineer * *Reqd* 10-12 years experience, dealing with auto components are essential * *Cont* T.Satyanarayanan, Director, TS&Associates, C/o Vanbey Business Centre, F1, Gajel Appartments, 152 Greams Road, Madras 600006 (H - 2.7)

OVERSEAS

- GENERAL MANAGERS * Kenya * *Sal* NS * *Age/Qlfn* 35-45 years * Graduate preferably PG in management * *Reqd* Senior level experience of managing production/commercial operation in steel industry * *Cont* Ref.No.CMP/F-4273, Datamatics Staffing Services, P.B. No.106, GPO, Bombay 400001 (HT - 8.7)
- GENERAL MANAGER * Middle East * *Sal* NS * *Age/Qlfn* NS * Engineer * *Reqd* 15-20 years experience in management of fire clay brick plant/ceramic industry * *Cont* Chief Personnel Manager, Gimmco International, Prakash Deep, 7 Tolstoy Marg, New Delhi 110001 (H - 10.7)

Please turn over for

BUSINESS INDIA APPOINTMENTS

PRESIDENT

A recently set up Delhi based joint venture in a high tech field wishes to recruit its President. The joint venture is an equal venture between an Indian and multinational promoter, both leaders in their own fields of activity. The company, whose activities include both products and services, commenced operations in India 2 years ago. It operates in a highly market driven environment both within India and internationally in the US, Europe and Far East. It provides for a multinational working environment.

The President, reporting to the Board of Directors will be responsible for all aspects of the company's growth, both domestically and internationally, profitability and corporate image. He will be responsible for evolving appropriate strategies, operating plans and translation of these into results. In doing so he will have to build up strong organisation and systems.

The candidates should preferably come from the computer, telecom or electronics industry. They should have operated at the Chief Executive level for at least 3 years; and should have a strong market orientation. They should be at least graduates in electronics/electrical engineering or computer sciences, preferably with an MBA. They should possess strong man management skills, and be good team players.

The company offers the normal top management compensation package, including housing and car.

Please apply within 10 days to:

A F Ferguson Associates
Hansalaya
Barakhamba Road
New Delhi 110 001

giving full details of age, qualifications, work experience, salary drawn and contact telephone numbers. All applications and envelopes must be marked **'Ref. MS/5001'.**

PRESIDENTS

(TECHNO – COMMERCIAL BACKGROUND)

Various locations

Very attractive compensation

One of the largest and most reputed business houses in the country requires Presidents for its new projects. The house is presently implementing large projects in the following core sector industries:

- ★ **Chemicals**
- ★ **Cement**
- ★ **Iron & Steel**

The incumbents will be initially responsible for the monitoring and implementation of the projects and thereafter will be responsible for the operations and profitability of the units.

The candidates should be engineering graduates or chartered accountants, with demonstrated leadership qualities. They should have at least 15-20 years experience in techno-commercial areas of which at least 5 years should be in profit centre head positions.

In addition to an excellent compensation package, the house offers excellent growth prospects including possible overseas assignments.

Please apply in strict confidence within 10 days to:

A. F. Ferguson Associates
Post Box No. 1786
Bombay 400 001

giving full particulars of age, qualifications, experience and salary drawn. All applications and envelopes should be marked "Ref: MS/5703".

We have been retained by a highly successful and **LARGE BUSINESS GROUP** in **NORTHERN INDIA** with **ANNUAL SALES TURNOVER** of **Rs. 300 CRORES PER ANNUM.** Textile represents 50% of the annual turnover, and the **GROUP MANAGES 7 TEXTILE MILLS** in different locations in the country. Our client is poised for major expansion and virtually doubling up the sales turnover of Textile this year, and we wish to select the following competent and matured Senior Professional at their Corporate Office in **NEW DELHI.**

PRESIDENT
(TEXTILE)

The incumbent must have 20 years' experience of Textile Industry, out of which at least seven years must be for running a Profit Centre of a highly successful Mill. His Educational Forte may be either Textile Technology, Management or Finance.

We are looking for an exceptionally brilliant professional having an excellent track record in the Textile Industry. The job profile would cover :

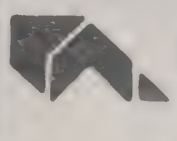
— Optimisation of the existing operations.

— Evolving medium and long-term strategies for Investment Decisions/Funds Management as well as 'Human Assets'.

— Keeping abreast of Textile Technology with a view to incorporating State-of-the-art technologies in the existing and future operations.

— Establishing Marketing Strategies with a view to Exporting larger percentage of the total output. The Group is already Exporting its products to European Countries.

The incumbent will essentially be an exemplary leader to inspire and motivate a senior Management Team.



The job will naturally entail extensive travelling to the various manufacturing locations of the Group and also its markets—both national and international.

The selected person will report directly to the Chairman.

THE INCUMBENT WILL BE EXPECTED TO GROW INTO THE POSITION OF MANAGING DIRECTOR.

THE COMPENSATION WILL BE HIGHLY ATTRACTIVE TO SUIT THE BEST PERSON IN THE INDUSTRY.

Can you spearhead an aggressive new thrust in International Marketing?

Our client, an established group in textiles, is currently setting up a new Rs 300 crores project which is slated to go into production shortly.

The Group plans to expand and diversify its existing export activities by setting up an export division and needs the right man to head this important thrust area.

VICE PRESIDENT
EXPORTS

Bombay

Above 3 lakhs, house, car and other perks.

The VP Exports will have a free hand to put together a team of top-notch achievers in the export field and develop penetrative, result-oriented strategies to meet an export target of 50 crores in a year. He will be in full charge of the Division which will operate as an independent profit centre. He will be required to make aggressive gains in the Group's existing export markets and to identify new markets for yarn and textiles, and a wide range of new products. He and his team will be responsible for converting a predominantly yarn and textile export division into a full-fledged major export house of repute.

The right candidate would be 40-45 years old with at least 10 years experience at a senior level in the field, preferably in a multi-product export operation or a large export house.

This senior management position reporting to the Managing Director assures the right person an attractive remuneration and perquisites package and offers excellent oppurtunities for further growth in this fast-expanding Group.

Please apply within 10 days with detailed bio-data and contact telephone number, and marking envelope & enclosures with job title & code, to **D K Tandon, General Manager.** Code: DKT/VPE/1193.

EFFECTIVE INDUSTRIAL RELATIONS

Gordon Woodroffe
(Services Division)
requires
Asst. Vice-President

The Company

Gordon Woodroffe is a 120 year old Company with diverse interests. Its two divisions, Leather and Services, are well-established in their respective fields. The Services Division of Gordon Woodroffe is one of the oldest and has a high reputation in the field of air cargo and freight forwarding. The Company is associated with leading international freight forwarders.

The Responsibilities

The incumbent should be a sound business manager. Planning and implementing strategies for business growth will be his responsibility. He will closely interact and co-ordinate with overseas agents and branch offices all over the country. High integrity and leadership qualities are imperative. The incumbent will be based at Madras and in about a year or two, take over as Vice-President.

The Person

The aspirant must already be holding a comparable senior position. He should be around 45 years of age. An IATA/FIATA qualification with a background in a reputed airline or cargo agency will be preferable. Thorough knowledge of RBI rules, customs procedures, excise regulations and export and import policies is absolutely essential.

The Rewards

The job offers good career growth opportunities. Emoluments will be excellent and will not be a limitation for the right person.

Applicants should send in their resume giving details of qualification, work experience and salary drawn, within 10 days to:

The Managing Director
Gordon Woodroffe Limited, 36, Rajaji Salai, Madras 600 001. Tel: 510533. Tlx: 041-6261. Fax: 044-510545.

INDIA TELE-COMP LIMITED

The **DALMIAs** are a diversified industrial conglomerate with interests in dairy products, cigarettes, chemicals, telecom, resorts, advertising and film production besides other products. Projected group turnover for 1992 is Rs. 1000 crores.

Having emerged as a major player in the telecommunications industry with the backing of world-renowned collaborations like British Telecom, Hasler Ltd. UK, Alcatel of France and ATS (Communications) of UK, INDIA TELE-COMP LTD. (IXL) has decided to broadbase its marketing activities and become the market leader in office automation products and services as well.

In the first phase, the company has identified seven product groups –

* VOICE PRODUCTS
* MESSAGE PRODUCTS
* REPROGRAPHICS/MICROGRAPHICS
* COMPUTERS/CAD-CAM/COMPUTER SOFTWARE PRODUCTS
* O/A MEDIA, SUPPLIES AND CONSUMABLES
* ELECTRONIC TYPEWRITERS
* SUPPORT SYSTEMS – SHREDDERS, BINDERS, LAMINATORS, UPS, CVTs

VICE-PRESIDENT FOR EACH PRODUCT GROUP

To actualise our plans, we are looking for SEVEN experienced and dynamic VICE-PRESIDENTS – one for each product group.

These are key positions in the organisation, reporting to the Managing Director. Each VP will be accountable for the profitability of his product group. Operating as a Business Head, he will be responsible for identifying/tying up the right product/s, formulation of marketing strategies and plans and achievement of targets for revenue, profit, market-share and customer satisfaction.

We are looking for professional, pragmatic "entrepreneur-managers" who have a passion to succeed even under highly competitive and demanding conditions. The ideal candidate would be an Engineer-MBA with around 15 years of rich marketing and sales experience in this industry.

To support these marketing business-groups, we have decided to strengthen our distribution reach and market penetration. We therefore need:-

VICE-PRESIDENT-DEALER DEVELOPMENT

This is an all-India position, reporting to the Managing Director. The immediate task will be to set up a network of over 100 dealers in a record time. Thereafter, he will be responsible for ongoing dealer motivation, performance and evaluation, as well as expansion and productivity improvement of the entire dealer network.

The person should be a hard-core sales professional with around 15 years experience of selling through dealers, and hands-on experience of appointing, managing and servicing dealers. Experience of working at an all-India level is a MUST.

He will be assisted by:

AREA DEALER DEVELOPMENT MANAGERS

at **Bombay, Calcutta, Madras, Bangalore** and **Delhi.**
They will be responsible for appointing dealers in their respective regions and ensuring dealer commitment, performance and viability. The incumbents should be sales professionals with 8-10 years experience of selling products through dealers, in professionally managed organisations, preferably multi-nationals.

GENERAL SALES MANAGERS

based at **Bombay** and **Delhi.**
The direct sales organisation will be headed by these two persons, who will be responsible for meeting sales targets and contributions of all company products in their respective areas i.e. the GSM (Bombay) will handle the West and South and the GSM (Delhi) will be responsible for the North and East.

We require result-oriented, mature sales professionals with around 10-12 years of rich hands-on experience. Only persons having proven leadership skills of managing large sales teams with high productivity need apply.

VICE-PRESIDENT-EXPORTS

The person will be responsible for achieving export targets for all company products, as well as third party exports in the above product groups.

We are looking for a person with around 15 years work experience in identifying and developing export markets for products of similar nature. Experience in setting up of this function, a thorough knowledge of export markets and formalities, and a foreign trade qualification are ESSENTIAL.

Persons with a management qualification will be preferred for all above positions. Sound managerial qualities to build and lead effective teams would be essential.

The Company offers a demanding work environment that will suit mature, ambitious achievers. The compensation package is comparable with the very best and will not be a constraint for the right candidate.

Please apply, giving full particulars with contact residential telephone number, within one week, to:-

Ashok K. Malhotra
Director
Dalmia Bros. (Pvt.) Ltd.
Telecom House
L-12, South Extension Part-II
New Delhi 110 049

Please indicate the job title on the envelope and application. All applications will be treated in strict confidence.

Every marketing professional needs a baby

Out of management school and into the rut.

Days were when new product launches made your pulse run faster. Brilliant case studies made you feel secretly jealous. You wanted to be part of the action. See your ideas take shape, fast. And where are you now?

In a reputed organisation perhaps, with the standard highly visible products in your company's portfolio. Well, how many of them do you feel belong to you?

Worse, are you pushing papers, pushing people, carrying out somebody else's plans?

Is your mind catching rust?

Wouldn't you really like to have your own pet project, your own baby?

Introducing new products. New Brand Managers. New Group Product Managers.

Look at it as a relaunch of your career. Every year Marico will launch two new products. (In this, our very first year, we launched Hair & Care and Sweekar nationally.)

To you this could mean the big, big opportunity to be involved in the most exciting stages of a product's life.

If you have at least two years in advertising or product management (in a good company), you can hope to be one of our Brand Managers.

If you have field experience, great – if not, we'll train you.

On the other hand, if you have about five years in product management (with at least two years in sales), aim for the Group Product Manager's position with us.

We're going to look at your track record. It's only fair that you look at ours.

Our company made marketing history with Saffola – launched at a time when there was

zero demand for a health oil.

Marketing Saffola meant we had to first educate consumers about the connection between cholesterol and cooking oil.

packaging development is very active. So is our new factory and a network of two lakh retail outlets, 1200 distributors.

In just one year, we have entered a totally new phase in business.

Turnover has shot up from Rs. 84 crores (1990) to Rs. 106 crores (1991).

As a result, we will have to move to a spacious new office at Bandra. (That's where you'll work when you join us).

Will congratulations soon be in order?

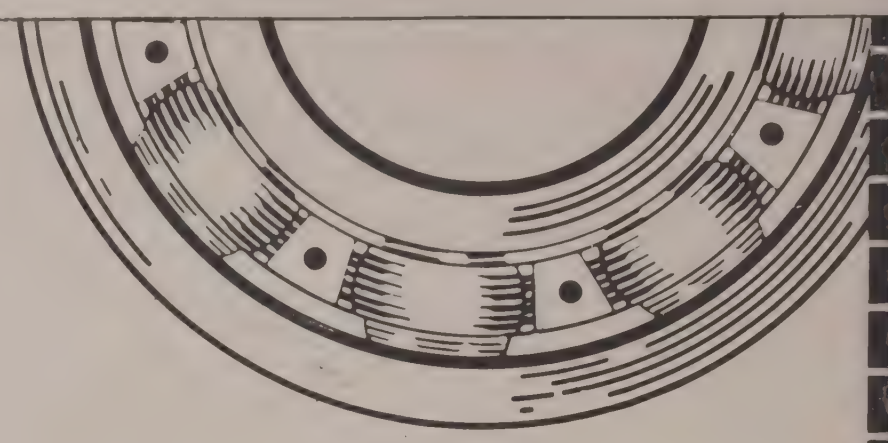
Discuss it with P. Vijayan, our Personnel Manager at 022 – 8558701 or 8551225 (between 9 a.m. and 5 p.m., Monday through Friday.)

Or just send in your resume at this address within a week. Marico Industries Ltd., Kanmoor House, 281/287 Narsi Natha Street, Bombay 400 009.

MARICO

Today Saffola is a household word and the leading brand in its category.

Another brainchild : With Parachute, we created the first strong brand in what was till then a commodity market, with coconut oil sold loose.



Other competitive brands followed, but Parachute today outsells all other branded coconut oils together.

So why are we shifting office in a hurry?

Things are moving fast in the company. Brands Saffola, Sweekar, Parachute and Hair & Care are doing exceedingly well in the marketplace.

Our new R & D Centre for product and

DHARANI FINANCE LIMITED

MADRAS

CHIEF EXECUTIVE

Dharani Finance Limited is a Member of the PGP Group of Companies promoted by NRIs. The Group is successfully operating SUGAR factories in Tamilnadu and Orissa and CEMENT factory in Tamilnadu. Construction and Finance activities have been taken up recently. The finance company is planning to launch various innovative schemes and has set very high targets of growth.

The company is looking for a senior executive to lead a team of professionals to achieve the goals independently with the inherent strength of the Group.

The successful candidate would be a CA/MBA with finance with proven record in Banking/Finance Companies. The job carries a very attractive salary and compensation package. (Age - around 40 years)

Please apply in confidence with a detailed profile and a note on your achievements in various assignments within 10 days directly to:

The Vice-President (Admn.)
PGP Group of Companies,
1, Venus Colony II Street, MADRAS 600 018.

GENERAL MANAGER – CORPORATE PLANNING

DELHI
Excellent terms

THE COMPANY

Large Corporate Group with ambitious plans for further growth.

THE PERSON

Should be an MBA from a reputed institute and have Engineering or Economics background with a strong grasp of market research and financial analysis.

Should have five years experience in the conduct/coordination of market surveys as well as feasibility studies/detailed project report preparation.

Should have good appreciation of the Indian economic scene/Business diversification plans.

Preferred age — around 35 years.

Please send your application, giving details of experience, qualifications, age, salary drawn and expected, within 10 days, to:

Box No. AA/349/LC/2, **Business India,** 59, Regal Building, Connaught Circus , New Delhi-110 001.

PRESSMAN

WANTED

A DEPUTY COMPANY SECRETARY

A reputed large scale Tyre Manufacturing Company has an opening for a Deputy Secretary at its Registered Office in Bombay. The incumbent should be a qualified Company Secretary with 8 to 10 years experience in a responsible position. The applicant should have sound knowledge of Companies Act, MRTP Act, etc., and should be fully conversant with Secretarial work of a large Public Limited Company.

The suitable candidate may be considered for the position of Company Secretary in due course. Candidates in the age of 40-45 years with adequate experience may apply giving full particulars, salary drawn at present and the salary expected within 10 days to:

Box No. AA/349/TP/1, **Business India,** Wadia Building, 17/19 Dalal Street, Bombay 400 001.

ase

Ambalal Sarabhai Enterprises Limited (ASE) is a large professionally managed company engaged in the manufacture and marketing of Drugs and Pharmaceuticals and Electronic equipment.

Sarabhai Research centre (SRC), one of its Division, is involved in Research & Development activities in pharmaceutical field. It has well equipped Development Laboratory, Pilot Plant and adequate facilities for development of formulations and packaging.

SRC are looking for dynamic and mature professionals in the areas of new drug formulations and updating of current manufacturing processes to keep in line with the latest technological developments vis-a-vis market requirements.

CHIEF EXECUTIVE — RESEARCH & DEVELOPMENT

He will be the leader of a team of devoted professionals and will be responsible for initiating activities in Research & Development Division and with particular emphasis on New Drugs.

Qualification : 1. M. Pharm (First Class) 2. Ph. D.(Pharmaceutical Technology)

Experience: Minimum 5 years experience in development of Pharmaceutical dosage forms in R & D Laboratory of a renowned pharmaceutical company. Persons with experience in recognised Universities abroad as a Research Associate or Post Doctoral fellow will be preferred.

Age : Around 40 years

RESEARCH CHEMISTS

Qualification : M. Pharm (First Class) with Pharmaceutical Technology or Pharmaceutical Chemistry as a special subject.

Experience : 2/3 years experience in development of Pharmaceutical dosage forms in R & D Laboratory of a reputed University or renowned Pharmaceutical Company.

Age : Around 30 years

Attractive terms will be offered depending on educational qualifications and Administrative experience.

Initial posting will be in Baroda.

Applications in confidence may be sent within 10 days of this advertisement to :

General Manager - Personnel
Ambalal Sarabhai Enterprises Ltd.
Wadi Wadi, Baroda - 390 007

K. SHAH

Tata Elxsi is looking for an Export Manager who can make a world of difference.

Tata Elxsi has almost everything it takes to be successful in exports.

Some of the world's most advanced products, based on the symmetric multi-processing RISC technology. Software capabilities that allow us to address the advanced segments of the international market. And the human resources to mount a major drive in developed markets around the world.

What we now need is a leader who can translate all these advantages into sales.

A professional who will head the export function, and be responsible for achieving the company's ambitious targets in the export arena.

You would be an engineer or a MBA with at least ten years experience in export marketing of projects, technical services and specialised software for high-end applications.

Exposure to the US market will be a distinct advantage.

If you think you are the kind of person we are looking for call or write within 10 days to :

TATA ELXSI

Some of the IDC models: functional good looks

Photos: Palashranjan Bhaumick

Koli's Braille copies: a new reading eye

Picture this. A blind man sits at a desk. He opens a box of compact disks. He selects one, inserts it into a drive, and then sits back to read the contents of the disk. The contents appear one page at a time in Braille on a rectangular plate in front of him. If he wishes to hardcopy a page in Braille, he can, at the press of a key.

This is the Braille Copier visualised by Sanjay Koli, a student at the Industrial Design Centre (IDC) at IIT, Bombay. The design was selected for the finals of a General Electric international design competition held recently in the Netherlands. An exhibitory panel of the model was on display at the inaugural annual exhibition of the IDC, held in end-June at the Nehru Centre in Bombay.

The exhibition was held with the intention of projecting the ideas of students of the two-year Master of Design (MDes) course to industry and the public. The IDC is one of the only two design institutions in the country; the other is the National Institute of Design (NID) at Ahmedabad. The exhibition featured project models designed by graduating students and the faculty, and covered a range of products — from a learning aid for the aged based on bio-feedback to a cryogenic container for liquid nitrogen.

No enquiries yet

For all the promise that the exhibiton held out, it didn't get the response it deserved. The turnout was encouraging no doubt, but industry did not seem to be particularly impressed. Hardly any top managers from the companies invited showed up. And till two weeks after the exhibition there were no enquiries for possible design development collaborations. The students are disappointed. "Companies are still not aware of the long-term cost savings that efficient designs fetch," says P.S. Giridhar, a student. "They only look for immediate gains."

Professional design development in the country, says professor K. Munshi of the IDC, is still a new concept; and practised by manufacturers usually only when prodded by competition in the market. The high costs and length of time involved, Munshi says, make design development a rather unattractive proposition.

Some companies do feel the need for well-designed products and have start inducting professional designers. A go example is Titan Watches. The Bangalo based company has offered jobs at Hosur plant to three of IDC's 12 19 graduates. S. Deenadayalan, personn manager at Titan, says, "The new recru will form the creative core group for ne model designs. They will bring aesthet into our process manufacturing. We co sider them long-term assets for t company."

Vikram Rajaram, general manager f HRD, adds that while the designers w bring with them design skills, they w work within the framework of the man facturing dictates of a micro-precisio engineered product.

Interestingly, four other 1991 grad ates have been offered jobs by HM another watch-maker. Munshi sees th as an indication of an increasingly co petitive watch market. "The technolo and prices in this market," he says, "a on par. In such a market, a design ed could decide who the leader will be."

Other companies that have strong pr fessional design teams are Eagle Flas

ir's electric car: moving towards a cleaner environment

Unakal's chain saw: portability and a better grip

Courtesy: Larsen & Toubro

L&T's pump: aesthetics and ergonomics

H Godrej. These are companies which ve to continuously create new designs order to offer customers a larger oice. Naushad Padamsee, managing ector of Eagle Flasks, says that at the mpany's CAD/CAM-equipped design dio in Talegaon, in Maharashtra, vers — particularly foreign — nstantly interact with the company's -strong design team. As a result, he s, final products, which take about a r from the conceptualisation stage to terialise, are not random designs, but y market specific.

me new designs

ough most of the projects at the IDC nibition were re-design projects, some re new designs. One was an electric car, signed as an alternative to fossil-fuel ven cars. The main design considera- n here, designer Rajeev Nair says, was imising between the range and speed he car, on the one hand, and its weight, the other.

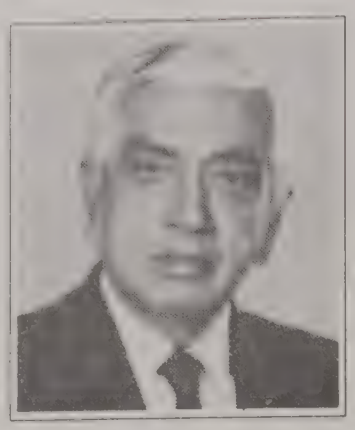
The re-design projects were more prac- al, and closer to the prototype stage. ere was a personal copier, which, unlike imported models, is designed to take India's higher temperatures and high dust density into consideration. A chainsaw for cutting trees was designed for portability, a better grip, and to be ergonomically more comfortable for the user.

Another student designed a simple reusable cable drum from engineering plastics. This design went into great dimensional detail — unlike the other models which were dependent on several factors not known to their designers at the outset.

While most designers on company payrolls are usually faced with re-design jobs, the occasional new design job does come up. IDC alumnus, B.K. Chakravarthy, who now works in L&T's R&D department has just designed a petrol pump he calls the Z-line pump. The pump, which took three years to reach actual production, is now being installed in some Hindustan Petroleum outlets. The pump is functionally different in its depth of ergonomic detailing and easy maintainability. Chakravarthy is currently working on, among other smaller projects, a corporate design that will standardise the packaging of L&T's various products.

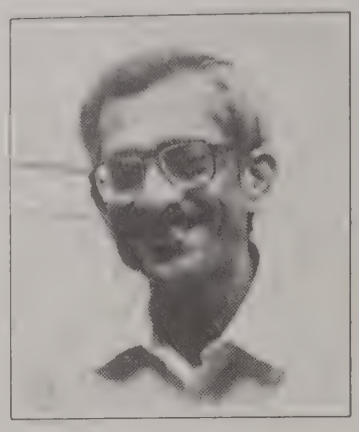
Slated for export

Some of the Z-line pumps are slated for export. And it is the highly-competitive export market that most often sends Indian manufacturers back to the drawing board. The public sector IBP's cryogenic container for liquid nitrogen is being designed for better efficiency at the IDC. Munshi says that about 80 per cent of the IDC's 20-odd ongoing projects have to do with products slated for exports. And it is with these export pressures that capital-intensive industries now seek the aid of professional designers.

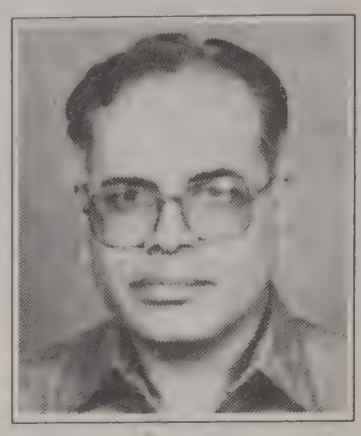


Demand for professional designers could well increase, given the new export orientation of the country's economic policies. As increasingly more Indian manufacturers seek to sell abroad, they will find that being price-competitive alone will not help. Their products will have to be designed for specific foreign markets. And that calls for some thinking about design.

■ ALLAN ABRAHAM



EXECUTIVE LADDER



A. Krishnamurthy has taken over as chairman and managing director of Kudremukh Iron Ore Company Ltd.

R.C. Malhan has taken over as director, finance, of Bharat Heavy Electricals Ltd.

U. Mahesh Rao has taken over as managing director of the General Insurance Corporation of India.

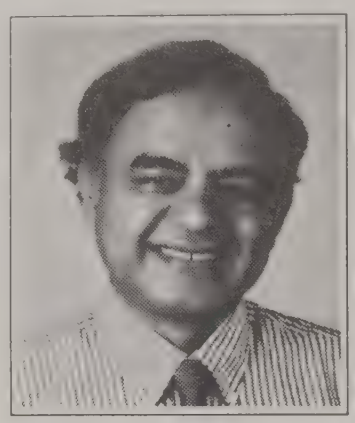
V. Suresh has been appointed as director, corporate planning, of the Housing and Urban Development Corporation Ltd.

Ranjit Mathur has take over as part-time chairman of Container Corporation of India Lt

M.M. Shastri and **Kewa Krishan** have assumed charge as executive director, technical, and executive director, projects, respectively, of Rashtriya Chemicals an Fertilisers Ltd.

K.S. Gergan and **H.B. Linganna** have bee promoted as director, watches, and director, technical, respectively of HMT Ltd.

Ankush K. Kakde has been elected chairman o the Maharashtra State Cooperative Housing Finance Corporation Ltd



Nagaraj S.Rao has beer promoted as vice-president, southern operations, Neoluxe India Ltd.

Shashank Jain has been appointed company secretary of Phoenix Electric (India) Ltd.

K. Prabhakar Rao has been promoted as executive director, Tribal Co-operative Marketing Development Federation of India Ltd.

K.S. Vishwanathan has taken charge as president, coach division and as secretary of Sundaram Industries Ltd (a TVS Group Company).

Gurcharan Das has been elected vice-president, far east, and as Officer of the Proctor & Gamble Company, US.

Gero von Goetz has been appointed as the Regional Passenger Marketing Manager, India, Nepal, Bangladesh and Sri Lanka for Lufthansa.

B.K. Gogoi has taken over as director, production, of the Bongaigaon Refinery and Petrochemicals Ltd.

ASSOCIATIONS

J. Ram Rao has been elected chairman of the Indo American Chamber of Commerce, Andhra Pradesh branch.

M.C. Bagrodia has been elected vice-president of the Cement Manufacturers' Association of India.

A. Krishna Murty has been elected president of the Federation of Andhra Pradesh Chambers of Commerce and Industry.

V.B. Lall has been elected chairman of the Indian Plastics Institute, Delhi Chapter.

J. N. Amrolia has been elected national president of the Indian Society for Training and Development.

S. Ramachandran has been elected president of the Delhi Management Association.

Walter Vieira has been elected vice-chairman of the International Council of Management Consulting Institutes, London.

Dilip Dandekar has been elected president of the Tarapur Industrial Manufacturers Association.

H.S. Chopra has been elected chairman of the Indian Mining Federation, Calcutta.

N.K.S. Mahapatra has been elected as chairman, Eastern Regional Committee of the Fertiliser Association of India.

L. Ganesh has been elected president of the Madras Management Association.

Rajeev Swaika has been elected chairman of the Vanaspati Manufacturers' Association, East Zone.

Alfredo Borges has been elected Fellow of the U.K. Advertising Association.

M.R. Prabharkar has taken charge as general manager of the Gujrat Rural Housing Finance Corporation Ltd.

Braj Raj has taken over as general manager, personnel and human resources development, Oriental Insurance Company.

S.M. Divekar has taken over as general manager, marketing, Oriental Insurance Company.

otal involvement

i Apte, *43, is chief executive of Citicorp Overseas Software Ltd (COSL)*

ce 1985, when he conceived and set up corp Overseas Software Ltd (COSL), i Apte has been working seven days a k, 52 weeks a year. Says he, "Even n I am physically elsewhere, mentally n at work." It is this dedication that enabled Apte to make COSL the third gest software exporter (exports in 0-91: Rs.10.80 crore) in India.

ust out of the Indian Institute of Tech- ogy, Bombay in 1970, he joined mpton Greaves but found the envi- ment there too stifling and quit a year r to join International Business chines (IBM).

consultancy. In 1978, when IBM left ia, its employees were paid a substan- severance pay. With his Rs.50,000 e and his wife set up Speed Systems Ltd, a software consultancy, in Goa. e, he learnt the ropes of running a iness, an experience which stood him ood stead when he set up COSL.

he year 1980 brought Citicorp as a omer, and after developing a series of ems for them, Apte undertook a fu- stic consultancy assignment — he lked out the future technological ds and opportunities for the bank. in 1984, he closed shop and joined corp as a full-time consultant.

is first assignment was to start India ware House, a pilot project to develop ware for the bank's overseas offices. was project leader for assignments in iland, Brunei and Hong Kong, the suc- of which persuaded the management to set up a separate software export subsidiary.

On 28 October 1985, with the necessary approval from the Citicorp board, COSL commenced operations at the Santacruz Electronics Export Processing Zone in Bombay. Says Apte, "We had no significant international exposure and no customers. The simple strategy was to survive."

Under Apte's stewardship, COSL touched a cumulative export of Rs.25 crore in five years, a growth of 30 per cent annually. It focused exclusively on financial services. Today, 50 per cent of its business accrues from the Citicorp family worldwide. Two business-originating organisations were established — one in the US, Citicorp Information Technology Inc, and the other in Brussels, Brussels Financial Technology NV.

Recently another subsidiary, Citicorp Information Technology Ltd, was set up in Bangalore to address the domestic software market. "Every day is a learning experience," says Apte talking of his expertise in managing these. "Every situation is new. There are no text books written on how to manage this business."

Fitting tribute. To top it all, the department of electronics' newly-instituted award for excellence in software was given to COSL along with Tata Consultancy Services this year — a fitting tribute to Apte's contribution to India's export effort.

■ AROON SARKER

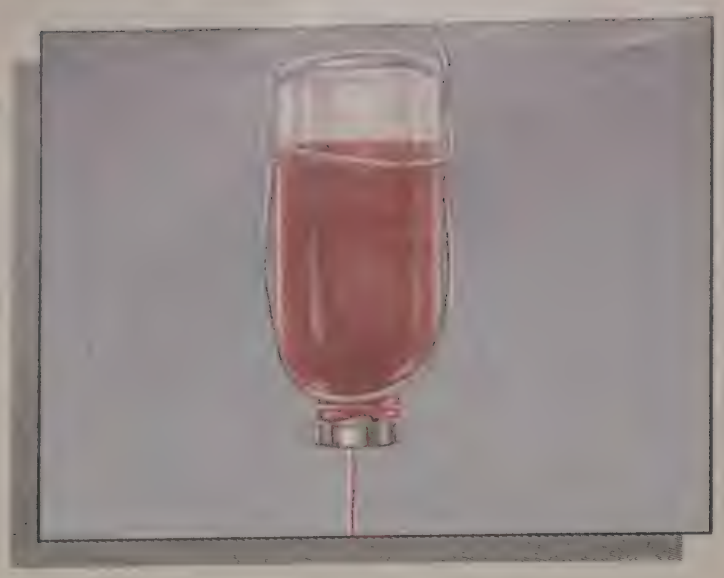
FRONTRUNNERS

The sign on his wall says: "If anything can go right, it will — Shakti's law". And it seems to have worked for **Shakti Saran**, 31, manager of Investcare, the portfolio management division of ANZ Grindlays Bank.

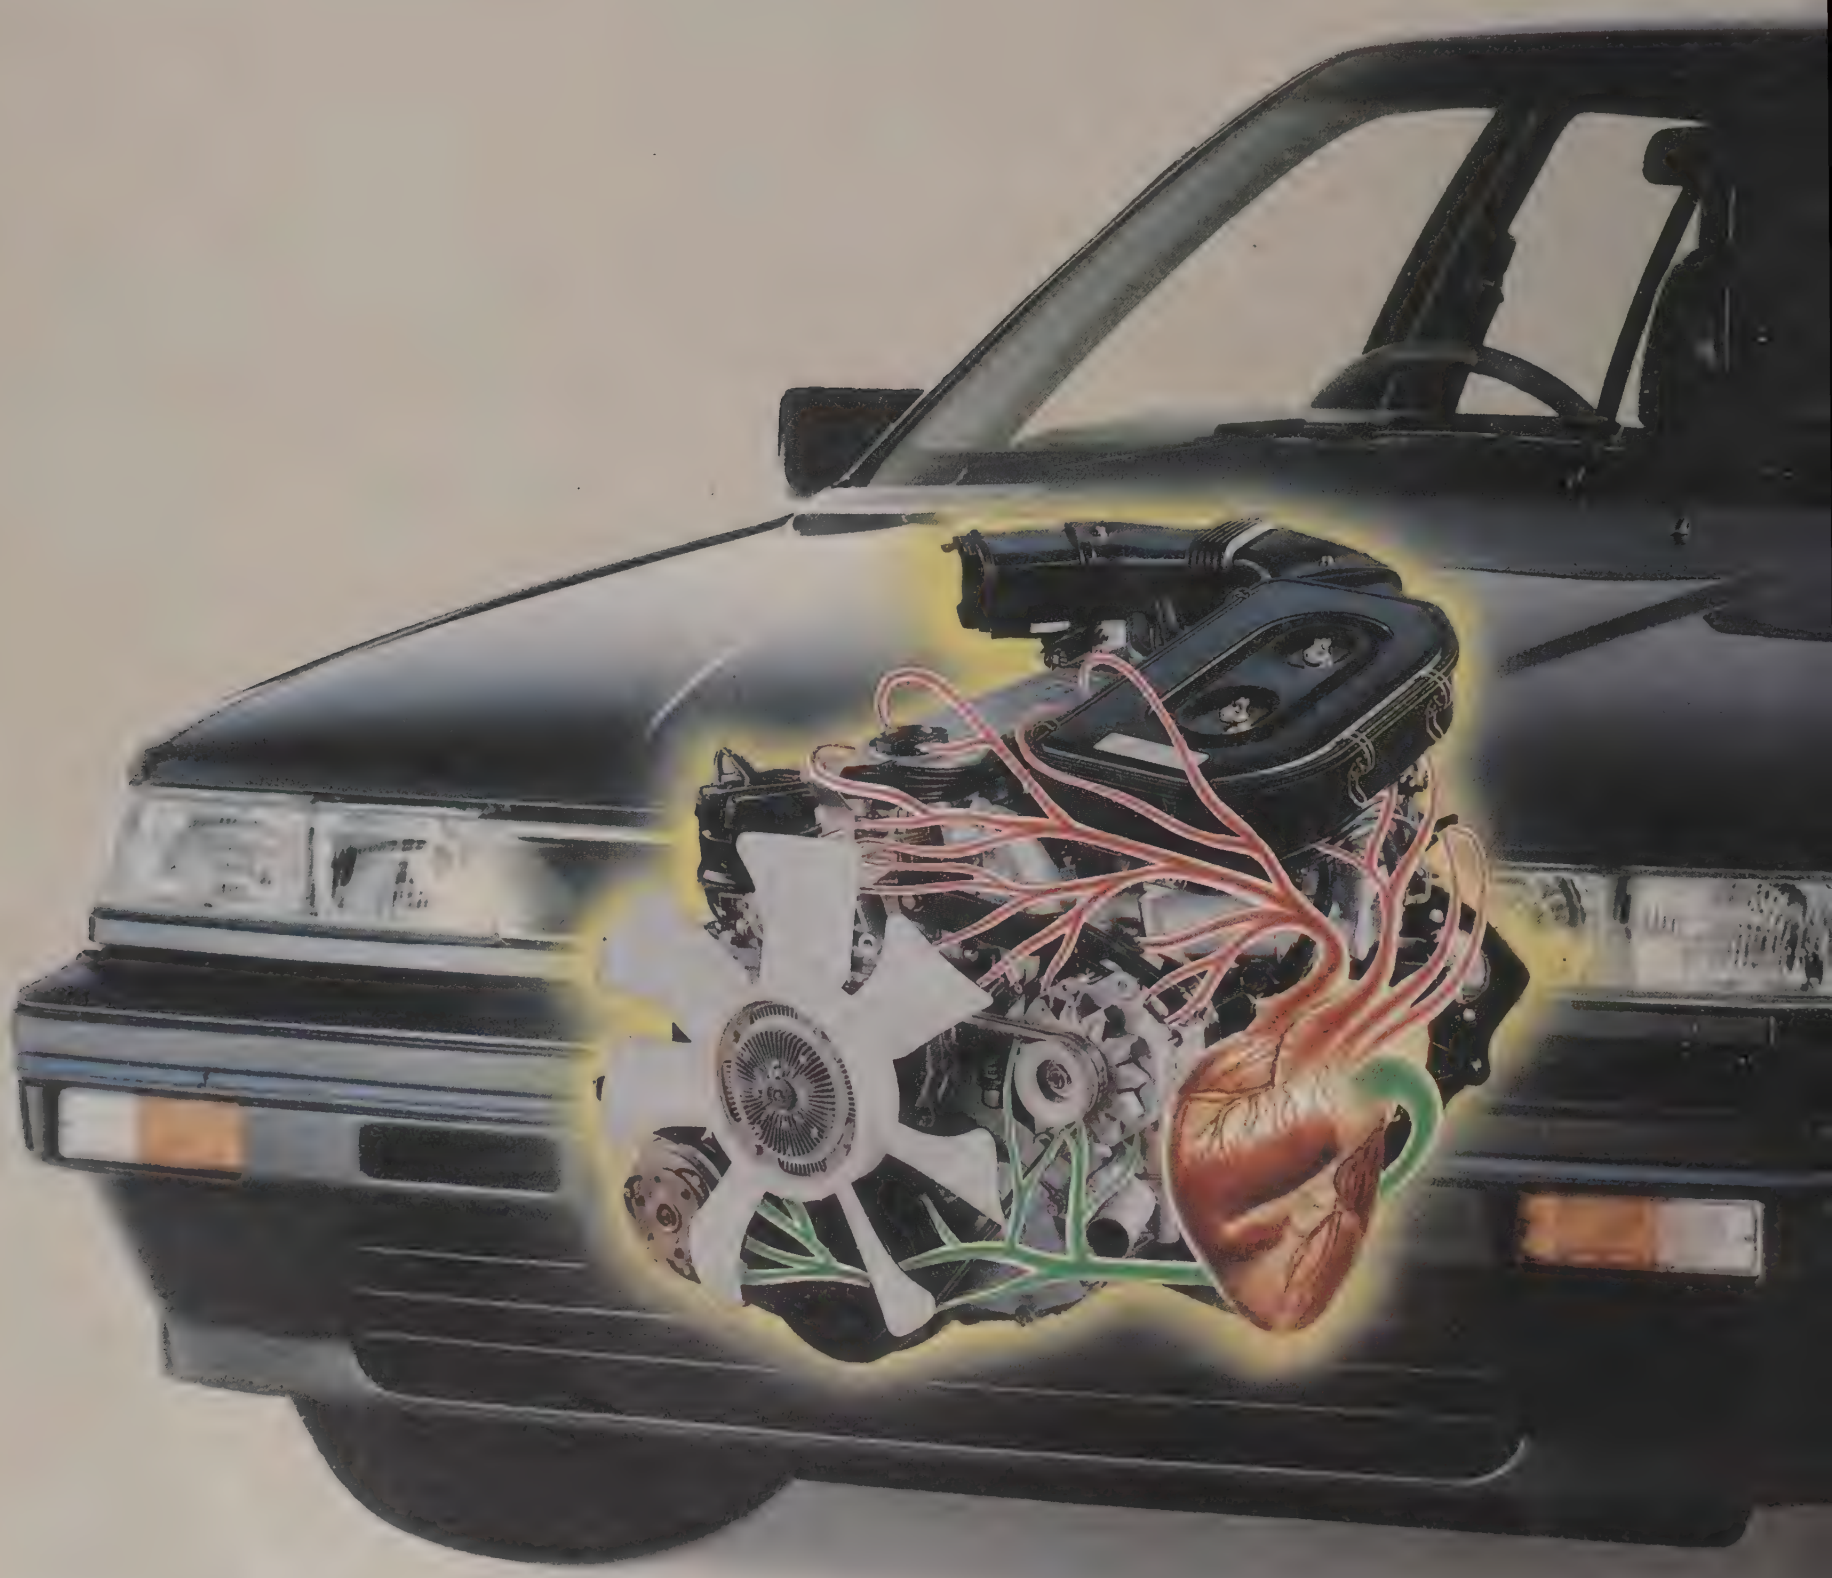
After a degree in commerce from Bombay University, and an MBA from Boston University, Saran joined Banque Nationale de Paris in 1984 as a trainee. In 1988, he moved to Grindlays, where he spent time in research operations before taking up customer handling. He was instrumental in setting up Investcare. He says, "every aspect of it is interesting, from coordinating research to handling the 170 odd customers, to the actual operations."

A jazz enthusiast and an avid sailor in his spare time, Saran plans to help to set up Investcare in other cities too.

— S. A.



As senior project co-ordinator for the Lupin Rural Support Programme, **Mukesh Gupta,** 33, is involved in developing village-based industries in Bharatpur and Alwar (Rajasthan) for one of the largest rural development programmes undertaken here by an Indian company — Bombay's Lupin Laboratories.



An engineering graduate from Udaipur University, Gupta did his MBA from Gujarat University before embarking on a successful corporate career. He joined Excel Industries as management trainee in 1982 and became general manager, commercial in less than four years. In 1986, he joined Four Walls Marketing as general manager (project) and helped set up a bulk drug unit.

Two years ago, Gupta moved to Lupin because "I thought I owed it to do something constructive in the land of my ancestors."

Castrol

ompromise on ife ?

Then why on the life of your car ?

Like your body and heart need good blood, an engine needs good engine oil.

The oil in your engine works much like the blood in your body which is continuously pumped around a network of large and small tubes and comes back to be revitalized and filtered. Like blood, a good oil has to keep flowing without clogging or choking, that may cause heart attacks or engine seizure.

Small wonder then, that millions of people around the world depend on Castrol GTX to extend the life of their engine and keep it fighting fit. The international formula of Castrol GTX is engineered to protect your engine through thick and thin, month after month, under engine conditions ranging from Arctic cold to the sizzling engine heat and at pressures ranging upto ten tons per square inch.

That's why we call Castrol GTX formulation, a 'Liquid Engineering' marvel – the lifeblood of your engine. Use Castrol GTX and be assured of silent, smooth running and longer engine life.

THE INSTITUTE OF CHARTERED FINANCIAL ANALYSTS OF INDIA

(In collaboration with The Institute of Chartered Financial Analysts, Virginia, USA)

ADMISSION NOTICE

THE CFA PROGRAMME

The American Institute

The Institute of Chartered Financial Analysts, set up in 1959 at Virginia, USA is the only institution of its kind in the world. It offers a three year training programme leading to the designation Chartered Financial Analyst (CFA) which is a highly valued professional qualification. Since its inception it has awarded the CFA designation to about 12,500 candidates. Interested in advancing the cause of professionalism in the field of financial analysis, it is collaborating with the Institute of Chartered Financial Analysts of India, in offering the CFA Programme in India.

The Indian Institute

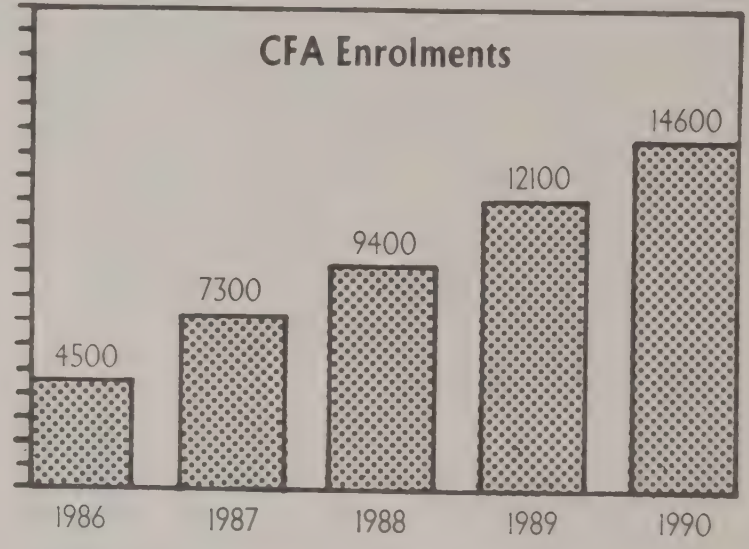
The Institute of Chartered Financial Analysts of India has been established in 1984 as a non-profit educational society. ICFAI is a member of Asian Securities Analysts Council, Japan. The Charter awarded by ICFAI is fast emerging as a symbol of professional excellence. Currently there are 59 CFAs, occupying senior positions in banking and corporate sectors. By 1991-92, the number of CFAs is likely to be around 100. Leading institutions such as RBI, IDBI, UTI, ICICI and IFCI reimburse the CFA Programme fee to their staff.

The CFA Programme

The CFA Programme is a three year training programme primarily focusing on financial analysis and its application in three broad areas: Corporate Financial Management, Investment Management and Financial Services.

The CFA Programme is divided into three levels :

Preliminary Level



Financial Accounting	Quantitative Methods
Financial Management	Economics

Inter Level

Economic Legislation	Security Evaluation
Management Accounting	Project Appraisal

Final Level

Adv. Financial Management	Investment Management
Financial Services	Indian Financial System/ International Financial Mngt.

Eligibility

Graduation (any discipline). Final year degree students can also apply. The applicants are required to qualify at the Admission Test (Date: Oct. 13, 1991) to be conducted at 25 centres. Certain categories of applicants such as CAs/CWAs/ACSs/MBAs/CAIIBs/First Class Graduates/First Class Post-Graduates are exempted from the Admission Test. Candidates with specified qualifications such as CA/CWA/ACS/MBA/CAIIB are directly admitted into the Preliminary Level. All others have to successfully complete the Foundation Course, to become eligible to take the examinations of the Preliminary Level.

Prospectus

Please write with complete address and a DD for Rs. 60 drawn in favour of 'ICFAI' to : The Admn. Officer (CFA),

HIN

ough times at diamond park

a dream that has, for the time being, its sparkle. Spanning 270 acres be-ing to the Gujarat Industrial Devel-ent Corporation (GIDC) at Sachin, m from Surat, is the Diamond Indus- Park, set up by the Diamond and Development Corporation (DGDC). park began to take shape in 1988 — before the recession in the diamond stry set in. Plans for this model town uded schools, hospitals, restaurants, s, an international diamond trading re and even a three-star hotel.

ne thousand diamond processing s were to be built. Of these 340 have n constructed and 230 have been ded over to allottees. But only 10 are ently functioning, 10 others closed n in April and May and have not re-ned due to a shortage of imported ghs'. Others who e taken possession e not even been to start.

Three years ago, we er visualised that re would be such a ession and foreign hange crunch," S.N. Sharma, irman of DGDC. at they did visu-e, instead, was an hetically designed, -sufficient towns-where artisans ld live and work n dignity, produc-higher yields and er cuts. As Sharma nts out, in Surat ar-ns sleep where they k, in small ill-tilated shelters n inadequate toilets and poor lighting. is affects efficiency," he explains. And ia cannot afford to be lax about this, ed as it is by increasing competition n low-wage producers such as Thai-d, China and Sri Lanka, which use more dern technology to provide better cuts. urat's diamond manufacturers nted out the need for an industrial es-e with improved facilities to Sharma, visited Surat in 1978 to inaugurate Indian Diamond Institute, the coun-s first training centre. And when DGDC tested the response through an advertisement, 900 people came forward with a token amount of Rs. 2,000 to book their units. Encouraged by this, DGDC obtained GIDC land on a 99-year lease for a project estimated to cost Rs.50 crore, with two-thirds of the finance coming from the Industrial Development Bank of India. The 900-square foot units cost Rs.1.8 lakh initially, but the price has gone up now to Rs.3.25 lakh.

Aesthetics and balance

So diamond-shaped structures began to be built, based on designs provided by the Industrial Design Centre attached to the Indian Institute of Technology in Powai. Some people grumbled about the design — people like S.P. Shah, convenor of the Gem and Jewellery Export Promotion Council (Gujarat region), who said maximum utilisation of space was difficult with the diamond-shaped structure. But he went on to book 24 units anyway, as director of Venus Jewel Pvt Ltd. Sharma, meanwhile, was emphatic: "A commercial man will look at it from only one angle, but we did not want to build boxes; we wanted aesthetics and balance."

It is all very aesthetic indeed, and serene and lush as you drive past the sal tree boundary. And it is quiet, as it was meant to be — too quiet, you realise, as you drive on. Where are the bustling units, earning the country valuable foreign exchange?

Some people who took space here are lucky; they still have diamond roughs to process. Godhani Exports' unit is busy, and has been so since it opened two years ago. Thirty-six workers, including three handicapped ones, meticulously cut and polish the dull little stones into 57 glittering facets, processing 50 to 60 diamonds per day, earning Rs. 500 to Rs. 1,000 each. "Surat's processing centres are full of dirt," says manager R.Y. Qureishi. "At the Diamond Park there is better air and more space."

Three co-operative societies are next door, named Aswini, Rohini and Krutika. These are 80 per cent financed by the Surat District Co-operative Bank, the rest coming from the members, all of whom have been trained here. The trainees, carefully chosen from nearby villages, undergo a three-month course, working and living at the Park on a monthly stipend of Rs.250. Last year, 1,500 boys were trained, according to I.B. Naik, the Park's chief executive. This year, even this target has been scaled down to 1,200 trainees.

A little distance away from the units is the shell of the International Diamond Trading Centre, a four-storey diamond-shaped structure which was supposed to have been completed last year. The ground floor has been reserved for the Surat Hira Bourse.

But while the Diamond and Gem Development Corporation can provide a package of clean well-ventilated units, machinery on a turnkey basis, loan aid and export facilities, it can do little to improve the import of roughs in an industry that is reeling worldwide. "I think the international situation will improve only after July 1992," says Sharma. He refuses to be disheartened, however. "We may be slow, but our park represents a major change from conventional industrial estates and we want to make it a model for the country," he declares.

■ MENKA SHIVDASANI

Artisans at the Diamond Park: converting dull roughs into sparkling gems

POWER LUNCHING

Deals over meals

In a culture where business and entertainment go hand in hand, lunching out has been honed into a fine art. Breakfast meetings, described by a banker as "a barbaric custom invented by the Americans", are more popular abroad. In India, where the working day tends to begin later, they are just beginning to catch on. But going by the turnout at five-star eateries at lunch time, there's no doubt as to which is the meal that counts. Many executives believe that no busy schedule is complete unless they have packed in a power luncheon in between.

Clear messages are incorporated into every invitation to dine or wine out. A cup of coffee generally means, "I don't really have much time for this, but since it's you, I'll give it a few minutes." A drink at the bar round the corner is when the relationship is on a warm and casual footing. Dinner with spouses usually means that the stakes are really high. Minus family, dinner could mean anything from, "Let's get down to enjoying ourselves person to person," to "Never mind the paper work, let's just relax". Usually, this is after the deal has been concluded.

An ice-breaker

But it is lunch that is regarded as an acceptable ice-breaker. "People tend to be freer outside their offices," explains Nanda Joshi, chief executive, Mafatlal Consultancy Services. "The change in atmosphere certainly helps."

The regulars on the luncheon circuit say that what may seem an indulgence is really a functional way of furthering business contacts. "Lunch is the only way of getting the person's attention for one to one and a half hours without interruptions or phone calls," points out Sanjay Kulkarni, director, 20th Century Finance Corporation. Neville Shroff, partner, Mazda Chemicals, agrees, adding: "While it is far more functional if one meets in either of the offices — you have your staff and papers at hand — a working lunch really means getting your business done in a different environment."

There are those who wonder as to how much brainstorming takes place over a business lunch. Anyone who looks importantly at his or her watch saying that they are rushing off for lunch, is actually heading for an hour or two of mutual backstroking, or a session of corporate gossip. "Lunch takes place usually when 50 per cent of the transaction is over," says Shroff. "Then you sit back and relax over a meal." Adds R.N. Heredia, vice-president, marketing, of Ceat: "It's not a meeting or conference with the object of taking a decision. It is, in most cases, to set the parameters for decisions that are made at more formalised meetings later." Kulkarni finds that the business lunch helps one to "explore a relationship and find areas of business to expand upon".

There is a clear pecking order in terms of who lunches with whom, and where people go. In Heredia's case, while lunching out is important, the venue does not have to be five-star, since the invitee is a senior purchase officer or distributor. Heredia usually dines at one of the local upmarket outlets near his office at Worli in Bombay.

Five-star meals are another matter. When Kulkarni needs to conduct a serious high-level meeting in privacy and quiet, he tends to gravitate towards the Cha at the Taj Mahal in Bombay. On the hand, when he wants his guests to without being weighed down by a so atmosphere, he opts for the more inf setting of a club like the Bombay Gy Cricket Club of India. The Belvedere a Oberoi is another favourite haunt of bay's top executives, but when they privacy it is the more expensive but eter Rotisserie in the same hotel that prefer.

Image building

While people like Shroff avoid five- restaurants because they find t "killing", power lunching at the h est levels does not seem to have fered because of rising prices. Sm time businessmen and those at middle-management level, may h cut back by shifting from de luxe tels to clubs, but hotels have not no difference in corporate entert ing. "Companies have a certain age to project and a drop entertaining in their customary s would immediately reflect advers on them," observes Vineet Kapo food and beverages manager, Obe Towers.

Strangely, few people actually mit to spending much time on th high-powered meals, and one s pects that is because they don't wa to admit to indulgences such lengthy alcohol-laced meals that ally accomplish little. Farid Curri director of Concept Communicati Pvt Ltd, cites the example of a seni banker who openly admits to havi five-star meals while his subord nates do the work. But few banke were willing to speak about it, and tho who did demanded anonymity. It is co mon knowledge, however, that the banki world gets a great deal of business done b tween 1.00 and 3.00 p.m.

The stereotype also has it that adverti ing executives indulge in long alcohol lunches. "That's very true of regular proc uct agencies," says Currim, "because pe ple have to give their clients a lot of hyp But if you're in a financial ad agency, you' be lucky if you get a sandwich on you desk."

If it is a fallacy that a great deal of se rious business gets done over lunch, no on has begun to complain yet. Certainly high powered executives on expense accoun should be the last to do so.

■ GEETA KRIPALAN

h, what a life! For much of his 87 years, **J.R.D.Tata** strode India's corporate *a firma* like a colossus. He seen much, heard more and e more than most, but never nd the time (and probably inclination) to commit his story on paper. When **R.M.** a, the author of two previous ks on the house of Tatas — *Creation of Wealth* (1981) *Heartbeat of a Trust* 84) broached the idea of a graphy five years ago, J.R.D. uld have nothing of it. "I 't want anyone to write ut my life during my life e," he told the author. But a, himself a Tata employee, not give up persuasion and ally the industrialist agreed a formula whereby the biog- hy would have been written wo volumes. The first one, ering the period till his nd Jawaharlal Nehru's th in 1964 was to be pub- ed during his life time and second one covering the re- inder years after his death. a began work almost imme- tely talking to the subject mself and hundreds of his nds and associates. He was o given exclusive access to usands of J.R.D.'s letters and sonal papers.

But Lala did not give up try- to impress on J.R.D. the need publish the entire biography ring his life time itself. And fi- lly in March this year when he pped down as chairman of Tata Sons, his last big job of responsibility at Bombay House, the old man finally gave in. And now the book, J.R.D.'s first full-fledged authorised biography, will be published later in the year by Viking-Penguin. "It will be about 400 pages long," says the author, "I have full editorial freedom; I hope I will do the great man's life full justice."

Herbivore chic! A vegetarian restaurant that is spread over three floors, whose grand French styled windows overlook Bombay's Marine Drive promenade and where you are assured a seat only by reservation. That is what city restaurateur **Kamlesh Barot** has bet his

money on. And the formula seems to have clicked considering the huge crowd that throng the month-old Revival, despite its unlisted telephone number. Barot is no stranger to success. He owns a restaurant called Rajdhani at Bombay's Crawford market, which is reputed to serve the best Gujarati *thali* this side of the Rann of Kutch, as well as two restaurants in Baroda. "With so many prosperous Gujaratis and Marwaris in Bombay, particularly those belonging to the Jain community, Revival was bound to catch people's fancy," he says.

A research fellow at Delhi's Centre for Policy Research, he is writing a book on the political economy of South Asia. But that did not prevent **Sundeep Waslekar** from being bitten by the 'wanting to do something worthwhile' bug. So he decided to work for peace

and recently set up the International Centre for Peace Initiatives. Its first project: "The New World Order", a compilation of articles by 40 world leaders written specifically for the book. Among those who have contributed are UN secretary general Perez de Cuellar, Bishop Tutu, Mother Teresa, Nobel laureate president Oscar Arias of Costa Rica and Eduard Sheverdnadze, former Soviet foreign minister. Financial backing came from Atul Choksey, managing director of Asian Paints and Anand Mahindra, deputy managing director, Mahindra & Mahindra. To be published soon by Delhi's Konark Publishers Pvt Ltd, this book will soon be followed by the second project — developing scientific capabilities in forecasting conflicts in south Asia.

Hogging the limelight sure makes lot of horse sense to **Vijay Mallya**. His latest foray: production of video cassettes on horse racing (what else?). Mallya recently launched "Horse Power", a 90-minute video magazine featuring memorial moments in racing interspersed with interviews with jockeys,

trainers, breeders and studfarm owners. According to Mallya, the primary objective of the six part series is "to support the racing industry just like the Fortune 500 companies patronise motor races and rallies abroad." The cassettes will be sold through the mail and at Central Bank counters.

When not working in the Small Scale Industries department of the West Bengal government, **Pranesh Chakravarty** takes to the mountains. Now he is planning the biggest ascent in his 20 years of climbing: leading 25 amateur mountaineers from Calcutta for

the first ever private attempt by Indians on Mount Everest (all previous expeditions have been under the aegis of the Indian army or government bodies like Himalayan Mountaineering Federation). Picking up the Rs.56 lakh tab will be companies like Tata Steel, Bhoruka Transport and the Peerless Group. Chakravarty and his boys will make a bid on the world's tallest peak from the tougher Chinese side.

"Allow greater competition"

Dhruv Sawhney, *president of the Confederation of Engineering Industry, speaks to Arif Sharif of* Business India *about liberalisation in Indian industry and what needs to be done to promote India's competitiveness*

How do you think the economy will perform this year? FICCI has just said that industrial growth will not go beyond 4 per cent, which is a dramatic decline from the average of 8 per cent registered by the manufacturing sector over the last five years.
That is not difficult to believe, with the current squeeze on Indian industry. But the underlying fundamentals are good and the slow-down is really artificial. Agriculture is doing well and investments have not really slowed down yet. We have had several discussions with the government and it has given us a good ear. I have always held that the credit squeeze was too sudden and was imposed without consulting the industry. We are not entirely insensitive to the foreign exchange constraint.

What would you really expect from the industrial policy, now, against such a backdrop?
The problems can be seen as long-term, medium and short-run and the policies required would vary with the time frame you are talking about. There are really three issues that have to be attended to: the high deficit and the alarming subsidies and expenditure that must be curbed if inflation is to be contained, a large national debt, and trade that perpetually gives us a current account deficit, low foreign exchange reserves and our receipts from invisibles. Of course, our total debt is large.

Presently, the government needs something like $400-500 million to get around the immediate problems over the next 30 days and we can get this kind of credit through bilateral assistance from countries like the US and Japan. And in case this does not come through, then we can arrange this with the Asian Development Bank.

But the ADB is usually not keen to lend to India because we are the largest recipients of World Bank aid in the region.
That is incorrect. The CEI has always been in close touch with the ADB which still offers a great potential for borrowing. However, this depends on approaching them in a co-ordinated fashion. But you certainly cannot impose fresh curbs on industry to contain imports for you might be causing a further slowing down of industry and leading to greater industrial sickness which might take longer to correct.

What about industry?
Our principal problem with industry is that it is high-cost and uncompetitive. And the only way you can get around the problem is by allowing greater competition. This is the only time-tested way of improving efficiency — allowing free entry and exit from the industries.

Industry is not scared of competition. Admittedly, the process of exiting will be painful but there is no getting away from it. The entire industry will have to put its head together on the issue; may be, create a social security fund that will help retrain labour or help them with opportunities elsewhere.

But labour isn't the only problem.
No, there are issues like the monopolies and restrictive trade practices (MRTP) act which makes very little sense now and ought to be done away with entirely. In terms of the global economy, the Indian companies are really very small and you are not promoting competitiveness by restricting their size. More than 40 per cent of foreign e ought to be licensed automaticall government ought to make the ru convertible on the current accou the next three years. That is the o way you can improve competitive your exportables. The only restric that you need to have are those pertaining to environment and fo exchange clearances, the rest should go.

Even administered prices?
Yes, they need to go too. I am sayi something very basic and simple – remove all constraints on product That might lead to some inflation immediately but we must be prepa tolerate that inflation.

Delicensing has not been a happ experience in India. Look at the experience with the power secto
That is because it is unremunerati do so. Besides, the government ha imposed a ceiling on the quantum borrowing from the financial institutions. You must realise that world over, there is a tendency to r borrowed funds.

Why is it that CEI is opposed to import of second-hand equipmer
Because of the environment in whi engineering industry has to functi we want at the moment is that the a level playing field. Everyone ough be subjected to the same rules; if t comes about, we are prepared for t import of second-hand equipment.

At the moment, the import regi penalises the domestic industry. D are higher for raw materials than f components and finished product. is reversed so that duties are lowes raw materials and components, th are in a position to face competitio from second-hand equipment.

What about the public-sector engineering industries?
There is a little bit of a problem th Quite simply, the government must the umbilical cord to the public-se enterprises. They should be treated other companies, with the governm role towards them being only that investor. And like other companies must be interested in returns on th investments. You cannot have each of their decisions being questioned the floor of the house.

We have people who check the people who check the people who check your aircraft.

You might well call it excessive German thoroughness that we don't let our technicians work unsupervised on an aircraft until they have completed four years' basic training and have at least eight years' practical experience.
It goes without saying, however, that their work is still inspected by an even more experienced technician who, in turn, is checked by a highly qualified engineer. And, after all that, there is the independent inspector from the technical control department who reports directly to the Board of Management.
We call this Lufthansa's contribution to inflight relaxation – it's something we simply owe you and ourselves.

C. F. T. R. I., MYSORE

From the Publisher

Ever since the twin announcement of the new industrial policy and the budget less than a fortnight ago, the stockmarkets have taken off. To the extent that the share bazaar reflects the sentiment of the business community, this shows how much trade and industry have welcomed the new initiatives taken by Manmohan Singh, the finance minister, and P. Chidambaram, the commerce minister. Both deserve the praise fully.

There are three important reasons for welcoming the new measures. First and foremost they have seized a historic opportunity. In a classic move they have converted a crisis into an opportunity. Second, they have shown a willingness to take bold steps. And have not lost their political nerve. And third, they have resisted catering to any political constituency. They have looked to what is good for the country. It is for these reasons that we must welcome and support the new measures.

Of course, there are several specific measures that we may not agree with. For example, many are not particularly happy with the amnesty scheme for tax and exchange control evaders. Also, it is possible to argue against the hike in petroleum prices, which may well trigger off another round of price increases. Moreover, little has been done in moving towards sensible rates of personal taxation. And no effort whatsoever has been made to cut wasteful government expenditure.

But in spite of these strong reservations, it is quite clear that the policy measures are bold steps in the right directon. It is always possible to argue that the changes made have not been radical enough. One only has to compare the speed of change in political and economic conditions elsewhere in the rest of the world — particularly USSR and east Europe. But one thing is clear — the present changes are irreversible. And the first steps having been taken, it will be difficult for anyone to hold back further change.

The other good thing is that the government seems to have realised that whatever major changes it wants to make, it must do so in its very first year, otherwise they will just not get done.

Obviously the question being asked is whether the markets are overheated. Our own guess is that the growth has just begun. To be sure, there will be ups and downs along the way but the underlying trend will be up. Even at the cost of going out on a limb with a forecast, one could hazard a guess that within the next eighteen months or two years the market index could easily reach 2,500.

STOCKMARKETS

Dances with bulls

Manmohan Singh's maiden budget, combined with his government's new industrial policy, has loosened the floodgates at the stockmarkets. The BSE Index is racing upwards, and a host of industries look capable enough to sustain the boom. While conditions are not what one might call "perfect", handled correctly, they are certainly good enough to catalyse an unprecedented phase of growth in the Indian economy

OYSTER

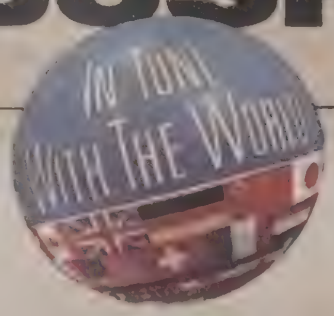
MADE IN SWITZERLAND. MADE FOR THE WORLD.

4002

MADE IN INDIA. MADE FOR THE WORLD.

An 18 Carat Rolex created for legendary mortals. And a B U S H Colour Television manufactured with the same dedication to quality. For those who demand dependability, durability and distinction.

Both designed on the same ground principle — 'only the best'.



This conviction has driven innovations at the B U S H R&D for over four decades. Its products today reflect a seriousness where three minds break ground together — B U S H of India and N E C and A K A I of Japan.

No wonder, Bush has been awarded by the exacting British, the BS 415:1990 approval.

Result : Today B U S H Colour Televisions are being manufactured for export to U.K. and Europe. Tomorrow for the rest of the world.

B U S H. Made in India. Made for the world. And for you.

BUSH

• At what cost?

This refers to the Cover Feature and Letter from the Publisher (24 June). In the midst of all the elequence and fine turn of phrase, you have left many vital areas still untouched. Does the new government plan to weed out corruption and black money? Is there a plan to make the public sector perform and open up the economy? Do we require an outsider's assistance to understand the impact of various unfinished projects undertaken by the government?

Is there even a ray of hope of nursing the Indian economy back to health, and if so, at what cost?

H.N.NAGRAJ
Bangalore

• Turnover problems

The subject of high personnel turnover among advertising agencies is highly relevant and so are some of the issues raised in the article (Advertising, 24 June). But the conclusion seemed simplistic. The Advertising Institute can definitely help but it cannot replace the role of the organisation itself.

A surer way of retaining people would mean: clear job definitions, a rational sync between designations and responsibilities, a proactive evaluation of the career progression paths and ongoing tracking of real and potential dissatisfiers and counselling.

UMESH SHRIKHANDE
Bombay

• Milking exports

Prakash Hebalkar says that export earnings from "processed food" exports may recede continuously like a mirage (Column, 10 June). One example given was milk. And for comparison, the author has taken the price of milk in Bombay (Rs.9 to Rs.14) as standard.

In reality, no one would put up a milk products factory in Bombay city; he would rather do it at Kolhapur or Mehsana where the price of buffalo milk would be Rs.5 to Rs.6 per litre during the flush season when milk products are usually manufactured. When converted into skimmed milk at the prevailing prices for ghee, skimmed milk would cost Rs.3 to Rs.4 a litre which is much lower than prices at which it is available to European or North American manufacturers. Thus, if all the subsidies are removed by the developed countries, the skimmed milk powder made in India would be cheaper than its western counterparts.

Also, transportation and processing costs and productivity of cows have to be taken into consideration.

R.N. APTE
Bombay

• Revealing, but late

This refers to the article on the finance minister Manmohan Singh (Cover Feature, 8 July). Your story made interesting reading, especially the interview. The piece on devaluation and the impact it would have on industry too was revealing.

However, several leading newspapers had already published most of the information. Your magazine being a fortnightly, the story should have been more analytical which unfortunately it was not.

PURNIMA TANDON
Bombay

• Lies and statistics

In "Safer by air", the safety aspects between air and road travel have been compared erroneously (For Your Information, 10 June).

The catch in relative safety figures compared is that the base for comparison is the distance covered and not time travelled. Accidents take place only during the time travelled. Distance covered is only incidental and depends on the inherent speed of the mode of transportation.

In air travel, larger distances are covered due to faster speeds of aircraft vis-a-vis road vehicles which gives the air travel figures an unwarranted statistical advantage.

UPENDRA BALCHANDANI
New Delhi

• Misleading

In the article on GIC (Corporate Report, 10 June) chairman Mony's statement that a higher claim payout of 11 per cent on motor insurance is due to revised Motor Vehicles Act is misleading. Under the MVA, only third party insurance is mandatory. Insurance of vehicles and drivers is optional. The comprehensive policy robs a vehicle owner of a chance to restrict himself with third party insurance.

As a result, the government escapes the responsibility of taking care of an accident victim immediately and forces the victims to litigate.

L.T. SIPPY
Pune

• Coloured report

This refers to Kaveri Mittra's report on the launching of Spredit Margarine in Calcutta (Marketing, 1 April). The manufacture's have argued that annato colouring used in margarine is nothing but carotene and carrots being a natural product, the colour derived from it cannot be synthetic.

Colouring and flavouring of margarine is not permitted by law and the product in question therefore violates the current Prevention of Food Adulteration Act. Even annato colour is not allowed to be used in margarine. Annato does not contain any carotene and has nothing to do with carrots.

Recommending unlimited use of margarine can only lead to greater health risks and is unethical

R.P. ANEJA
Institute of Rural Management
Anand

• Resuming flights

This refers to an item that appeared in News and Events (27 May). Rajkot is an important junction for onward journeys to places of pilgrimage like Dwaraka, Somnath, and Girnar. However, reaching these places is difficult as there is only one train a week from Delhi. Moreover, since the air crash in Mangalore in February 1990, the Delhi-Rajkot flight has been withdrawn. This has affected tourism. Why not resume the flight?

MAHESH KUMAR
New Delhi

• Only 'Indian'

While it is absolutely necessary to encourage foreign investment to maintain competitiveness, it is equally necessary to ensure that purely Indian products do not suffer due to inadequate publicity. Even the educated do not appreciate that products of multinationals, though produced in India, involve quite a substantial outflow of foreign exchange.

It is very difficult for a customer to identify a purely Indian product i.e. products of firms which do not have foreign equity participation. Indian manufacturers must maintain a substantial price differential in favour of their products, even if quality wise, they are no inferior to multinational products.

J.B. Rao
New Delhi

• On with change

As far as the economy is concerned, we should adopt an extreme posture, we are way behind China and the US. Fabian socialism is futile in the present world economic scenario.

Epochal change

Is the new government's industrial policy and budget a good one? Yes. Does it go far enough? No, but it is a big step in the right direction. Read with the changes in trade policy, there is enough to mark the new government's policies to date as epochal.

Consider that the areas where change was most needed were fourfold: less controls, less wasteful government spending, less inflation and the provision of an adequate safety net for the poor.

The industrial policy and budget both mark major steps in decontrol. Contrary to general expectations, the most dramatic reform in decontrol has come in agriculture. Fertiliser subsidies, availed of mainly by rich farmers who can afford fertilisers, are to be pruned, not at the expense of fertiliser companies but by raising prices at the farmgate. The Rs.440-crore reduction in fertiliser subsidies is, meanwhile, to be more than offset by a reduction in the loans of poor farmers by Rs.1,500 crore and an increase in spending on other rural development programmes by Rs.900 crore.

Equally welcome is the new reliance on controlling monopolistic practices rather than preventing new investment by laying down fixed criteria based on market share or asset size. This will encourage large companies to expand in the activities that they are best in rather than by forcing them to diversify into new areas in order to achieve growth. Unfortunately, however, the new industrial policy does not include the public sector under the MRTP.

The delicensing of huge sectors of economic activity, such as cement and synthetic fibres, also marks a big change from the past. The only way to make these sectors competitive is delicensing. Similarly, the only way for such sectors to access foreign technology is through free access to the world's best and the industrial policy has moved in the right direction by liberalising access to foreign investment and technology.

If controls have been adequately and most obviously addressed, a less obvious though no less significant policy change is in the control of government expenditure. If interest payments (which are currently out of the government's control) are excluded from the counting, then government expenditure is slated to fall by Rs.923 crore, primarily possible because of large cuts in allocations for power (by 25 per cent or Rs.670 crore) and abolition of export subsidies (Rs.2,500 crore).

Once again, the government could have done better. Its establishment expenditure could have been drastically pruned, for example. This is possible and the finance minister has suggested it but it will take a strong political will.

The statists in the Congress party have not given up completely, though. Continuing with licensing for motor cars, entertainment electronics and white goods makes no sense given the competitive environment these industries operate in — other than to protect those already in the field. Similarly, there is no reason why the "priority areas for growth of public enterprises" should include exploration and exploitation of oil and mineral resources.

Clearly, what has been yielded has been yielded most reluctantly since bureaucrats hate giving up control. This is seen in the industrial policy statement on freeing technological tie-ups that "the Indian entrepreneur has now come of age so that he no longer needs such bureaucratic clearance of his commercial technology relationships with foreign technology suppliers". The truth is that it is the bureaucrats who have been out of date for at least the past 20 years.

It is obvious that the tussle between bureaucrats and other vested interests versus the new government will continue. The politicians have not given up either. The public was recently treated to the hilarious spectacle of two ex-finance ministers and two opposition party hacks noisily exchanging assertions with the finance minister merely to be contentious.

There remain two areas that have not yet been addressed fully but need urgent attention. The first is a macro economic balance of resources. India's natural strength is its labour force, while capital is scarce. A critical question is whether the new policies will reduce the country's dependence on capital and encourage employment. In the past protective laws on urban labour and cheap loans for capital goods have encouraged the over-use of capital. The government has now acted positively to control the supply of capital by allowing financial institutions to charge interest at market rates. However, a labour policy is yet to be announced. And with the exception of certain food processing industries, hotels and tourism, the delicensed industries are highly capital-intensive and will not spur employment sufficiently.

The second is controlling inflation. This requires, (apart from controlling government expenditure) in the short-run, a greater reliance on direct taxes on income (which impounds funds already earned) for raising new resources rather than indirect taxes on commodities (which tend to get passed on). However, the share of direct taxes to total tax revenue is slated to fall from 20 per cent in 1990-91 to 17 per cent this year. Hence, inflation could rise in the short-term unless government can strictly control spending.

In the longer term, inflation will fall if growth is rapid. Apart from liberalisations in the industrial policy, the proposals to improve the quality of capital markets by empowering the Securities and Exchange Board and by allowing private mutual funds will help. However, the problem of unproductive public-sector units (even after partial disinvestment) and inefficiencies in the small-scale sector will remain.

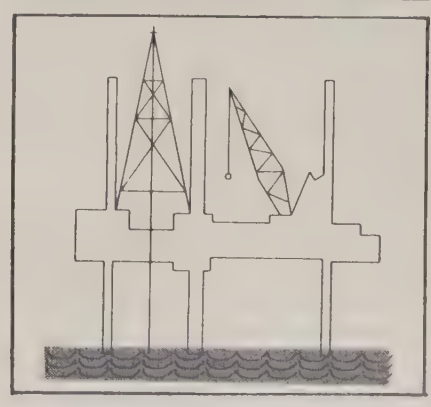
Yet the new government's policy needs to be cheered, largely because of major changes announced but also because of the future changes it signals. Those cynics who say that the changes have been inspired by the IMF fail to realise that several of the IMF's important prescriptions such as tax on agricultural income and greater protection to intellectual

property have been ignored. In other words, nothing in the budget or the industrial policy reads like a sell-out to economic imperialism. If parts of the industrial policy and the budget read like they were written in Washington, it is because the Indian government's analysis is finally reasonable.

Making every drop count

Is it only in India that controversies erupt in such a strange manner and at inappropriate times. The on-going dispute between Tamil Nadu and Karnataka on sharing Cauvery waters has taken a serious turn within a week, that too when all the reservoirs in Karnataka are overflowing and the water level in Tamil Nadu's Mettur dam is three times more than what it was last year. But emotions are running so high that a martyr has already emerged in the person of K. Ramamurthy, Union minister for labour, who has resigned.

The river water sharing agreements go back to 1892 and 1924 when the state governments of Tamil Nadu and Karnataka did not exist. It was decided between the governments of the old Madras presidency and the former princely state of Mysore, that the annual average release of water into the Mettur reservoir in Tamil Nadu would be about 370 TMC (thousand million cubic) feet. Once Karnataka came into being, it refused to acknowledge the earlier agreements.



It took unilateral decisions to construct three reservoirs in violation of the earlier agreements. This restricted the Cauvery flow in the Mettur reservoir to something between 140 and 180 TMC feet annually. The dwindling water supply has carried up the once lush Thanjavur delta which was once known as the rice bowl of the state. Karnataka never fails to point out that earlier, agriculture was better developed in Tamil Nadu's Cauvery delta and Karnataka had not developed at the same pace. This is why more of the water was used by Tamil Nadu while Karnataka was content with less. Today Karnataka's needs have increased and it wants to bring more land under irrigation. After all, the Cauvery originates in Karnataka which makes it the upper riparian state entitled to more water.

One cannot deny Karnataka's right over the water, but the state has never tried to work out a compromise with Tamil Nadu. It has treated Tamil Nadu's requests with arrogance and kept the farmers in suspense year after year.

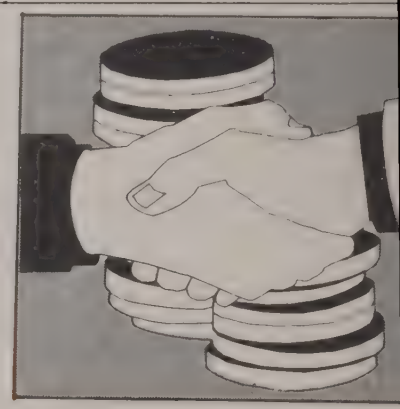
After interminable meetings and hearings for 20 years, a Cauvery Waters Dispute Tribunal was set up under the DMK in June 1990. Tamil Nadu's request for an interim ruling was upheld by the Supreme Court which said the tribunal was empowered to give interim orders. The tribunal passed this order directing Karnataka to release 205 TMC feet of water to Tamil Nadu in a full year, which has been vehemently rejected by Karnataka. Tamil Nadu has been wanting the Centre to help implement the award. The Centre, being pressurised by both states, has referred the matter to the Supreme Court.

The Tamil Nadu chief minister Jayalalitha sees this as a clear betrayal by the Centre. She is outraged. Can the PM, whose fragile government depends on the support of his Tamil Nadu ally, afford to commit tactical blunders? He certainly did so by not informing Tamil Nadu about the Centre's decision to refer the matter to the Supreme Court. And also not using his good offices to bring Karnataka under control. Karnataka has certainly shown a great deal of irresponsibility in passing an ordinance to prevent the implementation of the award. The situation has been diffused by nature. The rains have come to everybody's rescue. Now will all the parties abide by the Supreme Court's verdict which should be given as soon as possible? Or will the politicians continue to keep the issue alive for their own petty interests?

Perestroika in oil-prospecting

After five years of official procrastination, there is finally good news on the fourth round of bidding for oil exploration. This has been opened to the private sector (conspicuously excluded from the third round) either on its own or in consortium with foreign companies. There are more blocks on offer (71), including 33 onshore blocks, versus 27 (all offshore) in the third round, at attractive terms and with good prospects of yielding oil.

None of this would have occurred earlier given the Oil and Natural Gas Commission's (ONGC) past practice of retaining — without realistic exploration plans — the most attractive blocks. Attracted by the change in strategy, three international oil giants and some Indian firms appear interested in making serious bids.



Equally important is the offer of a dozen isolated and marginal pools to the private sector. These were discovered earlier by ONGC but left unexploited as they were of low priority. These pools could soon yield over 2,000 barrels a day (worth $15 million annually), while providing the private sector with valuable learning experience in its quest for global competitiveness.

Since multinational firms will undoubtedly be among the successful bidders, the other moves to make the fourth round successful must include a "single-window" system for clearances on the part of the government rather than the current obstacle course involving the ministries of finance, defe commerce (excise) and petroleum. Furthermore, the i viduals selected for this single window committee must h the stature to cut across ministries and get jobs done.

Second, a sense of continuity and competition has to brought into the process. This requires that the round syst of bidding be replaced by a continuous process of enterta ing bids from interested companies. This will reduce the ti lags and intensify the process of prospecting for oil. This strategy that has paid off in Malaysia and Indonesia.

Third, ONGC and Oil India Ltd need to be evaluated a monitored on the basis of the same criteria and as rigorou as any other prospector for oil. This alone will curb their torious inefficiency — short of divesting their holdings.

If these three complementary policies can be put in pla India has a good chance of meeting its domestic needs home within the decade.

Amnesties and economic realism

Any amnesty scheme, however well-designed, carries the odorous burden of its impact on future tax compliance. As the rural loan waiver scheme has demonstrated, the incentive to repay good loans has been severely affected.

Those who say that black money is a fact of economic life and that amnesty schemes merely reflect realism ignore the real fact: that it is an insensible tax-regime and insufficient penalties for non-compliance that has created black money in the first place.

Just as one example, a wealth-tax that taxes equity holdings at 5 per cent of market value when the dividend yield on equity is typically below 3 per cent of market value is essentially a confiscatory tax regime as it means that earnings from dividends (which are themselves taxable) are less than taxes to be paid. This has had a deleterious effect on the development of equity markets and is contrary to the government's stated intention of promoting the equity culture.

Similarly, the absence of effective penalties on holding unaccounted income has led to the proliferation of black money. When black money is discovered, it is merely added on to income and penal interest is levied on the amount. But how many businessmen have actually gone to jail for holding black money?

That said, the government has periodically come out with schemes to mop up black money, including two in the latest budget. Unfortunately, unlike the successful Bearer Bond scheme of 1981 which raised Rs.965 crore, the two schemes in the budget for channelling black money into the official economy are both poorly designed and unlikely to work. The first is an amnesty scheme: individuals can deposit unaccounted fund[illegible] the National Housing Bank (NHB) and immediately recover 60 per cent of the amount for their ow use, forfeiting the balance. This is equivalent to a 40 per ce tax, which though reasonable is morally amiss: illegal ear ings made by, say, a closely held public limited company i 1991 will be taxed at 40 per cent while legal earnings will b taxed at 57 per cent. Should otherwise honest companie convert as much income to black income as is possible befo the amnesty date of 30 November and then use the scheme t convert it into tax-free white money immediately thereafte

For those with black money in hand, even 40 per cent i too high. The tax will need to be lowered to about 25 per ce to equal the nuisance costs of evading taxes and transferrin the money abroad at a *havala* premium of about 20 per cen

The second scheme is even more unlikely to increase th flow of funds into the official economy. Under this scheme any individual can send monies in foreign exchange to any one in India, free of Gift Tax. Earlier, such exemption wa available only for funds sent by close relations. The hope i that those who have stashed large sums abroad will repatri ate them. The fact, however, is that such individuals were never deterred by the "close relation" requirement as these were always "available" when needed.

The scheme at best will encourage current holders of black money in India to transfer their funds abroad and return them less the *havala* premium. In other words, the finance minister has accepted that a 20 per cent "tax" be paid to *havala* racketeers by persons with illegal wealth in order to legalise black money. But is this not taking economic realism a bit too far? At the very least, he should have looked for more innovative ways to appropriate that tax for the government instead.

Swissair Customer Portrait: Harry Singh and family, Industrialist.

Holidaying in Europe, the Singhs are happy to discover that memories are made on the wings of Swissair. Harry Singh's family vacation gets off to a flying start with Swissair. Opening up the picturesque Europe via Zurich. Quite naturally, even when business demands, Harry insists on Swissair. With prompt connections to over fifty European business centres, seven gateways to the U.S.A. and two to Canada. As the Singhs would tell you, business or holiday, Swissair is the finest way to get carried away.

LIC's fruitless fight

Vithaldas Parmar took out an LIC Jeevan Mitra policy in February 1986. He was subjected to a thorough medical check-up and was considered fit enough to be insured. But Parmar died suddenly after ten months.

Peeved at the prospect of settling his widow's claim, LIC's Rajkot branch decided to act tough. The over-zealous branch manager had an old medical file on Parmar dug up in which an ayurvedic practitioner's prescription, which forbade him to eat bananas and pears, was discovered.

Promptly LIC concluded that Parmar had not followed that bit of advice. Calling his widow, Manjulaben, to his office, the branch manager told her that LIC was willing to offer her only a part of the full amount as a 'humanitarian gesture'. Not to be outdone, Manjulaben moved the Rajkot District Forum which ruled in her favour — LIC was directed to pay the full insured amount and stop its fruitless fight.

India's stockmarket boom

The developing countries had the fastest rising stockmarkets in the world last year, according to the 1991 Emerging Stock Markets Factbook published by the International Finance Corporation (IFC). The top market, in dollar terms, was Venezuela (up 572 per cent), followed by Greece (up 90 per cent), Zimbabwe (up 84 per cent) and Chile (up 31 per cent). India was number eight, with a rise of 16 per cent.

In 1975, the total capital raised in the primary market was Rs.990 million ($118 million approximately). In 1980-81, Rs.1.92 billion ($243 million) was raised and in 1984-85 Rs.10.58 billion ($890 million). However, the primary markets came into their own only in the second half of the eighties, the resources raised increased rapidly to Rs.20.97 billion ($1.71 billion), Rs.43.50 billion ($3.41 billion), Rs.45.13 billion ($3.48 billion) and Rs.56.51 billion ($3.9 billion), respectively in the four years from 1985-86 to 1988-89. The year 1989-90 witnessed an all-time high of Rs.102.10 billion (6.13 billion) in resource mobilisation from primary markets — a hundred-fold increase over the 1975 figure.

The number of shareholders is estimated to have increased from about 1.2 million in 1980 to 9 million by 1990 and the share of equities and debentures in gross financial assets of the household sector grew from 0.8 per cent in 1975-76 to 4.2 per cent in 1988-89 (in 1985-86 it had reached 6.4 per cent).

Communication goes cheap

The world is growing smaller every day and cheaper too than what it was half a century back as transport and communication networks increase and costs drop.

Over the past 60 years, the cost of sending cargo by sea has more than halved — from $100 in 1930 to around $50 in 1990. Flying has in relative terms, become even cheaper: the average cost of air transport is now only a sixth of what it was in 1930. But telephone calls are the real bargain. A three-minute trans-Atlantic call now costs barely 1.5 per cent of what it did 60 years ago. But while the price of telephone calls continued to fall during the eighties, the cost of air and sea transport crept up as equipment and labour became dearer. The trend would be bad news if it continued: the past few decades of tumbling transport and communication costs have helped boost world trade and make financial markets global.

BEST's image-building spree

Installing audio equipment in buses is only one of the things the Bombay Electric Supply Transport Undertaking is doing to build its image. There's more happening at BEST. Buses will now have special seats for the physically handicapped and women — the first three seats have been reserved for the handicapped and the next six for women. Men please note that in double deckers, the three seater bench on the left hand side at the entrance is meant for the handicapped and that on the right is for ladies only.

Meanwhile the BEST has introduced counselling for the staff. Those with a bad performance will be given a piece of advice and those with a good record a pat on the back. BEST officials say it's working out well.

Thriving on stress

Thanks to the law, stress claims by workers have become a growth industry in California, US. Last year alone, an estimated $380 million was paid to workers claiming sleepless nights, headaches and other ills. TV commercials and newspaper ads beckon workers to doctors and lawyers, who counsel those who have been fired, transferred or work under unusual pressure.

According to an industry group, the National Council on Compensation Insurance, Golden State workers collected $5.3 billion in disability payments in 1989 — a 10-per-cent hike over the previous year.

Stress-related claims have now become the key issue in resolving the already convoluted struggle over the state's $56 billion budget.

Where the Tatas rest in peace

In the city that celebrates life more exuberantly than any other in the world, even the dead have a style of their own. The Pere-Lachaise, sprawled over 115 acres of tree-covered rolling hills in Paris, is probably the most tourist frequented cemetery in the world. Here under marble tombs and granite grave- stones lie hundreds of celebrities, both French and foreign. The names include the likes of Chopin, Moliere, Oscar Wilde, Marcel Proust, Apollinaire, Balzac, Delacroix, Sarah Bernhardt, Isadora Duncan and, of course, under a rather nondescript grave stone lies the legendary rock star Jim Morrison.

But all these graves would seem inconspicuous when viewed against the tombs of a family that not many Parisians would even recognise — the R.D. Tata family. Ratanji Dadabhoy Tata was the father of the current Tata patriach, J.R.D Tata, who ran a prosperous trading house in Paris dealing in pearls and silk. He died in 1926 and lies buried here along with his wife and JRD's French mother, Suzanne Briere, who went by the name of Sooni Ratan Tata. So next time you are in Paris and do go to visit Pere-Lachaise, look out for the gravestone bearing the name "Famille R.D. Tata"

Taking stock

Stockmarket yearbooks, analysis and reports in financial papers and magazines are all for the moment. However an enduring and easy reference of a company's financial track record can be found in the Stock Exchange Offical Directory.

Available in an 18-volume set costing Rs.5,000, the directory contains 10 years' detailed analysis of the important companies quoted on the country's 19 stock exchanges, important non-quoted companies, public-sector undertakings, etc. Weekly updates at an additional cost of Rs.2,500 per annum give up-to-date data on the companies, including six-monthly results, details of rights issues, etc. This means that over the year every page in the 18 volumes is replaced.

The directory also is a mine of information on the history of the stock exchanges, their office bearers, and index movements.

Pleading innocence

Not only is the industry worried about the current liquidity crisis in the financial markets, but even banks are puzzled as to where their funds would come from and how much it would cost them! The creators of this crunch, RBI, having used the excuse of containing inflation, sit back with the satisfaction of a job well done. Suddenly, the North Block mandarins have awakened and have started questioning the chaos.

Pankaj Desai

In a recent letter to the banks, the finance ministry seems to have questioned the reason for the high cost of interest incurred in the months of April and May. As if they did not know, wonder bankers. They interpret this government move as one seeking to reimpose the call money market ceiling removed in 1988 as the first step towards liberalisation.

Getting set to go

Gujarat Narmada Valley Fertiliser Company (GNFC) has finally taken concrete steps to implement its four-year-old LoI for the manufacture of TV glass shells. It has recently tied up with Videocon International Ltd and formed a new joint venture called Gujarat Narmada Electronics Ltd to implement the project. GNFC will hold 26 per cent of the equity and Videocon 25 per cent. The rest will be offered to the public via a public issue.

The technology for glass shells will come from OI-NEG of the US and the cost of the project is estimated at Rs.500 crore. On full capacity, the plant will produce 3.5 million glass shells for colour TVs and 1.75 million for the black and white sets. Two of the three Dhoot brothers of Videocon have already joined the board of the new company and one of them will take over as managing director.

Videocon also plans to set up a TV picture tube plant. Once this is done, the company will complete its backward integration process.

Waiting to diversify

Ambitious plans are afoot at Carona Ltd. After its tie-up with Puma for sports shoes, the company is intent on gaining a foothold in the overseas market. While it has recently bagged an order from Germany for sports shoes, it is now eyeing the leather shoes segment.

Another tie-up, this time with a major north European shoe company for setting up an EOU for leather shoes is waiting to be finalised. Although 75 per cent of the production from this unit is destined for foreign feet, Carona will market the rest in India under the foreign brand name. Another diversification awaiting government clearance is Carona's plans to manufacture sporting goods and apparel for the domestic market in collaboration with Puma.

Havala boons

The one sector of business that has really boomed after the budget is the *havala* business. Operators are having a field day and very strong demand has pushed the unofficial rate of the dollar to between Rs.32 and Rs.33. The reason for the sustained demand is that the budget created a mini bonanza in the money laundry business. The modus operandi is simple: send cash out and bring it back as a gift in foreign exchange. No questions asked.

Businessmen have calculated that this is much better than the other amnesty scheme which attracts a 40 per cent tax when money is deposited with the National Housing Bank.

It is a pity that the Government relies only on *babus* in Delhi and does not consult businessmen when formulating such schemes.

Back to basics

Lupin Laboratories has had a terrific track record in pharmaceuticals. But it has not been as lucky with its foray into synthetic leather. Three years ago, it set up a Rs.9.6-crore plant in Goa to manufacture the product under the brand name of Polynova, and brought in Shashi Dash, a former managing director Universal Luggage to run the project. never really took off and Lupin's mana ing director D.B. Gupta has now put t division up for sale. The developme comes around the time when the co pany, which is a family-owned one, making plans to go public at long last.

Colour changes

There is an ongoing controversy betwee film producers and HPF on the price i crease of colour positives and HPF's mo nopoly over the conversion of graphi RTS paper, X-ray films and film roll HPF has not got into major manufactu ing yet in spite of being around for thre decades. But although about 10 small scale industrialists have put up conver sion units, HPF has not allowed them t convert anything other than colou paper.

The SSI lobby is not strong enough t take on HPF. Now with the current liber alisation of industry, HPF has to face competition for the first time. This, cou pled with the film lobby's annoyance with HPF is expected to bring about policy changes in the organisation.

Quite a merger

What caused Reliance Petrochemicals Ltd's (RPL) B and C series of convertible debentures to spurt up from Rs.40 to Rs.72 and Rs.150 to Rs.192.50, respectively, in a single trading session on 31 July? Market analysts put it down to a rumoured merger of RPL with Reliance Industries Ltd (RIL).

The logic of the merger is that on conversion of its above debentures, RPL's equity is expectd to jump from the present Rs.87 crore to Rs.500 crore plus. RPL will find it difficult to service its equity for quite a while, as commercial production is not under way.

RIL will gain from the merger a couple of years down the road when RPL starts production. By then RIL will have acquired a Rs.600-crore company with the addition of a mere Rs.80-100 crore to its equity, with Rs.400 crore added to the reserves.

Then the argument goes that if all goes well, with the amendment of the MRTP and amalgamations and mergers made simpler, within two to three years RIL may well become the largest Indian company in terms of assets and turnover.

WHO'S OFFERING YOU A TASTE OF SUCCESS?

Indana Spices, that's who.

Indana Group. A food products Company committed to making the Indian housewife's life easier. Pure, high quality, wide range of products. A Strong marketing network and quick diversification catering to almost all areas of household application. No wonder that Indana is an integral part of the Indian household.

Indana Spices and Food Industries Limited, an Indana Group Company engaged in the manufacture of Pickles and Spices, is now all set for a major diversification programme to manufacture and market Tea, Refined Oils, and set up a Flour Mill.

A large market, growing at a rapid pace due to increasing urbanisation and changing lifestyles, massive marketing and distribution network and its brand reputation are sure to make its proposed products bestsellers.

Yes, Indana's latest offerings are sure to give you a taste of success. After all, Indana has a legacy of high performance and high returns to live upto.

And now, to part finance its diversification programme, Indana Spices and Food Industries Limited is entering the capital market with a:

Public issue of 3,27,337 & Rights Issue of 5,39,330 14% Secured Fully Convertible Debentures of Rs. 150/- each aggregating to Rs. 1300 Lacs.

HIGHLIGHTS

- It's Indana again—growing Indana Group of Companies diversifying in different areas.

  Presently engaged in production of high quality household products, namely Pure Ghee, Milk Powder, Coffee, Biscuits, Bread, Pickles and Spices.
- Established marketing and distribution network to support proposed products—Edible Oils, Tea & Flour.
- Profit-making, consistently dividend-paying company.
- Participation by BOI Mutual Fund, Indian Bank Mutual Fund and Canbank Mutual Fund.
- Conversion into marketable lots at each stage.
- Easy Liquidity—Listing at Delhi, Bombay, Ahmedabad, Calcutta and Bangalore Stock Exchanges.

Risk Factors

- Raw material availability subject to seasonal changes and Statutory Controls.
- Market for proposed products competitive.
- Project cost subject to change in Government policies, levies & taxes.

ULKA-14090 A

Supermanmohan

Wednesday 24 July. The government announced its **new industrial policy**, making a radical departure from the thirty five-year-old regime of controls, licensing and protection. Companies can now expand freely without having to ask the Monopolies & Restrictive Trade Practices Commission and foreign companies are allowed to hold a controlling 51 per cent equity stake in Indian subsidiaries.

On the same day, finance minister Manmohan Singh presented his **first budget**, a valiant attempt to scale down the fiscal deficit from 8.4 per cent to 6.5 per cent of GDP. Though labelled by critics as a soak-the-rich-spare-the-poor exercise, Singh stoutly defended it saying it represented "an adjustment with a human face"

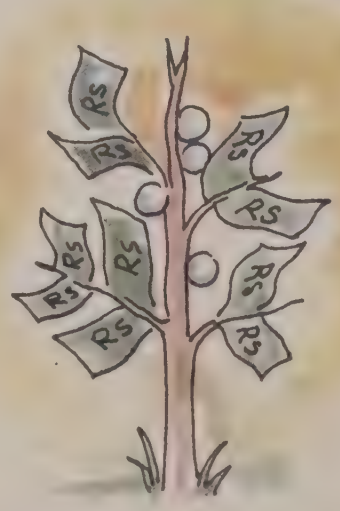
In a heated post-budget television debate, former finance ministers **Yashwant Sinha** and **Madhu Dandavate** accused Manmohan Singh of having sold out to the IMF. "Inflationary!" thundered Sinha. "Your fault!" Singh snarled back. The verbal brawl came to an end when the interviewer pleaded, "Gentlemen, this isn't parliament".

Monetary matters

Until it sanctions the multi-billion dollar credit to India — $ 5-7 billion — the **International Monetary Fund** (IMF) has approved a $220 million bridge loan as compensatory and contingency finance.

Utilising the IMF's gold tranche facility, India obtained a Rs.1,173 crore loan in the third quarter of 1990. This was kept a secret by the previous two governments until the pre-budget economic survey spilled the beans.

The International Finance Corporation (IFC) has second thoughts about forking out foreign exchange for **Haldia Petrochemicals Ltd**, the mega joint-sector project between the West Bengal government and Tata Tea Ltd. IFC says cost overruns have made the project unviable.



Financial companies have been given permission by the Reserve Bank to pay 15 per cent interest on their deposits.

Public Offerings

Canbank Financial Services Ltd (Canfina), Canara Bank's wholly-owned subsidiary, will go public soon with a Rs.160 crore partially convertible debenture issue which will dilute the bank's holding to 40 per cent.

Mahanagar Telephone Nigam Ltd plans to raise Rs.500 crore through 13 per cent seven-year bonds to be issued in December. India's Ma Bell wants the money to set up new exchanges, upgrade the existing ones and buy new equipment. About Rs.200 crore will be spent on Delhi and Bombay. MTNL's other money-raking scheme — metering calls in three-minute cycles — has been sharply criticised by consumers.

An offshore fund is in the offing from the **Life Insurance Corporation** in which the UK is expected to invest 50 million pounds.

The Hyderabad-based Sanghi group, whose first public issue earlier this year was oversubscribed, is planning to issue **teak bonds** of Rs.1,000 each. Buyers will become owners of a teak tree which in twenty years will fetch, so the claim goes, Rs.50,000. Sceptics say that's as tall a claim as saying that money can grow o trees.

Calico Mills is up for sale. T Gujarat government is scouting around for a suitable NRI partner/buyer.

Deadlines

The civil aviation ministry has until **15 August** to decide whether to buy the four 747-400s for Air India from Boeing. Meanwhile, post-devaluation, the aircraft cost has risen from Rs.1,300 crore to Rs.1,900 crore.

The use of expeller mustard oil in vanaspati has been **banned** from 1 August.

Flickering picture

Grasim Electronics has dumped its Rs.225 crore glass shell project for TV picture tubes. The company said it was discouraged by sluggish markets, both local and overseas.

Webel Video Devices, a state-owned unit in West Bengal, has bagged a $1 million order for supplying black and white picture tubes and TV kits to Bangladesh.

After coughing up half a million dollars in 1989 to Landor Associates for designing its new sun logo, **Air India** may be going back to its old image. Civil aviation minister Madhavrao Scindia prefers the previous centaur symbol.

Chartbusters

The **BSE Sensitivity Index** began its dizzying rise within hours of the industrial policy being announced. From the pre-budget peak of 1,467 it shot up to a post-budget high of 1,488; crossing eventually a few days later, last October's

Fortune 500 rankings

	1989	1990
Indian Oil	106	144
ONGC	278	278
SAIL	308	332
Hindustan Petroleum	352	371
Coal India	427	428
BPCL	451	474

all-time high of 1602. The biggest gainers on the stockmarkets were cement and fertilisers, notably ACC, Gujarat Ambuja Cement, GNFC and GSFC.

Six Indian companies — all public sector — figure in the **Fortune 500** list of the world's largest industrial corporations. While they had made it to the prestigious list last year too, all except ONGC have slipped in their rankings.

State Bank of India, the country's largest commercial bank, reported **record profits** of Rs.107 crore for 1990-91 while its deposits almost touched Rs.50,000 crore.

Say cheese

Overworked conductors in Bombay's red public buses should be smiling more politely and more often. General managers of the **Bombay Electric Supply & Transport Undertaking (BEST)**, while trying to improve overall discipline, have been showing them how to — smile, that is.

Goa will soon get back the **gold** that the Portuguese took away after liberation. Of course, this will go to individuals and not to the gold reserves. India and Portugal have agreed on other matters too such as bilateral trade and joint ventures.

Sour taste

While sugar politics dominates Maharashtra and sugar barons hog the headlines, few people know that twentyeight **sugar co-operatives** in Maharashtra have gone sick, accumulating Rs.10 crore in losses. The state's total sugar production this season is slightly higher at 4.1 million tonnes than last year's 3.9 million tonnes.

While tomato prices in Bombay touched a high of Rs. 32 per kg, **Pepsi Foods** processed over 22,000 tonnes of tomato into 2,500 tonnes of tomato paste since May. The cash-strapped company got Rs.35 crore from its American parent as advance payment for exports. The government has launched an inquiry against the beleaguered company.

The excise hike in the budget will make **soaps costlier** by 11 per cent says the Indian Soaps and Toiletries Manufacturers' Association (ISTMA). However, since detergents made by the Khadi & Village Industries Commission have been exempted, their prices will remain the same. ISTMA says that's unfair.

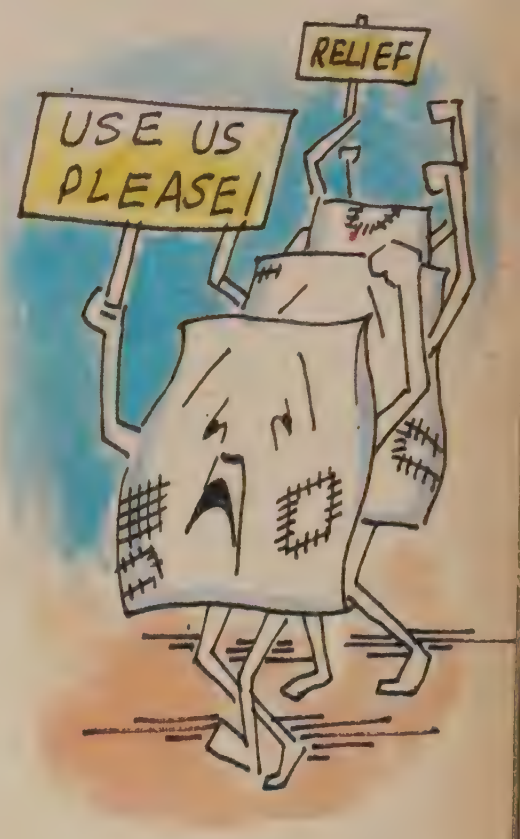
Smoke signals

Tobacco ads may soon be banned. This was stated by health and family welfare minister M.L. Fotedar while inaugurating a two-day national conference on **"Tobacco or Health"**, organised in New Delhi by the World Health Organisation.

Meanwhile in Madras, cigarette giant **ITC Ltd** set up fair price stalls to pre-empt retailers from overcharging smokers during budget time.

Private cars and commercial vehicles may be banned from Calcutta's streets on one day every week, said state transport minister Shyamal Chakraborty.

The restrictions, aimed at **reducing congestion**, will be first imposed on Ambassadors and then on other less obese makes.



Protests

Trade union leaders have bitterly opposed the proposal of referring sick public-sector units to the BIFR as is done

with ailing private companies. Haribhau Naik, vice president of INTUC, Maharashtra feels that under the BIFR, workers face **a greater risk** of losing their jobs.

On 19 July, **nationalisation day**, bank employees demonstrated outside the Reserve Bank's headquarters in Bombay. They were protesting against the move to privatise public-sector banks, which they felt would cause large-scale retrenchments and closures.

The Indian Jute Mills Federation (IJMF) has alleged that cement manufacturers are **not abiding** by the 1986 government order to use jute for 20 per cent of their packaging requirements. As an incentive, IJMF suggests that the cement industry be compensated for the higher cost of using jute.

Trade tidings

For the first time, the balance of trade with **Germany** has turned in India's favour. In the first quarter of this year, imports from Germany declined by 18 per cent to yield a Rs. 2.25 billion surplus against a deficit last year of Rs.1.4 billion. Leather, garments and engineering goods were the chief contributors.

By handling 38 million tonnes of cargo in the first quarter, the country's **major ports** overshot their targets by almost a million tonnes. Amongst the star performers were the Jawaharlal Nehru Port, Madras and Tuticorin. Calcutta, Cochin and Bombay Port were the laggards.

Comebacks

Indian industrialists who quake at the thought of **hostile takeovers** can rest easy. The government, says finance minister Manmohan Singh, won't encourage such a "destabilising" trend.

The **Japanese** are looking at newly liberalised India with renewed interest. They are prepared to invest upto $2 billion if the government allows them to set up townships with Japanese-style schools, golf courses, restaurants *et al.*

With the return of the 51 per cent limit, **Coke**'s comeback is imminent. The multinational, along with NRI tycoon Rajan Pillai's Britannia Industries has been planning its re-entry for a while.

Cutbacks

A *Business Standard* report alleged that changes in **US immigration policy** would adversely affect Indian software exporters. The US is likely to withdraw the B1 visa issued to high-level consultants and businessmen. They would have to apply for the H1 visa, meant for low-end workers, which takes over two months to be processed. The delay will be damaging, they fear.

Government officers travelling on work will no longer be allowed first class air travel and nor can they book hotel suites. Henceforth, they will have to make do with single rooms.

In response to their long-standing plea, development **financial institutions** have been given freedom to set their own interest rates by the government. Riskier loans w carry a higher interest — probably 19 per cent.

Cars, which continue to remain in the licensed category, are now **costlier**. Maruti Udyog announced price increases upto 25 per ce on its various models. Other price lists should be out soon

Controversy

Union labour minister **K. Ramamurthy** has resigned from the council of ministers protest against the referral to the Supreme Court of the dispute between Karnataka and Tamil Nadu on the sharing of Cauvery water.

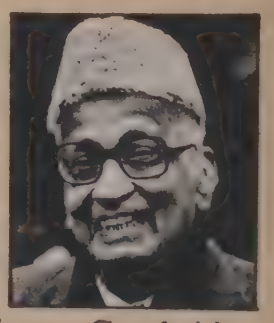
The controversy over the Central government's decisior which Tamil Nadu chief minister Jayalalitha has described as eyewash aimed at evading a solution, rocked both houses of Parliament.

LANDMARKS

Awarded, G.P. Talwar, founding director of the National Institute of Immunology, the Order of the Legion of Honour, France's highest civilian award. Talwar, who took his doctorate from the prestigious Pasteur Institute in Paris has over 200 original papers published to his credit. His many contributions to immunology include an anti-leprosy vaccine currently on trial in Delhi.

Awarded, the best Industrial and Commercial Profile Trophy by EDICOIN (Publicationes de Commercio Internacional S.A.), a Madrid-based organisation, to the Anthropological Survey of India for its excellence in the field of research and publication. This is the first time that an Indian institution has earned international recognition.

Awarded, to K.V. Subanna, Indian dramatist, the Ramon Magsaysay award for journalism, literature and creative communication arts. Subanna was cited for enriching the cultural life of the people of Heggodu town in Karnataka. He brought fresh ideas to *Ninasam*, a theatre group founded by his father. The Magsaysay foundation said that he also crafted traditional Indian myths and tales into new plays that probe modern issues.



Appointed, N. Narasimhan, as secretary, Research and Analysis Wing (RAW). Narasimhan, currently the seniormost officer of the Research and Analysis Service (RAS), was earlier associated with the Intelligence Bureau, and has stints in Washington and Moscow to his credit.

Donated, by Congress member Ratnakar Pandey, his gold ring to finance minister Manmohan Singh, "to tide over the serious economic crisis". He also added that the situation could be retrieved only if austerity measures were adopted in all walks of life.

Recorded, the highest ever auction price for tea grown anywhere at Rs.6,010 for a kilo of Darjeeling tea in Calcutta. Grown by Harrisons Malayalam, the previous highest price was Rs.5,001 per kg.

The tea was bought on behalf of the Japanese tea trader Mitsui Norin Co Ltd. It will be marketed in Japan and Taiwan as an exclusive gift item packed in specially designed bone china containers made in Italy by renowned porcelain manufacturers Richard Ginori.

Died, former Union minister and noted economist, Vijayendra Kasturi Ranga Vardaraja Rao, at 83. Rao received a galaxy of awards and prizes including the Adam Smith prize at Cambridge and the Padma Vibhushan; founded the well known Delhi School of Economics and the Institute of Economic Growth in Delhi and the Institute for Economic and Social Change in Bangalore. He was a friend of John Maynard Keynes and was a member of his famous political economy club.

S.M. PARANDE

He has been having a hectic time since 15 July. For that was the day on which S.M. Parande, chief general manager, State Bank of India, was appointed provisional liquidator for BCCI. Parande is the man chosen to "take possession and control of the assets, properties and affairs" of the bank. He has been working round the clock to do just that.

While no money has yet been paid to depositors, Parande says, "My recommendations to the court was that we start realising cheques and interbank call loans due to us, which we have started doing." He estimates that it will be at least a month before the depositors can hope to start getting their money back. And it will be another two to three months before matters at BCCI are sorted out.

V. SRINIVASAN

As director of the Bombay-based Intec Systems Pvt Ltd, V. Srinivasan recently announced the launch of an off-shore joint-venture in the US.

with Atre Inc, a computer consultancy company based in New York. The new venture, to be known as Atre/Intec Inc, will develop products for the sophisticated database and Windows software markets in the US, both of which are valued at $ 20 million. "The two companies have an existing working relationship, where Atre Inc. provides the marketing assistance in the US, while Intec handles the execution and technology management," says Srinivasan. "Since the chemistry has worked well, we decided to strengthen it."

HARSHA BHATKAL

Communications is a field with immense growth possibilities

and Harsha Bhatkal, the dynamic young director of Popular Prakashan Pvt Ltd, has found many interesting diversifications. One among them is Value Added News Service (VANS), providing comprehensive information about the business environment, at an annual cost of Rs.15,000. Adds Bhatkal, "It's only a matter of time before VANS will also be available as an on-line database service."

Bhatkal is also planning the release of three audio cassettes of Vijay Tendulkar's two new Marathi short plays, read out by the author himself. "This has never been done before and when Tendulkar himself reads, every nuance of his idea and interpretation will manifest itself," explains Bhatkal.

Another diversification foray of the group will be a television serial in Marathi. The books, of course, there will be. Popular Prakashan, founded by Bhatkal's grandfather six decades ago, is a widely-acclaimed publisher of Marathi literature. In English, social sciences and medicine are its areas of specialisation.

ARVIND DHAM

Amtek Auto Ltd, manufacturers of automotive connecting rod assemblies, is embarking on an ambitious expansion plan with a capital outlay of Rs.2.9 crore. Incorporated in 1988 by Arvind Dham, the company is the sole supplier of rods to Maruti Udyog Ltd and Birla Yamaha Ltd. According to managing director Dham, the present expansion is aimed at consolidating the existing capacities to meet the requirements of LCV manufacturers

who are still importing ro
The company is also plann
backward integration with

R.S. AGGARWAL

Small is evidently bountiful. At the end of its first operating year, the Small Industries Development Bank of India(IDBI), earned a net profit of Rs.35 crore. SIDBI's managing director R.S. Aggarwal reports that the outstandings portfolio, of Rs.4,200 crore inherited from the IDBI now stands at Rs.4,900 crore. The paid-up capital too has been increased from Rs.250 crore to Rs.450 crore.

SIDBI has sanctioned assistance worth Rs.2,824 crore last year. It also raised about Rs.860 crore from various sources.

So much for numbers. Now Aggarwal says that while quantum growth is important, the focus will be on simplification. Thus, SIDBI's newly liberalised single window scheme will allow small units to get both term loans and working capital (up to Rs.10 lakh) from the state finance corporations.

S.P. SABAPATHY

Bank of Madura Limited (BML), the largest private-sector bank in Tamil Nadu, has netted Rs.402.55 crore as deposits for 1990-91, recording a growth rate of 15 per cent as against the industry average of 13.7 per cent. The non-resident deposits increased by 31 per cent during the year. The bank came out with a rights issue of Rs.50 lakh which was oversubscribed. Says S.P. Sabapathy, chairman, BML, "We are planning, subject to the approval of the shareholders at our forthcoming AGM, to make a further rights issue of Rs.75 lakh during the current year."

BML proposes to open new branches at 41 centres in the current plan period. "For the current year, we have planned to reach the landmark deposits of Rs.500 crore," says Sabapathy.

HERMANN SCHNABEL

Hermann Schnabel believes in functioning on a grand scale.

He heads one of the largest chemicals and pharmaceuticals trading house in the world — the Hamburg-based Helm AG. Its annual turnover is DM 5.5 billion, with its Indian subsidiary, Helm India contributing DM 160 million. Schnabel is a connoisseur too, owning the fifth largest private collection of paintings in Germany.

Schnabel, who was visiting India to meet associates in the chemicals and pharmaceuticals business, also lectures on international management. To improve management efficiency in India, Schnabel advises that "Young people should be sent abroad to learn practically how other countries are improving their business practices."

L. OBYO-NELSON

"India should be able to offer us a lot. We hope that visits like this one will stimulate Indian interests in Nigeria," said L. Obyo-Nelson, assistant director, Raw Material Development and Research Council, Nigeria. He was recently in India leading a 15-member high level business delegation. The objective of the mission was to promote two-way trade, transfer of technology and joint-ventures in Nigeria. Allaying apprehensions about adverse business conditions in Nigeria, he explained: "Things have changed in the last few years. Business conditions have become more attractive in terms of infrastructure available as well as repatriation conditionalities. The government is keen to encourage investment in industry."

DAVID WHITWAM

At age 48, David Whitwam is among the younger chairmen of a large size US corporation — the Rs.11,000-crore Whirlpool, the largest manufacturer of appliances in the world. His visit to Pondicherry last fortnight to inaugurate collaborator TVS Whirlpool's Rs.20-crore washing machine plant was significant because of the timing — around the time when the government announced its plan to raise the FERA limit for MNCs to 51 per cent.

But Whitwam is not interested in raising Whirlpool's 34 per cent stake in the Indian company. "We are happy with our present arrangement and we don't want to interfere in the management. In fact, we don't even feel the need to station someone full time here," he says. But he sees Whirlpool becoming a household name in India in the near future.

PLASTIC CRATES

Profits in adversity

At a time when the plastic processing industry is going through tough times, plastic crate manufacturers appear to be breathing easy. With more and more companies replacing wooden crates with fancy plastic ones, demand is increasing rapidly. The latest to join the bandwagon is Parle Beverages.

Interestingly, it was Pepsi — and not Parle — that initiated the use of plastic crates in the soft drinks market. In keeping with its international norms of environmental friendly products, Pepsi insisted on polymer-processed crates right from the start. Besides, there are other advantages as well.

Made of plastic, these crates are lighter in weight, have a longer shelf life, and can be made to look attractive. Says Paresh V. Parekh, a partner of National Plastics Ltd, the company which supplies crates to both Parle and Pepsi, "Stacks of neat looking crates with company logos printed on them, have been providing virtually 25 per cent of the advertisement."

Yet, neither of these rival companies can take the credit for introducing plastic crates to India. In 1971, a now defunct company called PVD Plasmolds, had brought blow-moulded plastic crates into the country for the first time. Despite the low polymer prices prevalent then, however, sales never really took off, till the milk dairies introduced the concept of milk pouches.

Today, a variety of uses for crates have been identified. Among the many, the engineering and the hotel industry, the fishery and the horticulture departments, are all opting for plastic crates. This has led to an increase in the number of players in the market. "This industry has been generating an income of Rs.35 to Rs.40 crore, for the crate manufacturers. It has a growth potential of nearly 25 per cent, in the coming years," says a senior executive of Blowplast Industries Ltd, the makers of VIP-moulded luggage.

Blowplast is now planning to diversify into manufacturing plastic crates for the industrial segment. "Being the last to enter this field, we are hoping to assure, at least the latest designs and a wider range," says the Blowplast executive quoted earlier.

A total switchover to plastic crates, however, will take more than a while. Since both wood and tin alloys — alternatives to plastic — are still fr available in the country, at a much lo cost, companies are reluctant to rep them with more expensive plastics. instance, even though Parle was fl with funds, it took the company a l time to switch to plastic crates. "We w not sure about the quality of crates av able then, so we didn't want to inves something we might not like," say senior Parle executive.

Hesitant to switch. Beer manufactu too, are hesitant about a complete swi The reason: the high costs involved. ' Rs.190 per plastic crate, wooden cra are five times cheaper," says Vijay M chant, president of All India Plastic M ufacturers Association (AIPMA). plastic crates cannot be made a cheaper since it is in an industry whic highly dependent on imports. Besides expense, after the recent import curbs, supply of polymers too has been incon stent. "Added to this, is the high cost plastic moulds," says Vaman V. Pare chairman of Neelkamal Plastics Ltd.

Despite all this, the manufacturers' thusiasm remains unabated. "We w anyway importing 75 per cent of our quirements. Still, today we manufact about 5,000 trays a day and and sell th all," says Paresh Parekh of Natio Plastics.

Other manufacturers argue that ev though the initial cost of replaceme may be high, in the long run it makes ec nomical sense. "While wooden crates not survive more than 10 to 12 trips, pl tic ones literally last forever," clai Parekh. Thus, despite the hurdles, plas crate manufacturers seem to be here stay — and make money.

The Parekh brothers of National Plastics: overcoming hurdles

PETROLEUM CONSORTIUM

Steady progress

Since its inception five years ago, Pet leum India International (PII) — consortium of nine Indian public-sect petroleum and petrochemicals co panies set up to render technical, mana erial and human resources to forei clients — has kept a low profile. Th even though it has steadily made inroa

PII's projects

Year	Client	Job profile	Number
1986-87	Port Dickson Refinery, Malaysia	Engineer	1
1987-88	Jeddah Oil Refinery Company, Saudi Arabia	Engineers	2
	Kellog Plant Services, Kuwait	Engineers/Technicians	45
1988-89	Marbco Trading & Technical Services, Abu Dhabi, UAE	Technicians	4
	Kellog Plant Services, Kuwait	Engineers/Technicians	35
	Kuwait National Petroleum Company, Kuwait	Engineers/Operating personnel	28
1989-90	Technic-Esia-Alkhaleej Joint Venture, France/ Saudi Arabia	Engineers	3
	Kuwait National Petroleum Company, Kuwait	Engineers/Operating personnel	38
	Nigerian National Petroleum Corporation, Nigeria	Engineers/Operating personnel	84
1990-91	Nigerian National Petroleum Corporation, Nigeria	Engineers/Operating personnel	65
	Kuwait National Petroleum Company, Kuwait	Engineers/Operating personnel	8
1991-92 (Existing)	Nigerian National Petroleum Corporation, Nigeria	Engineers/Operating personnel	54
	Petromoc, Mozambique	Engineers/Marketing specialists	7
(Proposed)	NNPC-WARRI, Nigeria	Engineers/Operating personnel	34
	National Oil Distribution company, Doha Qatar	Engineers/Operating personnel	10

into the international market and has been able to participate in several foreign ventures. Last year, its billings amounted to Rs.10 crore.

Tailor-made packages. PII offers expertise for complete systems solutions to petroleum refining, marketing, transportation, manpower and general management needs. Expertise is available as tailor-made packages in the form of trained Indian personnel or through extensive training programmes for the foreign companies at their plants or at the Indian refineries and installations. It has access to personnel from 13 petroleum refineries, three lube refineries, 10 lube oil-blending plants and various other petroleum and petrochemical-based industries.

"There is still a long way to go," concedes S.K. Awasthi, the newly-appointed executive chairman of PII. "In terms of both technical expertise and research and development, India lags way behind international requirements. Therefore it's a question of hard sell. We have to stress the fact that we provide cheap labour and seek tie-ups or sub-contracts with American and European companies."

Awasthi expects to triple PII's business in the next three years. With the ready availability of manpower (45,000 key personnel on file), the consortium has bagged prestigious assignments like the one with the Nigerian National Petroleum Corporation, where, 203 Indian engineers and operating personnel have been working for the past three years with four foreign specialists.

According to Awasthi, there is considerable idle manpower existing in the petroleum companies. PII is, therefore, ideal for utilising this idle manpower, giving these personnel a chance to work in foreign environments (more sophisticated) and earning foreign exchange.

In 1989-90, PII had sent 128 personnel to the UAE, Saudi Arabia, Kuwait and Nigeria (*see table*). But in 1990-91, only 90 personnel could be sent — mainly to African destinations — due to the Gulf crisis. For the current year, there are plans to send about 180 personnel abroad on assignment.

■ DEVENDRA TAK

HANDLOOM EXPORTS

Devaluation blues

Handloom exporters had barely finished congratulating themselves for having ended 1990-91 with an export of nearly Rs.850 crore when they had to wake up to the realities of the new trade policy. Consequently they are among the first to make their protests. The withdrawal of cash compensatory support (CCS) will hit them particularly hard.

According to Govindan Nair, secretary, Handloom Export Promotion Council (HEPC), the main problem with handloom exports is that the bulk of the orders are booked in Indian rupees. A lot of these exports consists of items like *lungies* and real *madra* handkerchiefs, which go to Malaysia, Singapore, the Gulf countries and Africa.

Withdrawal of CCS has come as a big blow. A lot of handloom exporters work on very small margins and sometimes they enter into contracts below cost, as CCS provides them with the minimum margin required for survival. The margins are very low in handlooms as the productivity is low. A handloom weaver, despite of putting in a whole day's work, can produce only five or six metres of cloth. And he has to compete with the powerloom which can turn out 50 to 60 metres a day.

Tougher negotiations. Even those exporters who booked orders in negotiable currency are beginning to feel the brunt of devaluation. Foreign importers are already demanding that the contracts be renegotiated taking into account the depreciation of the rupee. C.A. Maria Joseph, president, Madurai Handloom Export Association, admits the time has come to get into contracts only in convertible currency. And tougher negotiations will be required.

The chairman of HEPC, M.P. Radhakrishnan, has requested the government to extend the CCS facility to the han-

Handloom weaver: low productivity

Harsh Man Rai

dloom sector until December this year. Or at least extend CCS at the existing rate to the orders booked before the announcement of the new policy.

Underscoring the general feeling of gloom many exporters feel that out of this situation some order might finally emerge in the handloom export trade. Says an old-time exporter, "There has been quick money in exports. The last few years have seen the emergence of a whole lot of fly-by-night operators who send one consignment and indulge in price cutting." These people will not be able to operate any more, he adds. Handloom exporters will now have to learn to select the right kind of products, the right kind of fabric and go in for diversification.

■ SUSHILA RAVINDRANATH

MANAGEMENT TRAINING

German twist

In Germany, a well accepted management tenet is that the manager must have experience in the detailed shopfloor skills of the job. What he learns through practice is never forgotten. And only then does he qualify to manage his department and guide his subordinates.

To ensure this level of capability, especially at the middle management level, for decades, most German companies have been supporting a dual system of education for young entrants into industry. This dual system, which combines theory with practical training, and applies to both the technical and commercial fields, has become an industry norm. The government and the local chambers of commerce are also staunch allies in this cause.

Strong initiative. Recently, the Indo-German companies in India strongly felt the need to induct people trained in this system. Consequently, a number of these companies, in conjunction with the 4,500-member strong Indo-German Chamber of Commerce (IGCC), have taken a major initiative to replicate here the dual system by starting the Indo-German Training Programme (IGTP). "Companies felt that a gap existed in the middle management level as other personnel were either underqualified or were MBA managers," explains G. Krueger, executive director of the IGCC.

The companies involved in the programme include Siemens, Bayer, Boehringer Manneheim, Hoechst, MICO and KSB Pumps as well as one outsider

Pankaj Desai

Krueger: advantages of similar type of training for affiliates

— Tata Electric, which is a member of the IGCC. "Many of these companies," says M. Dayal, who has been deputed from Siemens as the IGTP's project leader, "used to send their personnel to Germany for this kind of training; and that was expensive. Now it's available here."

First mooted a couple of years ago, the prime movers of this programme have been Siemens and Bayer. And under the programme, beginning in October this year, 22 fresh BCom graduates, after passing a written exam, will be sponsored by the seven participating companies to undergo theoretical and practical commercial training. The five basic subjects taught during the two-year, full-time programme, concluding with a diploma in business administration, will be materials management, production, marketing and sales, costing, accounting, finance, personnel, commercial law, computer application skills and the German language.

The theory, taught in a 6 to 8 week module, will be immediately followed by 10 to 12 weeks of on-the-job training directly related to the theory, in the relevant departments of the seven participating companies. A teacher has also been flown down from Germany to supervise the training. "This programme," explains Dayal, "is a combination of the in-house training given by companies and the primarily theoretical orientation of MBAs."

How will the companies benefit? "A business becomes more international says Krueger, "it's advantageous f both the parent and affiliate company have people who have undergone a sim lar type of training. It leads to closer i teraction." According to T. Racko Siemens' executive director, the hands-c commercial skills acquired by this ne middle-level cadre, will raise the overa management standards within a com pany. "Being better trained, they wi have a more practical approach to sol ing problems and will contribute po itively to the decision-making processes

During the programme, the trainee will be paid a stipend of Rs.1,900 p month, and the sponsoring company w be spending approximately Rs.50,000 p trainee per annum. Siemens is sponsorin eight trainees; Bayer four; MICO thre KSB, Hoechst and Boehringer two eac and Tata Electric one. But these com panies are not obliged to recruit thes trainees. And even if they do, it would no be at the managerial level, but in a senio staff position.

All set to demonstrate, by example, th efficacy and advantages of the dual sys tem of training, Krueger is confident tha soon more companies will be eager t participate in the programme. No doub its progress will be followed closely.

■ INDIRA KHANN

FOOD CORPORATION

Gloomy scenario

A good harvest and still no cheer, at least for the Food Corporation of India (FCI), the government's primary foodgrain trading arm. The year 1990-91 produced a third successive good rabi and wheat harvest but procurement from the surplus areas of Punjab, Haryana and western Uttar Pradesh has been depressed. Though the estimated produce is 54 million tonnes this year, wheat procured is only 7.74 million tonnes against 11 million tonnes last year, from a production of 50 million tonnes.

Even the year before last when the produce was 54 million tonnes, procurement was upto 9 million tonnes. Market watchers attribute the poor procurement to the depressed arrivals contrary to expectations — in the notified markets of both Punjab and Haryana.

Says Neel Kanth, executive commercial director, FCI, "The wheat brought to the market itself was much less than last year. The marketable surplus this year is 8.7 million tonnes compared to the previous year's 12.5 million tonnes."

Stocks withheld. Part of the reason for the depressed arrivals in the market is due to farmers withholding stocks in anticipation of higher procurement prices in the post election period (the marketing season for wheat is March to May). This followed last year's sudden sharp hike in procurement prices as per instructions from former agriculture minister Devi Lal. From Rs.187 per quintal in 1989, prices rose to Rs.215 for the marketing season 1990 and to Rs.225 in 1991.

Not only this but even during the lean season, the price of wheat went up by 30 per cent. Complains a grain merchant, "The wrong policies adopted by the government were responsible for this price hike." Wheat sold at Rs.330 per quintal last year. According to a FCI official, this had led to private traders stocking up wheat in the hope that prices this year will follow the same trend as last year. Anticipating a price hike, the traders have bought more wheat this year. Though Bhani Ram Gupta, a grain merchant and ex-president of the All India Traders Association refutes it. Says he, "The traders bought the usual 4 to 5 per cent of the marketable surplus this year." Says Kanth, "This year the prices may not increase that much during the lean season. For the simple reason that the farmers will have to release their extra stocks."

According to P.K. Vasudeva, manager, procurement, FCI, another reason behind the less procurement were the elections. Unfortunately, 20, 24 and 26 May were the dates set for elections which clashed with the marketing season. Not only were the farmers busy with political activity but there was also a scarcity of transport, used instead for electioneering. This resulted in the low market arrivals.

Moreover, when the government is trumpeting about increasing exports, depressed procurement is perhaps going to create problems. If the present attitude of farmers continues, even next year's target of 1 million tonnes of wheat export seems a little far-fetched. Though Kanth says that lesser procurement will not be a problem as the overall food situation is quite comfortable with buffer stocks of food grains (wheat and rice) totalling more than 21 million tonnes. FCI officials claim that 400,000 tonnes of wheat have already been shipped.

But what FCI has not foreseen are the added problems. Since the last one month, contracted labourers in both Punjab and Haryana are on strike. This has brought to a halt the entire loading and unloading of foodgrains. Complains a railway ministry official, "Since the last seven days, no one has bothered to collect the wheat from the railway rakes." Usually FCI is given preference over private traders. But the strike has resulted in loaded rakes lying around stopping further transport." The railway ministry has therefore declined rakes to the FCI.

If this continues, the FCI has difficult times ahead.

Food stocks: much lower marketable surplus this year

INDO-PAK TRADE

Political hurdles

In a series of measures over the last few months, the Nawaz Sharif government has significantly liberalised the trade regime in Pakistan, including abolition of foreign exchange controls.

But what does this mean for Pakistan's neighbour, India? Unfortunately, nothing, at least legally. Though the rest of the world will gain significantly from these moves, Indo-Pak trade may well continue at the existing low levels.

If Indo-Pak Trade will remain unaffected by liberalisation in both the countries it is because trade between the two countries is restricted to commodities. As a trade analyst put it, "It is politics that stands between trade expansion rather than economics."

Unimpressive figures. Trade turnover touched Rs.157.57 crore (India's total turnover 1990-91 — Rs.73,000 crore) in 1990-91, up from Rs.76.41 crore in 1980-81. A 100 per cent change, but not impressive considering the low base and inflation. Moreover, turnover has fluctuated widely, being as low as Rs.28.66 crore in 1984-85. Actual figures may be higher as there is some illegal trade too.

TEST OILS

IN MINUTES ON SITE

In service lubricating oils from DG set, Earth Moving machinery, Automobiles & Industrial Machinery should be tested regularly to decide the correct oil change period. Testing also signals early warning on oil related equipment problems/ damages. Also new oils must be tested from each and every barrel to seggregate adulterated oils.

We present ENGINE OILAB: a portable kit to test New & Used Engine oils on the spot. Tests can be done even by a layman to determine exact Viscosity, Water Content, Total Base Number, Insoluables & Dispersancy characteristics. Accurate & instant results are assured by Engine Oilab on the spot.

ENGINE OILAB

Test oils in minutes ... on site

Also available following ON SITE Oil Test GAGES to get instant results: **VISGAGE (MODEL-II)**: To test Diesel quality • **F.O. GAGE**: To determine Furnace Oil viscosity and correct burner pre-heat temperature • **VISGAGE**: To determine v[illegible]ty of lubricating oils in cSt at 40°C-range 20 cSt–460 cSt • **HYDROGAGE**: To check exact water % by volume in any liquid • **T A N GAGE**: To determine Acidity in used oils

Harsh Man Rai

Containers for export: balance favours Pakistan

One feature of Indo-Pak trade is the fact that the balance has always been in favour of Pakistan. India's trade deficit was Rs.74.31 crore in 1980-81, which has now declined to Rs.10.89 crore in 1990-91.

Rohini Bhusan, secretary to the Indo-Pak business committee at the PHD Chamber of Commerce and Industry (PHDCCI) feels that India's exports would have been much higher if Pakistan's private sector were allowed to import freely from India. The list of permissible items which was only 42 till April 1988 was increased to 249 in that month and further to 571 items in July 1989. As a result, India's exports went up from Rs.36 crore in 1988-89 to Rs.73 crore in 1990-91.

Therein lies the problem. Three powerful lobbies in Pakistan, namely politicians, indigenous producers and bureaucrats, will oppose any liberalisation of India-Pak trade. Restricted trade between the two countries is unfortunate, because the scope for co-operation is immense. Take tea, for instance. At present we account for only 5,000 tonnes out of Pakistan's imports of 90,000 tonnes. Yet Indian tea is cheaper and of better quality than those of Pakistan's chief suppliers, China, Kenya and Argentina. Another possible area of co-operation is cotton. Indian production of cotton tends to fluctuate from year to year and it has been suggested that India could i[illegible] port cotton from Pakistan [illegible] her bad years and vice versa.

Transferring technology. In[illegible] and steel is another possib[illegible] area of co-operation. India h[illegible] one of the largest reserves [illegible] iron ore in the world and yet [illegible] supply only 10 per cent [illegible] Pakistan's imports. India cou[illegible] export iron ore import meta[illegible] lurgical coking coal fro[illegible] Pakistan since that country[illegible] supplies have less ash content[illegible]

Perhaps, the most promisi[illegible] possibilities lie in technolog[illegible] transfer. The technology use[illegible] by SAIL and Tisco is only a fe[illegible] years more advanced than tha[illegible] used at Pak steel. The latter wi[illegible] find it better to use such techno[illegible] logy rather than technolog[illegible] from Japan (which it has foun[illegible] to be too modern for its taste! The same goes for the powe[illegible] sector.

Indeed, India can assis[illegible] Pakistan across the whole gamut fro[illegible] small-scale to large-scale industries Pakistan's capabilities are limited even i[illegible] such elementary items as motors, pumps boosters, hand tools, etc. One indicatio[illegible] of India's technological lead is that w[illegible] have far more collaboration agreement[illegible] across the whole spectrum of industrie[illegible] from consumer durables to labour[illegible] intensive commodities. Another very promising area is that of textile machinery which Indian producers have offered at prices 70 per cent less than European and Japanese producers.

However, the problems are immediately apparent. Both in commodities and technology, India has much more to offer Pakistan than vice versa. Figures compiled by the PHDCCI reveal that while Pakistan has shown interest in importing 135 items from India, we are interested in importing only 35. Pakistan's fears of being swamped by Indian industry thus, are not entirely groundless.

Ultimately, feels W.N. Talwar, chairman of the Indo-Pak business committee at PHDCCI, any improvement in Indo-Pak trade must await a solution at the political level. He points out that in November 1988, an Indian delegation was supposed to go to Karachi. However, the trip was cancelled at the last moment due to difficulties on the Pakistan side. "Nothing has happened since then."

■ KINGSHUK NAG

We have people who check the people who check the people who check your aircraft.

You might well call it excessive German thoroughness that we don't let our technicians work unsupervised on an aircraft until they have completed four years' basic training and have at least eight years' practical experience.
It goes without saying, however, that their work is still inspected by an even more experienced technician who, in turn, is checked by a highly qualified engineer. And, after all that, there is the independent inspector from the technical control department who reports directly to the Board of Management.
We call this Lufthansa's contribution to inflight relaxation – it's something we simply owe you and ourselves.

KELVINATOR

Defrosting the coolest one

The stalemate between the management and the workers of Kelvinator of India Ltd's factory in Faridabad, Haryana has finally been resolved. The management lifted the lockout on 16 July 1991 after declaring it two months ago on 21 May.

This was the first major labour trouble at Kelvinator since 1975 (see *Business India,* 4 September 1990). The company has always had an internal union with little interference from professional trade union outfits.

According to G.C. Narang, chief executive, works, of the company, the trouble started mainly thanks to the ambitions of a single worker of the company, Suresh. In 1988 he had tried to take over the leadership of the internal union, Kelvinator Employees Union, with the help of Lok Mazdoor Sangh (LMS) and tried to organise a strike. In response the management sacked him. However, his hold on the workers remained and in the 1989 elections he supported the panel led by Harbhan Singh and Sudhir Babu which eventually got elected.

Lockout! Suresh got himself reinstated with the union's help. But his ambition to run the union remained and he turned hostile to the union over the wage pact. In the beginning of the year some workers got themselves affiliated to the Hind Mazdoor Sabha (HMS) which controls the unions of the two most prestigious companies in Faridabad — Escorts and Thomson Press — besides several others. Towards the end of March, the HMS affiliated group led by Suresh started mobilising workers causing the management to suspend five workers in two days. That set off a series of defiance and suspensions. Frequent tool down and go slows followed. Till 18 May, over 100 workers were suspended on charges of indiscipline. And on the night of 18 May, the HMS camp resorted to damaging machines and components. The management decided to down the shutters two days later.

As the factory stayed closed for over a month and HMS could do nothing to make the management yield, most of the workers gave in and wanted the lockout to be lifted. The management demanded an apology from the errant workers and an assurance of no more disturbances. Finally the union and the management signed an agreement for lifting the lockout. The union conceded that no wages need be paid for the period of the lockout as no work was done and that the management would be at liberty to pursue charges against the workers who had actively participated in the HMS-led movement.

Logically the company should have lost out on sales but it was hardly affected. Despite the closure of the factory for those two months, Kelvinator managed to retain its slot at the top. At the time of declaring lockout, the company had a stock of about 60,000 ready refrigerators with it and plenty of stocks already with the dealers.

Narang says that the company didn't use the excuse of labour unrest to cut its operational costs. He contends that in the past too the company has had several marketing problems and it has resorted to production cuts through plant closures. But never through a lockout. "Earlier we managed by adjusting the time of leave of the workers. And if only cutting production and costs was the aim we could have done the same this year too," says he.

■ FEROZ AHMED

OSWAL AGRO

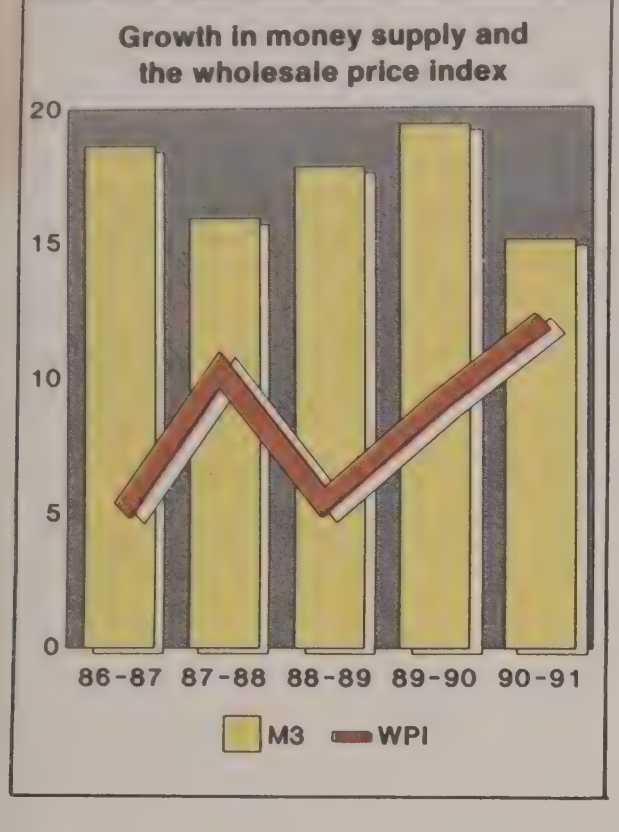
Elusive factory permit

Oswal Agro Mills Ltd's petrochemical complex in suburban Bombay is now beleaguered by a controversy it should have sorted out at the very beginning. The pending factory permit — FF 10 —that the management was unable to secure in November 1988 (due to environmental irregularities) when it took over the plant from Union Carbide is still proving elusive (see *Business India*, 18 September 1989).

The 42nd metropolitan magistrate's court at Dadar in central Bombay fined the Oswal Petrochemicals security manager Rs.2,000 earlier this month for running the plant without a permit from 1 April 1990, despite an objection by municipal officials. The court has summoned Oswal for a 14 August hearing.

There are 69 pre-conditions which have allegedly not been met by Oswal. These include pollution control, arrangement for treatment of effluents and compliance with the recommendations and deficiencies pointed out by the Garg Committee and Second Environment Safety Committee during their visits to the refinery area in 1988. The Oswal management countered that they have met these stipulations and are now eligible for a factory permit.

No reprieve. But if Oswal does not go in for an integrated effluent and pollution treatment programme it seems unlikely that the state government, and even sitting MP Gurudas Kamat from the Bombay North East constituency who made environment a big issue in his election campaign, will let Oswal off.



Even while the factory permit remains pending, the Chembur plant in north-east Bombay is running at full steam. The reputation of the finished products has however not charmed the traders, who complain that "reprocessed LDPE is being sold as finished LDPE". Dealers also remain discontented at the company's billing practices, particularly with LDPE, which is known to attract a huge premium in the market. However, benzene and butanol products from Oswal Petrochemicals sell at a discount because they are perceived to be inferior.

Oswal Petrochemicals has seen the exit of seven senior marketing personnel in the past six months, who claim that the marketing *modus operandi* had evoked harsh reactions from dealers. While the plant appears to be running at near full capacity, its future is clouded. In spite of the many apparent problems with the plant, Oswal has been able to run it with aplomb, without paying much heed to the uproar created by his critics and detractors.

Much depends on Oswal's ability to meet the environmental and other requirements of the BMC as quickly as possible. The other deciding factor is the seriousness with which the government takes environmental considerations.

■ DEVENDRA TAK

Holding the price line

The feeling that finally the country is on the right track to economic recovery is rea enough for euphoria. The government, up to now, has given out positive signals indicate fewer controls, more liberalisation and market orientation. But reductio subsidies, rupee devaluation, and certain budget proposals will put pressure on pri Managing inflation, which has been galloping since last year, will be one of the grea challenges in the short and medium-term.

On a point-to-point basis, during the fiscal year 1990-91, the rate of inflation — measured by the wholesale price index — was up 12.2 per cent. The consumer p index in 1990-91 was up 13.6 per cent for industrial workers and 13.4 per cent for n manual workers.

Steep hike in prices

The disturbing aspect of the price rise is that primary articles and the fuel and po group showed substantial rises of 18 and 17 per cent respectively. In primary artic the wholesale prices of food articles were up 19.7 per cent, of which foodgrains creased by a whopping 24 per cent.

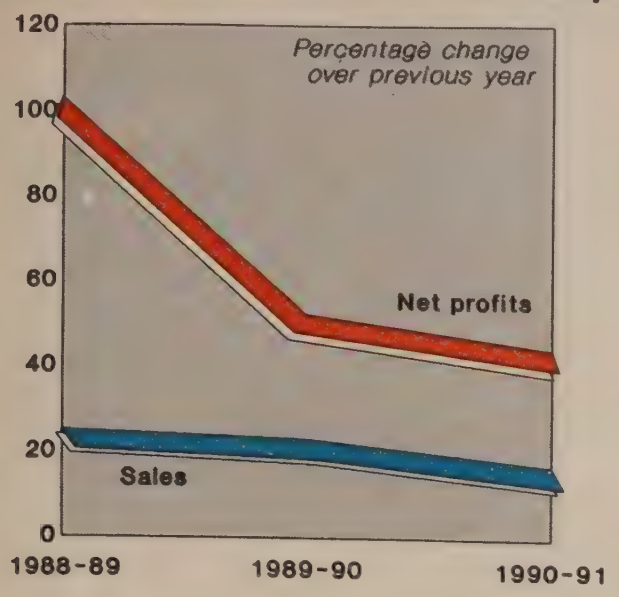
The wholesale prices of fuel and power items were up 17 per cent in 1990-91. T had a cascading effect on the price of other commodities as well.

On the other hand, prices of manufactured products in 1990-91 were up only 8.2 cent. Edible oils and food products witnessed price hikes of 30 per cent. Since about per cent of total expenditure of an average family is on food and food products, increase in prices has been disconcerting to many.

Money supply as measured by M3 or broad money was up 19.3 per cent in 1989-9 However, in 1990-91, the increase has been more modest at 15.3 per cent, largely b cause, in percentage terms, the net bank credit to government in 1990-91 was m ginally lower at 18 per cent as against 20.9 per cent in the previous year.

In recent years, growth in reserve money has led to monetary expansion; and t main factor has been net RBI credit to government. In 1989-90, this accounted for 9 per cent of the expansion in reserve money compared with 73.2 per cent in 1988-89. 1989-90, reserve money was up 23.2 per cent as against 17.7 per cent in the previo year. This was caused by a sharp increase of 23.6 per cent in net reserve bank credit the government. However, a curb on the growth of net RBI credit to the government 1990-91 (up by 17.6 per cent) restricted the growth in reserve money to 6 per cent.

Containing demand

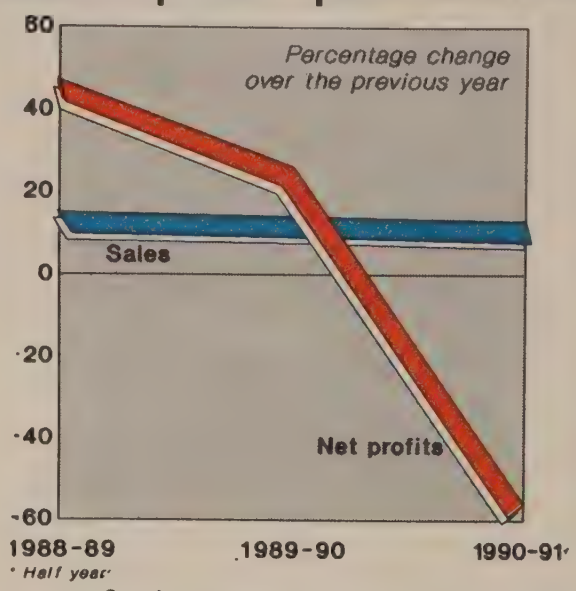


Other measures taken by RBI to contain demand pressure were the restrictions credit. The ratio of net incremental non-food credit to deposit was pegged at 45 p cent. The floor lending rate of interest changeable by scheduled commercial banks w raised from 16 to 17 per cent and by one per cent over the rates already being charg on existing credit by banks. Also, for all bank borrowers with aggregate credit limits Rs.1 crore and more, the effective credit limits under the cash credit facility were seal for the period 9 May to 30 September 1991. The incremental cash reserve ratio w reintroduced.

Many of these measures should have a dampening effect on prices. But moneta expansion essentially is a function of net RBI credit to the government, the princip source of reserve money growth. Since budget deficit is the main component of net RB credit to Central government, deceleration in monetary expansion will depend on th reduction of the budgetary deficit.

Though in recent months (April to June) there has been some deceleration in price inflation still remains a two-digit value. It is highly unlikely that during the fiscal ye 1991-92 there will be a sharp fall in prices. But a good monsoon and strict ant hoarding measures against traders could curb inflationary pressures in the short ru Measures taken in curbing money supply, credit and reducing the fiscal deficit woul have a more lasting effect over the medium term.

■ ASPI CONTRACTO



Sales and profits — private sector companies

There has been a declining trend in both sales and net profits of private sector companies. Gross fixed asset of 1,080 companies analysed totalled Rs.5,942 crore in 1989-90. Margins are likely to be further squeezed in 1991-92.

Source: CMIE

Sales and profits — public sector units

As in the case of private sector companies, trends of both sales and net profits are on the decline. The net profits of 233 central government enterprises declined sharply to Rs.481 crore, as against Rs.1,103 crore in the previous year. Iron and steel companies, coal and fertiliser companies were the major losers.

Source: CMIE

Wholesale price index: The wholesale price under for all commodities is up by 1.07 per cent for the month under review. Primary articles are up 1.84 per cent, largely due to the sharp increase in the index for pulses and fibres. Manufactured products are up by 0.83 per cent.

(1981-82= 100)

	6 July '91	8 June '90	7 July '91	% change over month	% change over year
All commodities	196.9	194.8	178.8	1.07	10.12
Primary articles	204.7	201.0	182.1	1.84	12.41
Manufactured products	193.9	191.3	179.3	0.83	8.14

Consumer price index: The consumer price index for industrial workers is marginally up by about 1 per cent in May 1991 over the previous month. There has been some decceleration in the consumer price index.

	May '91	April '91	May '90	% change over month	% change over year
Industrial workers (1982=100)	204	202	182	0.99	12.08
Urban non manual workers (1984-85=100)	169*	169	149		13.4

** March*

Bullion prices and stockmarket index: The rupee's devaluation has pushed up the price of gold by nearly 12 per cent and that of silver by 8 per cent, during the month under review. The BSE index is up 26 per cent and is slated to go up further on active bull support.

	26 July '91	28 June '91	28 July '90	% change over month	% change over year
Gold (Bombay)	4,160	3,731	3,260	11.49	27.61
Silver (Bombay)	7,081	6,874	6,843	3.01	4.48
BSE index	1,599.98	1,269.91	792.17	25.99	101.97

(Price of gold is in rupees per 10 gm and silver in rupees per kg)

Industrial production and infrastructure: Industrial production during March 1991 is up 24.4 per cent. However, on a year-on-year basis, the index is up 7.23 per cent. There has been a marginal deceleration in the growth rate of the industrial production index in 1990-91. Production of crude oil has declined steeply by 4.2 per cent in June 1991 over the previous month. Power generation is also down. However, both steel and cement production are up by 2.3 and 2.5 per cent, respectively, in June 1991.

	Latest month	Previous month	Year ago	% change over month	% change over year
Industrial production index	277.1 (3)	222.7	258.4	24.42	7.23
Railway freight (million tonnes)	28.76 (12)	26.75	25.96	7.51	10.58
Crude oil production ('000 tonnes)	2,619 (6)	2,734	2,781	− 4.20	− 5.82
Power generation (million units/day)	714.86 (6)	737.38	705.7	− 3.05	1.29
Coal production ('00,000 tonnes/day)	5.20 (6)	5.12	5.7	1.56	− 0.87
Steel production ('000 tonnes)	730.1 (4)	747.2	636.7	2.28	14.66
Cement production ('000 tonnes)	4,050 (6)	4,155	3,882	2.52	4.32

Figures in brackets indicate month

Money and banking (scheduled commercial banks): There has been a sharp decline in Broad Money (M3) (−0.27 per cent), aggregate deposits (0.13), bank credit (−1.08) and food credit (−5.17) on a month-to-month basis. For the year under review though, the decline was marginal.

(Rs. crore)

	28 June '91	31 May '91	29 June '90	% change over month	% change over year
Broad money (M3)	2,77,716	2,78,483	2,41,505	− 0.27	14.99
Aggregate deposits	1,98,753	1,98,480	1,73,088	0.13	14.82
Bank credit	1,17,552	1,18,840	1,04,011	− 1.08	13.01
Food credit	5,316	5,606	3,917	− 5.17	35.71
Credit/deposit ratio	59.14	59.88	60.09		

Recasting polity

AMIT MITRA

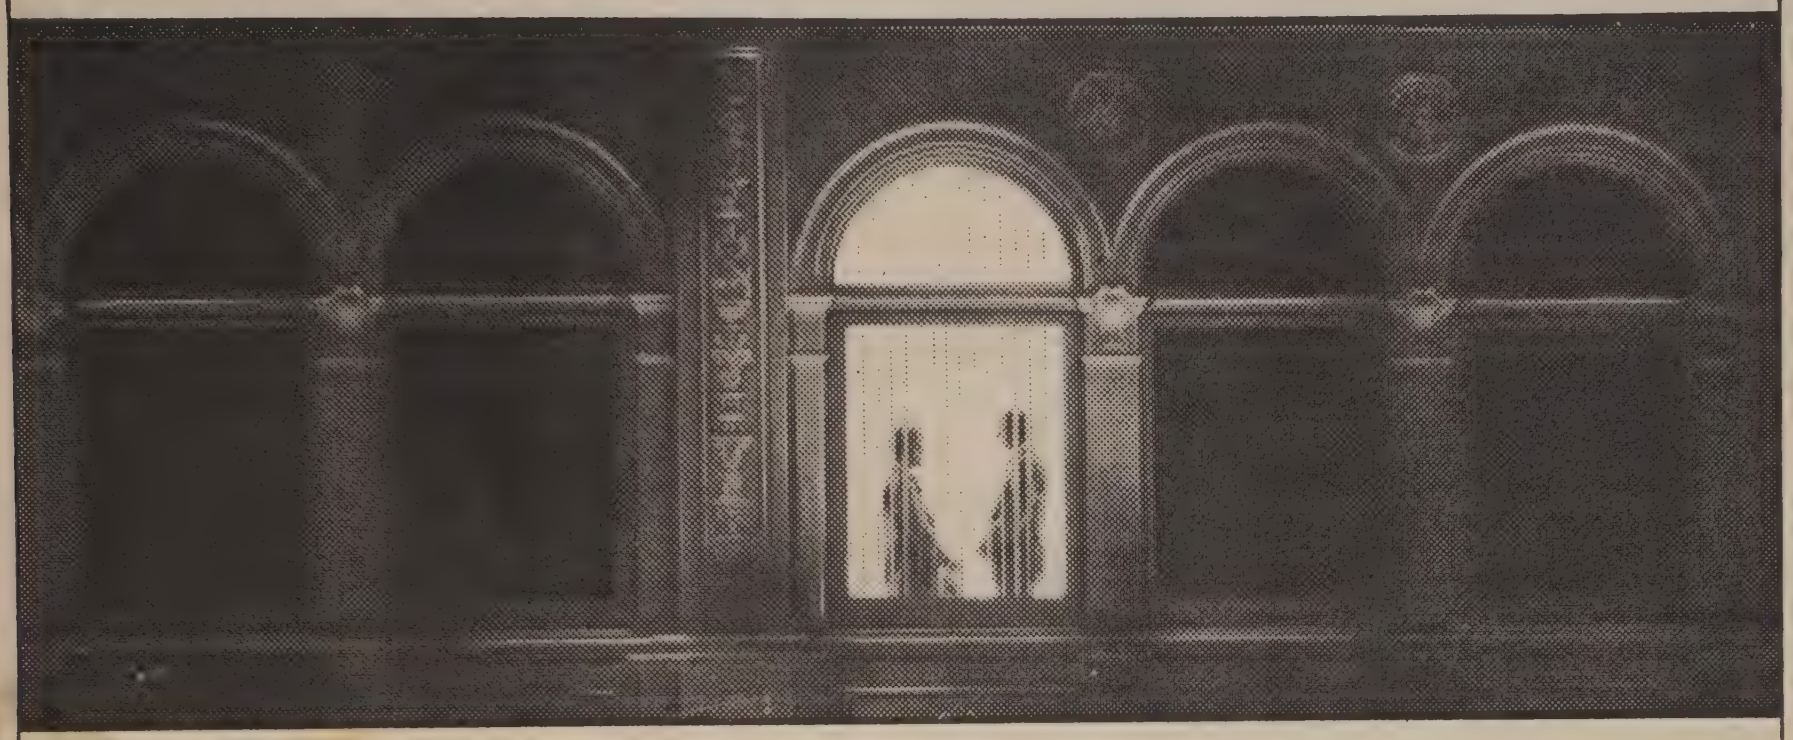
The government of Narasimha Rao has jolted India's intelligentsia into a new level of discourse and debate. He and his courageous colleague Manmohan Singh have forced us to face the reality of a bankrupt economy, a ramshackled infrastructure and a highly sheltered and controlled industry that just cannot face the pressures of globalisation taking place in the world today. The central secretariat of Delhi is now throbbing with activities directed at rolling back the interventionist and *dirigiste* mentality of the government. However, there is also a growing undercurrent of resistance to these reforms from within the Congress(I) — a phenomenon that could gain momentum in the near future fuelled by the short-term negative fall out of these reforms. Such a development could threaten the very prospect of sustaining the current process of liberalisation.

The dissensions within the Congress(I) has already resulted in the reviving of the 'socialist forum' within the party. There is also a growing resentment in the ranks over the straying from the 'sacred path' of building a 'socialistic society' — a path laid down by Jawaharlal Nehru. To address this concern the government took pains to include pages in the industrial policy statement directed not so much at the Indian public, but at its own party cadres. These pages tried to convince the sceptics within the Congress(I) that the reforms were supposedly based on Nehru's own thinking.

Disturbing events

Unfortunately, this cancer of inner-party schism on economic philosophy and economic policy permeates all of our political parties today. One may recall how Chandra Shekhar singlehandedly torpedoed Ajit Singh's industrial policy proposal when Chandra Shekhar was a senior leader of Ajit Singh's own political party, the Janata Dal. It is also evident that Subramaniam Swamy pushed hard to liberalise the economy during the regime of the Janata Dal(S) while his own cabinet colleague Yashwant Sinha tugged hard in the opposite direction. It is even more ironic that on assuming the post of the prime minister, the same Chandra Shekhar who had publicly campaigned against Ajit Singh's attempt to liberalise India's industrial policy, somersaulted and became a liberaliser himself. These disturbing events demonstrate the serious lack of a clear economic policy platform within these national parties.

If you are now wondering whether the disciplined BJP is free of such inner-party differences, you are in for a surprise. There are at least three types of economic thinking within the BJP and these conflicting perspectives are bound to contest each other if BJP gains power at the Centre tomorrow. There are those in BJP like Viren Shah, Jaswant Singh and M.L. Sondhi who have publicly taken a modernising market position and are not fearful of globalising India's economy. Then, there are those like K.R. Malkani who have deep socialistic roots going back to the days of a Marxist commune in Punjab. This group tends to be more worried about market failure and inequality, do not see much good in privatising the public sector, and are suspicious of opening up the economy to foreign investments. And then, there is the growing influence of 'integral humanism' of Deendayal Upadhaya on the younger cadres with RSS backrounds — a force that is led by the quiet but razor-sharp Govindachariya. Clearly, the BJP is just beginning the process of serious debates within their party on economic philosophy and policy and inner-party differences are bound to surface as BJP creeps closer to power.



Dangerous chemistry

What are the implications of these contradictions within India's political parties? How could these contradictions interfere with the prospect of liberalising India's economy in a sustained manner over the next five years? The key implication is that when the going gets tough with short-run inflation and some uncertainties in the labour front, the vested interests who have benefited from the licence-control-quota-*raj* for decades will combine with the socialistic faction within the ruling party. This joint front may then collate those within each party who have ideological antipathy to freeing India's economy. This may produce a dangerous chemistry that can revert India back to the now discredited government-controlled (*dirigiste*) model of development.

The solution obviously lies in a re-casting of our political parties in a manner such that all those who have a pro-market position are in one party and all those who continue to have a traditional socialistic perspective are in another. This is the case in all mature democracies of the world. Short of this happening soon in India due to the dominance of egos over ideology among our politicians, the educated voter who wants to see the freeing of India's economy must become an activist now. He or she must pressure the 'doubting Thomases' in each party through democratic means and speak loud and clear to those who are unaware of the net benefits of liberalising our economy. Are we ready for this challenge?

BHADRACHALAM PAPERBOARDS LIMITED

An enterprise promoted by I.T.C. Limited

PEOPLE-THE DECISIVE DIFFERENCE

SPEECH OF THE CHAIRMAN, SHRI K.L. CHUGH, AT THE FIFTEENTH ANNUAL GENERAL MEETING OF THE COMPANY ON 3rd JULY, 1991, AT HYDERABAD.

Changes in the policy framework would encourage the Industry to become a capable world player and a significant foreign exchange earner, and as I have often said, a major employer in the Rural Sector.

I am pleased to welcome 2,667 new Shareholders who have become Members of the Company during the last year raising the total number of Shareholders to 14,724.

Last year's results are a continuing tribute to the unrelenting efforts of your Company Employees and I take this opportunity to express, on your behalf and on behalf of the Board of Directors, our appreciation of their efforts. Despite adversities in terms of floods and some temporary personnel issues, **profit after tax increased by 91%, to Rs. 15.47 crores, with earnings per share improving to Rs. 14.64 from Rs. 7.67. Capacity utilisation during the normal working period, at 138%, was an all-time high. Considering the good performance of your Company, your Board has recommended an increased dividend of 37.5% compared to 32.5%** in the previous year. Investors' confidence in your Company is reflected in the high price of your Company's share, which has for the first time crossed the price level of Rs. 150/-.

Coupled with the above facts is the reality that your Company has brought progress, opportunities, and new light and life to a backward area. These verities must give you cause for satisfaction as owners. It makes you investors in progress and enriches the quality of the returns which you earn on your investment.

You will recall that last year I had shared with you that your Company was embarking on a market expansion strategy to ensure profit, growth, and survival. This meant that whilst we would retain our position in traditional strongholds, we would be entering the high-value premium segment of the market. I am pleased to communicate that in furtherance of its competitive strategy, your Company has successfully developed,through Research and Development, high-value products, both for the domestic and the international markets. **You are aware that your Company has been pro-active, and has made timely investments in the last few years, the benefits of which we are now reaping. To further fortify our position in the Industry, we will continue to make substantial investments in modernisation, quality upgradation, balancing equipment, and capacity expansion.** All this would require substantial liquidity. In this perspective, your Board has transferred Rs. 11.5 crores to General Reserve this year, raising the total General Reserve to Rs. 36 crores.

Amongst the most important sources of competitive advantage is superior energy management. The commissioning of the Atmospheric Fluidised Bed Combustion Boiler, with a turbo-generator of matching capacity, completes the total energy project which shields your Corporation from the vagaries of external power supply and arms the Organisation with further competitive edge.

To enable the Industry play its role, both in the national and international perspective, Government Policy must encourage investments not only for modernisation of existing capacities, but also for establishing fresh capacities, ...Towards this, the import of critical capital equipment will need to be encouraged at rates of import duty much lower than the prevailing 85%.

Sharing the national concern on the Balance of Payments position, YOUR COMPANY THROUGH AN AGGRESSIVE AND VIGOROUS EXPORT EFFORT HAS EMERGED AS THE LARGEST EXPORTER OF PAPER IN INDIA. **Our export earnings have increased by 60% compared to the previous year, to over U.S. $ 3.5 million.** The success of our export effort is axiomatic of the fact that the Indian Paper Industry is capable of capturing market niches in the full face of international competition. The present prognosis is that the industry has to gear itself to satisfy a demand of 52 lakh tons by the year 2000. However, in the perspective of the success of our international efforts, we may, indeed, have set our sights too low. Changes in the policy frame work would encourage the Industry to become a capable world player and a significant foreign exchange earner, and as I have often said, a major employer in the Rural Sector.

We cannot, of course, predicate the Industry growth at the cost of the environment or pulp-wood supply from the natural forests. Pulp-wood has to be grown in Captive Plantations and Economy of Scale in mill sizes will have to be built in, with technology that is contemporary, to become competitive and give the consumer, quality products at prices that are internationally competitive. Presently, the Industry is dependent on large imports of raw materials, both pulp and waste paper, consequent to the ban on supply of pulp-wood from natural forests. As a measure of conservation, the Government had placed import of raw materials under open general licence and had also exempted it fully from customs duty. It is unfortunate that customs duty of 40% on waste paper and 10% on pulp has since been imposed making domestic production very expensive. This is likely to become counter-productive and would stifle the domestic industry. The eventual outflow of foreign exchange to import the finished product to bridge the supply/demand hiatus will be higher than the outflow of foreign exchange to import raw materials for use by the Industry in India.

Paper Industry has always been capital intensive. The last few years have, however, witnessed the capital intensity escalate very rapidly from Rs. 10,000 per annual installed to in 1979 when your Company's mill was established, to approximately Rs. 40,000 per annua

Perhaps the single greatest upheaval in the traditional paradigms of business is in the area Information Systems and Organisation Design. Since Information Sytems have increase the span of managerial jobs, it tends to flatten the organisation structure and releases wh layers of people from routine communication, coordination and control jobs. The conventional pyramidal organisation is gradually transforming into an organisation of clus and networks of people who form, dissolve, and re-form, to resolve issues in a turbulent an dynamic environment.

installed ton, today. At this cost, the setting up of a mill of Bhadrachalam's size would invo an outlay of over Rs. 300 crores. To enable the Industry play its role, both in the national a international perspective, Government Policy must encourage investments not only for modernisation of existing capacities, but also for establishing fresh capacities. Towards thi the import of critical capital equipment will need to be encouraged at rates of import duty much lower than the prevailing 85%.

In the National Policy Framework, therefore, if the Government -

(1) facilitated the Industry's investments in scientifically managed plantations;
(2) allowed the import of critical capital equipment at rates of import duty that are much lower than prevalent today, enabling the Indian Engineering Industry to add further va and
(3) in the short term, reduced the customs duty on the import of pulp and waste paper,

the Industry would be able to make meaningful strides towards progress and become a source of strength and prosperity to the national economy. Attention of Government, therefore, must focus on these issues which are, in fact, opportunities for Government and Business to affirm their partnership in the Nation's development.

The fundamental task of your Management is to ensure the prosperity of your Company in perpetuity. Continued environmental scanning reveals opportunities in the Financial Services Industry. These opportunities are matched by complementary skills within your Organisation. Diversification into this Industry would create new income-streams which wil further strengthen your Company. It is considered advisable therefore to enter this busines on a long-term basis through a wholly-owned subsidiary. The investment in this company t start with will not exceed a sum of Rs. 5 crores, with your Company having the controlling interest. To infuse strength into this diversification proposal, it is necessary to integrate certain intangible assets which rightly belong to your organisation. As members, you are aware that Bhadrachalam Paperboards Limited was promoted by ITC Limited. In its embryonic years ITC Limited nurtured Bhadrachalam through its trials and tribulations. Sin Bhadrachalam Paperboards Limited is an integral part of the ITC Group, it is proposed to change the name of your Company to 'ITC Bhadrachalam Paperboards Limited'. The intangible assets of two strong and vibrant names - ITC and Bhadrachalam - will not only further strengthen of your Company, but will also infuse a competitive strength to our new proposed Financial Services Organisation. I look forward to your support for these propos

PEOPLE - THE DECISIVE DIFFERENCE

I now come to today's theme which is dedicated to the people who make things happen. THEY MAKE THE DECISIVE DIFFERENCE. Human Resource is the prime mover of advancement and development. The strides that companies and, indeed, countries make is founded on the ability of leadership to tap the productive genius of a people. However, to develop people appropriately, it is necessary to comprehend the emerg ing scenario and the environment in which they will have to perform

THE CHANGING BUSINESS ENVIRONMENT

Ours is a protected economy and this has impeded accelerated accretion to national wealth. Undue protectionism has created a high-cost, low-quality economy. Resultantly, in a globalising world, our competitiveness is poor. This reality is reflected in our Balance of Payments and Internal Debt position, which has reached crisis proportions

Whilst we ponder over our own realities, a new world economic order is rapidly taking pe. Philosophies and dogmas which held sway for over a century have been dismantled in than one year. Throughout Eastern Eupope the cry is to shift from a command to a ket economy. The business-geography of the world is changing with the emergence of nomic communities ushering in a new kind of citizenship and creating new compulsions, ortunities, and challenges for countries and companies throughout the world. These elopments will seminally affect the way Nations and Corporations strategise to ensure r growth and survival and prove their 'good corporate citizenship'.

To meet the challenge posed by these rapid changes, it may be necessary to question the damental precepts of the model followed by us till now,which places capital at the centre he developmental process. I believe that Capital should now be replaced by People who uld occupy the centre stage. Of the seven basic resources of the manager (Men, chines, Materials, Money, Time, Land and Ideas), it is the human resource that creates ue and achieves the productivity necessary for success. What then must be the framework human resource strategies? What will equip the People of Tomorrow to manage the

he work-force and personnel of the future, will contain numerous specialisms which need interact synergistically. Business leaders must encourage and create the circumstance for m building and productive collaboration between Specialist and General Managers to hieve business results.

rket, products and technologies in the emerging world economic order? Answers to these estions is a Top Management responsibility. Today's Top Management must prepare its ople to face the challenges ahead and thus perpetuate the Organisations they govern.

REATING AN INTERNATIONAL PERSPECTIVE

To create the market-driven companies of the future, we will have to develop an inter-tional perspective in our employees to facilitate the required change. Traditionally our ople have confined their perspectives to within National boundaries. The changing mands make this perspective obsolete.

In the sphere of Marketing,as the future unfolds, perceptions of the customer are changing m a Mass Market in the 50s and 60s to a Segmented Market in the late 70s and 80s, and w into a matrix of niches with a very demanding product and service satisfaction criteria. succeed in a stochastic marketing scenario, we will have to underscore the basic maxim of rketing, that the customer must come first. We must affirm that marketing expenditures are fact investments in creating competitively superior products and services. Marketing ocesses must not be limited to the marketing function but should include the entire ganisation, and strategy must integrate the various structures and functions of an ganisation to deliver satisfaction to the customer on an on-going basis. Cross-cultural and ernational marketing will require the induction of skills and the infusion of marketing know-ge through training programmes within the Company.

Technology ingestion will have a significant impact on almost every aspect of business. e technologies of yesteryears which were based on conventional electrical, mechanical, d chemical engineering, are now being overtaken by new knowledge in microelectronics, mi-conductor, genetic engineering, and robotics. Strategic alliances will have to be forged facilitate skills and knowledge transfers to create globally competitive concerns. These new ances, knowledge, and technologies create opportunities for learning and training a new eed of people. The ingestion of this new learning will create new opportunities for human ources development in a multinational context.

Perhaps the single greatest upheaval in the traditional paradigms of business is in the area Information Systems and Organisation Design. Powerful new software in On-Line, Expert, d Executive Information Systems have been developed. These in tandem with hardware eakthroughs in Cellular Radio Technology, Optical Storage Media, and Neural Networks, ve made Information Technology increasingly people friendly. The most significant area of effects of this Technology on the modern organisation is in the sphere of Organisation sign. Since Information Sytems have increased the span of managerial jobs, it tends to tten the organisation structure and releases whole layers of people from routine mmunication, coordination and control jobs. These resources can be retrained and deployed

leadership must encourage risk-taking and innovations to face the changing challenges at organisations have to deal with in the emerging world economic order. Leaders must low for occasional failure,as a process of learning.

The conventional pyramidal organisation is gradually transforming into an organisation of sters and networks of people who form, dissolve, and re-form, to resolve issues in a bulent and dynamic environment. In the 'flattened' organisation structures of future mpanies, compensation packages will not necessarily follow the logic of level in a pyramid. using knowledge into, and empowering the work force will create the commitment neces-y for competitive success and will prevent undesirable obsolesence and turnover.

In no other area has the future arrived faster in our 'global village' than in Financial nagement. In this area Information is directly linked to competitiveness in the trade of ancial instruments. These developments in Financial Management will facilitate increased estment opportunities, and the emergence of tailor-made products for specifically defined stomer segments. Expertise in currency management and funds deployment will have to be eated. The role of the controller will now progress from Financial Accounting and nagement Accounting to a new form of Strategic Business Accounting.

BLUEPRINT FOR THE HUMAN RESOURCE

Traditionally the accounting treatment of people classifies them as 'costs' rather than vestments'. How often have we heard that 'People are our greatest asset'? The tragedy is t this is becoming a cliche. Actions have belied words, and the wrong kind of compromises have been made which have affected the credibility of leadership. In India over protection and lack of competition in the economy has created a situation leading to a continuous outflow of human talent which aspires for meaning in their work, as well as improved monetary rewards. It has given us the luxury of accepting mediocrity. Managerial practice has often used talent but rewarded mediocrity for their own comfort. This style of management is a complete anathema to the internationally competitive organisation we want to create and establish.

In formulating our blueprint we must begin with the creation of an Organisational Philosophy. This Philosophy must have the active commitment of people. It must not be so esoteric that it is difficult to comprehend throughout the company. Most importantly it must be seen to be practised. In fact, it is better not to have an organisational philosophy at all, rather than to have one which is denied every day in our work practices. This affects morale adversely and breeds cynicism in the Organisation. In Bhadrachalam we knew that our people could share a common vision only if that sharing was rooted in a common culture. Over the years our organisation's philosophy based on knowledge, candour, understanding, commitment, hard work and mutual respect, has created a vibrant culture which has enabled your Organisation to achieve pinnacles of productivity. To paraphrase a verse in the Rig Veda 'there is union amongst us because of the common wishes of our hearts.'

Based on our philosophy and culture, people policies and practices in Bhadrachalam, have been formulated. We have tried to foment a sense of fraternity, togetherness, and belonging. We have emphasised the pre-eminence of the team and have underscored the reality that the output of hard working teams is greater than the sum of the individual inputs of the persons who comprise the team. We have given competitive monetary rewards, have ensured hygenic work and living space, and have created the availability of the basic amenities for health and education. In short, we have designed and delivered an anxiety-free environment, conducive to learning, performance, productivity, and progress. These actions have been fundamental to the success of your Company which was facing the challenge of creating a successful enterprise, and a new culture - in a backward area and in a very competitive industry. As a measure of our commitment to learning your Company is establishing a Research Centre, which will pursue research and harness actionable knowledge relevant to business management practices in India.

As we take ourselves forward to grow and carve a niche in international markets, we can take sustenance from our past investments. **If learning has become an organisational habit, we can face the future of discontinuous change with confidence.**

To make work productive and people achieving, we have to effect the transition from the managing of personnel to the leadership of people. To achieve this successfully, leaders must:-

First, shift their role from the directing to the development of the human resource. In the rapidly changing markets and customer requirements of the future, with far-flung operations, it is impractical to direct the work force in the traditional sense. The development of people, and infusing them with new knowledge and learning is the sure formula for future success.

Secondly, leaders must provide parameters for employees to become increasingly self-managed. The employees of the future will desire a degree of autonomy and psychological ownership of the jobs which they perform. This will give them a sense of achievement and will enhance cosiderably the productivity of their efforts.

To effect the transition from national performance to international entrepreneurship, strategies will have to be formulated around the development of the human resource.

Thirdly, the work-force and personnel of the future, will contain numerous specialisms which need to interact synergistically. Business leaders must encourage and create the circumstance for team building and productive collaboration between Specialist and General Managers to achieve business results.

Fourthly, speed has become the watchword. The one common denominator in all dimensions of business in the future will be managing the increasing rate of change. Business leaders must adopt practices which stimulate speedy responses from the organisation. To achieve this,decision-making must be decentralised to the lowest level possible and people must feel 'empowered', to act rather than to keep seeking permission. To improve the quality of decision-making, business leaders must ensure that employees have access to the necessary information which is required for the making of their decisions.

Finally, leadership must encourage risk-taking and innovations to face the changing challenges that organisations have to deal with in the emerging world economic order. Leaders must allow for occasional failure,as a process of learning.

In developing our blueprint for the management of the human resource, it must be underscored that what we need is not meetings, seminars and proclamations; but action.

But no meaningful human resource strategy can ignore our senior citizens. The retired human resource is still an employee on pension and as elders and ambassadors of the Corporation, their interests and well-being must continue to command our due attention. Organisations that value people must prepare them to lead lives of fulfilment and achievement even after they have finished their years of productive service in the Organisation.

CONCLUSION

In conclusion, the performance of your company during the last year, and indeed, over the past eleven years, gives us cause for satisfaction and sanguinity. The efforts of your employees have made your Organisation a leading entrepreneur on the national scene in the paper industry. But there are developments in the environment which will engulf us and compell us to make changes that enable us to succeed in the emerging international economic order. To effect the transition from national performance to international entrepreneurship, strategies will have to be formulated around the development of the human resource. To implement these strategies will not be an easy and painless task. But there is no alternative and no escape from this challenge. Let us therefore commit ourselves and move ahead with determination and confidence.

This does not purport to be a report of the proceedings of the 15th Annual General Meeting

EXEMPT YOUR CAPITAL GAINS FROM TAX

INVEST IN

IDBI

CAPITAL BONDS

Long term capital gains from the sale of land, buildings, jewellery, shares etc. attract Income Tax. But there is a way out. Invest in IDBI CAPITAL BONDS, keep your capital intact and earn interest too.

- Bonds available at par throughout the year.
- Exemption from tax on Capital Gains under Section 54E of the Income Tax Act, 1961.
- Income tax benefit under Section 80L.
- Exemption upto Rs. 5 lakhs from Wealth Tax under Section 5(1)(xvie) read with Section 5(1A) of the Wealth Tax Act, 1957.
- Interest at 9% p.a. payable half yearly.
- At the investor's option, interest for the full period of 3 years can be paid in advance on discounted basis.
- No deduction of tax at source.
- Outstation cheques accepted and cost of collection borne by IDBI.

A fly-by-night operation?

SUBRAMANIAM SWAMY

Most people who know me think that I would be in raptures about Dr. Manmohan Singh's budget. They are wrong. To be frank, I am quite alarmed by the projected consequences of this budget.

I have no reservations about Dr. Singh's intellectual equipment or his integrity. In fact, there are few gentlemen like Dr. Singh in the economics profession. I am concerned about what Dr. Singh's budget would do to the credibility of the ideology that I have been vigorously propagating for the last twenty years of my public life. I have been arguing and arguing since 1971 that competitive market economy is the only system that interfaces (or meshes) with the Indian ethos.

Dr. Singh has also strongly alluded to the need for such an ideological commitment. In a nutshell, he argues that the model of the past budgets (the Soviet model) has failed to deliver the goods, and hence he intends that we move away from it, to a deregulated competitive economy. Nothing is wrong with this intention, but remember that the path to hell is also paved with good intentions. Besides, the Congress(I) did not come to power on a mandate to restructure the economy. It had promised stability instead.

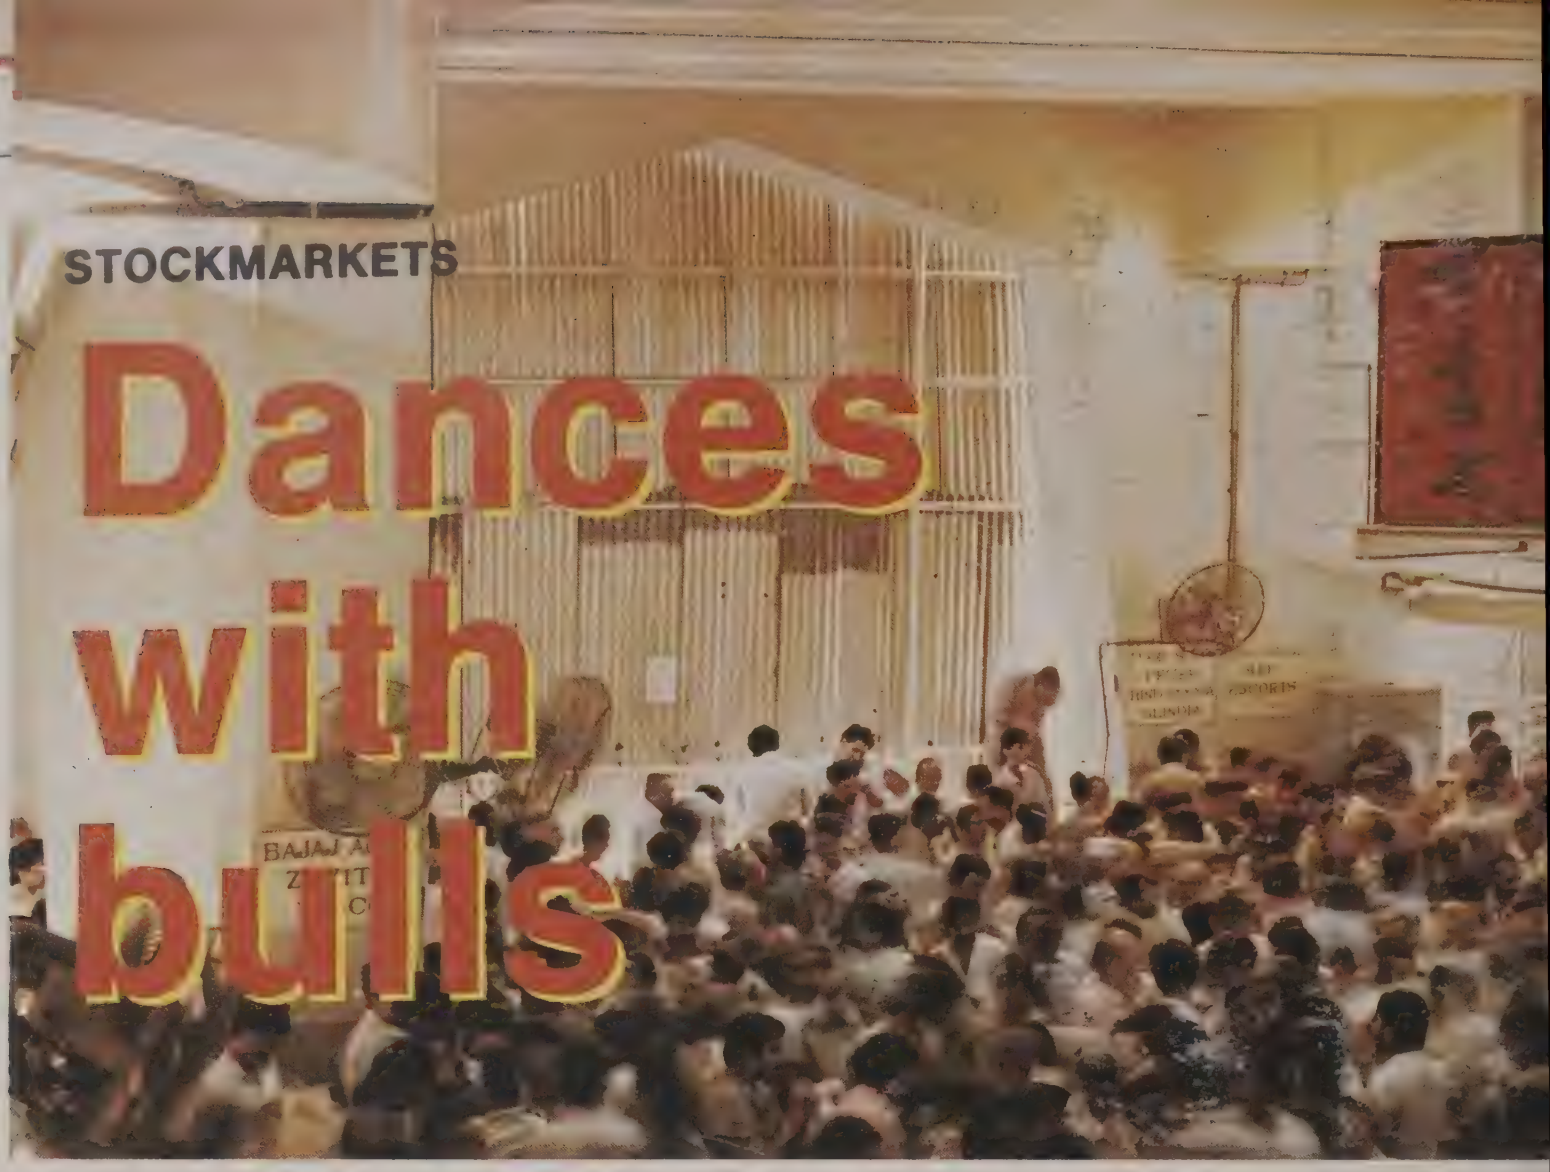
Wonderful intention

What has Manmohan Singh done in his budget to move the economy in the direction of a competitive market economy? He has, as the IMF wanted, proposed to reduce the fiscal deficit by 2 per cent points, down to 6.5 per cent of the GDP. Wonderful intention, but he has sought to achieve this, creating a huge surplus on the capital account (nearly Rs.7,000 crore) to offset the huge deficit on the revenue account (about Rs.14,000 crore).

This means that the budget is growth deflationary and thus will cause a reduction in the growth rate of the economy. Dr. Singh himself has acknowledged that the growth rate in 1991-92 will be 4 per cent. Is the reduction in the fiscal deficit worth such a high price? Will it endear the ideology of the market economy to the people? Reduction in the fiscal deficit could have instead been achieved by a reduction in the size of the government and by initiating new measures of mobilising resources. This means that had Dr. Singh embarked boldly on privatisation he could have achieved a reduction of the fiscal deficit without having to deflate the economy.

In Dr. Singh's budget, there is no mention of privatisation. Delicensing or deregulation is not the same thing, especially when public financial institutions and public-sector enterprises so dominate the economy anyway.

Similarly, the much trumpeted changes in industrial policy, changes in MRTP and FERA do not take us anywhere near a competitive market economy. The proposed changes are peripheral. What was needed was instead a genuine fiscal reform, through which the economy could be redirected along productive lines. For example, we need to step up the rate of domestic saving even more, for which it is essential that we abolish personal income tax. To reduce corruption and harassment, the scrapping of sales tax and streamlining of the excise tax system are vital.



Nitpicking measures

Instead, what we have in Dr. Singh's budget is the same nitpicking resource mobilisation measures of enhanced taxes on petrol, air conditioners, sugar and cars (yielding Rs.2,800 crore in six months). What is worse is the elimination of the fertiliser subsidy, thereby ensuring a rise in the price of fertilisers which is bound to hurt the farmers without any apparent benefit for the country at large. Mark my words, the ill-timed scrapping of the fertiliser subsidy at a time of spotty rains and a ruling party without majority, will cause the ultimate distress to Dr. Singh's tenure as finance minister. If the fiscal deficit and the fertiliser subsidy cuts were 'IMF/WB friendly', to *borrow* a phrase, then Dr. Singh has not understood these lending organisations. These two bodies would be far more interested to see how durable the changes sought by Dr. Singh are, rather than some fly-by-night operation to secure a loan. Compare how Gorbachev fared at the G-7 meeting to know what is in store.

I am also not impressed by this rapid-fire trade reform announced by Dr. Singh. As commerce minister, by sheer import compression and export encouragement, I turned around a trade deficit of Rs.185 crore in November 1990 gradually to a trade surplus of Rs.139 crore in April 1991 despite the Gulf war. A trade reform is necessary for carrying this good work into the future — but not the trade reform announced. As minister, I resisted the idea of devaluation till we had built up an export surplus, and had straightened out the infrastructure system. Devaluation was to follow. Till then, I had suggested calibrating the exchange rate with REP licences. But, the Congress(I) government has put the cart before the horse.

In brief, Dr. Singh's budget is doomed to run into heavy weather. Whether his party will stand by him is to be seen. In the meantime, some of us will have to work overtime to salvage the credibility of the ideology of a competitive market economy.

The author is the former commerce minister and an economist in his own right

STOCKMARKETS

Dances with bulls

Manmohan Singh's maiden budget, combined with his government's new industrial policy, has loosened the floodgates at the stockmarkets. The BSE Index is racing upwards, and a host of industries look capable enough to sustain the boom. While conditions are not what one might call "perfect", handled correctly, they are certainly good enough to catalyse an unprecedented phase of growth in the Indian economy

It has been a boom of epic proportions. Reacting swiftly to the budget and industrial policy declared on 24 July, the market, which had been simmering since the new government came into power, boiled over. In a mad scramble, speculators, assisted liberally by mutual funds, rushed to buy scrips, taking the market to record highs. The BSE Sensitive Index, which stood at 1,419 on Monday, 22 July, pipped the 1,600 mark by Friday, the 26th — a jump of 13 per cent in four days.

It was the moment for the aggressive buyers. Canbank Mutual Fund, whose purchases average Rs.60 lakh a day, reportedly purchased shares worth Rs.3 crore — mainly Grasim and Indian Organic — in the trading session following the budget announcement. The immediate result: Grasim shot up from Rs.248 on the day before the budget to Rs.300 by end July, while Indian Organic jumped from Rs.46 to Rs.60.

Some even bought back what they had sold earlier. UTI, in particular, was a big seller of shares before the budget. In the run-up to the budget, it had apparently sold about 300,000 shares of Great Eastern Shipping; almost all of that was snapped up by a large bull operator at about Rs.84 a share.

UTI must be rueing its decision now, while the buyer is celebrating his sagacity, for by end July, Great Eastern had risen to Rs.92. Like UTI, several other institutions sold shares — particularly of Tata Steel — when the market started moving up, having learnt the lessons of last year well. Grateful for the high prices they were getting, they figured this was it. What they hadn't foreseen was the spectacular rise that came towards the end of the month.

For speculators, who tend to join the bandwagon as soon as the bigger operators enter, it was a chance to make a quick buck at the expense of short-sellers caught napping in companies like Tata Steel and several multinationals that are expected to have modest earnings increases in 1991. The mood of joyful follow-the-leader was well summed up by an excited Roopesh Pande, a floor broker with the stockbroking firm of Bhaidas Maganlal, as he shouted on the floor of the exchange a day after the budget, "The big boys are in!"

Deepak Tolani

In its first chapter, then, the story of this boom is a lot like that of October 1990 which took the bellwether Bombay Stock Exchange Sensitive Index (BSE Sensex) past 1,600 for the first time. Then, too, the charge had been led by speculative scrips on very high volume. Then, too, the more conservative mutual funds like LIC had sold blue chips like Grasim only to buy them back a couple of months later at prices about 25 per cent lower.

Thereafter, the market proceeded to fall steadily through January, with the BSE Sensex falling by 40 per cent and the market losing over Rs.40,000 crore in value between 9 October and 25 January. The question is: could it happen again? One will have to wait and see, but, perhaps as is to be expected, marketmen are confident that it will not be as dismal.

They could well be vindicated though; the main reason is that the bust that followed the boom in 1990 occurred because of rising international oil prices following the Gulf war and the volatile domestic political situation. Neither of these negative factors is present now.

There have been, in fact, many positive and even euphoric changes. For one, the buzzword from Rajiv's glory days has been revived in Delhi these days: liberalisation. Ever since the new government came into power, it has sent clear signals of loosening restrictions and letting market forces play freely. It started off its show with the massive devaluation which enhanced export demand. Then came the new trade policy which made foreign trade more market-oriented by removing export subsidies and simplifying replenishment incentives.

Next, came the revolutionary industrial policy which did away with the draconian MRTP restrictions that hampered the growth of larger companies. The limit for foreign holding in Indian companies was raised to 51 per cent for a wide range of capital-intensive industries. This took several companies, including the likes of Hindustan Lever and SKF Bearings, out of the Foreign Exchange Regulation Act's purview. The new policy also delicensed the food industry, thereby opening the door to high value-added foreign branded food products. Says B.R. Shah, chairman of Lipton, "The new industrial policy has made investment in modern food technology attractive. Indian agriculture and horticulture will benefit. This is a far-seeing measure."

And, finally, the Rao government presented the budget which unsealed the market. With only modest tax increases, the general fear of a harsh budget proved to be unfounded.

Talking about the market's subsequent surge, Pradeep Dhokania of DSP Financial Consultants says, "The market has reacted to the budget not being as bad as expected and the industrial policy being better than expected." Dhokania is also bullish on the new issue market, noting that "only the capital market today has the money".

Does this suggest a one-time rise as market levels adjust to a new level of expectations? Dhokania feels that further changes in the long-term will depend on the companies that make best use of the new opportunities

Merchant banker Vallabh Bhansali, of Enam Financial Consultants sounds a different note on project expansion. "The benefit of liberalisation will go to companies with assets in place. Thanks to high inflation, higher interest rates and devaluation, the costs of new projects will be substantially higher than projects set up even just two years ago."

Does that mean that the market is unlikely to go up significantly in the short run? According to Dhokania of DSP, the only major industrial group unaffected by the boom is the pharmaceutical group. Although pharma shares rose in the weeks before the industrial policy, they have been steady since the policy was announced — primarily because

the industrial policy stated that drug prices would continue to be controlled, in accordance with a drug policy yet to be announced. Hence, Dhokania is of the view that only liberalisations in the drug policy would boost drug shares and help the market in the short run.

J.M. Mondkar of J.M. Financial, who feels that the industrial policy is "fantastic for growth", mentions greater primary and secondary market trades by non-resident Indians (following the industrial policy) as another of the reasons for the current boom. He does, however, expect the capital market to turn down around October 1991 when companies announce their results for the first half of the financial year. He expects poorer results thanks to higher interest rates and import costs following devaluation.

Indeed, corporate performance will ultimately be the key to determining stock prices. But will it be as bad as Mondkar suggests? A look at the likely performance of some important sectors that make up the market reveals some surprising conclusions. Note that of the total listed companies' turnover of Rs.1,20,000 crores per annum (about 20 per cent of GNP), the major contributors will be automotive (13.5 per cent), cement (4 per cent), pharmaceuticals (3 per cent), fertilisers (3 per cent), steel (a mere 2.5 per cent), textiles and fibres (9 per cent) and tobacco (2.5 per cent).

Of these, steel and pharmaceuticals are expected to do poorly. About steel, Devapriya Kanoria, managing director of Kanoria Steels, notes that although prices of semi-finished steel have risen after the hike in cash margins on imports in April, to Rs.10,000 per tonne from Rs.7,000 per tonne in January, this has not benefited producers who use scrap steel or sponge iron as the prices of these has shot up by much more.

STEEL

Several steel companies were in bad shape even before the budget and industrial policy were announced, thanks to import restrictions and devaluation. Companies like Mukand, Mahindra Ugine Steel and Jindal Strips, which are among the larger speciality steel-makers, have a heavy import component.

Mukand, for example, had imports of Rs.174 crore for the year ending March 1990, for which audited figures are available, or 33 per cent of sales. After import restrictions were imposed in April, there are reports that the company has sharply cut production due to non-availability of raw materials. So, the company's prospects for 1991-92 look even worse than that in 1990-91, when its net profits fell by 38 per cent to Rs.9.3 crore. So also for Mahindra Ugine Steel and Jindal Strips which have imports at 30 per cent of sales.

The company which might sail through is Tata Steel. It is a net foreign exchange earner, noted Ishaat Hussain, its executive director for finance. With steel price decontrol inevitable now, it is a small wonder that Tisco's share price has risen 17 per cent since the industrial policy.

Steel plants are expected to do poorly

In addition, producers of sponge iron will do extremely well, particularly Ipitata, Orissa Sponge, Sunflag Steel and Essar Gujarat. This is because devaluation has made scrap steel imports (which supply 60 per cent of the mini-steel sector's requirement of 5 million tonnes) costly. Not surprisingly, sponge iron makers are minting money and their share prices have been among the firmest in the market.

The windfalls of the sponge iron companies may not last very long though. There are large capacities in the pipeline and some of these projects are very big. One such is Grasim's 400,000-tonne project at Raigarh scheduled for completion in 1993.

AUTOMOTIVES

The automotive sector, barring perhaps passenger cars, is expected to do well in 1991. An important indicator is that volume sales for the first quarter at Tata Locomotive, the country's largest automotive company, are up by 25 per cent, while sales at the country's largest scooter manufacturer, Bajaj Auto, are up 20 per cent in the same period.

Nevertheless, in any rising market there will always be peculiarities and exceptions. The expectations factor mentioned by Dhokania, as the reason for the recent boom, can have its irrational manifestations as well. Premier Auto is an example. The share price of Premier Auto rose from Rs.46 to Rs.53 after the budget, despite the fact that the budget raised the excise duty on cars from 50 to 60 per cent, not to mention the 20 per cent hike in petrol prices. Both will dampen the sales of Premier's cars and, logically, its share price should have fallen. Company sources take consolation from the waiting list for their cars and hope that there may not, after all, be any drop in sales.

TOBACCO

Tobacco will, of course, have an excellent year again. This recession-proof industry has been relatively unaffected by the budget with a mere inflation-compensating 10-per-cent increase in the excise burden. As ITC Chairman J.N. Sapru says, "I am not particularly worried about demand contraction as a result of the excise hike." Finance Director Feroze Vivaina adds that he expects the company's balance sheet to look even better next year.

TEA

The other major agro-based industry, tea, is greatly benefited by devaluation and the new trade policy. Commenting on the boom in tea share prices, R.L. Rikhye, president of the tea division of Macneill and Magor, notes that "India controls 15 per cent of the world tea market, so the 20 per cent devaluation and higher export replenishment will be excellent for tea exporters."

CEMENT

Cement is currently the powerhouse of the stockmarket. All cement companies have announced record results and current trends indicate that 1991-92 will be better, with net earnings rising by over 35 per cent. In fact, the cement sector is expected to earn a net of 15 per cent on sales this year. This despite higher costs of about 10 per cent due to dearer oil, coal and freight, according to Madras Cements' director P.R. Venkatrama. Since earnings are what push stock prices, the impact of cement's performance is likely to be the single strongest influence on the direction of the market this year. In recent weeks, ACC, Gujarat Ambuja,

and India Cement have posted handsome gains in the stockmarket, despite increases in the cost of production.

The main reason for cement scrips going up in the boom, however, is that the market had expected a heavy dose of fresh excise duty on cement. This had depressed the shares of cement companies. Since the budget did not levy any fresh duty, the shares flared up. Narotam Sekhsaria, managing director of Gujarat Ambuja Cement, is naturally bullish on cement: "The cement industry will do well for a few more years to come. The industry has reached an equilibrium between demand and capacity."

The super profits of cement companies will definitely attract new entrepreneurs and new investments, and more so now because of delicensing. So the possibility of over-capacity and a subsequent drop in profits cannot be ruled out, especially considering that the pre-tax profits of the industry in 1991 will be enough to fully finance ten 1-million-tonne plants.

FERTILISERS

Fertiliser companies form another group where the stockmarket response has been tremendous, notably for SPIC, Indo-Gulf Fertilisers, Gujarat Narmada Valley Fertilizers (GNFC), Gujarat State Fertilizer Company (GSFC). This is because, first, some fertilisers like calcium ammonium nitrate, ammonium sulphate and ammonium chloride, have been totally freed from price and distribution control.

GNFC, GSFC and Punjab Fertilisers are the major beneficiaries of this policy change. Says a senior marketing executive of GSFC, which has a 300,000-tonne ammonium sulphate plant, "Now we can sell our fertiliser in any market which fetches us the best price." And cryptically, "So we should make more money."

For other major nitrogenous and phosphatic fertilisers, the budget has allowed a price rise of 40 per cent. Here, the price rise has been balanced by the reduction in subsidies that companies were enjoying so far. Will the price rise lead to lower sales of fertiliser companies?

Those who bought fertiliser shares after the budget argue that, given the foreign exchange crunch, imports of fertilisers will be restricted and, therefore, the demand for domestic companies will be strong. Besides, they argue, fertiliser demand is largely price inelastic. May be true. But then again, fertiliser consumption largely depends on rainfall. In years of draught, as has happened in the past, consumption nosedives. On such uncertainties do the fortunes of fertiliser companies depend.

SYNTHETIC FIBRES

The share prices of Reliance Industries Ltd (RIL) and Indian Organic (IOC) rose sharply by 30 and 27 per cent, respectively, after the budget. Reliance is the major manufacturer of polyester fibre (PSF) and yarn, while IOC makes PSF. Both PSF and PFY have been given the benefit of MODVAT, whereby manufacturers can now reclaim duties paid while buying the raw materials. The MODVAT benefit for PFY works out to Rs.5.05 per kg and for PSF at Rs.4.50 per kg. But this entire benefit will be more than offset by the increase in special excise duty from 5 to 10 per cent and an increase in DMT and PTA costs; prices of the latter two have gone up because of higher naphtha prices. S.R. Rathi, president of the Association of Synthetic Fibre Industry, says, "The benefit extended under the MODVAT scheme by the finance minister will be nullified by the hike in input costs."

The rise in Reliance's share price, then, may be largely technical. According to stockmarket sources, a Calcutta broker short-sold nearly 100,000 shares before the budget and is now busy buying back. Or it could be because of a return of the famed Ambani political clout.

Grasim Industries, the country's largest manufacturer of viscose staple fibre, also witnessed a 16-per-cent increase in its share price after the budget, despite the lack of any benefits from it. Says senior vice-president S.K. Saboo, "There is no apparent reason for such a flare-up in our share price except that we will do better this year due to the full impact of our new 1-million-tonne cement plant."

Much rides on the fortunes of the textiles and synthetic fibres industries though. With most companies in both performing better in 1991 than towards the end of 1990, the very solidity of the stockmarkets looks assured. As broker Ashok Thakkar puts it, "Even if the market reacts, the index cannot fall below 1,500."

Synthetics: MODVAT benefits will be offset by higher special excise duty

CONSUMER ELECTRONICS

Companies in the consumer electronics business, however, have taken a beating in the latest budget. The duty on colour TVs (CTVs), VCRs and VCPs has been raised while the duty of about Rs.500 on each black and white (B&W) TV set has been abolished. The share price of the largest colour TV manufacturer, Videocon International, has, however, gone up from Rs.160 to Rs.230 after the budget. This might be because of Videocon's dominant position in both B&W and CTVs.

During the current year, Videocon plans to produce 480,000 B&W TVs. So, from the abolition of excise duty on such TVs, Videocon stands to gain Rs.24 crore in a full year. But since the company will also produce 240,000 CTVs (on which the duty has gone up by Rs.500), this gain

Consumer electronics companies have taken a beating in the budget

will be partly offset by the Rs.12 crore loss on CTVs.

Videocon's managing director Venugopal Dhoot figures that the gain will be bigger because the higher excise duty on CTVs can be passed on to the consumer. He says, "With our strong brand image and good quality, people will pay higher prices for our TVs." Besides, there is also the fact that with licensing having been continued for TVs, smaller manufacturers have become more vulnerable to an industry shake-out than giants like Videocon.

If so many key industries look like solid performers for 1991, where is the economic mess that the country is supposed to be in? And, surely, the impact of reduced government expenditure will be deflationary in the short run? The finance minister has forecast a modest 4-per-cent economic growth rate and 5 per cent inflation for this year. He is certainly underestimating inflation, but, according to the figures above, he may be underestimating growth as well.

The factor that may have made the difference between the policy-induced mess and solid growth is agricultural demand. As the strong demand for fertilisers and tractors shows, agriculture has reached a turning point. Agricultural growth in 1990-91 was recorded at 4.5 per cent, the highest since 1981.

The other factor which excites marketmen is the possibility of direct foreign investment in secondary markets. The new industrial policy allows multinationals to raise their stake from 40 to 51 per cent in certain industries without coming under FERA. Although it is not yet clear how foreign companies will raise their holdings, there are two possibilities — some will go in for privileged share issues, while others may purchase shares directly in secondary markets. Either way, it is bullish for markets.

All this leaves open a key question: how high is high enough for the market? Analysts' predictions are largely bullish, and are based on a consideration of an appropriate price earnings (PE) ratio for the market. PE is the relation between the price level of a stock (or market index) to the underlying earnings.

The current average PE of all the shares that make up the BSE Sensex stands at 26, or marginally below the PE reached on October 9, 1990. This figure is, however, misleading. Since the index is only 3 per cent more than the October peak, and since corporate profits have risen by an average of 25 per cent between 1989-90 and 1990-91, this means that when current year results are fully included in the calculation, the PE will drop to about 19.

Given the new policies, a PE of 19 seems reasonable, given that it has historically averaged at 15 in India. Yet, it also suggests that since the market is well-priced, further rises in markets ought to be related to the announcement of new policies or changes in corporate performance. Further sharp short-term jumps without a correction, argues Brijesh Koshal, vice-president of PNB Capital Services Ltd, would be unjustified in fundamental terms. In other words, there is the danger of a speculative bubble

That said, the market at the end of Ju had much to cheer about. With tradi volumes in Bombay once again crossi an average of Rs.200 crore per day for t first time since October 1990 and with t value of a stockbroker's card at an a time high of Rs.80 lakh, glamour da have returned to the stockmarkets.

Ultimately, however, no stockmark is riskless and "a well-priced marke does not mean a market that cannot fa On the contrary, there are some maj risks facing the economy at this time, a of which could affect the stockmark adversely.

The first is political. Although the p litical situation does not compare wi the instability that marked the last qua ter of 1990, it is not entirely absent. This because the current government is a m nority government subject to all kinds political uncertainties.

The second is the government's shor age of domestic and foreign resource Manmohan Singh's soft budget is esse tially a bet that the economy will gro rapidly this year. If this does not happe perhaps because of monsoonal vagarie harsh fiscal measures will undoubted follow.

A third risk is inflation. Although go ernment spending may fall and help co tain inflation, the impact of higher cos may well mean lower inflation-adjuste profits of companies this year.

Given the economy's opening up, it i however, arguable that all these a short-term disturbances. In the long ru the Indian economy will continue to gro steadily. Today, the economy is whe Western Europe and the United State were in the fifties — at the beginning decades of secular increases in consum demand. For the next 30 years, barrin minor setbacks in some years, growt ought to be both high and sustained.

This is because of the inhere strengths of the economy. Our vast popu lation provides a large consumer ba with a growing buying power that reflec improvements in living standards. Th unusually high savings rate of over 20 p cent implies a large latent potential pu chasing power. Simultaneously, wi time, consumers will demand better qua ity at lower prices. Given the open-do policies being pursued by the gover ment, if Indian companies can live up the expectations of consumers, vast ho zons are at their feet.

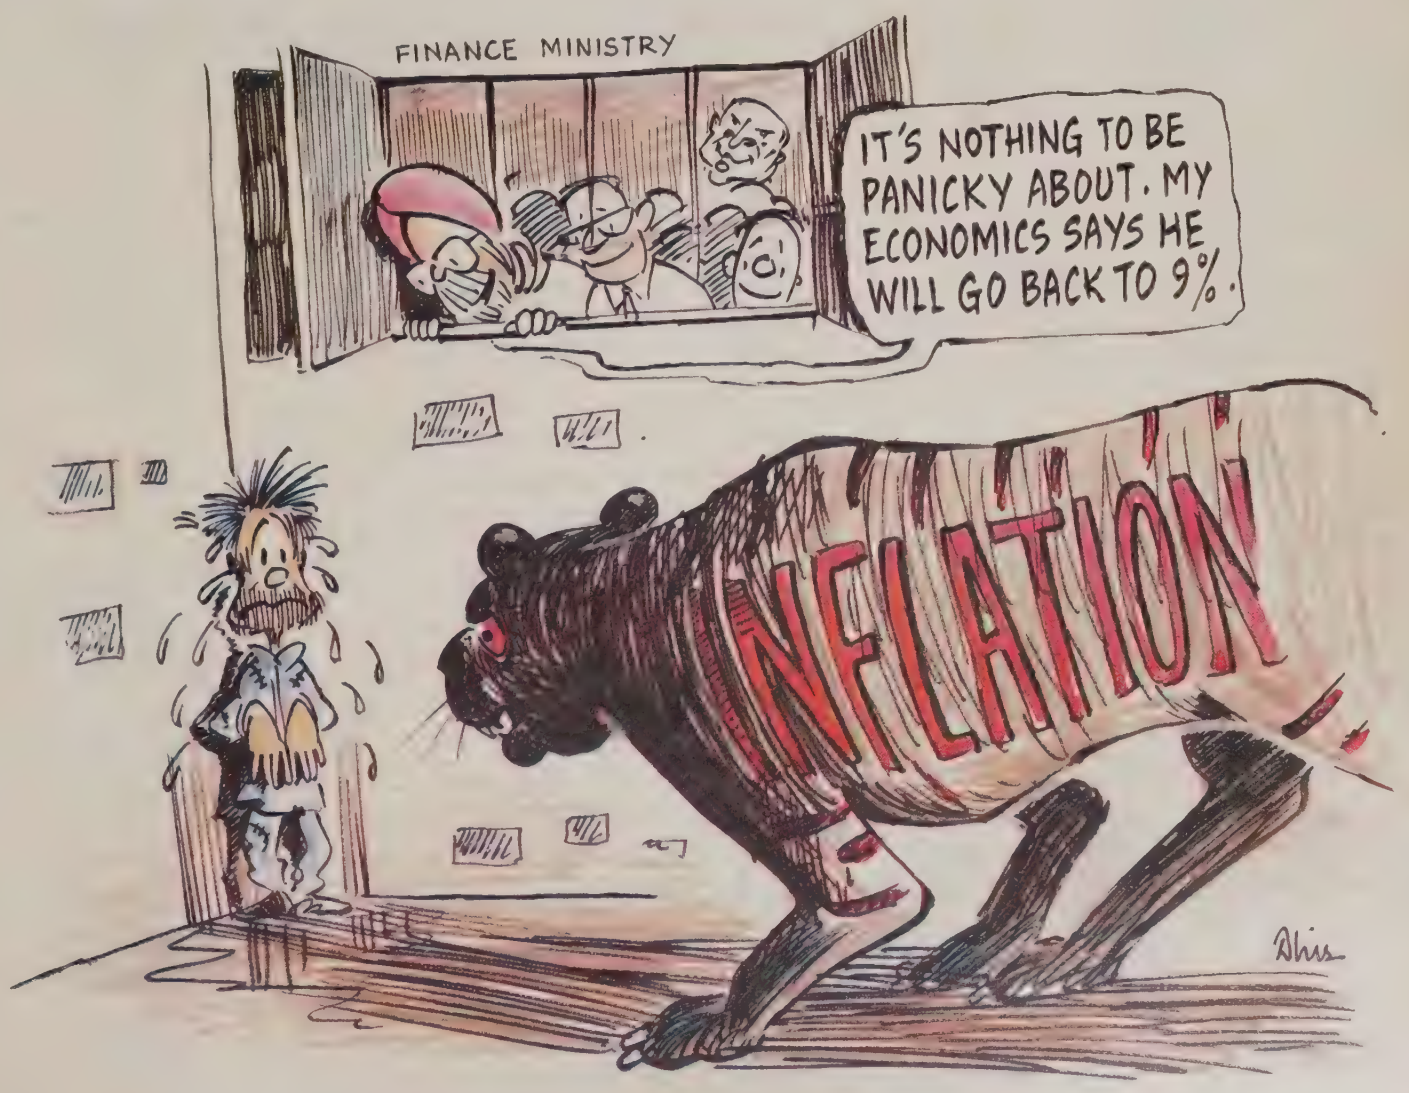
BUDGET 1991-92

"Deflation with growth"

Finance minister Manmohan Singh says that we are gaining more than losing. But one thing is clear. It will be some time before the results show

Will it be 9 per cent or 12 or 16 or 20 per cent. These are the opinions on the anticipated escalation in price levels that the economy will register in fiscal year 1991-92. Finance minister Manmohan Singh gave a rather brave figure of 9 per cent together with a GDP growth of 4 per cent the day after his budget presentation. "A deflationary budget without sacrificing growth," he said, by now, famous words. Few are prepared to believe Singh especially as he steps into a tradition where economics has been shown little consideration. The annual promise to hold fiscal deficits (the primary reason for continuing inflation) at levels promised in the budget have rarely succeeded. And Manmohan Singh inherited an economy that displayed an upward movement of 12.1 per cent in the whole sale price index (WPI) and 13.6 per cent in the consumer price index. Would it be possible to reverse that ascent? Twelve weeks into this financial year, by 22 June, the point-to-point WPI had slowed to 10.1 per cent.



But would there be any further slowing down? Even after all the taxes that the budget added, the finance minister insisted that inflation would drop another percentage point. That confidence flows primarily from having slashed Rs. 6,604 crore from the fiscal deficit (the difference between the government's current revenue and the recovery of loans and its total expenditure) that he reduced to the promised 6.5 per cent of GDP.

Even as Singh stepped into the finance ministry six weeks ago, it was clear what the budget demanded of him. The previous years' inflation has resulted mainly due to the consistently high budget deficits owing to high revenue expenditure — on interest payments for past borrowings, on subsidies, defence and public administration. Primary articles, mainly foodgrains, owing to higher procurement prices added to prices last year. Oilseeds and pulses, commodities whose prices are extremely sensitive to shortages, have not been imported owing to the foreign exchange constraint. Little can be done about agriculture supplies, but the finance minister had to do something about the deficit.

Singh managed all this by relying mainly on the extra revenue that will come through customs; following the 20 per cent devaluation (since the devaluation increased the price of imports by 20 per cent, it raised customs revenue by an equivalent amount). Devaluation allowed him to take away Rs.3,000 crore of the export subsidy too. To these he added a 40 per cent increase in fertiliser prices that reduced the Rs.1,000 crore off the fertiliser subsidy.

Another Rs.2,617 crore came through fresh taxes, excise, corporate and lowered depreciation. And so the revenue deficit was brought down by Rs.3,721 crore and the budget deficit by Rs.6,281 crore which contracts "aggregate demand" in the economy by that figure. "So that is two reasons less for inflation this year," says an economist. More importantly, it allowed Singh to stay away from using the painful path of pruning plan expenditure or adding backbreaking excise levies.

Still, not many are convinced by this exercise, saying that some figures in the

budget left room for doubt. Several allegations have been made that "the figures in the budget have been fudged, almost two thirds of the 72 heads of expenditure have not been adjusted for the 20 per cent devaluation. Most noticeably, for the plan outlay of the petroleum sector, no extra provisions for the higher payments in dearness allowance to compensate government employees have been made. Defence expenditure has taken a beating in real terms, an area considered least flexible of all expenditures." Past experience has demonstrated that the momentum of these expenditures has been difficult to contain.

Admittedly, there have been liberal additions to taxation that will strain prices — petroleum products (effect on index: 0.42 per cent), fertilisers (0.7 per cent), that will be followed by a revision of the procurement price of foodgrains (0.2 per cent) lead the threat to prices. Then there is an increase in excise surcharge, from 5 to 10 per cent (0.65 per cent). Other familiar targets, electronics, refrigerators and airconditioners and motor vehicles, all have had excise added to them ranging from Rs.200 to Rs.30,000. "Surely this extra burden will be passed on to the consumer," says FICCI secretary general D.H. Pai Panandikar.

That isn't all. Administered prices of coal (likely increase of 15 per cent that will add 0.2 per cent to the index directly) and steel will take another jump upwards. These are more disturbing to the finance ministry. "For, an increase in the price of coal will travel across industry adding to all other coal-based industries, especially power," says an executive from the power sector.

Railway freight (price up 10 per cent: direct impact on index 0.3 per cent) is the other problem. Almost 35 per cent of the transportation of goods in the country depends on the railways for movement. But the other crucial commodity, diesel, has been left untouched which means that the road transport sector that moves 65 per cent of the country's goods will be kept out of the cost increases.

"So at least there will be no cascading effect of taxes as there was in October last year after the 25 per cent Gulf surcharge," says a finance ministry official. "Only the final goods have been touched, the intermediate goods left untouched." But if last year, the cascade effects began from the petroleum sector, now it will originate from higher procurement prices. These prices usually act as the floor to market prices. And if they go up that means that wages will go up through higher dearness allowances. "You can expect about Rs.500 crore to be added to the government wage bill," says NCAER director S.L. Rao.

The economist, nevertheless, is prepared to go along with the 9 per cent even with a little reluctance. In January, the National Institute of Public Finance and Policy (NIPFP) had demonstrated that a reduction of the fiscal deficit from 8.5 to 6.5 per cent will cause inflation to drop by four percentage points and growth by two. But everything really hinges on the monsoons and the agriculture performance. Another good monsoon and we can get away with 9 per cent because the contraction in government spending is substantial," says NIPFP's Sudipte Mundle.

> Singh has neatly shifted inflation from being driven by excess demand to one fuelled by higher costs. He hopes that increasing taxes would cause a one-time increase that the system will absorb. And two years hence, there will be remarkable gains from improved corporate performance

All these taxes added up together with the higher lending rates of banks and import curbs will undoubtedly slow down progress in the manufacturing sector. At least, nowhere near last year's 8.6 per cent. And lower growth rates mean lower tax collections, both of corporate income and excise, lower investments and higher costs too. And all this will be accentuated by a depressed demand for industrial products. So the 16.8 per cent growth in tax collections that the budget relies on maybe optimistic. The previous year's unanticipated shortfall in corporate tax collections by Rs.1,149 crore is still fresh.

More than the addition to corporate taxes, reducing depreciation rates from 33.3 to 25 per cent is another lethal blow that will transfer at least Rs.1,800 crore from the corporate sector to the government. Much of this constitutes the core o the promoters' contribution of corporat finances to fund future investments. "Fu ture investment, then, can be expected t take a beating," says another industr spokesman. Industrial slowdown, eve though predicted, has not come yet. In frastructure performance in the firs quarter has remained unaffected — coa production is up 3.2 per cent, saleabl steel up 24.4 per cent, cement 13.7 pe cent, fertilisers 6 per cent and power gen eration another 9.5 per cent.

There are several other things that th finance minister did not do, most impor tantly, perhaps, the rolling back of tariff on capital goods, presently a staggerin 80 per cent. "If this budget attempted t take the first step towards global integra tion then we clearly need lower tariffs t compete by bringing down project cost to conform with some of the other indus tries in the Asia-Pacific region," says Pa Panandikar. Besides, a corporate tax rat of 45 and 50 per cent is certainly steep an the export sector could have done with a few more tax exemptions than the thre that the budget handed out. "The 20 pe cent disinvestment of public equity ha been a dampner," says NCAER's Rao.

Singh admitted that he was working o a programme of rationalisation of ta structure. For the moment he has neatl shifted inflation from being driven by ex cess demand to one fuelled by highe costs. He hopes that increasing taxe would cause a one-time increase that th system will absorb. And two years hence there will be remarkable gains from im proved corporate performance with th freedom given out through the industria policy. Stockmarket behaviour over th previous fortnight is sufficient evidenc of that.

Nevertheless, it is apparent that the fi nance minister is walking on a very slen der edge from where the slightest nudge can throw him off. "What, for instance will happen if Tamil Nadu's Jayalalitha demands Rs.1,200 crore for the state o Jyoti Basu Rs.2,000 crore for his petro chemical project in Bengal in return fo CPM support at the Centre?" asks a po litical analyst in New Delhi. But that is a much that Manmohan Singh the econo mist can do. The initiative now reall rests on the political managers in th Congress, to pilot these bills throug Parliament as well as to ensure that th government departments conform to th expenditure reductions.

EW INDUSTRIAL POLICY

Only a beginning

ne significant result of the new policy is that it would induce more ompetition, which in turn would change production patterns. New apacities would be added and specialisation encouraged though foreign vestment is not likely to boom in the short run

The new industrial policy may lead to a restructuring of industry, but it's likely to take time. Some analysts feel that it will be probably -5 years before the results start showing, at all. The interlude will be a time of rain, when, in the words of ASSOHAM president Avijit Majumdar, Some of us will fall by the way side and ome of us will forge ahead."

Considered along with the new ade policy, the devaluation of ie rupee and the budget, the ew policy's impact would em to be towards creation conditions for intense inrnal competition. But it ill be in a protected enronment because imort barriers have not een substantially reuced. Also, devaluaon makes imports ostlier and not much reign investment can me in very quickly.

The intense internal roduction that would acue (for that is what decensing implies) would ange the whole pattern of roduction. Says T.K. haumik, assistant secretary genal of the PHD Chamber of Comerce, "Until now, the production ttern in the economy has been directed a deliberate fashion through the licensg system. Now, free of restraints, proiction patterns would conform to the mand pattern. In fact, you can go forard and say that it would tend to match e income distribution pattern."

In the delicensed areas, where investent had been restricted, new capacities ould be added. But as Jagdish Shettigar, wly appointed economic idealogue of e BJP, points out, there will be a shake ut in areas where excess capacities have en created in the last few years. Says nettigar: "One such area could be the entertainment electronics segment where, in the last few years, a lot of capacity has come in, but which still remain under licensing."

According to S.L. Rao, director of the Delhi-based National Council of Applied

Economic Research (NCAER), "We might witness a great deal of mergers and takeovers in the future, especially since they have been made entirely legal." Rao feels that, in future, industrial enterprises will tend to specialise in their areas of expertise rather than diversify into unrelated areas as we see now. "A single group like the Modis who manufacture everything from thread to tyres and cement will be under some pressure," he says. Scale expansions will be the other attractive option. And since the domestic market will not sustain such expansion, companies will be forced to depend on the export market.

The new policy will change the production pattern for sure, but it will also affect the locational pattern. Again, until now, investment has been directed purposely to certain areas depending on the judgement of the government of the day. Now with the locational policy freed, investment would flow into such areas where the infrastructure is the best. Says an analyst: "In the short run, this would mean that UP and Bihar, which used to get a lot of projects with their political clout, would be out and investment would flow to states like Gujarat and Maharashtra." In the long run, there will be intense competition among states, all of them competing for scarce resources in the form of investment. The finance minister thinks that "when projects are deliberately located in a particular area, it hardly leads to a betterment of the prospects of the locals. They get jobs as peons and cooks, while the top personnel come from outside."

Apart from the pattern and location of investment, there would be other changes also. Says industrialist Hari Shankar Singhania, vice-president of the International Chamber of Commerce, "The rise of the middle sector is something I foresee as a result of this policy. With delicensing, medium-sized entrepreneurs' full entrepreneurial abilities can be unleashed." Large industrial houses which used to thrive on by cornering licences through their networks would be at a discount, but in some other ways, even they would benefit as there is no limit to growth by the asset limit of MRTP now and more new areas are open to them for investment.

However, what the government has announced is, in a way, only a statement of intent which has to be followed through

with legislation. Much would also depend on the way in which the bureaucracy, with its penchant for *status quo* and reluctance to forgo controls, implements these policies.

Some analysts feel that there are enough provisions in the policy, the way it is evolved now, which actually mean relicensing by the back door. For instance, any project where import content is more than 25 per cent (or value of import entailed is more than Rs.2 crore) would require to come to the government for clearance. In these days of mega projects, more would require that kind of imports than not.

There are also misconceptions about the impact of the changed policies on foreign investment. Even though the government has opened the door for foreign investments, companies abroad will not consider this gesture seriously until they actually see the policy being implemented. Says Singhania, "People abroad are going to see how many will follow this policy and the fashion in which it will be administered."

The interest of the large foreign companies in India stems from their perception that India is a large market where they can purvey their wares, especially consumer goods. But India is looking at foreign capital mainly as a vehicle for high technology. In fact, it is these areas which are open for automatic clearance (*annex 3* consisting of 34 industries). So, if foreign investment wants to come in areas other than these, approvals would be required. And approvals could be as cumbersome as always. In fact, a close reading of the new policy reveals that even in cases where clearance is automatic, its approvals, and not clearances. The operative word "approval" is causing apprehensions to analysts.

And even the list of 34 industries have been drawn up in such a fashion as if to deliberately keep away foreign companies from some areas. Points out P. Balakrishna, a foreign investment consultant, "For instance, in the list, hydro steam gas generators only up to 60 MW are open for foreign investment. This is obviously to protect BHEL which produces generators of higher capacity. But if foreign companies are interested in coming to India, they would like to do so for higher capacity equipment."

There are other problems in the policy as well. Given India's foreign exchange problems, the government might have been justified in insisting on "foreign exchange neutrality" of all foreign investments. But as PHD CCI's Bhaumik points out, "Much of the incentives for foreign investment is lost through this clause. I am not too sure about how many companies can manage foreign exchange neutrality" — a view shared by many other experts too.

Moreover, foreign investors are going to take a total view of India before committing to resources in the country. Says Singhania, "This means that if the infrastructure is bad in India (which it is), foreign companies are going to consider that before actually coming to this country."

All this is not to say that the allowance of 51 per cent equity to foreign companies is no improvement on the prevailing 40 per cent (though analysts point out that 74 per cent and even 100 per cent foreign equity was allowed even before, on a case-to-case basis). Till now, the general policy of the government to allow for only 40 per cent equity had deterred many foreigners from moving into the country.

Also, as M.S. Patwardhan, executi vice-chairman of NOCIL points ou "Having a 51 per cent stake in India w be advantageous for foreign companie especially those who are investing for t first time in India, because not all of the can locate the right kind of Indian par ner. It will also allow them to consolida the accounts of the Indian subsidiari with the parent company." Also, it w mean more commitments towards th Indian company, especially in areas lik scarce know-how because chances leakages will now be less due to th greater equity holding by the foreig companies.

In all, foreign investment is hardly ex pected to boom as a result of the policy especially in the short run. Probably th finance minister realises this and, i recognition of this, has created a special empowered board to scout for foreign investment outside the broad parameters of the policy from leading transnationals. As he explains, the idea will be to target some of the top transnationals and also those who are likely to be displaced from Hong Kong, when it cedes to China in 1997. Since the details of how the board's composition and *modus operandi* are not known, it might be too early to speculate on the likely success of the board.

CANBANK MUTUAL FUND

Going great guns

The new kid on the mutual funds block is a daring operator in financial markets. And with markets booming, Canbank Mutual Fund's (CMF) aggressiveness has paid off and today it is second only to pioneer UTI in the market. In getting there, it has earned accolades from investors and brokers, and criticism from competitors and regulatory bodies

Canbank Mutual Fund (CMF) is the largest member of Canara Bank's financial services arms; the others are Canfina and Can Fin Homes. The three organisations are linked by common management, with Canbank chairman N.D. Prabhu chairing all three, and personnel typically move from the parent bank to the financial services arms.

It is all part of an integrated and very person-oriented management style. CMF's general manager B.R. Acharya says he started as a "plain B.Com from Bhadragiri — population 1,000, unchanged since 20 years, and peopled by the newly wed and the nearly dead. All the rest have left." He himself started working for the bank and made it, "on the strength of performance" to CMF in Bombay via Canara Bank, Bangalore and Canara Bank's overseas branch in London.

And speaking about the reasons behind CMF's astonishing growth since it was started in 1987, Acharya says: "Knowledge is not as important as interest or initiative. Basically what we are doing is just addition and subtraction. For that you don't need to be a chartered accountant. Practical experience is what counts."

It did not start spectacularly. Canbank's divisional manager, Gouri Shankar, remembers, "When we started in September 1987, CMF had only two employees — general manager K. Dharmapal and me. At the time we launched Canshare, I went to Mangalore, my hometown, to gather investor support. My own people had their doubts. They had booked a small room in the hotel for the conference thinking that only 5 to 10 people would attend."

Canshare was a flop, despite advertising support worth Rs.1.10 crore. It collected only Rs.17 crore when launched in December 1987.

Compare that with Canstar, the 1990 blockbuster. The scheme collected Rs.800 crore, supported by advertising worth only marginally more at Rs.1.5 crore. "Today," Acharya says, "I don't think that any fund we launch will collect less than Rs.100 crore."

Though CMF's total funds of approximately Rs.2,300 crore are dwarfed by UTI's investible funds of Rs.21,000 crore, it has a higher growth rate. Besides that, it has put up serious competition to reputable competitors like State Bank of India's SBI Capital Markets (SBI Caps).

How do the men — and they are all males — from Udipi do it? And can they continue to do it, given that there is a rapid turnaround of top management? Canara Bank has had two chairmen in the past three years and is about to get a third. Even CMF has had two general managers since its launch.

To this, Acharya says, "We form a cohesive and friendly group. That is our

Canara Bank's financial services

Canbank Mutual Fund: A trust, with Canara Bank as principal trustee

Canbank Financial Services Ltd: Wholly owned by Canara Bank now, but soon to go public

Can Fin Homes Ltd: Owned mainly by Canara Bank (80 per cent); the rest is with the public

Dealing room: abuzz with activity

Prabhu: visualising an expanding market

Pankaj Desai

strength." S.M. Parande, former executive director of competitor SBI Capital Markets (SBI Caps), attributes it to the "Canbank culture". He notes that ex-chairman B. Ratnakar, under whom CMF started, was "a revolutionary, a rebel who supported innovative ideas and the people who had them". Acharya agrees: "Ratnakar was a dynamic chairman who supported us in all our endeavours."

Ratnakar, who now runs Fairgrowth Group, notes that "while the ideas for starting both Canfina and CMF were mine, they were implemented by those in charge of the schemes. My biggest contribution was in coaxing the talented staff to do their best. Talent needs exposure and it cannot grow in a restricted atmosphere. I picked up talented personnel and helped them flourish in the organisation by allowing freedom in operations. When people succeeded, we projected their achievements."

CMF has its share of critics though. G.V. Ramakrishna, chairman of the Securities and Exchange Board of India (SEBI), for instance, criticises the mutual fund industry in general, criticism which applies to CMF too, for imprecise objectives. He says, "Mutual funds advertise what kind of fund they are raising money for, such as for growth, income, etc. But they do not say what they will do with the money. Where will it be invested? Today, a lot of money is raised for investment in equity, debentures and similar instruments but ends up as loans, working capital, company deposits, etc."

Ramakrishna would ideally like each scheme of a mutual fund to be approved by a regulator, something which is not done now. He also disagrees with the present system which allows a fund to collect unspecified and theoretically unlimited amounts under a scheme. He notes that mutual funds keep collecting funds from the public and use the money to increase liquidity in secondary markets, thereby making them more speculative. It is, he says, like "splashing around in the same pool".

From the funds' point of view, it makes sense to stick to secondary markets, since most new issues are too small and illiquid in the early years to justify investment by mutual funds.

SEBI has been insisting that mutual funds should avoid speculation by transferring shares in their names before resale. Acharya opposes this in concept, arguing that CMF loses the opportunity of a timely sale because it takes at least two months to transfer a share. Though disapproved by SEBI, as is well known in market circles, many mutual funds, including at least one foreign fund, tend to ignore SEBI's insistence on this count.

Although CMF offers products that are nearly indistinguishable from those of its competitors, its aggressive marketing has ensured that its funds have remained far ahead of the pack. The Canstar fund, which quadruples the investor's money after 10 years and yields 12.5 per cent a year thereafter, caught the public's imagination and collected Rs.800 crore. In contrast, the two competing mutual fund schemes with identical offers — Indjyothi from Indian Bank and Boinanza from Bank of India — together collected less than half that amount. Again, in May this year, Canbank launched Canpremium, a scheme like Canstar, with the difference that the minimum investment was fixed at Rs.10 lakh. The target was set at Rs.500 crore; it was achieved in three days between 16 and 18 May.

Speaking about the marketing success of a tax-saving equity linked scheme, Canpep, launched in March this year, Nirmal Suchanti, director of CMF's advertising agency, Concept Communications, says, "It was promoted as a growth scheme rather than just a tax-saving scheme. That made the difference, and helped us end up at number two after UTI. I am sure that CMF would have overtaken UTI had UTI not had special tax advantages."

To a large extent, Canbank's success owes much to the conservatism of UTI and SBI Caps, its major competitors. Both chairman S.A. Dave of the UTI and Parande of SBI Caps argue that they did not come up with five-year doubling schemes not because they felt it was impossible to achieve the rate of return, but because they would rather promise less and achieve more. In retrospect, however, with interest rates having soared since April, CMF's schemes appear to be more and more cannily planned.

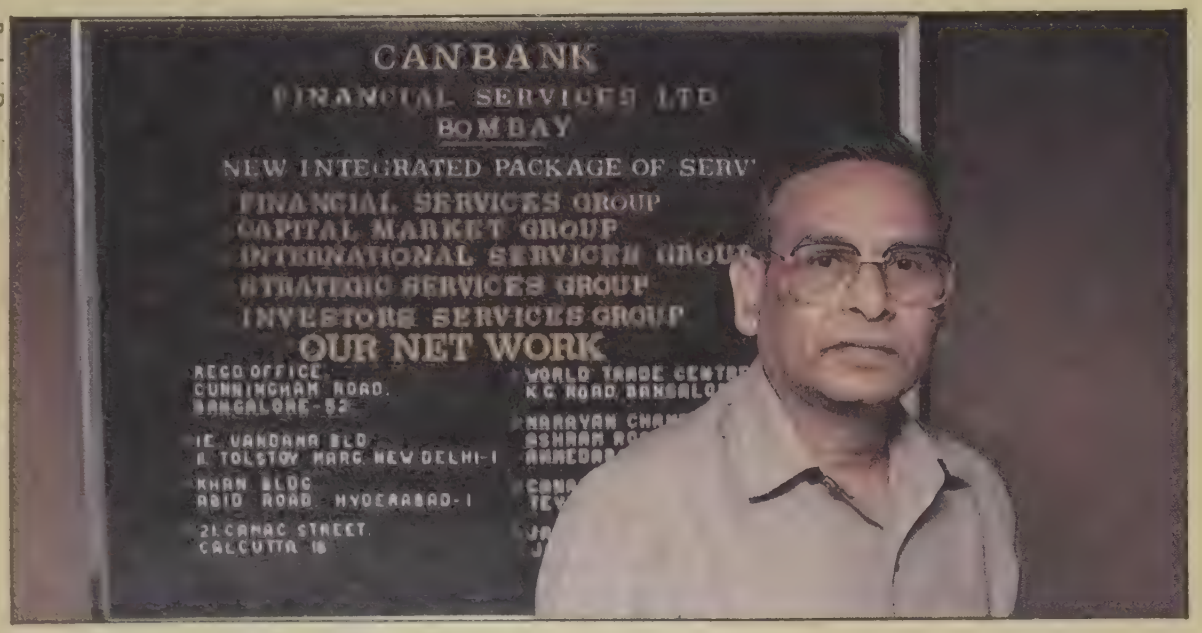
Bank managers, in the initial years, were reluctant to advertise CMF's funds. Says Acharya, "They (the branch managers) felt that it would take away from their own deposit base. But we convinced them that if they did not then some other mutual fund would take the same money. In any case the effect has been less than 10 per cent on the deposit base and it has all come out of growth."

Most of CMF's schemes are fixed-income schemes (*see table*). This is because the urban investor (who makes up almost 100 per cent of CMF's clientele) wants fixed returns. Acharya says, "Even if we give 100 per cent return in equity schemes like Canshare or Cangrowth, we

Ratnakar: supported innovative ideas

CANBANK FINANCIAL SERVICES

Top of the big league



A late start has not affected it much. Set up in 1986, Canbank Financial Services Ltd (or Canfina, for short), Canara Bank's wholly-owned merchant banking arm, quickly topped the major league along with contemporary SBI Capital Markets (SBI Caps). In 1990-91, it was the lead or joint-lead manager in 84 of the 141 public and 59 rights issues that were made. Now, with interest rates high, Canfina itself is soon to go public with a Rs.160-crore public issue of partly converted debentures. That will dilute Canara Bank's share to 60 per cent. Shareholders will get shares at Rs.30 each compared with the book value of Rs.2.89 per share. That said, how good is Canfina ?

While the lending power of its banking arm may have helped Canfina (along with ICICI and SBI Caps) to muscle its way to the top, its functioning still draws praise. "They work like private-sector organisations and are among the best in the business," says M.R. Mondkar, vice-president, J.M. Financial and Investment Consultancy Services Pvt Ltd.

Low margins offset. Merchant banking is a fee-based business with the only risk of loss coming from failed underwritten issues. The post 1985 boom in the capital market removed this risk and ensured Canfina's prosperity. Its gross income rose 50 per cent to Rs.96.42 crore for the year ended March 1991 (*see table*) while net profits rose 49 per cent to Rs.33.75 crore.

Merchant banking makes most of the money for Canfina, but its turnover to total income has fallen from 45 per cent in 1989-90 to 40 per cent in 1990-91. The reason, says executive vice-president K. Mohanan, was the decline in new issues last year (Rs.3,384 crore against Rs.5,868 crore in 1989-90) as well as more joint issue-management involving sharing of management and underwriting fees with more than one merchant banker.

Leasing — Canfina's official business (it is registered as a leasing company) — has compensated for the decline. Canfina's managing director A.P. Rao acknowledges that margins in leasing are low, thanks to ICICI — with its low cost of funds — having come to dominate the field (although this may not continue in the current tight money scenario). But leasing generates large depreciation tax shields, which more than offset the low margins in the business.

Pankaj Desai

Rao: depreciation benefits offset low margins in leasing

Canfina plans to concentrate on leasing, for it needs to earn 51 per cent of its total income from leasing to maintain the status of a leasing company. This allows it to raise public deposits from the market up to 10 times its net worth (Rs.86.81 crore at present). For 1990-91, it issued lease sanctions worth Rs.83 crore, an increase of 63 per cent over the previous year, and plans to maintain the pace, targeting lease income to jump from Rs.36.75 crore to Rs.50 crore in 1991-92 with Bombay continuing to contribute 40 per cent of leasing business.

Hire purchase, which is like leasing except that ownership of the asset (and the attendant tax-benefits arising from depreciation on the asset) is transferred to the lessee, is also a proposed growth area. According to Rao, several recent corporate clients have been reluctant to renew their leases because they want to claim their own depreciation benefits. However, the latest tax-changes in the budget which reduce the depreciation tax shield may well change their point of view.

(Rs in crore)

	Canfina		SBI Caps	
	Mar '91	Mar '90	Mar '91	Mar '90
Profit after tax	33.75	22.58	25.07	18.06
Equity capital	30.00	20.00	50.00	20.00

Investments. Canfina's third major source of income is investments. This includes over-the-counter and odd-lot share trading in about 150 companies, custodial post-issue services (as registrar and transfer agent), stock-broking and investing in capital markets. Its post-issue services are significant. It has more than 1 million folios on hand and acted as registrar to 11 issues in 1990-91. Credit syndication and project advisory services are among its other activities.

Many of Canfina's activities are yet to contribute to the bottomline. The share broking divisions in Calcutta and New Delhi have done poorly. Rao feels that the company will get a substantial business only after it obtains a membership on the BSE.

A Rs.10-crore subsidiary for factoring, (bill-discounting-cum-collection services) has recently been formed with minority shareholdings of Andhra Bank (20 per cent) and the Small Industries Development Bank of India (20 per cent).

A venture capital fund was floated last year. Rao notes that the fund has already committed Rs.5 crore to 18 hi-tech projects. With the World Bank

extending a line of credit for $5 million, another 10 to 15 projects will be financed shortly.

But is such rapid growth manageable? Consider venture capital. At present, the company merely finances projects. It does not provide the other support-services so vital to the success of technology-oriented venture-capital projects, such as administrative and marketing support.

The feeling within Canfina is different. Since a company's financial services cannot be protected by brand names or by tangible asset creation at historical costs, growth is possible only through the entry into new fields.

Retaining personnel is another looming problem. The year 1990 saw the exodus of its executive director and some senior officers, especially in the Bombay office. Whilst R. Kannan, executive director, moved to Standard Chartered Bank along with two senior officers and some junior staff, three other senior staff joined ex-chairman Ratnakar's rival company, Fairgrowth Financial Services.

The Canbank magic. Rao displays confidence when it comes to rebuilding another aggressive workforce. He clearly believes that the Canbank magic that seems to produce good managers will help sustain the company. He notes that when Ratnakar left, many felt that there would be a vacuum. In fact, most professionals in the field believe that current chairman N.D. Prabhu is as successful as Ratnakar.

Rivals, including J.M. Financial's Nimesh Kampani and PNB Capital's Brijesh Koshal, also feel that Canfina's problems are purely temporary and reflect the shortage of personnel in merchant banking generally rather than problems specific to Canfina.

Shitin Desai of DSP Financial Consultants and Kampani, however, believe that Canfina has a long-term problem in that top management rarely stays in place for more than three years — a disadvantage in a risk-oriented business.

Paradoxically, Canfina's expansion plans are in intensive service-related business. For example, there are plans for a mergers and acquisitions (M&A)department. Rao expects slow initial growth as the M&A field remains small, but "whether it makes me a crore of rupees or not, my interest lies in giving it as a service to my customer", he says.

"Investor Service Cells" at smaller centers like Nashik and Pune where Canbank does not have a branch, a training institute and a travel agency — these are a few of the projects Canfina has in mind.

While the menu is diverse and synergies remote, it is clear that the company does not suffer from a lack of confidence. This underpins its growth strategy.

Mohanan: decline in new issues

will not collect more than Rs.100 or 200 crore. That is why we prefer fixed-income schemes with returns higher than bank fixed deposit rates. And, to keep it inexpensive, we prefer not to go in for monthly payout schemes."

How well are CMF's funds managed? A typical day for Acharya starts with a 10:30 am meeting with his fund managers to discuss the day's trades. And by 12:30, the dealing room is abuzz with activity, as fund managers watch the index and stock price movements on the PTI screens and simultaneously talk on the 96 hotlines to the exchange. By 2 pm, when the BSE closes, shares worth about Rs.60 lakh are usually traded. About a dozen brokers get the bulk of the business, although the fund has 150 active brokers.

Research turnaround from Canbank's five-man research staff is quick; remarkably, despite the fact that all recommendations need an okay from Canbank's Central Office Committee in Bangalore, a recommendation received from a broker can be normally converted into a trading decision within 24 hours if necessary.

Such speed raises questions about the poor quality of research that such a quick turnaround could imply. Is it possible to pick a scrip in a day and commit several crores of investors' money to it when fundamental analysts often commit days of painstaking research?

Acharya is quick to defend the Canbank style. "We obtain information from a variety of sources, including research reports from brokers. Why should we invest on plant visits and the like, when we do well as we are doing?" he asks. "We

Harsh Man Rai

BSE: shares worth Rs.60 lakh traded

want a lean organisation." Paresh Khandwala of the stockbroking firm of Jayantilal Khandwala (which is a Canbank broker and intensively researches stocks for them) agrees with CMF's approach.

Of late, Canbank has not been active in stockmarkets, thanks to more profitable opportunities in money markets, particularly the overnight call money market. However, it has bought heavily in the run-up to the most recent boom that has taken the BSE to a new high.

The firm also believes in "churning its portfolio", that is, in buying and selling shares over short periods of time in order to realise profits. The average holding period of the firm's market investments is a mere nine months — with new company shares being held for a longer period than old company shares — compared with over five years for UTI.

The risk is that churning may just raise brokerage costs without raising profits, as any long-term investor in blue-chips can testify. This is especially true in a rising market.

Canbank Mutual, then, is the new

"Our schemes have created history"

N.D. Prabhu, Canara Bank's chairman and managing director talks to Business India's Devaprasad Purokayastha and Manali Reshamwala on the success of Canara Bank's offspring

What is the secret of Canbank-Mutual's marketing success?
Our innovative schemes and liberal income distribution policy have actually created history. Our investors have got good returns. Besides, marketing starts with the design of the scheme itself.

How do you motivate your fund managers?
Our concept is: given the freedom, the required authority and reasonable responsibility, people excel. In other words, 'innovate, improvise and excel' is our culture. A simple and flexible working environment provides the freedom to experiment and seek success.

Then why have several key personnel quit recently?
While we are happy that people working with us are in demand, there is no dearth of competent workers in the organisation.

The initial schemes of Canbank Mutual were undersubscribed by 80 to 85 per cent. Your comment.
The concept of mutual funds was new at that time. Today we have not only rural investors but also the urban elite. Besides, our results have boosted investor confidence and loyalty leading to record breaking collections.

Is it true that Canpremium was pre-

marketed before its official launch?
Of course, for any scheme marketing efforts begin before its launching.

What is your fund's investment strategy?
All our funds are well diversified in the primary, secondary and call money markets. Today, we concentrate on the call money markets because the rates offered are lucrative.

What new schemes are being planned?
We are now planning one for the benefit of children's education and also a pension-type scheme. Schemes specific to regions and popular abroad are also being planned.

Why is Canfina planning to expand more into leasing which is not a profitable activity?
Leasing provides a steady income with the scope of a good future, given the banks' liquidity problems. The key to profitability is a low-staffed organisation. Leasing activities at our Bombay branch are managed by a senior vice-president and a loan officer. They handle 40 per cent of the all-India business.

Does Canfina benefit from being linked to a bank?
No. Merchant banking is regulated by SEBI.

What is the future for Can Fin Homes?
It will continue to perform impressively. At a conservative estimate of Rs.50,000 per dwelling, the resources required to eliminate housing shortage by the year 2,000 is Rs.2,00,000 crore. Surely, there is enough scope for the existing and the new housing finance agencies coming up.

What is the future of financial services in India?
They have been transformed with new instruments, schemes and institutions. When markets expand, new trends surface, changing conditions create new wants that must be satisfied and unusual occurrences offer unexpected opportunities. I visualise an expanding market for innovative and diversified financial services.

whizz kid on the block. At this stage, it is perhaps too busy enjoying its success. It raises funds in a market where its credibility with investors is at a peak. It deploys them in a tight money market with rising interest rates, making returns of 15 per cent a year a snap, and an equity market where the combination of inflation and strong domestic demand will ensure returns of at least 20 per cent a year for the next five years.

Which is just cosy. But, in the meanwhile CMF has some thorny problems on its hands. The first is its high personnel turnover rate. Despite CMF's claims to a corporate culture that encourages success in financial services, its best and the brightest seem to leave much too frequently. After all, why would one stay in a public sector bank at a fixed grade when the private sector offers much more? Or when going on one's own is a more attractive proposition?

Then again, promises made today may seem unreasonable in tomorrow's harsh light. As Parande asks, "Do you think you can predict the rate of interest 10 years down the road? I don't really think

CAN FIN HOMES

Racing ahead

Since its inception in December 1987, Canara Bank's Can Fin Homes Limited (CFHL) has grown at an amazing 100 per cent annually and stands second only to the mammoth Housing Development Finance Corporation (HDFC). It now plans to maintain its scorching growth by expansion, having opened five new branches since last August for a total of 23 branches spread over eight states and two Union territories. The target is to surpass Rs.1,250 crore in loans disbursed by 1995.

By March 1991, it had sanctioned Rs.237 crore to finance 25,000 single-family homes. This was financed by public deposits that rose from Rs.66 crore in March 1990 to Rs.107 crore by March 1991, Rs.50 crore from the National Housing Bank (NHB), other lines of credit and equity of Rs.10 crore (20 per cent of which is held by 120,000 individuals). Net earnings were Rs.3.82 crore or Rs.3.8 per share in 1990-91 and dividends were 22.5 per cent, up from 10 per cent in 1989-90.

"A fine achievement," comments B.R. Ratnakar, former chairman and managing director, Canara Bank (under whose tenure CFHL was introduced). Commenting on its innovativeness, CFHL's general manager, M.R. Prabhakar (soon to join HDFC's Gujarat Rural Housing Corporation as its general manager), adds, "We were the first to offer 20-year loans, exceeding HDFC's 15-year scheme, thereby reducing the payout burden on customers."

NHB's crucial role. Maurice D'Souza, CFHL's managing director, notes that

D'Souza: most borrowers are small

75 per cent of borrowers are small, with loans below Rs.1 lakh. NHB is a crucial part of CFHL's success here. For loans below Rs.1.5 lakh, including for renovation and upgradation up to Rs.30,000, NHB provides 100 per cent refinance to CFHL and other qualified housing finance corporations at interest rates between 1 and 2 per cent below CFHL's lending rates.

NHB also refinances loans to builders and developers, which account for 20 per cent of CFHL's business, at a similar spread. With such narrow spreads, loan recovery (currently stated at 99 per cent) is the key to profits.

Long-term risk. This dependence on cheap funds from NHB is a risk since NHB's new chairman, M.J. Pherwani, has publicly said that he favours higher lending rates in order to maintain the health of NHB.

Speaking to *Business India*, he noted that higher rates need not, in turn, drive housing finance companies into the red as these costs could be passed on to borrowers. Meanwhile, to make housing schemes more attractive, the government could consider other subsidies rather than interest rate subsidies, such as tax-breaks or land subsidies.

The Home Loan Account (HLA), operated by qualified housing finance institutions (including, recently, by CFHL) is another source of cheap money. Investors who tie up their funds for five years at 10 per cent per annum can thereafter borrow up to four times the saved amount at a premium rate of between 10.5 and 14 per cent, compared with a normal range of 12.5 and 18 per cent.

The question is whether investors will be enthused by the combination of future borrowing power and a low interest now (compared with three-year fixed deposits in a regular bank, for example, which earn 13 per cent).

The other risk is loan default. An analyst with a competitor firm who preferred anonymity, implied an underlying problem with recoveries when he noted that "the future of CFHL depends upon its approach to recoveries and they should focus on that aspect of their operations. That and resources: CFHL must handle growth in a manner that is tempered with a sharp focus on resources and recoveries. They should resist playing the numbers game under which high growth figures make attractive reading".

Nevertheless, with its outward expansion begun, CFHL's superior marketing skills will undoubtedly help it to easily surpass the lacklustre performances of the housing finance units of Punjab National Bank in the north and State Bank in the east. Of course, as CFHL's first managing director A.K. Shetty notes, housing finance has few players and growth should be no problem.

A fitting epilogue to CFHL comes from Sridhar Subasri, a deputy general manager of Vysya Bank, who says, "The demand for housing finance is so large (estimated at Rs.100,000 crore) that growth is not a problem, managing it will be."

its possible because all the instruments you have are for around seven years (like debentures). Today, I can be sure that the debentures I've bought will give me a certain yield. But to presume that, at the end of five years, it will become double and our interest rate then would continue to be 12.5 per cent is perhaps too strong an assumption. For example, if in that time we were to become a Germany or a Japan then we will have problems because in the market the interest rates would have gone down. Even if today's moderate inflation continues, we might not have the same interest rate."

Another risk is private sector competition and liberalisation. By the end of 1991, the private sector will be allowed to compete with the existing mutual funds. That is when, as Ramakrishna argues, the public sector will really feel the heat. At present, he says, "mutual funds are a protected species".

The fourth risk is CMF's preoccupation with growth in asset size. As the fund becomes larger, the ability to manage the quality of its portfolio will become increasingly difficult.

These risks do not seem to disturb those who run the fund. It already has over 100,000 investors and expects to end 1991 with about Rs.4,000 crore of investible funds. It is, as Acharya says, ready to face all the challenges that liberalisation will bring. "We are ready," he says, "to be judged on our performance."

■ RAFIQ DOSSANI, DEVAPRASAD PUROKAYASTHA and MANALI RESHAMWALA

SUNDARAM FINANCE

In the giant's lair

India's largest and most successful finance company continues to power ahead despite being criticised often of being too conservative. But some changes might be on the anvil

A giant is taking a small step in the direction of change. Sundaram Finance Ltd (SFL), the country's largest finance company, which, till now, had stubbornly marched to the sound of its own conservative beat resisting all urges to step out of its beaten path of financing hire purchase, is now looking sideways at possible new ventures. It has teamed up with GIC and the State Bank of Mysore to set up a proposed financial services subsidiary. "We want to handle issue management, mergers and acquisitions as also do portfolio management, investment counselling and tax planning," says T. Ramabhadran, the managing director of Sundaram Finance.

For the Madras-based company, this, no doubt, is a major departure from established trend. But would it change SFL's basic image as a hire purchase company? Seems unlikely, at least during the life time of chairman T.S. Santhanam, the founder, who at 78, is still very active. "I set up the company 37 years ago to make money available for road transport industry at low rates. We are involved in the welfare of the truck and bus operators. This is our basic philosophy," he says.

And Santhanam will be true to his words if one goes by precedents. In 1981, when SFL went into leasing, it was among the first few hire purchase companies in the country to realise that leasing activities would help its tax planning. But despite the all-round boom in the industry, SFL has consciously restricted its leasing exposure to less than 10 per cent of its total annual disbursement.

Does SFL need to make any drastic change in its corporate philosophy? Would its 9,000 shareholders and 200,000 depositors, who consider the company safer than most banks, want this change? If its continuing success in its traditional business of hire purchase is anything to go by, an emphatic 'no' would be the answer.

This year, the company surpassed its own record on all fronts. Hire purchase payments shot up to Rs.241.84 crore against Rs.181.15 crore in the previous year. The stock on hire zoomed to Rs.380.87 crore compared to Rs.278.47 crore in 1990. In deposit mobilisation, the company scaled new heights by crossing the coveted Rs.200-crore mark, up by 19-per cent from the previous year. Profit after tax jumped 30 per cent to Rs.12 crore.

SFL rides like a colossus in the hire purchase industry dwarfing virtually every competitor. After 35 years of existence, Sakthi Finance had a stock on hire of Rs.69.03 crore last year with Rs.3.19 crore as PAT; 60-year-old Motor & General Finance, the oldest in the business, had a stock-on-hire of Rs.92 crore and a PAT of Rs.4.86 crore; Nagarjuna Finance's corresponding figures were Rs. 40.62 crore and Rs.1.71 crore; while truck giant Ashok Leyland's own finance company Ashok Leyland Finance, Madras, had figures of Rs.82.14 crore and Rs.3.19 crore respectively.

SFL is part of the giant TVS group, which, until it went into auto ancillary manufacturing in a big way, was in automobile sales and service and marketing auto spares and ancillaries. And Santhanam, the son of the group's founder T.V. Sundaram Iyengar, was known as the financial brain and the planner of the group. He built up one of the most

SFL's office: a colossus in the hire-purchase industry

profitable insurance companies in the world, Madras Motor and General Insurance, which was subsequently nationalised.

Santhanam, who had established good rapport with transport operators on the strength of the group's marketing network, recalls how they were being exploited by the money lenders. "They put a lot of pressure on me to start a finance company," he says. And so Sundaram Finance came into being in 1954 and has been a leader for more than three decades.

SFL was not the first company to come up in the corporate sector to finance the transport operators; the Delhi-based MGF has been in the business for over six decades now. But SFL has always been looked upon as a pioneer because of Santhanam's contributions towards developing the higher purchase industry.

Santhanam: staunch conservative

Santhanam, considered the father of the hire purchase (HP) industry in the country, had strong connections with the State Bank of India and the Reserve Bank. It is well known that SFL has always managed to influence the RBI policies for HP business, and in doing so has done a lot of good for the industry, setting standards for the rest to follow. Says Kailashmull Dugar of Deccan Finance Ltd and the president of South India Hire Purchase Association, "We are very happy to follow the lead of Sundaram Finance."

Ramabhadran: "We use funding sources within limits"

Competitors concede that SFL has single-handedly strived to give HP business corporate respectability. But they lament the fact that the company has not ventured beyond its original business. "You cannot judge SFL by what it has done. That is there for everybody to see. You have to evaluate it by what it has not done. SFL is not a trend setter in the emerging financial super market. It has introduced no new financial instrument. SFL is not innovative," comments one of them.

The company's experience outside the field of hire purchase has been limited and the results mixed. The cumulative value of its own leased assets in the last ten years has been only around Rs.110 crore. A subsidiary company, India Equipment Leasing Ltd (IEL), floated in 1986 by SFL (55 per cent equity) with SBI (30 per cent) and International Finance Corporation, never really took off. Its total receivables as of March 1991 was only Rs.36 crore, of which Rs.17 crore came in 1990-91 alone. Though this compares rather poorly with the company's rapid strides in hire purchase, SFL managers think otherwise. They say it is a steadily growing business and slow growth is a reflection of the abundant caution with which it chooses clients. But critics contend that this is an indicator that IEL is not very comfortable in the leasing business.

In fact, despite being flush with funds it is only in the last two or three years that SFL has felt the need to become a player in the short-term money market. "Inter corporate markets are very volatile. However, not using such markets would mean that we are losing opportunities. We have self-imposed ceilings and use these funding sources well within limits," says Ramabhadran, who joined SFL three years ago, bringing with him a wealth of experience from the SBI and some new thinking. SFL also placed two commercial papers worth Rs.10 crore each last year. It was the first finance company to do so.

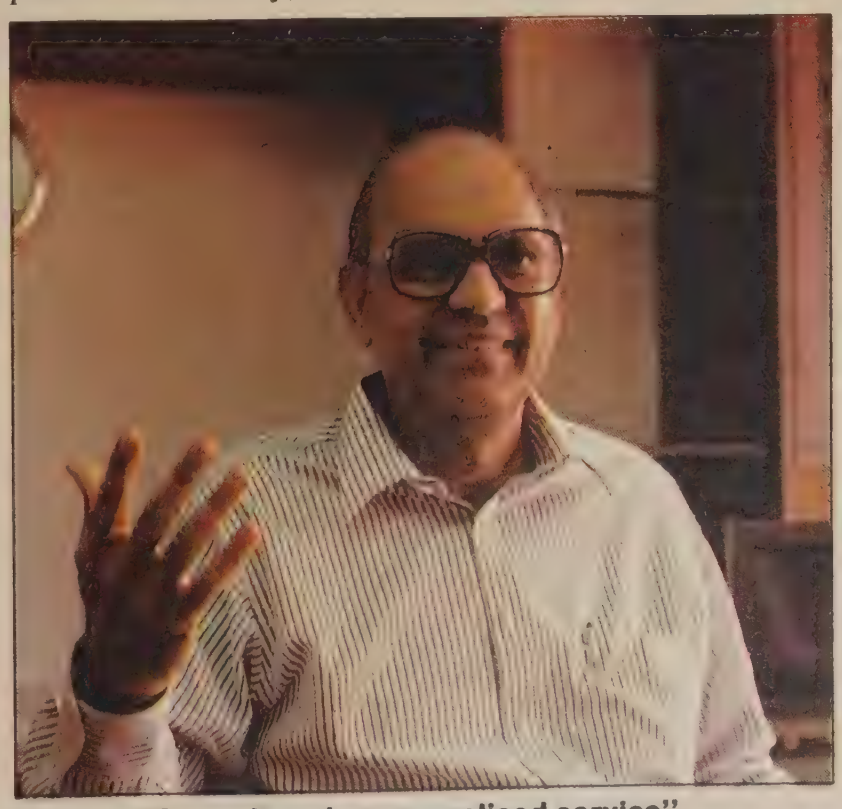
Ramabhadran can also claim credit for setting up the financial services subsidiary. The capital for the new company is expected to be Rs.2 crore, with SFL holding 51 per cent shares, GIC 35 per cent and SBM 14 per cent. The project is awaiting various clearances. In typical SFL style, the management prefers to maintain a low profile about the new venture till every formality is completed.

This kind of conservative approach is ingrained in SFL management. It genuinely feels that it is answerable only to its customers (the transport operators), its depositors, and its shareholders. All these groups have done well under the SFL umbrella.

SFL has believed in building up a personal rapport with the transport operators — the hirers. They have been treated as an extension of the family of the company. "Our culture till today is personalised service at the doorstep of the customer," declares G.K. Raman, joint managing director, who has devoted a life time to HP business. The personalised service extends to helping the operator with banks, insurance claims and so on. Says R. Paranthaman, a transport operator based in Madras, "My family's association with SFL goes back 35 years. We

would not think of going to any other finance company."

The company also scores with transporters because prudent financial management helps it charge lower interest rates from clients. This is then topped with excellent pre-and after-sales service. Pradeep Gada of Sri Ram Dev Roadlines in Bombay, for example, has a Rs.25-lakh limit with SFL which has helped finance six of his trucks. He earlier had an account with Abhudhaya Co-operative Bank. Says he, "I shifted because doing business with SFL is cheaper. While the bank charged me 16 per cent, SFL charges only 12.75 per cent." SFL's rates in fact are cheaper than most other finance companies who charge up to 14 per cent.



Raghavan: deposits are SFL's strength

As for service, according to N.L. Gupta, managing director of Caravan Roadways and president, Bombay Goods Transport Association, "Their service is prompt not only while giving credit but also afterwards. Other companies take two months to terminate the contract after the loan is repaid, SFL does this within 15 days. This is significant for the borrowers as it relieves the asset from hire purchase under the law." He also points to the fact that if there is a delay in repayment in one particular month, SFL is not very rigid and does not take overdue charges like other companies do. "If we are two days late, SFL adjusts the account if we pay the next instalment two days in advance," Gupta says. Adds Gada, "We have a family like relationship. It is credit at the doorstep."

The company has, over the years, developed an extremely efficient collection machinery, with 63 branches and a field officer for every 200 to 250 contracts. They are expected to contact every hirer. "We have believed in giving all our field staff company-maintained vehicles, so they will not have any excuses for not being in touch with the hirers. Our chairman thought of that from day one," says Raman.

Why has SFL confined its activities to the south and the west? This is seen as another sign of SFL's conservative approach to business. "We feel that we should have knowledge of our customers. We don't have it in the north and the east," explains Raman. It was only in 1983 that SFL decided to enter the western region. It took two years to study the market and educate the operator.

But today, SFL is certainly doing well. Its stock on hire in the west is Rs.80 crore with hardly one per cent of carry-over arrears. In Danabunder alone, the transporters' central place in Bombay, SFL has financed about 500 trucks. In the whole of western India, SFL's Bombay branch has so far financed about 6,000 trucks.

Raman: "Our culture is personalised service"

SFL's continued prosperity also no doubt, depends on it loyal family of depositors numbering over 200,000. The practice of putting money in fixed deposits is particularly south Indian and SFL more than any other company has been successful in attracting them. In fact, till recently, it had to put in occasional advertisements in the newspapers to announce that it cannot accept further deposits. It has, in some cases, three generations of depositors. "We have depositors in far flung places like Meghalaya and Andaman & Nicobar Islands," says S. Raghavan, the other joint managing director, who has spent his entire career with SFL.

Over the years, SFL has taken many special steps to serve the depositor better (again setting standards for other companies). For instance, SFL was the first company to introduce a bi-monthly scheme of interest payment so that the depositor will not have tax problems. Permitting premature withdrawal of deposits, working out a scheme of loans by which a depositor can take an advance of 90 per cent of the deposit amount for one per cent extra interest are some of the innovations SFL has introduced for the convenience of the depositor. P. V. Raman, chief executive of Apple Credit Corporation, Bombay, says that his company has learnt to service the depositors from SFL.

The 9,000 shareholders also have reason to feel pleased with SFL. When established in 1954, the capital of the company was Rs.2 lakh. In 1991, the net worth is around Rs.42 crore. Bonus shares account for 92 per cent of the capital of SFL. No other HP company has been able to do it. SFL has, of course, an unbroken record of dividend payments. After a 30 per cent dividend last year, this year despite a 1:1 bonus issue, the company rewarded its shareholders with a 25 per cent dividend.

But in spite of its impressive track record and obvious contributions, many finance industry sources exhibit a sense of exasperation with SFL. It is very difficult to like a leader whose attitude is "What is good for SFL is good for the industry." There are many instances where the industry feels that SFL's practices are too

rigid for the industry to follow, and it hampers newcomers.

Take the case of middlemen, for example. SFL does not have any or brokers either in the HP business or for deposit mobilisation. No incentive of any sort is offered to solicit business, something which no other finance company has been able to follow. But since the HP industry more or less follows the interest rates set by SFL, and the other companies still have to offer incentives, it eats into their profits. And if SFL succeeds in increasing interest payment for deposits (following increase in bank rates), it will inconvenience the other companies further because they will have less to pay for middlemen.

Gateway to prosperity, with no middlemen

The company's conservatism extends to its accounting practices as well. SFL follows the written down value (WDV) method for calculating depreciation in the balance sheet. This method provides accelerated depreciation by which profits are suppressed initially. The Straight Line method, SFL feels, unnaturally boosts profits and misleads shareholders.

Leasing industry sources claim otherwise. "It is easy to provide depreciation in an accelerated form when only 10 per cent of your business is leasing. SFL can recoup the extra depreciation through tax benefits. But newer leasing companies, which have no tax provisions, cannot afford to do this," they say. Critics claim that SFL, through conservatism of this nature, creates problems for new leasing companies specially in the south where shareholders tend to think that what SFL does is the standard for the industry and anything else might be suspect.

There is also a feeling that SFL tends to interpret the RBI rules very narrowly and with the clout built up over the years, the RBI accepts what SFL says. "Today, HP is a mature business and SFL has played a major role in establishing it as such. SFL should now work to liberalise the norms of the industry like raising the bank limits of borrowing from 10 times the net worth of the company to may be 15 times. And do away with the rule which says 10 per cent of the net worth of the HP company should be kept as reserves in a bank," says an emerging competitor.

It is difficult to imagine SFL accepting such criticism. And does SFL think that more liberal norms for the industry is necessarily a good thing? Apparently not. In fact, it revels in its image of the conservative straightforward solid southern company.

Under the circumstances, SFL's foray into financial services is bound to provoke a lot of interest. A huge resource base, high credibility and a massive reach has always provided the company an envious position in the finance industry. It has a ready clientele in 10,000 depositors who are medium and high net worth individuals. The south-based medium and large companies would be more than willing to use the services of SFL. The kind of retail network SFL, along with its partners GIC and SBH, possesses is tremendous. So SFL can become a big player in other financial services as well, observers say. But would it want to, is the moot question.

MAA COMMUNICATIONS 1503

Of what use are 77 satellites in space to people who don't even own a television set ?

Imagine launching 77 satellites in low-earth orbit. Imagine a global communication system linked to these satellites and designed to connect every place on our planet to a telephone - even areas as remote as this desertland. There'll be no problems like laying cables (because this will not be a land-based system). So costs will be reduced. And a dream will come true: that of a phone for every village in India. At Motorola we are exploring many such advanced solutions that can better the human experience.

So that high-technology isn't just relevant to industry.

But also to every Indian.

Taking cognisance of India

Announcing new microprocessors almost as fast as they can compute, the nventor of the silicon chip is paying more attention to the Indian market

Vikram Modak is a happy man these days. And with good reason: as direc-or, southwest Asia, of Intel Asia Elec-ronics Inc, he has just managed to stablish a "clear conduit" to bring the atest in microprocessor technology — to ndia, by linking his office in Bangalore o the Asia-Pacific network of Intel Corp, JS. From now on, his customers here in ndia will be served from Hong Kong, nd not California.

"The regional headquar-ers in Hong Kong have the echnical resources and a aboratory," he says. "All 've have to do is to get on the lhone and ask them for solu-ons to any problem."

Any new information re-ased in the world today is ow available in India al-nost simultaneously. "So roducts too can be released t the same time," says Modak. For example, very on after Intel introduced s i486 microprocessor chip n December 1989, DCM Data Products and Wipro ere using it in new i486-ased computers. These two ompanies were among the rst in the world to do so. ays Veer Sagar, CEO of DCM-Data roducts, "As a Beta site (ie, an organisa-on selected by Intel to test its new prod-cts under real working conditions), we et advance information on Intel's prod-ct plans. So we can launch products in ndia simultaneously with their launch in ne US." Another example of this in the unch of DCM-DP's Cosmos super mini-omputer based on the Intel 80486 chip.

The Intel486 DX chip: superfast computing

astest chip ever

nd in June this year, Intel launched the 60XP or RISC (reduced instruction set omputing) chip. It packs over 2.5 million ransistors and is the fastest thus far. Modak, who announced its launch in ndia simultaneously with the announce-ent in the US, Europe and other world narkets, explains that the 64-bit i860XP combines supercomputer performance and microprocessor technology to accelerate the development of high-end computing systems."

Just two months earlier, in April 1991, Intel had launched the i486SX, a 32-bit chip which has brought mainframe and minicomputer performance to the desktop at an affordable system cost of less than $5,000. It simultaneously announced the 487SX, an optional upgrade which speeds up mathematical computations more than five times, and the 82350DT, a new EISA (extended industry standard architecture) chip set. With the latter, manufacturers can build low-cost computer systems using only 43 components, but which are capable of reaching minicomputer performance levels. These chips have already been despatched to select manufacturers in India for sampling, and commercial shipment will begin in the last quarter of 1991.

The computer industry grew rapidly in the Asia-Pacific region last year, touching total business worth $500 million, thereby overtaking even that of Japan's. If the airliner industry had grown at the same rate, Modak points out, "we would be having planes flying at 500,000 miles an hour"!

The Indian computer industry is also growing rapidly, and Intel is today paying more corporate attention to i business, and helping manufacturers increase their exports. Industry observe agree that exports are essential for dynamic growth, as the domestic market is necessarily limited, however much it grows in percentage terms.

Intel, which developed the first commercially marketed microprocessor, called the Intel 4004, in 1971, claims that 80 per cent of personal computers worldwide are based on its components. And in 1990, its revenue went up 25 per cent to touch a record $3.9 billion, of which the fourth quarter alone accounted for $1 billion.

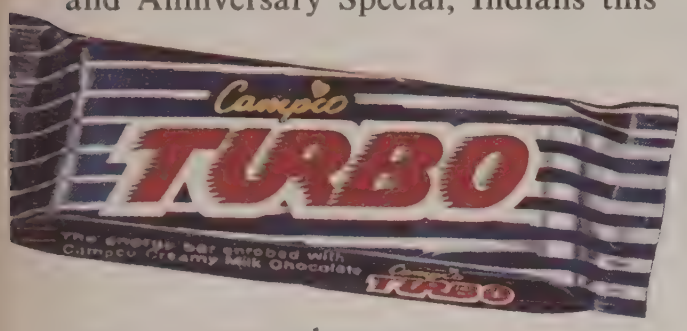
No challenge

Intel has announced a 35-per-cent increase in earnings in the second quarter of 1991, while arch rival Motorola has reported a 25-per-cent drop in overall April-June earnings though its semiconductor business recorded a 6-per-cent increase in sales. In India, Intel does not face any challenge from Motorola as the latter's considerable presence is only in the communications sector.

Surprisingly, though, Intel's India office — set up in late 1988 — accounts for only a 35-per-cent share of markets, even for components which it is supposed to manufacture exclusively. The rest is imported in the form of kits, and comes from what Modak euphemistically describes as "other sources". He obviously means smuggling.

What will bear watching now is how the new tie-up between another worldwide competitor, Hewlett Packard, and leading Indian computer manufacturer HCL Ltd affects Intel's performance, and Modak's personal commitment to double his company's business here in 1991. Because, while HP has landed with both feet in the Indian market, Intel may well be stymied by the fact that it has no manufacturing facility or tie-up, but only a liaison office which is not permitted to carry on any revenue generating activity.

■ SEKHAR SESHAN



CHOCOLATES

The sweet story

Despite being categorised as a luxury item and having to face impediments such as soaring prices of ingredients, the industry is breaking new ground

At a time when chocolates — the cholesterol-rich vice — is taking a back seat in the health conscious West, chocolate makers in India are biting firmly into the hitherto traditional sweetmeat market. Chocolates say it better — be it Diwali or a birthday party. There is a chocolate for every occasion and for every age group. From ordinary milk bars and crunchies to the more exotic fruit and nut, roasted almonds and the latest soft centred designer chocolates — chocolates just swarm the market, offering over 50 varieties to choose from.

Enticed by names as interesting as Jamaican rum and raisin, Treat, Playtime and Anniversary Special, Indians this

year are expected to consume over 10,500 tonnes of chocolate and spend over Rs.100 crore on them. More than ever before, today, many in this business are extremely happy over their burgeoning bottomline. Market leader Cadbury India Ltd sold chocolates worth Rs.75 crore last year, up by 15 per cent from 1989-90. With an over 60 per cent share, it continues to dominate the market as it has for the last 40 years. Companies like Amul, Campco, Parry's and Nestle are constantly endeavouring to grab a larger piece of the cake which is growing at the rate of 15 to 20 per cent a year. Says C.Y. Pal, chairman and managing director of Cadbury's, "More and more people are coming into this industry to provide a healthy competition for us. Also, the market is growing large enough to accommodate us all."

The latest entrant is Britannia Industries, the country's largest company dealing in foods. It has tied up with Lotus Chocolates based in Medak, Andhra Pradesh, a company recently promoted by south Indian film actress T. Sharada, to market the chocolates they make. The growing chocolate market is even attracting manufacturers outside India. Both Mars and Hershey, two of the world's largest confectioners, recently sent teams to visit India to assess the market potential for their products.

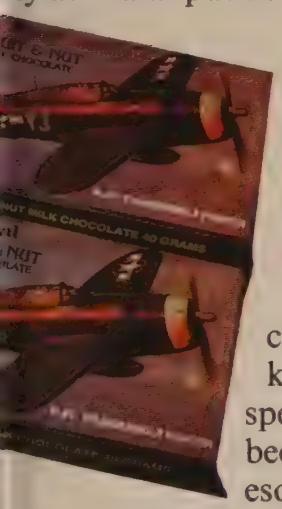
One reason for the growth in this industry has been the growing middle-class with a sizeable disposable income. The new generation too contributes in a way, by acquiring a taste for chocolates. But according to statistics, an average Indian spends much less on cocoa products than on any other food. While in India the per capita consumption of cocoa is still a few grams per year, in the UK for instance, this works out to nearly eight kg a year. Says Vineeta Bali, general manager, marketing, Cadbury's, "These figures can be quite misleading, but if taken in the proper perspective, it shows a vast potential for us."

Amul stepped into the market in 1980 with six varieties of low priced chocolates. Among the better known are Amul orange, Amul crackle and Amul bitter. Initially, their aggressive marketing challenged the virtual monopoly of Cadbury's and threatened to carve for themselves a neat 20 per cent market share. Subsequently, however, they began to lose their edge and settled with a 13 per cent market share.

The success of one egged several others on. Campco Ltd set up a plant in Puttur, Karnataka in 1986, to manufacture 13,000 tonnes of chocolates a year. The company had all the basic ingredients for success — a secure raw material base (its own cocoa plantations) and sound technology from Denmark and Italy. But it was a marketing failure. Laments M.S. Mudnur, managing director of Campco: "Our decision to manufacture white chocolates at that time was wrong." And today, the company derives much of its Rs.12-crore annual turnover out of leasing part of the production capacity to Nestle.

Nestle's international parent is one of the world's largest confectioners. But it was only last year that the Indian subsidiary decided to make a grand entry into the local market. The company bombarded the national television network with a powerful advertisement. With its strong brand image and experienced marketing set-up, Nestle has already dented Cadbury's market taking away about 6 per cent of their market share, despite the fact that its limited manufacturing capacity made its chocolates available only in Bombay and Pune. Cadbury's had finally found a worthy rival.

Nestle is now working to extend its marketing to Delhi as well. But it will be a while before its chocolates are available all over the country. Says Ravi Wahi, manager, corporate relations, Nestle, "We have a well equipped distribution chain — from the point of manufacture to the retail outlets, to guarantee quality products. Hence, we prefer to restrict our distribution only to those outlets which have refrigerated storage."



However Cadbury's refuses to acknowledge Nestle as a major competitor yet. Says Bali, "They are far too small for us." But ever since this multinational's arrival in the market, Cadbury's has launched several new products in the premium end of the market, say, Classic Selection, All Silk, etc, seemingly to take Nestle head on.

Competition between the two multinational giants is acquiring newer forms every day. If Nestle offers a free pack for five empty wrappers, Cadbury's counters by giving a free Hotshot camera for 40

wrappers. "We sold a year's stock of Cadbury's in barely two months," says a manager of Sahakari Bhandar, a department store in south Bombay. The Cadbury's scheme has been so effective that it is well worth watching Nestle's next move.

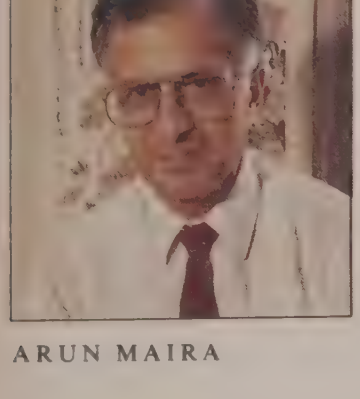
Like Amul in the early eighties, Nestle has given a new impetus to the chocolate industry today. But in the battle of the giants, it's the smaller manufacturers who experience the squeeze. While Campco has hired part of its production facilities to Nestle to survive, Sathe, an old-time Pune-based manufacturer, has moved out of the competitive retail market to cater only to five-star hotels where they supply the product in bulk. Dr Writer's, another old-time manufacturer, which is part of the Apte group, has also opted out of the race, having concluded a deal with Cadbury's to hire its manufacturing facility at Malanpur in Madhya Pradesh.

But companies like the Taj group of hotels has proved that, in the absence of a strong brand image and a large sales force, one can always tap special niches in the market. Taj's range of speciality chocolates has been a big success. With esoteric names like Florida Truffle, Grande Menthe, Brandy Creme, Taj is famous for its range of 16 different flavours of moulded chocolates meant mainly for the elite. Priced anywhere between Rs.200 to Rs.400 a kg, these are available only at Taj outlets in Bombay. Their success has led to a series of rival products like Choco Swiss in Delhi and Chocolat in Pune, Campco in the south and Overtures by Cadbury's in Bombay.

Taj's success in Bombay is also an indicator of the fact that despite burgeoning sales, chocolates are still essentially products that sell largely in major metros. A perishable commodity, it needs to be stored in constantly cool temperatures. Hence, distribution is particularly tricky. In fact, at 10-15 per cent of the total cost, distribution is as expensive as production. This is why the chocolate industry has not developed widely outside cities like Bombay, Delhi, Madras and Bangalore despite the eagerness of manufacturers.

Another impediment in the way of growth is the high cost of raw materials (mainly milk, sugar and cocoa). The price of milk, which alone constitutes 40 per cent of the raw materials cost, has shot up tremendously in the last two years. Also, the government has traditionally treated chocolates as a luxury item and hence the industry does not get the benefits that are available to other agro-based industries.

According to P. Chakrabarthy of the National Dairy Development Board, Anand, the makers of Amul chocolates, "The government can help the industry by giving a fillip to cocoa growers and by rationalising the various taxes. If the taxes are made cumulative, then chocolate prices could defintely come within the reach of all." Today, the minimum one pays for a bar of chocolate is around Rs.5. "We are compelled to pass on the increase in cost of production to the consumers. As a result, profit margins are falling," says Bali.



Despite the high prices, chocolates will still be very much a part of the urban Indian's daily life in the coming months. With the new entrants waiting to grab chunks of the delectable market, and the oldtimers straining to clutch on to their share of the goodies, the Indian consumer can look forward to tasty times.

■ SHAMPA KAR

CHOCOLATES

Towards high performance

ARUN MAIRA

Finally, we came off our high horse and down to earth. We are in the growing line of countries that are desperately competing for markets in the developed world to earn the resources needed for modernisation and growth. South East Asia, Latin America, Eastern Europe and now India. At the same time, the Indian government, like governments elsewhere, is stepping out of the marketplace. The ball is being passed on to the heads of our business organisations. Whether India makes it in the international marketplace will be much more a question of whether Organisation A in India has higher performance than Organisation B in Mexico than the export promotion schemes in these countries. An increasing number of chief executives all over the world are concerned with understanding what constitutes a high performance organisation; more significantly, how to develop one faster than their competitors.

Common characteristics

Excellent organisations in different industries share many common characteristics: focus on customers and a propensity for teamwork. The universal applicability of organisational development (team building, attitude change, etc) type programmes across all functions has resulted in a market for such programmes, many of which are currently sold under the 'quality' banner. Like good physical fitness programmes, these improve the sense of wellbeing in the organisation as also performance. However, there is a growing body of evidence, anecdotal and researched, that such "programmatic change" often does not produce results in areas that really matter — or not fast enough.

High-performance organisations develop unique abilities and build businesses around these core competencies. For example, Honda has developed several successful businesses around its core competency in engines. And Sony has leveraged its competency in miniaturisation.

But all successful organisations like Honda and Sony also have most of the universal characteristics referred to earlier. Therefore, high-preference organisations have both universal characteristics of organisational excellence and focused abilities related to their businesses.

Core competency is necessary but not sufficient for business success. Ricardo Engineers in the UK are known for their expertise in engines and are consulted by auto manufacturers from all over the world. Honda and Ricardo Engineers both have core competencies in engines. But they are in different types of businesses. Product development, including engineering and manufacturing, is a key process for Honda and manufacturing a principal value-adding function, but not for Ricardo Engineers. Hence, organisations with the same co competencies, may need strengths in different pr cesses and organisational functions.

Key factors

Organisations are created to carry out some mi sion, to meet some social and/or business need. A most always they must do this in competition wi others. It is necessary for an organisation to co tinuously redefine the need that it must fulfil, ar how well it does so relative to its competitors. must also improve the process by which it delive its outcome — product or service — to fulfil th need. The questions are "What are the critical su cess factors for our organisation?" and "What ar the key processes which determine our perfo mance?" The key processes may be common fo all firms in one industry but would differ acros industries. Organisational improvement pro grammes must first address these issues.

The next step is to determine the principal fun tions (or units) in the organisation involved i these key processes. These functions have to carr out activities integral to the process. They ad "value" as the process proceeds to its outcom For example, engineering is a principal function i the products development process. These func tions have to comprehend and improve the overa process, understand their roles in it and clarif their interfaces.

Direct and indirect involvement of the variou functions with the key processes selected for im provement can be determined. Enhancement o the capability of these functions must be the high est priority.

Enhancing the capability of a function can re quire two types of actions. The first is improvin its specific functional capabilites — its technica skills, its equipment and its functional processes The second is the development of internal tean working skills, performance review procedures etc. The former are specific to the function. Th latter are applicable to many or all functions of th organisation. One could think of the former as th skills required to play the game, differing wit games, and the latter as physical fitness, require for all games. The recipe for improvement re quires both types of ingredients. A good diagnosi should lead to an integrated plan to provide th required inputs.

Whether India makes it in the internationa marketplace and whether some Indian companie will make it even within the more competitiv domestic market, will depend on how well an fast Indian firms can improve thei performance.

Shhhh.

Discover the secret that Telco, Maruti, Premier, Ashok Leyland, Eicher, Bajaj, DCM-Toyota, Escorts and Mahindra & Mahindra share.

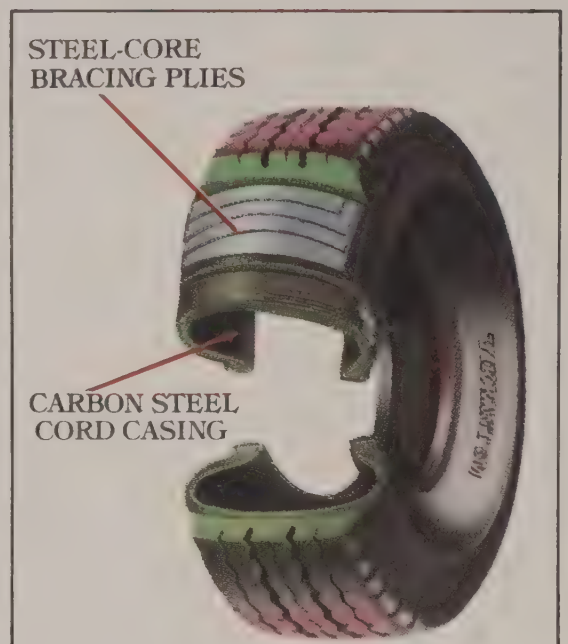
There are whispers in the automotive industry. Whispers about the Standard Furukawa battery's outstanding performance.

And that's not very surprising, really. Considering that the battery is made by The Standard Batteries Limited, an associate of the Macneill and Magor Group, in technical collaboration with The Furukawa Battery Company Limited of Japan.

Furukawa is the largest supplier of O. E. (Original Equipment) batteries to Suzuki, Japan, and is also a supplier to Honda, Nissan and Toyota.

What's more, the Standard Furukawa is made with 1.8% selenium. It has the lowest antimony content amongst all Indian batteries. Which means, it needs topping up less frequently and less maintenance. That's why the last 18 months have seen more and more leading manufacturers using Standard Furukawa as O. E. batteries.

So if you're replacing your vehicle's battery, listen to what the manufacturers are whispering about. The performance of the Standard Furukawa battery.



STANDARD FURUKAWA AUTOMOTIVE BATTERIES

Advanced, by design.

An open challenge

Has any tyre company made All Steel Radials for trucks? The question now is : *why not?*

For most tyre companies, radials made with textile casing and steel belts represent the limits of tyre technology. The only company to have gone beyond these frontiers into the realm of All Steel Radials, combining steel casings with steel belts, is Vikrant. Vikrant makes these tyres for heavy commercial vehicles whose demands are greater than those of LCVs and cars. Why is it, then, that Vikrant has succeeded and others haven't? The answer lies in Vikrant's approach to the radial challenge. Vikrant went about it with the single mindedness of an inventor. It tapped the vast technica resources of Avon, buil prototypes, followe their performance, wen back to the drawing board and carried ou improvements. In othe words, it didn't merely 'borrow' the technology it tailored it, made i workable. In a sense, Vikran invented this technology for India

Vikrant's All Steel Radial

At Vikrant, each and every Radial tyre goes through an X-ray c

from Vikrant.

and buses? Has anyone followed Vikrant's treadsteps?

The result is that India now has access to a special tyre that can bring down fuel bills by 4%. Consider this logic: if a transport corporation were to radialise 10,000 buses, it could, with the savings on fuel alone, add more than *one hundred new buses* to its fleet every year. In additon, the corporation would reduce annual tyre expenses because Vikrant's All Steel Radials travel twice as far as conventional tyres. The expected lifespan of a Vikrant All Steel Radial can be a staggering 300,000 kilometres or more. If this is the case for All Steel truck and bus Radials, as indeed it is, then why haven't other tyre companies invested in this technology? One wonders. Vikrant has shown that the Radialisation of public and goods transport isn't a simple matter of technology transfer. It requires the spirit of a pioneer, a deep understanding of the severe conditions and loading practices prevailing in the country. It requires expertise to create an All Steel Radial for this environment. The challenge is really that. A challenge that the others haven't yet been able to meet.

40,000 Vikrant Radials are already in service

Technology no one else has.

VIKRANT

"Why do I prefer the Daily Thanthi for reaching Tamil Nadu?"

"Because 38% of the graduates in Tamil Nadu don't read English dailies."

தினத் தந்தி
DAILY THANTHI

Some advertisers imagine they can reach graduates in Tamil Nadu effectively through the leading English daily.

Here are some facts that'll help them see the light.

First, 38% of the graduates in Tamil Nadu don't read any English daily.

Second, more than 3,60,000 graduates read the Daily Thanthi.

And third, the cost of reaching each of these graduates through the Daily Thanthi is 7% lower in Tamil Nadu and as much as 59% lower in Madras city than through the leading English daily.

The Daily Thanthi is as effective in other vital segments too – people with a monthly income of Rs. 2,000 and above, officers, businessmen, executives, professionals and those who are socio-economically forward.

So, when you think of corporate, financial, or business advertising in Tamil Nadu, it pays to prefer the Daily Thanthi.

Because no other daily, Tamil or English, gives you such quality readership, with such cost-efficiency.

THE DAILY THANTHI • NOT JUST THE NO.1 TAMIL DAILY • THE NO.1 DAILY IN TAMIL NADU.

NEW OIL POLICY

Missing the obvious

Among other things, the new government must first address the problem of the growing energy crisis. In fact, import of petroleum products largely contributes to the overall import bill and the resulting deficits. Thanks to the IMF loan, the immediate crisis may be averted. However, unless we take some hard and even unpopular decisions on our energy front, a long-term solution will be impossible.

Our energy problems stem basically from two things — first, lack of long-term planning and second, too much emphasis on the government's view to retain "notional" control and keep energy and related industries in the public sector. The performance of some of the key "energy" producers such as ONGC looks good on paper, though it leaves a lot to be desired in actual practice.

Stagnant production

The requirement of petroleum products has been growing at well over 5 to 6 per cent per year. Indigenous production, which took a quantum leap in the late seventies and early eighties as a result of the Bombay High discovery, has remained stagnant at about 30 million tonnes per annum (mpta) in the last five years. In fact, due to political problems in the North East and some internal problems related to field operations, total crude oil production has reportedly fallen by about 2 or 3 million tonnes this year. However, consumption of petroleum products has been steadily rising. This year it is expected to reach well over 55 million tonnes. The gap between consumption and indigenous production is increasing every year. This year it is expected to be 28 million tonnes, costing the country over Rs.10,000 crore in foreign exchange to import .

There are three main issues which need to be addressed:

Are we using petroleum energy efficiently?

What do we need to do to increase supplies?

How can we properly utilise flared natural gas?

It is well established that Indian industry is in general highly energy intensive. Basically, there are two stages of conservation. In the first stage, we need good house-keeping; from simple things like turning off lights when not required, to properly insulating steam lines. It is estimated that such house-keeping discipline can save 10 to 15 per cent of overall energy consumption. This would cost industries nothing — only an appropriate monitoring system would need to be initiated.

Monitoring required

In the second phase, a number of energy-saving devices such as an air preheater in the stack gas and more efficient heat exchange schemes can be installed in any existing industry. Such measures can also save another 10 to 15 per cent of the overall energy consumption. However, an extensive energy audit backed by some investments would be necessary to implement this second stage. To promote these conservation measures, it would be necessary to devise a system of monitoring backed by financial incentives in terms of tax write-offs for investment.

External efforts in oil exploration need to be made both more intensive in areas already explored and more extensive to cover new ground

No significant new discoveries have been made in the last 15 years. If this trend continues, in another five years we may well be faced with a gap of over 50 mtpa of petroleum products, rising to 75 mtpa by the turn of the century. The question before us, therefore, is to see at least how this gap can be narrowed. Are the current exploration efforts by ONGC and OIL enough? Awarding of areas for exploration to multinationals itself is a recognition of the fact that external efforts in oil exploration, therefore, need to be made both more intensive in areas already explored and more extensive to cover new ground. Abroad, the bulk of new discoveries have been made by small and medium-size independent oil companies. These companies can work more effectively in India with participation from the private sector.

It is believed that the Indian private sector is both technically and financially ready to participate in complex areas like oil exploration. They can effectively combine with small and medium oil companies and intensively explore the Indian basins. Large multinational companies have been known to move away from small discoveries. The second aspect is quicker development of already discovered fields. The government and therefore ONGC are facing severe financial problems. Development of already explored fields like Neelam at Bombay offshore and Gandhar onshore in Gujarat has slowed down significantly. This slowdown cannot be in the short or long-term national interest. ONGC can work out joint development programmes with Indian public, NRIs, etc. An innovative approach to raising finances must be adopted.

Behind schedule

Exploration programmes of several highly prospective areas are significantly behind schedule again, possibly due to the financial crunch and general delay. For example, the exploration drilling programme in the Gulf of Cambay which can be considered to be an extension of the already promising Gandhar field is delayed by over two years. It is understood that the tender is being reissued.

In addition to crude oil, ONGC has discovered fairly large quantities of natural gas in both Bombay High and onshore Gandhar fields. Natural gas has been discovered both as associated gas which is produced along with crude oil and as free gas produced from gas reservoirs, and can be produced as required. Since our country is short of petroleum products, crude oil — especially from Bombay High — must be produced at optimum rates.

As a result, we produce large quantities of associated gas. While liquid petroleum products can be transported by pipeline, truck, or railway wagons, natural gas which occurs in gaseous states requires a highly capital-intensive dedicated pipeline. Accordingly, distribution of natural gas requires a good deal of advance planning.

Recognising this, the government has

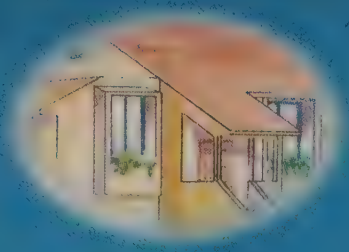
set up a number of committees to establish gas utilisation and planning of distribution networks. The committees have made their recommendations and some of them have already been implemented. This method has proved highly inadequate as natural gas production has been constantly changing. For example, when oil production from Bombay High reached its peak in the mid-eighties, only half of the present quantity of associated gas, ie, only about 20 million cubic metres/day (mcmd) was being produced. The committees set up by the government to establish gas utilisation have always concentrated on major users, namely fertiliser, power and to a lesser extent sponge iron. Even though the Gas Authority of India Limited (GAIL) was formed specifically to market natural gas, we are burning about 14 mcmd of natural gas valued at well over Rs.2,000 crore.

In all the planning efforts of natural gas utilisation, emphasis has been placed on bulk utilisation for fertiliser and power. While it is accepted that the primary users must remain, it must also be borne in mind that these projects require very large investments. Coupled with the investments required for natural gas transportation, the investments become astronomical. For example, investments required for the offshore pipeline to bring South Bassein gas to Hazira and the HBJ pipeline from Hazira to transport natural gas to Madhya Pradesh, Rajasthan and Uttar Pradesh were well over Rs.3,000 crore. The six fertiliser and three power projects planned along with the pipeline would add another Rs.10,000 crore. At no time in the last decade, and even more so in the present, does the country have the capacity to make such large investments in one sector. As a result, three fertiliser projects are yet to come up and the other three have come up only after much delay.

Castles in the air

It is understood that a new scheme is being devised to utilise flared as well as additional available gas for large projects in north India at transportation costs estimated at well over Rs.10,000 crore. This does not include costs of new fertiliser and power projects which would be necessary to absorb natural gas. Such schemes are only comparable to building castles in the air and have as much chance of succeeding. It is feared that flaring natural gas worth over Rs.2,000 crore per year will continue. Lessons learnt in last decade seem to be completely ignored.

What then is the answer? We seem to be missing the obvious. Importing of petroleum products causes a big drain on the economy. Natural gas can substitute most petroleum products in their use: fuel oil for industrial use, LPG and kerosene for cooking and lighting, gasoline and diesel in the transport sector. The second point is that the users are available both in Maharashtra and Gujarat, and so we can save petroleum products as well as improve overall energy efficiency by co-generating power and heat.



We are spending over Rs.10,000 crore on importing petroleum. The government must, therefore, take immediate steps to formulate a more realistic oil policy and implement it at the earliest

The Gujarat government, it is understood, has offered to bring natural gas from offshore and put it to immediate use within the state without any support from the Central government. We should not ignore a proposal of this nature for relatively highly capital-intensive proposals. Given our dire financial state, we have to concentrate on the fact that we are spending over Rs.10,000 crore on importing petroleum. The government must, therefore, take immediate steps to formulate a more realistic oil policy and implement it at the earliest. While formulating the revised policy, the new government should consider and incorporate the following issues:

- Our industry and transport network is highly energy-intensive, and schemes appropriately backed by financial incentives and monitoring agencies need to be immediately considered.
- India is still highly under-explored. Rather than leaving exploration to ONGC and OIL — the Central government agencies — an aggressive policy need to be initiated whereby:
  - Where marginal pools are discovered but not developed, they must be immediately farmed out to interested parties for development. Farming out such pools is an accepted international practice.
  - Exploration activity must be significantly increased to discover and develop presently known resources of hydrocarbons. The past practice of formal rounds has proven to be highly time-consuming and cumbersome. It would, therefore, be advisable to keep the prospective areas open for negotiations with interested parties on a continuous basis. The areas can be identified after ONGC and OIL are given their areas.
- To ensure proper implementation of the work programmes, negotiate contracts, collect and store data, and obtain new data as desirable, a monitoring group directly reporting to the petroleum ministry would be desirable.
- The Indian private sector has shown its willingness to participate in exploration activities. In the exploration field, there are a number of Indian private-sector companies operating in the areas of seismic data acquisition, drilling, etc. These companies are given price preference. Similarly, not only should the Indian companies get participation but also encouragement in the form of certain incentives to participate in such activities. Indian companies can save valuable foreign exchange for the country and also raise capital for exploration outside of government sources.
- Natural gas utilisation which is by and large reserved for large power and fertiliser projects must be freed for industrial use, thereby replacing petroleum products and saving valuable foreign exchange. To ensure quick absorption of natural gas into the system, the following needs to be done:
  - Free the restrictive practice of allocating natural gas only to large users. Industries using petroleum products willing to convert their existing industries to natural gas must be given necessary priority.
  - Gas transportation is expensive and requires large capital investments. Wherever possible, private-sector participation should be encouraged.
  - Like crude oil, there are a number of undeveloped small and marginal gas fields. Private sector firms interested in developing and making the necessary marketing arrangements for natural gas must be given encouragement and allowed to develop and market natural gas under an overall policy framework of pricing.

THE SECCOLOR WINDOW IS GUARANTEED TO STOP UNWANTED WATER SUPPLY TO YOUR HOME, EVEN IN THE FIERCEST OF MONSOONS.

It may rain, or it may pour. ■ Not a drop that you don't want will come into your house through a Seccolor window. Because of its unique perimetric sealing and its weather-stripped design, this window is equally adept at keeping out other unwanted elements like noise and dust. ■ Unlike traditional wooden windows or the shoddy mild steel windows, a Seccolor window is a complete window system. With Seccolor you don't ever need to visit a carpenter, a hardware merchant or a handyman. ■ It is guaranteed to last the lifetime of your house, or your office building. Without any maintenance. Ever. ■ It is completely rust-proof. Fire-proof. Termite-proof. Water-proof. In fact, weather-proof. ■ That's because Seccolor windows are made from specially treated imported steel. They are pre-painted with non-fade, non-peel colours that require no re-painting. And are precision-engineered to open and shut without a whisper. ■ The biggest plus, of course, is their brilliant look. So modern, elegant and bright. ■ Install a Seccolor window today. It's the modern alternative to traditional wooden and aluminium windows.

THE SECCOLOR WINDOW. THE MODERN ALTERNATIVE TO WOODEN OR ALUMINIUM WINDOWS.

LEVER VS VELVETTE

Storm in a sachet

In the southern shampoo market, a battle for supremacy is on, but market leader HLL is not going to give in to competition from the SSI, particularly when they infringe trademark rights

The smaller the packaging the bigger the bucks. Amongst the first to latch onto this marketing concept was C.K. Rajkumar whose Velvette shampoo sachets raised a storm in southern markets when they were first launched. The uniquely packaged Velvette, priced at Re.1 per sachet, outsold many established names, picking up an astounding market share of 16 per cent in that region.

Last month, Rajkumar found himself in the eye of a different kind of storm. This one has been raised by market leader Hindustan Lever Ltd which recently secured an injunction from the Madras high court against three small-time shampoo manufacturers who supply to Pharma Care Ltd, Rajkumar's company. Godrej Soaps Ltd, which distributes Velvette, has been named co-defendant.

The multinational claims that Rajkumar has played dirty by cloning the design, colour and logo of their heavily advertised and successful shampoo brand, Clinic Plus. Lever feels that the striking similarity between Velvette Plus launched 18 months ago and their brand is no coincidence. Both are blue packs with a cross symbol, show a picture of a family and have the 'Plus' sign in their brand names.

Purely coincidental

Rajkumar feels that these objections are unfair. "Ours is a steel grey package unlike Clinic Plus which is light blue. Everyone has a right to use a family picture. Besides, the cross is barely visible on their package." H.K. Press, Godrej Soaps' marketing chief echoes this view. "There are no similarities between the two," he maintains.

Despite this defence the court has ruled in Lever's favour. Velvette has been asked to withdraw the offending pack and refrain from using the four features that are distinctive to Clinic Plus. The case begs the question as to how a small regional entrepreneur become a force to reckon with for a multinational giant.

Rajkumar can be considered the sachet pioneer. A qualified medical doctor, he entered business on his father's death who left a legacy of a shampoo formulation. According to Rajkumar, this is a low-tech product that is eminently suited for small-scale manufacture. His only innovation was therefore the packaging.

Rajkumar: 'I have helped the consumer'

Though nowadays Rajkumar drives around in a Mercedes Benz, his beginnings were humble. He recalls the days when he used to pedal around on a bicycle trying to hawk his product. Velvette was clearly aimed at the middle segment. Its low price pack was meant to induce those who used soap to try out and eventually switch to shampoos.

Until 1987, Velvette remained only a regional brand, despite a marketing tie-up entered into with Voltas in 1981. The turning point was when Godrej came into the picture and took up Velvette's distribution and marketing in right earnest. In 1988 Velvette went national. And it gradually expanded its range to six varieties. Though Rajkumar is reluctant to reveal details, the estimated turnover of Pharma Care is around Rs.10 crore and there are more than 100 units manufacturing Velvette shampoos.

Currently, Velvette's 16 per cent market share in the south has almost caught up with the market leader's. Clinic scores 19 per cent and Lever's other brand, Sunsilk, has a 16 per cent share in the south.

'Unfair' advantage

Being in the small-scale sector, Velvette enjoys an excise advantage over larger manufacturers. Indeed Velvette's success spawned a host of new brands made by small entrepreneurs whose cheap products began to nibble into the market share of the established names.

Though unremunerative for Lever, which pays a whopping 110 per cent excise duty, it was forced to enter the booming sachet market in 1988. At Rs.2.50 for a 10ml sachet, Sunsilk was pitched against Velvette which had managed to hold its price down at a rupee. Subsequently, Sunsilk reduced its pack to 5 ml, pricing it at a rupee to match Velvette's price. "My success really lies in making Hindustan Lever come down to one rupee. I feel I have helped the Indian consumer," says Rajkumar.

According to him, the multinational hasn't been playing fair in the past and has been using its clout with retailers to stop them from displaying his product. Velvette has succeeded despite this. Which is why, perhaps, Rajkumar appears unfazed by such head-on confrontations.

■ SUSHILA RAVINDRANATH

AYURVEDIC REMEDIES

An untapped potential

Nature cure is back. And though demand for both ayurvedic remedies and raw herbs at home is not much, a large exports market is opening up

With a growing number of side effects associated with chemical drugs, there is a worldwide trend to go back to nature cure. Can the ancient Indian system of herbal medicine, ayurveda, therefore benefit? Perhaps, but there are several problems.

If they can be surmounted, there is very good scope for Indian ayurvedic remedies as well as raw herbs, both of which are exported. According to the Basic Chemicals, Pharmaceuticals and Cosmetics Export Promotion Council (CHEMEXIL), India exported Rs.3 crore worth of ayurvedic remedies last year. The sales were to over 53 countries, the largest buyer being the USSR, which imported goods worth Rs.1.18 crore. Some of the most popular products were Liv 52, a medicine for impaired liver functions; Zandu balm, used to combat colds; Dakshna churan, a digestive, and Chavanprash, a general health tonic.

Precious resource

The export of herbs however outstrips that of ayurvedic remedies, and amounted to Rs.87 crore last year. "We should not export raw herbs, because it is a precious resource which is being taken away very cheap from the country," says H. Karstein, exports manager at Himalaya Drug Company. "We need to do some preliminary processing here, so that value is added and employment generated." Isapgol, a laxative, is the major raw herb being exported (about Rs.40 crore annually), primarily to the US.

"The potential for export of ayurvedic remedies is tremendous," says K.M. Parekh, director, Zandu Pharmaceutical Works, one of the largest ayurveda manufacturers in the country. According to one estimate, "The potential market for herbal products is worth £4,000 million annually." Starting in 1910 with a 500 sq. ft. factory in Parel, Bombay, Zandu now has five factories and sales of over Rs.20 crore.

The most crucial problem facing exporters are the food and drug regulations in various countries. Explains Karstein, "They ask for the chemical composition of the remedy and the chemical structure of each ingredient. You can't do that with a herbal-based remedy. It's possible only if you just mix chemicals."

Another problem is the supply of raw materials. Over 400 herbs go into ayurvedic preparations and most of them are collected in the wild. The lack of even one herb can mean that a whole range of products cannot be manufactured. Locating the herbs is becoming more difficult because of deforestation. Zandu has set up a foundation to do reseach on the cultivation of herbs. "But the task is difficult and time consuming. We may need one type of root which takes three years to reach the size of three inches. Will it be economical when cultivated?" asks Parekh.

He feels that encouragement from the government could help matters. "In China doctors in public hospitals have to first try a Chinese remedy. Only if it doesn't work do they shift to chemical drugs. Such a policy has meant a wide acceptance of the remedies, and the opportunity to do field research. In India, though there are over 75 teaching institutions for ayurveda in the country, there is very little research and testing." Government assistance is also called for, he points out, since ayurvedic medicines are made from locally available herbs and do not require any raw material imports as in the case of allopathic medicines.

It was only in 1969 that the Indian government constituted the Central Council for Research in Indian Medicine and Homeopathy. But an attempt is now being made to speed up matters. CHEMEXIL is currently in the process of bringing out a book on medicinal plants used in India because foreigners are still unaware of the full range of products available here. According to executive director K.C. Menon, the book will include the nomenclature, historical aspects, pharmacology, clinical usage, etc of selected Indian plants.

Surveys carried out by CHEMEXIL have indicated that there is a tremendous potential for export."I feel that we can easily export up to Rs.20 crore worth of ayurveda remedies annually," says Menon. What is needed is an all-out effort to spread awareness abroad about these local remedies. And, of course, encouragement from the government.

Available through company nomination only • Honoured at over 15,000 establishments all over India • Cash withdrawals between Rs.10,000 and Rs.20,000 at Citibank's 24-hour ATMs • Instant information on card related queries on the phone • For details, just call: Bombay 202-2233, Delhi 371-2277, Calcutta 29-2002, Madras 47-3344.

HTA 7806

Back to the rain god

The increasing dependence of crops on an erratic monsoon pattern can throw this year's agricultural output out of gear

If anything can upset the finance ministry's carefully designed programme to correct inflation, it will be a reduction in agricultural output. This fear is close to coming true with delay in the arrival of the monsoon over the crucial north-west Punjab, Haryana and Uttar Pradesh, the belt that produces a large part of the country's agricultural surplus.

About 70 per cent of the cultivated area is rain fed. This makes crop output vulnerable to weather fluctuations. Among the kharif crops, 43.6 per cent of the area under rice has access to irrigation whereas only 19.8 per cent under oilseeds cultivation does. "Output of these two crops will certainly be affected," says an agriculture ministry official.

In the last 20 years, more and more areas in the north west plains have been brought under rice cultivation, mainly for its remunerative value

On the dot

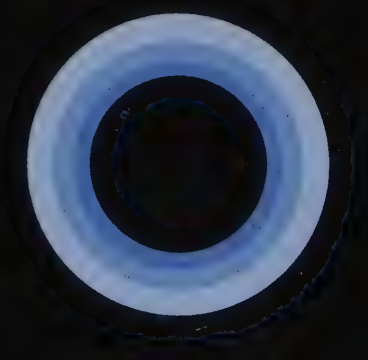
With three consecutive years of good monsoon, prospects for a fourth good one seemed dim. The Indian meteorological department, nevertheless, did predict a timely monsoon, though marginally below normal (an average of 88 cms of rainfall is considered normal). Right on prediction, the monsoon arrived in Kerala only a day behind schedule while in Bombay, it was actually a day early.

Subsequently, things proceeded normally till 15 June this year, then stagnated until 11 July. The ministry of agriculture decided to wait and watch until 20 July. Because, as K. Rajan, joint secretary, department of agriculture, says, "Thereafter, signals for crop variety shifts were to be issued and other contingency steps were to be effected. But now that the monsoon has commenced its normal course, these measures are redundant."

The delayed monsoon will doubtedly have an adverse impact on agricultural output. Bajra had already been sown in Haryana in anticipation of the monsoon, and its output is likely to be affected. In Rajasthan, bajra sowing itself has been on a much smaller scale this year.

Gujarat's groundnut crop has had to bear the brunt of the delayed monsoon. To compensate for this loss, mustard will have to be grown in adequate amounts in the rabi season. All this calls for determination of proper price signals by announcing appropriate procurement prices.

The overall rainfall is estimated to be 94 per cent of the normal with a variability of 4 per cent. As on 10 July, only 17 out of 35 meteorological divisions had received excess or normal rainfall, monsoon was expected to be normal. By 24 July, the situation changed. Now 21 out of the 35 divisions have received excess or normal rainfall.



In the last 20 years, more and more areas in the north west plains have been brought under rice cultivation, mainly for its remunerative value. Under the circumstances, paddy with its relatively higher water requirements will add to the already existing pressures on water resources. According to S.K. Sinha, professor at the Indian Agriculture Research Institute, any delay in transplanting paddy will mean an extension in its ripening period and lower productivity.

Related problems

A related problem is the sharing of the water required for paddy and that required for wheat in the following rabi season. As ground water replenishment will be adversely affected, it becomes imperative to communicate the right signals to farmers if varietal shifts or crop shifts are to be made. For instance, the signal to grow *sathi* instead of *basmati* which has a 60-day cycle. Sugarcane and cotton grown in the Deccan Plateau have not suffered greatly as the rains have been plentiful.

In addition to the drop in output of kharif is the fact that market arrivals for wheat, as on 21 June, 1991, were much lower than last year. While 11.15 million tonnes arrived in the markets last year, the corresponding figure for this year is only 8.67 million tonnes. The amount procured by the government was 10.72 million tonnes last year and this fell to 7.74 million tonnes this year. This may also have been due to the withholding of stocks by the farmers in anticipation of a change in government policy.

The Power of Technology

RIVATISATION

s it constitutional?

he privatisation of Uttar Pradesh State Cement Industries by its sale to almia Industries has raised several pertinent questions

he sweep of liberalisation that is oc- curring, has set off certain questions lating in the constitutionality of some these measures. After all socialism is an ject of our constitutional endeavour; nd how can measures designed to dis- antle the socialist legacy square with nstitutionality? This question has isen recently in connection with the pri- atisation of Uttar Pradesh State Cement dustries (UPSCI) by its sale to Dalmia dustries.

This pioneering act of pri- atisation has prompted sev- al articles by academics, cluding a short but tren- nant polemic by professor pendra Baxi, presently vice- ancellor of Delhi University hich seeks to question its nstitutional *vires*. The gist Baxi's argument is that the onstitution is required to be mended at least in respect of rticles 38, 39 and 43A (Di- ctive Principles) and the Pre- mble is further required to be mended if privatisation laws e to be passed.

It must be remembered that nlike the UK where judicial view of administrative ac- n is very limited and con- ned to technicalities nnected with the preroga- e writs, the Indian Supreme ourt acts remarkably like the S Supreme Court inasmuch it has extensive power of judicial view.

There are two powerful arguments for rivatisation, one on doctrinaire grounds limiting the scope of the state for liber- rian and other reasons; the other, which presently in the fore, is on grounds of ficiency. The public sector is widely seen a drain on public resources, that these dustries are being run almost exclu- ely for their workers and not for con- mers and tax payers. Today the needs economy and curbing the inflated bud- tary deficit is the most compelling rea- n for privatisation. If that is so, can ch legislative acts be challenged and on what basis? It also needs to be stated that there would be no shortage of persons to challenge such measures if such measures have adverse implications on employment in the short term.

The basis for the argument that privatisation can be challenged is the view that the Constitution, in the words of Baxi, "envisages a state regulated capitalism, not primitive accumulation of capital at all social costs." Baxi refers to the First Amendment in 1951 which expanded Article 19(6), the range of "reasonable restrictions" which vest the state, by law, to carry on "any trade, business, industry or service, whether to the exclusion, complete or partial, of citizens or otherwise."

The interpretation adopted by Baxi is that nationalisation even when it "annihilates altogether the rights of the citizen is constitutional". He enlists the support of the observations and ruling of the Supreme Court in Akadasi vs Orissa (AIR 1963 S.C. p.1047). This judgement concerned the challenge by a *kendu* leaf grower to the state acquisition of a monopoly in the *kendu* leaf trade. It is pertinent that Baxi almost exclusively relies on the interpretation of Article 19(6), termed the First Amendment, and observations in this judgement. The point being that this judgement is itself a controversial one. Noted jurist H.M. Seervai has attacked the reasoning of the judges at length. At any rate, as much seems to turn on an interpretation of this judgement it is perhaps useful to set out the issues.

The petitioner in the case challenged the Orissa Kendu Leaves (Control of Trade) Act, 1961 on the basis that the Act contravened Articles 19(1) (f) and (g). The Supreme Court was called upon to decide the affect of the Amendment to Article 19(6). The unamended Article 19(6) is of no interest to us. The substance of Article 19(6) is that it provides that "Nothing in sub-clause (g) of the said clause shall affect the operation of any existing law insofar as it imposes, or prevent the state from making any law imposing, in the interest of the general public, reasonable restrictions on the exercise of the right conferred by the said sub-clause and in particular, nothing in the said sub-clause shall affect the operation of any

A PREMIUM ISSUE

EVERYTHING YOU EXPECT FROM THE FIRST EVER ISSUE BY A BUSH COMPANY*.

INCLUDING A PREMIUM!

Public Issue of 19,20,000 Equity Shares of Rs.10 each at a premium of Rs.5 per share aggregating to Rs.288 lakhs.

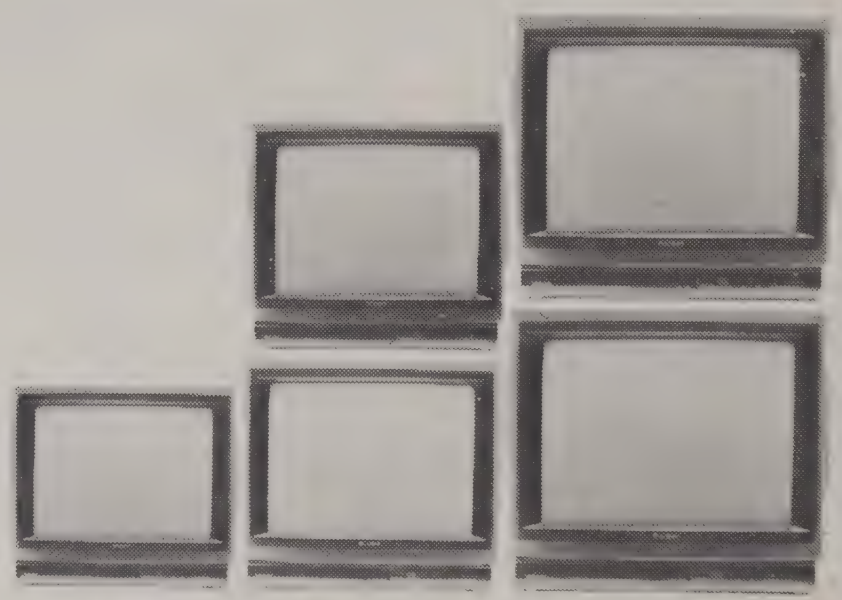
FACTS ABOUT 'BUSH'

- A well known brand in Monochrome and Colour Televisions, VCR, VCP, Radio, Stereo Cassette Recorder, Hi-Fi System, Compact Disc System, In-Car entertainment products and Computer Monitors.
- Products manufactured in technical assistance with NEC and AKAI of Japan.
- Products renowned for their high quality and reliability.
- Extensive marketing network of over 3500 dealers.Sales and Service offices covering every Indian State.
- R & D facilities approved by the Department of Science and Technology, Government of India.
- Bush Colour Televisions have been awarded the British standard approval for safety (BS 415 1990).
- Group Turnover for the year ended 31/3/91 exceeds Rs.170 crores.

ISSUE OPENS ON 12TH AUGUST, 1991

If the Company does not receive minimum subscription of 90% of the issued amount, the entire subscription will be refunded to the applicants within 90 days from the closure of this issue. If there is a delay in refund of such amount by more than 10 days, the Company will pay interest at the rate of 15% per annum for the delayed period.

ISSUE HIGHLIGHTS



- A well established, profit making, dividend paying Company from the BUSH GROUP.
- Reputed manufacturer of a range of Monochrome and Colour Television sets — all sold under the 'BUSH' brand.
- State-of-the-art manufacturing facility at Gandhinagar in Gujarat.
- Operates a sophisticated STUDIO-BUSH FX at Bombay. Equipped with the most advanced Betacam editing facilities and computerised animation system. Also incorporates Video to Film conversion equipment.
- Substantial export contracts in hand to hard currency areas.
- Equity shares being issued at a premium of Rs.5 per share against a Book Value of Rs.28/- (Ex 1:1 bonus issue on 23rd April, 1991).
- Listing at Bombay and Ahmedabad Stock Exchanges.

RISKS AS PERCEIVED BY THE MANAGEMENT: The Company foresees the competition in the domestic market in the Electronic Industry as is normal and prevalent in any Industry. However, it expects a bright future for exports as indicated by favourable government policies.

Some critical components required by the Company are imported. The Government's Import Policy will thus have a direct bearing on the working of the Company. However, the Company has steadily reduced its dependance on imported components over a period of time.

In view of the sizeable export orders on hand, the Company does not envisage any difficulty in procuring critical imported components.

The Company does not also anticipate any problem in marketing its products in view of its elaborate marketing setup.

xisting law insofar as it re-
tes to, or prevent the State
om making any law relat-
ng to... (ii) the carrying on by
ne state or by a corporation
wned and controlled by the
tate, of any trade, business,
ndustry or service, whether
o the exclusion, complete or
artial, of citizens or
therwise."

The judges in Akadasi vs. Orissa considered the scope of the amended Article 19(6), the Amendment being carried out when it was realised that a legislative power to create a monopoly did not preclude a challenge under Article 19(1) (g) and accordingly Article 19(6) was amended by the provision that the creation of a complete or partial monopoly was not to be affected because it contravened Article 19(1) (g). The learned judges were of the view that in construing the Amendment, the literal construction is not appropriate and should be discarded in favour of a construction which would bear in mind the political or economic philosophy underlying the provisions in question." This observation led them to consider various theories underlying nationalisation and they determined that such an approach could be either doctrinaire or pragmatic. If it were the former, it could not be challenged; if it were the latter, it could be. The judges further made the observation that "according to the legislature, a law relating to the creation of state monopoly should be presumed to be in the interests of the general public."

Seervai argues, most trenchantly, that this interpretation is unfounded, first the cardinal rule of interpretation of the Constitution is to give the words their plain grammatical meaning. The philosophical, social or economic theories underlying the provisions are no aid to interpretation. In respect of the assumed dichotomy between the doctrinaire and pragmatic theory of monopoly is relevant, perhaps, to a law creating a monopoly, but is wholly irrelevant to Article 19(6) which purports to save a law creating a monopoly. "Whether such a law is based on doctrinaire theory, pragmatic theory or no theory at all."

However, even if Seervai is correct and the judges of the Supreme Court are wrong in the interpretation of Article 18 (6), the fact remains that the judgement in Akadasi vs. Orissa is still good law until a constitutional bench of the Supreme Court decide otherwise. It is still binding on all courts.

The other point which emerges from Baxi's argument relates to the details of the UP privatisation where apparently cement plants worth Rs.306 crore were sold to the Dalmias for Rs.68.38 crore. His argument being that such acts of privatisation have to conform to some notion of public interest, particularly in view of the expanded interpretation given to Article 14 (the right to equality), which was determined by the Supreme Court in Menaka Gandhi's case which has been held to prohibit arbitrary or irrational state action. It cannot be an opportunity for politicians to enrich themselves and their associates through sale of public assets at throwaway prices. This argument is well taken.

It is abundantly clear that any Act of privatisation will have to state reasons for the action: and those reasons will have to conform to the public interest. There is nothing to suggest that doctrinal considerations have come to the fore, as occurred in Thatcherite Britain. Privatisation in India is likely to be an entirely pragmatic affair and accordingly, reasons have to be offered.

The concluding argument made by Baxi is that privatisation measures must conform to the Constitutional scheme and hence must satisfy the goal values enshrined in the Directive Principles of State policy in Articles 38(1) and (2) and 39(1) (b) and (c). These include such goals as the state promoting welfare of its citizens, striving to minimise inequalities in income, rights to adequate means of a livelihood, ownership and control resources to be distributed to best subserve the common good and that the economic system does not result in concentration of wealth and power. The implications of this argument is that the Constitution would necessarily have to be amended if privatisation measures are to be pushed through. The sensible view would be that privatisation *per se* cannot conflict with the various goals set out in the directive principles and it would be absurd to test any act of privatisation as conforming to the policy goals set out in the directive principles. Ultimately, policy goals as the test prescribed by Learned Hand (a distinguished chief justice of the US Supreme Court) may be competing and it is for the judges to decide which policy goal has greater weightage. If this is a plea for a more activist judiciary then so be it. Increasingly, our Supreme Court should take a more active role in determining competing policy issues and to that end it may be necessary to appoint judges who are somewhat more worldly than the professional judges hitherto appointed.

XLRI
JAMSHEDPUR

Management Development Programmes

17 INTEGRATED MANAGEMENT

Dates: September 30 - October 12, 1991 **Venue :** XLRI, Jamshedpur
Programme Directors : Dr Madhukar Shukla, Dr. Geeta Saxena
Key Areas : Managerial Techniques for Key Functions: Marketing, Finance, Operations, Personnel; Interfaces among Functional Areas; Formulation and Impact of Corporate Strategy; Skills for Managerial/Personal Effectiveness.

Fees : Individual	Rs. 9,400	Residential
	Rs. 8,200	Non-residential
Team (per person, three	Rs. 8,500	Residential
or more attendees)	Rs. 7,300	Non-residential

19 TRAINING FOR TRAINERS IN HRD

Dates: October 28-November 2, 1991. **Venue:** XLRI, Jamshedpur
Programme Director: Prof Keith C D'Souza
Key Areas : HRD and the Training Function, Behavioural Processes in Learning and Development, Process Skills of an HRD Trainer, Techniques of Training in HRD, Planning and Evaluating Training.

Fees: Individual	Rs. 5,000	Residential
	Rs. 4,200	Non-residential
Team (per person, three or	Rs. 4,500	Residential
more attendees)	Rs. 3,700	Non-residential

20 BASIC LEADERSHIP SKILLS

Dates : November 11-15, 1991 & March 16-20, 1992 **Venue :** XLRI, Jamshedpur
Programme Director : E H McGrath, SJ
Key Areas : Personal Expressiveness; Goal Setting Skills; Problem-Solving and Decision-Making Skills; Leadership and Conflict Management Skills.

Fees : Individual	Rs. 4,600	Residential
	Rs. 4,000	Non-residential
Team (per person, three	Rs. 4,200	Residential
or more attendees)	Rs. 3,600	Non-residential

21 STRATEGIC MARKET PLANNING

Dates: November 18-22,1991 **Venue:** XLRI, Jamshedpur
Programme Director: Prof Sharad Sarin
Key Areas: Nature and Importance; Opportunity and Competitive Analysis; Product-Market Portfolio Analysis; Growth Strategies, Corporate Culture and Structure for Sustaining Competitive Advantage.

Fees: Individual	Rs. 4,600	Residential
	Rs. 4,000	Non-residential
Team (per person, three	Rs. 4,200	Residential
or more attendees)	Rs. 3,600	Non-residential

22 TOTAL QUALITY MANAGEMENT

Dates: November 18-22, 1991 **Venue:** Park Sheraton, Madras
Programme Director: Prof M V Madan
Key Areas: Total Quality Planning, Implementation and Improvement; Techniques and Tools for TQC; Productivity and Quality; Quality Assurance in Functional Areas; Computerised MIS for TQC; Quality Circles; Training for TQC.

Fees: Individual	Rs. 4,300	Non-residential
Team (per person, three	Rs. 3,900	Non-residential
or more attendees)		

23 PARTICIPATIVE MANAGEMENT

Dates: November 18-22,1991 **Venue:** XLRI, Jamshedpur
Programme Director: Prof Pranabesh Ray
Key Areas: Participative Management: Its Purpose, Evolution & Evaluation Participative Strategies: Quality Circles, Joint Committees, Equity Participation etc.; Dilemmas in Managing Partipation; Participative Behavioural Skills.

Fees: Individual	Rs. 4,600	Residential
	Rs. 4,000	Non-residential
Team (per person, three	Rs. 4,200	Residential
or more attendees)	Rs. 3,600	Non-residential

24 MANAGERIAL SKILLS FOR EMPLOYEE COUNSELLING

Dates: November 25-29, 1991 **Venue:** XLRI, Jamshedpur
Programme Director: Fr K Cyriac
Keys Areas: Popular Counselling Techniques, TA in Counselling, Basic Counselling Skills, Listening, Responding, Interviewing; Group Counselling, Performance Counselling, Problem Counselling, Absenteeism, Alcoholism, Conflicts Stress.

Fees: Individual	Rs. 4,600	Residential
	Rs. 4,000	Non-residential
Team (per person, three	Rs. 4,200	Residential
or more attendees)	Rs. 3,600	Non-residential

25 MANAGING CORPORATE PROJECTS : FINANCIAL INDICATORS IN STRATEGIC DECISIONS

Dates: November 25-30, 1991 **Venue:** XLRI, Jamshedpur
Programme Director: Dr Bhavesh M Patel
Keys Areas: Corporate Growth Strategies; Cost-Benefit Analysis; Risk Analysis; Capital Allocation; Project Control and Post Completion Audit; Managing Time and Cost Overruns; Merger-Acquisition; Turning Around the Sick Business.

Fees: Individual	Rs. 5,000	Residential
	Rs. 4,200	Non-residential
Team (per person,three	Rs. 4,500	Residential
or more attendees)	Rs. 3,700	Non-residential

ASSISTED REPRODUCTION

Dicey business

Infertility treatment has come as a boon to many childless couples. And in spite of the initial hitches, this form of treatment is gaining popularity

On 24 June 1991, there was an ecstatic couple at Bombay's Jaslok Hospital. Thanks to doctors Firuza Parikh and N. Joshi at the Infertility Management and Assisted Reproduction Centre, they became parents of twins on that day. They have been trying to have a child for more than seven years.

Over 10 million couples, in India alone, fail to become parents because the egg cannot get fertilised naturally within the woman's body. Infertility treatment attempts in various ways to achieve this fertilisation. Jaslok Hospital has over 600 couples seeking treatment for infertility, barely nine months after the Infertility Management Centre was set up. Not all these couples will be able to participate in the *in vitro* fertilisation (IVF) programme, since it is an emotionally strenuous process and they have to be carefully screened and counselled before embarking on it.

Parikh's group used a combination of IVF and gamete intra-fallopian transfer (GIFT). In both, the eggs are first removed from a woman's body by ultrasound. In IVF, the female egg and male sperm are mixed in a petri dish, and when and if fertilisation occurs (60-70 per cent chance), the embryo (fertilised cell) is put back into the mother's womb. In GIFT, a mixture of sperm and eggs is placed back in the woman's fallopian tubes, and fertilisation occurs within the woman's body.

A proud moment: Parikh, the mother and the twins

Lucky ones

This couple, was one of the lucky ones — even in the best of circumstances, only one in five or ten women who attempt IVF deliver a child by this method. In the 13 years since the first baby girl in England was born by IVF, only about 10,000 have followed. In India, the first test tube baby, Harsha, was born in 1986 under a project carried out at the Institute of Research in Reproduction (IRR) and the KEM Hospital, Bombay. Subsequently, 14 babies were born under the IRR programme.

Worldwide, approximately 8 per cent of the population within the reproductive age are infertile. Hence the desire and need for aided fertilisation is immense. Several private clinics have come up (at least eight of them in Bombay) since the first Indian test tube baby was born five years ago. Not surprisingly, more than half have closed down because of failures to achieve pregnancies. The procedure is expensive. It costs approximately Rs.30,000 a cycle, all inclusive (one treatment month starting with menstruation). Pregnancy may occur in the first cycle. Up to three are recommended.

The chances of success are somewhat higher at modern hospitals like Jaslok, whose sophisticated equipment and facilities help in increasing the possibility of fertilisation when it does not occur naturally. Another hitech institution with good prospects is the Hope Infertility Clinic set up recently in Bangalore by Dr T.C. Anand Kumar, former director of the IRR, Bombay, and Dr Indira Hinduja — the team that gave India its first test tube baby.

The Rs.1.25-crore project has received venture capital from the Industrial Credit and Investment Corporation of India (ICICI) through its subsidiary, the Technical Development and Information Company of India (TDICI). They also have a term loan from the Karnataka State Finance Corporation (KSFC). The project has been cleared by Karnataka State Industrial Development Corporation (KSIDC). Even with the possiblity of many more centres being set up in the future, there are still several unresolved questions with *in vitro* fertilisation.

For example, the Jaslok case involved picking up 10 female "egg" cells by ultrasound. Four of these were put back in the woman's uterine tubes along with the husband's sperm their mobility enhanced by laboratory techniques. The remaining six eggs were fertilised in the petri dish. One embryo was put back in the uterus, the others are lying frozen in the lab, in case the procedure needs to be repeated.

If the original donor doesn't need them, who has rights over these frozen embryos? Would they be used in other women who want to have a child without consent of the original donor?

Also, the woman has to have daily hormone injections of human menopausal gonadotropins, which make them superovulate. (Normally, a woman releases only one egg which can get fertilised; with the injections up to 10 eggs are released.) The effects of the hormones on women and the possible side effects on offspring have not been adequately studied.

The World Centre of Studies in Reproduction (UK) is doing a follow-up on children born following aided fertilisation. But with the first baby only 13 years old, the possible consequences on the reproductive functions remain unknown. However, private clinics continue to be set up.

With the new reproductive techniques emerging from the laboratory and being applied commercially in India, controls or, at the very least, a common code of ethics is required.

■ MIRA SAVARA

ALACRITY GROUP

Concrete foundation

For a one-time chartered accountant who decided that he would be his own boss, Amol Karnad and his group have come a long way. And their rather unconventional honest approach has set an example for others to follow

He presides over a fast-growing construction empire and his company, Alacrity Foundations, controls 25 per cent of the market share for residential flats in Madras city. But when Amol Karnad branched out on his own in June 1978, buildings and bungalows were the last thing on his mind. Alacrity Consultants Pvt Ltd, registered with a share capital of Rs.35,000, distributed grinding wheels and electronic vending machines. Progress in this field, however, was slow and Karnad soon started off as a builder. And how!

In the last decade, Madras-based Alacrity Foundations has delivered two million sq ft of built-up area to its clients. Currently, it has projects worth Rs.30 crore in hand. For the year ended 31 March 1991, the turnover touched Rs.35 crore. "Alacrity is undoubtedly the market leader in the residential flats segment with a reputation for being fine builders," says Altaf Pasha, chairman of the Alsa Group, a competitor.

A chartered accountant from a middle-class family, Karnad tried a succession of jobs — Cheeseborough Ponds, Hamilton Cycles Pvt Ltd and B.P. Vaidya & Co before he concluded that henceforth, would be his own boss. The diversific tion from the distribution to the constru tion arena came by accident. In 1981, 3 year-old Karnad, now married, bega looking around for a flat. "This gave n an insight into the manner in which t construction industry functioned. Ma ket confidence in the developer was lo mainly because the industry was not o ganised." Clearly, there was a niche for construction firm which promised r liability and accountability.

The opportunity to make an entr came when Karnad's uncle, Indukant Ragade, now a vice-president at Alacrit wanted to develop his property in T Nagar, Madras. Even though he did no have any background in civil engineerin Karnad decided to take up the projec Flats at *Prabhat Apartments* were price at Rs.150 per sq ft, at a time when th market rate was Rs.250 per sq ft. Say Karnad, "It was bad pricing and we los Rs.50,000 since we did not anticipate a escalation in cement prices during th year." In subsequent projects, Alacrit learnt to price its flats properly. But th initial slip-ups had their benefits. "Alac rity's cheap prices in their first few ven tures were instrumental in helping them make an entry into the residential flat market," says a director in Ram's group another competitor.

In the residential flats market, Alacrity decided to cater largely to the middle-class. The demands of the market also encouraged this. "About 80 per cent of clients ask for flats in the 700 to 1,000 sq ft category," observes B. Vasanthakumar, senior manager, marketing, Alacrity. And in Madras, it is the middle-class which opts for flats of this size.

From the very outset, Alacrity decided not to deal in black money. "Every payment, whether in cash or by cheque, has a receipt and is accounted for," claims Karnad. The other major decision was not to pay bribes. "This refusal on the part of the company to grease palms sometimes leads to delays," observes K.V. Chandrasekaran, security executive, SRF Limited, a client who is satisfied on all counts, including costing and quality of construction. And Alacrity is known to be very rigid where graft is con-

In the last decade, Amol Karnad has delivered two million sq ft of built-up area to his clients and he controls 25 per cent of the market share for residential flats in Madras city

erned. *Sneh Sadan* is a case in point. Located in Adyar, Madras, the project was elayed by eight months because the firm eportedly did not pay a Rs.150-bribe to et an electricity connection.

Instead, it preferred to pay liquidation harges to the tune of Rs.4 lakh to its clints. A concept introduced by Alacrity rom its third project onwards, liquidaion charges compensates clients for deays in handing over completed flats. "The system of paying liquidation harges is a novel one," says A.K.V Menon, administration executive, Crompton Greaves, a client.

By the end of 1986, Alacrity had built even residential complexes, involving a loor space of 18,649 sq ft. It concenrated on building "ground plus three" onstructions. "The plethora of rules and learances required to build multitoreyed flats has kept us away from that

At Alacrity the emphasis is on the functional aspects and hence the facade is not given much attention

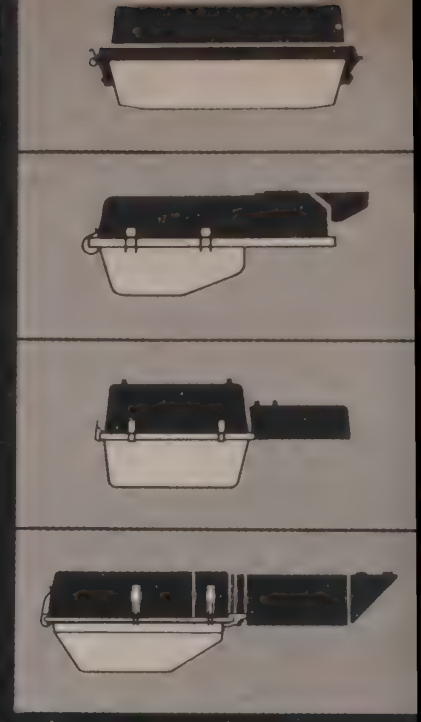
egment. Besides, Madras is not yet ripe o take on such constructions, particlarly in terms of infrastructure like water, etc," explains R. Ramakrishna, senior vice-president, personnel and adninistration, at Alacrity.

Karnad is inclined to attribute his rm's success to a "satisfied clientele". Market impact is very important while reating a role model, and our intention is o develop Alacrity into one for the conruction industry," says Karnad. The mphasis is on giving buyers a good deal. n February 1989, Alacrity expressed its concern for the customer through a series of advertisements in the media, which educated the flat buyer about the criteria he should check while buying a flat. He was advised to ask questions like, "Can I see the title documents?" and "Can I have a copy of the Madras Metropolitan Development Authority's (MMDA) approved plan and planning permit before commencement of construction?" The following year, a booklet, giving further explanations, was published.

At Alacrity, according to Karnad, the emphasis is on value for money. "We do not talk of deluxe flats and do not make extraordinary commitments," he says. Instead, the emphasis is on the functional aspect. So, while cross-ventilation is a must in at least two bedrooms, the facade is not given much attention. "We are in the assembly line and therefore do not indulge the architects," adds Karnad. An in-house design team takes care of the architectural needs of various complexes. Consultants, however, are called in whenever necessary. Costing is done on a project-to-project basis. Once a price is offered to the customer, there are no escalations in cost. If there are unforeseen increases in the prices of cement, steel, etc, Alacrity absorbs the costs.

Alacrity plans to concentrate on Madras. "Moving into other cities will dilute the impact of our experience," says Karnad. But with the high amount of liquidation charges paid, the company's profit margin has been under pressure. It is for this reason that in the last two years, projects have been taken up to provide Alacrity with the economics of large-scale operations. "Suppliers are more willing to negotiate at concessional rates where large volumes are involved," says Karnad. Currently Alacrity has 47 ongoing projects. And now, projects are being taken up in the suburbs in an effort to extend the market.

Along the way, Alacrity diversified into electronics in 1982. Its "KryKard" servo control voltage stabilisers help in conserving energy. Initially it was a cottage industry, the assembling being done in a single room. But the product was a success because it incorporated built-in protection devices for which there was no extra charge. Since it was a small manufacturer, Alacrity was not subject to the usual excise duties and other levies. Its product was therefore Rs.1,000 to Rs.1,500 cheaper than leading brands like Keltron and Nelco which were priced at around Rs.6,000. And when the market for PCs exploded in 1983-84, there was a much bigger demand for "KryKard". Currently the division sells 8,000 stabilisers per annum and enjoys a market share of 35 per cent in the four southern states. For 1990-91 this division, which recorded a turnover of Rs.4 crore, now plans to introduce another model to handle the lower end of the market.



The group also plans to start publishing *Genesis*, a quarterly magazine targeted at business executives and senior managers, at a subscription rate of Rs.500 per annum. The first issue — to be sold through subscriptions only — is scheduled for release in September. Alacrity is also toying with tentative plans of getting into the field of education and medicare.

The main emphasis, however, will continue to be in construction. In order to cater to the increasing activity, more people have been taken on. In addition to Karnad's three brothers, who hold key positions, the show is now being run by a core team of dedicated professionals.

Looking back over the years, the Alacrity team has a sense of satisfaction. "Alacrity now sells as a brand name because of its accountability," says Nagesh Aroor, vice-president. And it is an achievment of this kind which will clearly help it achieve its ultimate goal of emerging as a role model for the industry.

JAPAN AT THE CROSSROADS

A nation wrestling with itself

Like one of the country's periodic natural disasters—earthquake, typhoon or tsunami—a national identity crisis has struck the Japanese islands with full force.

Japanese political, corporate and intellectual leaders are engaged in searching reappraisals of the nation's global standing and status. Does Japan represent the world's first, true, economic-only superpower, is it destined to remain stunted in terms of political growth and international influence?

The luster of Japan's almost unbridled economic success has become tarnished. Observers in North America, Europe and Southeast Asia are preoccupied with Tokyo's plunging stock and real estate markets and question whether Japan itself is on the edge of serious financial decline.

In the following pages, a core of astute Japan watchers and insiders dissect the country's current conundrum about its proper role and future in the world.♦

DAVID AUSTEN / STOCK BOSTON

Adrift in a riskier world

Will Japan become the most reluctant superpower?

BY AKIYUKI KONISHI
in Tokyo, Japan

WHILE THE "new world order" of Mr. Bush refuses to be ordered, Japan is having trouble establishing its own identity.

In a case that was almost comically "too little, too late," Takako Doi, leader of the opposition Social Democratic Party of Japan, made a belated plea for her party's pacifist stance on the Gulf War to a gathering of the Japan-US Association in Chicago on May 24.

The first woman to lead a Japanese political party would have provided a better service to her nation and to Japan-US friendship if she had made her plea in the US during the Gulf crisis. Instead, she went to Iraq to make a well-meaning but ultimately counterproductive plea for peace to Saddam Hussein on the very eve of Operation Desert Storm.

In Chicago, Doi also accused the Kaifu administration and the ruling Liberal Democratic Party of being reluctant to admit and make up for what Japan did to her Asian neighbors in wartime. "The LDP has always ignored matters that are inconvenient for it," she said. "It is not qualified to play an important role in the international community."

Two days later, a Japanese miniflotilla of four minesweepers and two support ships passed through the Strait of Hormuz and entered the Persian Gulf. This is the first overseas non-training mission of the Japanese Maritime Self Defense Force (Navy) since the Korean War. It was another case of "too little, too late." As these episodes illustrate, Japan is struggling to define its role in the international community.

Two years ago, the outlook was far brighter for Doi and her supporters. Prime Minister Noboru Takeshita had to resign because of an influence-peddling scandal involving insider-trading of stocks. The appointment of Sosuke Uno as the prime minister elicited another scandal, this time involving a geisha. In the House of Councillors elections Doi's party dramatically increased its strength.

Meanwhile, the Japanese economy had lost its glitter because of the burst of the "twin bubbles" of inflated land and stock prices. All these phenomena combined to give an impression of a declining Japan to many overseas observers, and, indeed, to many Japanese themselves. But to Doi and her supporters these simply represented a rectifying process for Japan.

International developments were also encouraging. The Cold War was ending and Germany was being peacefully reunited. Many felt Japan was a role model for the future. The only items on the national agenda were to make Japan's economic and political system more fair and enhance understanding and co
munication with other nations.

Then the Gulf crisis erupted. By
vading Kuwait, Saddam Hussein pus
ed history back to the 1930s. By refu
ing to withdraw from Kuwait in time
preempt Desert Storm, Saddam r
minded the Americans (and probab
the Soviets and the Chinese) the val
of military power.

And last but not least, by allowi
Hussein to use his remaining tanks a
helicopters against Shiites and Kurds
suppress their rebellion, George Bus
showed the world that might is right

Now that the world is looking mo
like a stormy ocean full of ethnic strif
Japanese pacifism is subdued. Na
tionalist and ultranationalist elements
Japan are again clamoring for a revisio
of the Constitution, especially for th
abolition of Article 9 which renounce
use of military force as a means of na
tional policy.

Politically and socially, Japan is confus
ed and adrift in the turbulent sea of in
ternational relations. Economically
however, Japan is still not doing to
poorly, mainly because its economy
thrives on being bashed and its peopl
are used to voluntary belt-tightenin
when international winds are against it

Would Japan like to be a "full super
power," with dominating political and
military clout like the US? Hopefully
not, because a majority of her people
and all of her Asian neighbors would no
like to see her become one.

Looking quixotic for now, Doi and
other Japanese pacifists hopefully are
still on the right track, and a real new
world order is on its way; a world where
every nation voluntarily limits sovereign-
ty on equal terms to beef up the UN and
domestically allows autonomy for its
regions.

In that sense, the glass will then never
be full for any nation in the sense or pre-
sent notion of the nation state. If an
American asks, "Is Japan's glass half
full, or half empty?" One would reply,
"Of course, half full, for we started from
empty in 1945, and we'd be satisfied
with that. After all, half full is going to
mean full to every nation in the real 'new
world order.' Will you, Americans, be
satisfied with half full then? Won't you
cry out it's half empty?"

The answer shouldn't be blowing in
the wind. For it is still the US that in-
fluences Japan the most, whatever
Takako Doi says.♦

The myth of Pax Nipponica

The way of the merchant and its future

BY JEAN-PIERRE LEHMANN
in Tokyo, Japan

FROM CONTROL of Java's natural resources to Hollywood's cinema gems, Japan's global expansion is being propelled by the same forces—commercial, industrial and technological—that fueled its stunningly rapid emergence as an economic superpower in the 1980s.

On the other hand, its superpower status is distinctly not political, ideological or cultural. Japan has not exerted formal political control over any nation, it has fought no war for 46 years and currently has no military capability or presence beyond its borders. Nor does it currently appear to espouse any evangelical universal ideology which would be sufficiently influential abroad. Yet, there are new whispers that Pax Nipponica is about to complement, or possibly supplant, Pax Americana.

In 1868, a revolution occurred which paved the way for capitalism and industrialism, but which also involved the restoration of the emperor and all the Shinto mythology associated with it. Instead of the capitalist revolution leading to the emerging dominance of bourgeois values, as in Europe and the US, it was the samurai ideology, the *bushido* (way of the warrior), which predominated.

Political power was concentrated primarily in the hands of former samurai. With the government's policy articulated in the slogan of *fukoku-kyohei* (rich country-strong army), a modern military machine was established which later came to dominate the state.

While Japan's modern nation-building was initially defensive, nationalistic and reactive, by the late 19th century the country began to carve out its own empire and became offensive, imperialistic and proactive. In the late 1930s, the empire was presented in the form of the Greater East Asia Co-Prosperity Sphere, leading to a showdown with the Western powers, the US in particular. By September 1945, the empire had collapsed.

> *There is nothing that really drives the Japanese in terms of their global role outside of purely commercial objectives.*

In the course of the decades immediately following World War II, the Japanese socioeconomic landscape changed virtually beyond recognition. The values that have emerged are preeminently bourgeois.

As the *bushido* has been eclipsed, the *shonindo* (way of the merchant) has risen in phoenix-like fashion. The Japanese have been exceedingly good at making things, including money. At dusk of the 20th century, economic forecasters—and other soothsayers—herald the imminent arrival of the "Pacific Century" with Japan in the driver's seat.

Japan's current global position and weltanschauung might be better compared to that of the earlier Dutch seaborne empire. In contrast to the other European empires, the Dutch model was singularly devoid of evangelical ideology, much less concerned about Christianity than in pursuing the teachings of Mammon.

Similarly, there is nothing that really drives the Japanese in terms of their global role outside of purely commercial objectives. In the contemporary Japanese commercial empire, as in the Dutch seaborne empire, the only real "ism" is materialism.

The Dutch, of course, were not all slaves to Mammon. They had a vibrant artistic culture in the Netherlands. The same is true of contemporary Japan. The Japanese do not just make cars and semiconductors. They also make music, films, paintings, literature and architecture—and they also have a lot of fun. To say that Japan is devoid of ideology and commercially driven is one thing; to say it is soulless or without art and humor is quite wrong.

Japan does have a major contribution to make to the world, but it lies and will continue to lie pretty much exclusively within the economic domain.

For the time being, the West, the US in particular, will still have to be relied upon to provide the ideological model and the geopolitical framework. So long as the Americans and the Japanese can agree on a reasonable division of labor and keep the tensions in their economic relationship within manageable proportions, the more plausible scenario for the foreseeable future is a hybrid Pax Nippo-Americana.♦

Life after the bubble

Miracle economy still growing despite slowdown

BY KOICHI ISHIYAMA
in Tokyo, Japan

THE JAPANESE economy is slowing down, but still moving strong despite the fact its so-called "bubble" has burst.

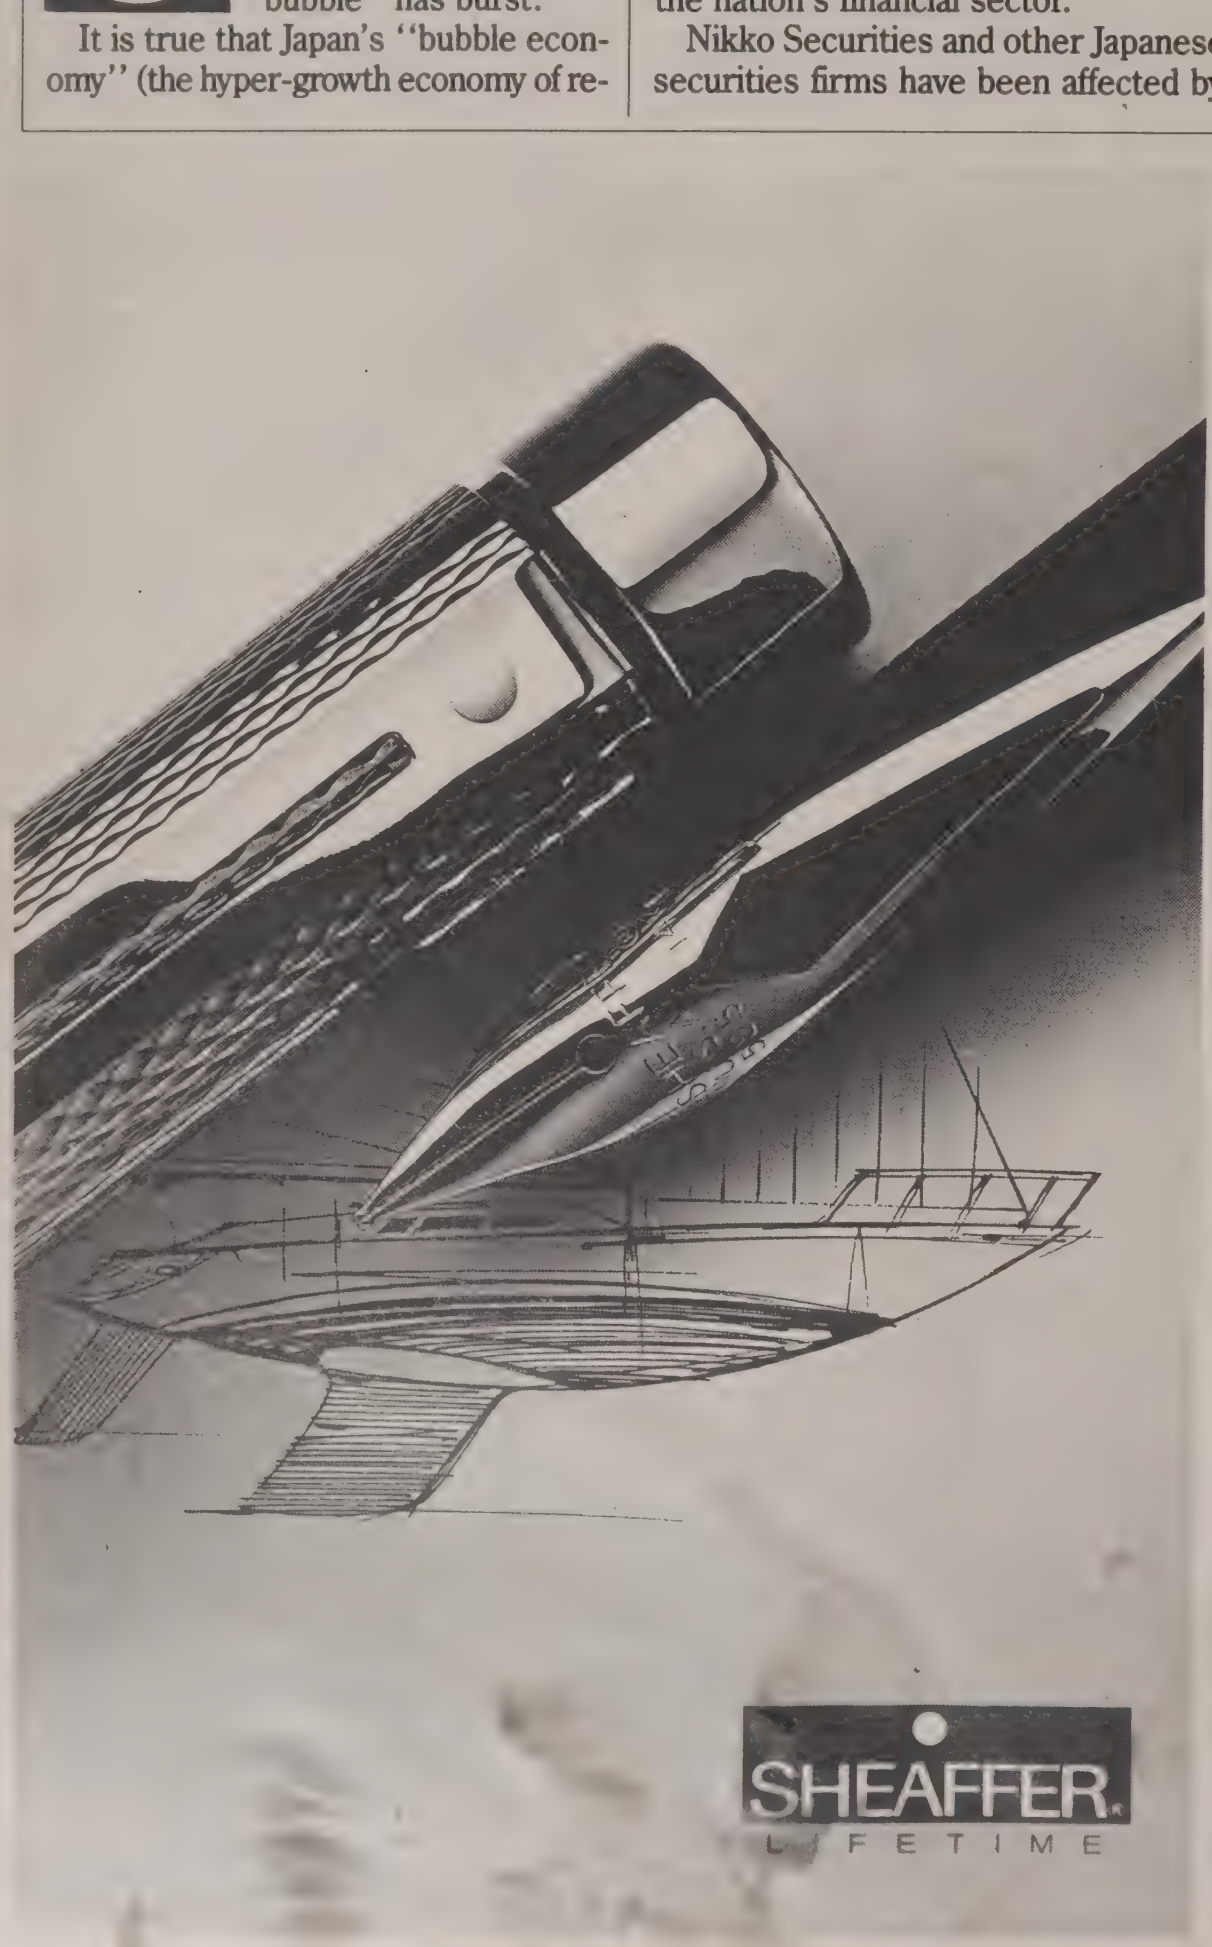
It is true that Japan's "bubble economy" (the hyper-growth economy of recent years which has been fueled by ballooning stock and land prices) has started to shrink, but the current decline is in reality a kind of "growth recession." Growth is decelerating, but is still being maintained and the slowdown is not hurting any major industries, as seen in the nation's financial sector.

Nikko Securities and other Japanese securities firms have been affected by last year's plunge in the Tokyo sto market. Turnover is still very low, abo 300 million shares a day compared w more than one billion shares when t market was at peak performance.

Under the circumstances, all Japane securities houses, including the "B Four" (Nomura, Daiwa, Nikko and Y maichi), posted drastically reduced pr its in the fiscal year ending last Marc

But despite this gloomy picture, Nik Securities is not daunted by the plungi profits. "Even if profits have declined says Nikko spokesman Yoshiyuki Nak mura, "most securities houses are n posting operating losses. This is ve important. The 'bubble' part of the n tion's bubble economy has certain burst, but we are still enjoying han some profits."

During Japan's bubble economy, stoc prices, as measured by the Nikkei Stoc Average, tripled from 1985 levels. Na tionwide, land prices quadrupled ove the past four years. But the boom bega to fizzle last year.



"Everything that has gone up, mus come down—or 'be corrected,' to us our securities circles' jargon," say Nakamura of Nikko. "The same thin could be said about land prices. But jus like stocks, everything that has gon down will go up again. So, stock price will soon pick up."

The banking industry has also exper ienced a similar decline. The combine pretax profits of the "Big Five" city banks (Dai-Ichi, Sumitomo, Sanwa, Fu and Mitsubishi) dropped a record 3 percent from the previous year's total Nonetheless, the banks are expecting a rebound similar to the one the securities firms are predicting.

A spokesman for Mitsubishi seemed unperturbed by such sharp profit declines. "The recent plunge in Japan's stock and land prices has, of course, affected our bank's performances but we are still making a profit of about US$1.3 billion a year. The recent profit decline will only be a temporary phenomenon."

The bubble economy years of the late 1980s are now a part of the past, but the momentum of Japan's economy is still strong. Despite pessimistic reports of Japan's wavering economy, it seems to be more a tale of paradise slightly delayed than paradise lost.♦

Japan's information advantage

Nikkei vs. the Journal

BY KIRK PATTERSON
in Cambridge, USA

WALTER LIPPMANN, American journalist and social observer, once recounted the following story:

On a remote Pacific Ocean island lived a few Englishmen, Frenchmen and Germans. News could only reach them on a British mail steamer that came every 60 days. One day in 1914, the steamer arrived and the captain announced that England and France were at war with Germany. Thus, for a period of six weeks the island's residents had acted as if they were friends, when in fact they were enemies.

The point of Lippmann's story is that behavior is based on information, usually second-hand information like news, and that different people have different bodies of knowledge. As a result, their behavior differs, and better information leads to better behavior.

Applying this lesson to global economic competition, the success of a country and its corporations is very much related to the quantity and quality of information that news organizations supply to corporate decision makers and economic policymakers. The ability to capture global markets is determined significantly by the availability of information on those markets.

From this vantage point, Japan's rise to economic superpower status may be seen as partly a function of the superior international information received by the country's economic and business leaders. This is confirmed by a recently completed comparison of foreign news reporting in the principal business newspapers of Japan and the US—the *Nihon Keizai Shimbun* (*Nikkei*) and *The Wall Street Journal* (the *Journal*).

Nikkei provides about 2.5 times more foreign news than the *Journal*. Furthermore, the Japanese newspaper devotes a greater proportion of total news space to foreign news than does its US counterpart (26.4 percent as opposed to the *Journal*'s 19.6 percent). As a result, *Nikkei* readers are made more aware of the importance of international issues and of the relevance of those issues to their ability to operate successfully in world markets.

Most surprising, *Nikkei* and the *Journal* cover almost completely different "worlds." Excluding articles that relate to Japan and the US, less than 10 percent of the foreign news stories in the two newspapers are on the same topics. It is as if one paper were covering Mars and the other Jupiter, with occasional overlap on coverage of the asteroid belt between the two planets.

The two newspapers also report stories from significantly different perspectives. *Nikkei* sees the world as a complex, dynamic environment full of opportunities in which news occurs on an ongoing basis, states are the dominant actors and economic issues are the principal concern.

For the *Journal*, the world is a relatively simple, unchanging place full of obstacles and news is the sum of discrete events, corporations are the major object of attention and political issues dominate the public agenda. It is a world where the power of personality prevails, where dogmatic adherence to individual principles is rewarded and where a short-term orientation is encouraged.

During the autumn of 1989, *Nikkei* devoted extensive coverage to dramatic developments in Eastern Europe while the *Journal* devoted much of its attention to mergers and acquisitions activities. With respect to political and economic reform in Hungary, *Nikkei* ran 77 articles while the *Journal* had only five, one of which was on how the American soft-pornography magazine *Penthouse* was to begin publishing in Hungary.

Nikkei's approach to foreign-news reporting provides numerous comparative information advantages, both quantitative and qualitative, for the business and economic elites of Japan. Relative to the *Journal*, it helps Japanese corporate executives plan and implement more successful global strategies and better educates them about the dynamics that drive world affairs.

In addition to being of greater assistance to corporate executives, *Nikkei* does a better job of "signalizing" important international issues meriting the attention of national economic policymakers.

The *Journal*, by contrast, adheres to an "event-of-the-day" approach to foreign-news reporting and tends to ignore issues that lie beyond the horizon of immediate world attention.

This is not to say that *Nikkei*'s foreign-news reporting is perfect, or even good. Rather, the point is that *Nikkei* does a better job of covering the world than does the *Journal*. It is the relative, not absolute, quality of foreign-news reporting that is important, for it is the gap between the two newspapers' international coverage that will translate into a difference in the ability of Japan and the US to compete worldwide.

Everything else being equal, *Nikkei*'s superior foreign-news reporting gives Japan and its corporations the advantage in the international struggle for prosperity and security.♦

At left: Spot the outsiders in Tokyo.

The lure of the yen

As immigration rises, is Japan ready for integration?

BY FUMIKO MORI HALLORAN
in Tokyo, Japan

THE TWO men sweeping the floor of a Tokyo hospital chat in Chinese. A waitress in a coffee shop looks Japanese but speaks the language with an accent and bluntness distinctly foreign. A police notice in Japanese, Chinese, Korean and English near a subway station warns against parking bicycles illegally.

Five years ago, there were hardly any Asian workers in Japan. Today, there are so many that the lives of Japanese and other Asians have become entangled in what many Japanese call "the third opening of Japan," following the Meiji Restoration in the 19th century and Japan's 1945 World War II defeat.

Since the last decade, the Japanese have been debating the meaning of internationalization now that Japan has become a major economic power. Once perceived as simply improved communication with Westerners, what the Japanese did not anticipate was that internationalization would mean "Asianization."

Last year, 3.5 million foreigners entered Japan, 62 percent of whom were Asian—students, tourists, entertainers and businessmen. But many among them came to stay and work illegally, entering Japan with passports supplied by brokers who obtain work permits, marriage certificates and other papers through a vast network of middlemen, some of whom are *yakuza*, or members of organized crime.

In 1983, 2,300 Asians, mostly women, were arrested as illegal workers and deported. In 1990, the number jumped to 36,000, among whom almost 24,000 were men. The majority of deported women are singers, dancers and hostesses who actually work as prostitutes.

Foreigners legally entering Japan as students and workers numbered 81,000 in 1988, compared to an estimated 100,000 illegal workers. Many experts say this official estimate does not reflect reality and that the actual number of illegal workers might have reached 200,000.

The lure of money is the main reason so many Asians are flocking to Japan. Even with relatively low wages, poor housing and hard work, their earnings in Japan can be awesome compared to what they earn in their own countries.

The declining birthrate and dwindling number of young people entering the work force has caused a labor shortage. More stores and factories are going out of business due to a lack of manpower; Asian workers fill that void.

The image of Japan as a dream country paved with gold often obscures the harsh reality of the Asians' lives as laborers in a tightly controlled society. The plight of illegal workers has been publicized in the press and several citizens' groups and lawyers have formed organizations to protect the civil rights of workers.

While the policymakers are struggling with the issue, Japanese citizens have been slowly learning how to cope with their Asian neighbors. There have been many examples of cultural clashes and discrimination: housing disputes, Japanese children's nasty treatment of their Asian classmates and either an indifferent or superior attitude of some Japanese toward Asians.

But the increasing Asian presence has also produced positive interest among Japanese. Many books on Asia have been published, the study of Chinese, Korean and other Asian languages has become popular and ethnic Asian food, music and fashion have also come into vogue.

More importantly, many Japanese have volunteered to help Asians learn the Japanese language, to become host families and to raise funds and donate items needed to make daily life more pleasant.

"Asianization" has happened against Japanese wishes. But the scale of the Asian drive to come to Japan makes Japanese preferences irrelevant. Japanese have to realize that they cannot live comfortably and happily alone, closing their minds to the reality of the Asian presence in their midst.♦

PUT YOUR BUSINESS IN THE CENTER OF THE WORLD.

In the air and on the ground, Atlanta International Airport places the world at your fingertips.

In the air: Every day, 31 airlines with 2000 flights provide non-stop service to the major business markets in the United States. Unsurpassed connections get you to and from nearly everywhere in the world.

On the ground: We've doubled our cargo capacity, expanded our international concourse—which now offers 14 gates with quick and efficient customs clearance. And our Atlanta Tradeport has been designated a foreign trade zone.

Underground trains take you between the terminal and concourses. Then, the MARTA rapid rail races you to downtown Atlanta, the new international business center of the southeast United States.

No wonder we're the business travelers' favorite airport.

Atlanta International Airport

RAL PROCESSING INDUSTRIES, STEEL PLANTS, CHEMICAL INDUSTRIES, SPACE RESEARCH & NUCLEAR POWER INSTALLATIONS.

INTRODUCING THE FALSE CEILING THAT HAS RISEN TO A SUPERIOR LEVEL.

BAKELITE HYLAM

PHENOTHERM

- Unmatched fire resistance
- Excellent sound insulation
- Good aesthetic attributes
- Exceptionally low thermal conductivity
- Does not emit toxic gases in case of fire
- Easy installation
- Retains rigidity over a period of time
- Cost effective
- Longer life
- Easy to clean
- Light in weight
- Substantially reduces electricity bills
- Painting is not required

OTHERS

- Average or poor fire resistance
- Poor sound insulation
- High thermal conductivity
- Emission of toxic gases on burning
- Laborious installation process
- Difficult to clean
- Painting is required

Feel Fire Free

PHENOTHERM

THE SUPERIOR FIRE-RESISTANT MATERIAL FOR PARTITIONS AND FALSE CEILINGS

SWITZERLAND

Trapped in the EC?

As Switzerland celebrated its 700th anniversary on 1 August, the Swiss find themselves struggling to cope with the consequences of Single Europe

Though their conservatism and reluctance to change are proverbial, the rejection by the Swiss of the introduction of value added tax (VAT) in a recent referendum is of particular significance in the context of the European Community (EC). This referendum was the third on this issue in Switzerland, and the passage of over five years since the first one has thus made little difference. Switzerland, at present, does not have a VAT but a reasonable 6.2 per cent turnover tax introduced 50 years ago.

What was of enormous interest in the outcome of this referendum was, however, the answer to the question that the referendum collaterally raised: that is, whether the attitude of the Swiss towards joining the EC was showing a shift.

All community nations as well as four members of the European Free Trade Association (of which Switzerland too is a member) have a VAT system. While the EC nations are discussing at the moment a minimum floor rate of 15 per cent for VAT, any new country that wants in future to be a part of the EC has to have a VAT regime. It is in this context that the Swiss referendum had spurred interest. With the four parties in the coalition government having agreed to the introduction of VAT earlier, what this referendum once again brought to the fore was the wide disparity between the preferences of the governing body and those of the people themselves.

In a sense, for the Swiss, the issue in this referendum was an extension of the continuous dilemma that they have been facing, with the closing in of Single Europe. The EC countries are the ones with which Switzerland is mainly concerned in trade as well as in competition. Predicated as Single Europe is on financial deregulation and a certain fiscal uniformity, its establishment is seen to have an adverse impact on the economy of Switzerland. The Swiss are constantly called upon, willy nilly, to recognise this and make compromises even in areas where their uniqueness has been their original forte.

With the EC nations bringing down all barriers to free movement of capital and co-ordinating all banking activities with free access to one another's markets for purposes such as granting of credit facilities, the EC banks now have a wider market for all their services. This, coupled with deregulation in general, robs Swiss banking of some of its sheen. With inflation too running at close to 6 per cent, much higher than that in France or Germany, interest rates in Switzerland have shown a marked rise in the last one year.

Banking law amended

The banking sector will have to bear the brunt of deregulation and the EC onslaught. On another level, bowing down to international pressure, the Swiss have amended their banking law, making money laundering by intent, as opposed to negligence, a criminal offence.

Yet another compromise that Switzerland has had to make has been in the area of immigration and granting asylum. Given Switzerland's prosperity, the country has been a strong source of attraction for potential immigrants. The Swiss are very sensitive to this circumstance and are really not pleased to see foreigners seek residence here on a permanent basis. But with other West European nations accepting immigrants and refugees, the Swiss have had to fall in line, with the result that the last few years have seen a large influx of foreigners.

Although symbolic, it was mid-June's nationwide strike by a Swiss women's union demanding wages equal to those of men that provides some evidence of the social change that Switzerland is going through. After all, this is a country in which one of the cantons afforded voting rights to its women only late last year, that too after being ordered to do so by the Federal Supreme Court.

For us Indians, facing problems several times more complex, these might seem matters of mere detail. But, for an enlightened people of a country with a population less than that of Bombay, these are issues of serious import. Indeed, it is this very attention to detail that has all along earned the Swiss their reputation for perfection and professionalism. The crux of their problem is not so much that their way of life is increasingly subject to the economic and social changes taking place around them, as that these changes should be taking place at considerable damage to their own value and social systems.

BANK MERGERS

Survival games

The US banking industry, overburdened by the excess baggage of the loan happy eighties, is feeling the first draught of the changes expected. After corporate and real estate loans burnt a hole in their bottomlines, banks have now turned to traditional retail business and middle market lending.

Recently, New York-based Manufacturers Hanover Trust (Manny Hanny) and Chemical Bank shed their individual identities in the biggest merger in the history of US banking. The new entity, Chemical Banking Corporation, with assets of $135 billion is now the country's second biggest banking organisation, next only to Citicorp. Soon after, two southern banks, NCNB and C&S/Sovran also decided to get together. The $4 billion share exchange deal creates NationsBank, now the third largest bank after the newly formed Chemical Banking.

Manny Hanny and Chemical were both facing slipping credit ratings and bottomlines, thanks to their portfolios of dud loans. Third world debt, mainly from Brazil and Argentina, and commercial real estate loans were the main problem areas. While the banks had to write off 40 to 60 per cent of third world debt, almost 15 per cent of the new bank's real estate loans are non-performing.

The New York mega deal is expected to result in savings of almost $650 million, partly through job cuts. Almost 6,200 of the total work force of 45,000 will have to be retrenched. A $1.25 billion stock offering is also in the offing. For the two new partners, though, the main challenge lies ahead.

The plans are to focus on domestic retail banking and the small and middle business market, an area which is proving the most profitable across the US. C&S/Sovran, too, agreed to the merger following real estate loan problems. NCNB, a North Carolina-based bank with its strengths in the lucrative retail business, had in the past been eyeing the earlier incarnation of C&S, Citizens and Southern, but was pushed out by Virginia-based Sovran Financial. NationsBank, with $118 billion in assets, is expecting to save almost $350 million following the merger, and reduce its workforce by 10 per cent.

NationsBank, despite its poor presence in the international market, should do well at home. It has the biggest domestic deposit base in the US, and the largest retail franchise network amongst US banks, putting it in an enviable position. In US banking circles, big seems to be beautiful these days. Only because, analysts say, it's the only way to survive.

PAN AM

Clipped wings

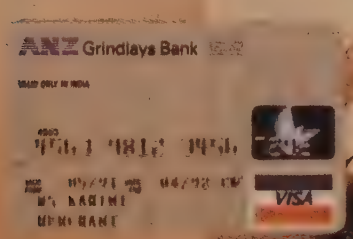
For sale: parts of what was once America's best-known airline, to the highest bidder. Pan Am Corp which filed for bankruptcy protection under Chapter 11 in January this year, is receiving bids for its various operations.

In mid-July, Delta Air Lines offered $260 million for a package of assets including Pan Am's New York-Europe, Miami-London, Detroit-London routes, its Frankfurt operations including India routes, and its East Coast (Boston-New York-Washington) shuttle. The deal will include lease and other interests in 45 aircraft. Delta would also absorb about 6,000 of Pan Am's employees.

Shortly thereafter, Trans World Airlines Inc. and American Airlines put forward a rival combined bid of $310 million. Under this, American would get Pan Am's East Coast shuttle and routes between the US and certain European cities, while TWA would get the Miami-London and Detroit-London routes, as well as the Frankfurt operations. TWA would also take on 4,500 Pan Am employees.

The fate of Pan Am's Indian operations however, is as yet unclear. With sale imminent, employees too are unc tain about their future. Presently, Am's market share out of India on

Frankfurt-New York sector is estima at six per cent. Neither Delta nor TW operates flights out of India. TWA, ho ever, has landing rights in India whic has not used since 1987 when it s pended operations out of India. Acco ing to C. Rama Chandran, chief operations, East-West Travel and Tr Links Pvt Ltd, "TWA might not be w ing to pay for landing rights which t already have. However, these would attractive to Delta, as it does not h these rights in India."



TWA had suspended operations India because they were not profita enough. Now, if TWA does get the d what happens to the Indian sector? Sa TWA spokesman, "if the deal g

through, the decision regarding the In routes will depend on their viabili Other airlines are also reportedly in bidding. The final decision will be m by the bankruptcy court at the hea scheduled for 12 August. Governme bodies and the Pan Am creditors' c mittee are also likely to have a say. W ever eventually bags the deal, it se unlikely that Pan Am will vanish into blue. It will, in all probability, continu operate on a few sectors worldwide.

WHEN YOU HAVE ARRIVED, LET YOUR CARD DECLARE IT.

THE ESSENTIAL ACCESSORY OF A SUCCESSFUL W O M A N EXECUTIVE

If you don't deserve the ANZ Grindlays Visa Card, then who does?

You have worked very hard indeed to get where you are in your profession, haven't you?

Well, why shouldn't everyone know it?

Respect is not all that the card gets you. It is accepted at over 15,000 establishments like shops, hotels and restaurants, which display the Visa sign.
You can buy just about anything on your card. For your home. For travel. For entertainment.

You can choose how you would like to pay. You can pay the entire bill at the end of the month. Or just 10% of the total outstandings. Or any amount over 10%.

Cash at 56 branches across the country. Show your card at any of our branches and you can get instant cash.

Your spouse, and children above the age of eighteen years can have their own cards, charged to your account.

You need not even have an account with our bank to get our Credit Card.

Now that you have arrived, claim the privileges you deserve.

Telephone or write to your nearest ANZ Grindlays Bank Branch or to:

Card Services Division, ANZ Grindlays Bank, 132, Mint Road, Bombay 400 001. Phone: 2623081, 2623082.

STOCKMARKET REVIEW

Upbeat and favourable

(For the fortnight ended 27 July 1991)

	27 July	12 July	per cent change over fortnight	year
BSE Sensitive Index	1599.98	1441.85	+10.9	+54.8
BSE National Index	774.73	702.91	+10.2	+45.9
Vol (Rs.cr) fortnt. ended	211.61	177.80	+19.0	+24.4

The fortnight began with the market in an expectant though uncertain state in its reflections about the Union budget to be announced on 24 July. The devaluation and liberal trade policy measures adopted during early July, served as a welcome prelude causing marketmen to be hopeful. This mood was helped by the railway budget of 16 July which proposed 20 per cent fare hikes for first-class passengers and a modest 10 per cent hike in freight. This was well received by the market and

the BSE Sensitive Index rose by 35 points to 1,442 by 17 July.

While the railway budget was significant in that it indicated a possible soft fiscal budget, the delay in announcing the industrial policy suggested that the Congress was not united on this. This caused the market to drop sharply on 22 July.

Company	Price 27.7	Price 12.7	Per cent change
Baroda Rayon	700.00	530.00	32.1
Century	6,800.00	6,300.00	7.9
Indian Rayon	164.00	134.50	21.9

During the pre-budget session on 24 July, the market was already bullish, following from the industrial policy statement read out in Parliament in market hour. Given the immense significance of the new industrial policy, the market was ready to move sharply upwards provided the Union budget was not sharply adverse.

While the frenetic budget session was taking place during evening hours, all that the market was really looking for was a not-too-harsh budget. Well aware of the government's resource crunch, expectation was rife that cement — which has been performing particularly well — would come under heavy levies, while direct taxes would rise sharply. In addition, an expected 20 per cent reduction in fertiliser subsidies was expected, to be financed at least in part from the profits of fertiliser companies.

What the market got was not merely a soft budget on the tax side (a mere Rs.700 crore of additional indirect taxes due to changes in law and Rs.2,100 crore of direct taxes) but several liberalisations including the abolition of the office of the notorious controller of capital issues (CCI) and the allowance of private mutual funds. The expected quick empower-

Cement spread in budget

Company	Price 27.7	Price 12.7	Per cent change
ACC	2,875.00	2,460.00	16.9
Grasim	280.00	255.00	9.8
Gujarat Ambuja	217.00	172.00	26.2
India Cement	180.00	167.50	7.5
Jaiprakash	39.00	35.50	9.9
Mysore Cement	115.00	93.00	23.7

ment of the Securities and Exchange Board, with its positive attitude towards freer markets also helped market sentiment.

In addition, cement remained untouched except for the general increase in excise, while profits of fertiliser shares were unaffected by the reduction in fertiliser subsidy because of the permission pass on costs. In essence, it was the combination of a strong industrial policy a a relatively innocuous budget th pushed the market. As a broker commented, "The first was positive, the second not negative."

The market consolidated its gains the days that followed, shattering t 1,600 mark to touch 1,630.27 befo retreating to marginally below 1,600 the close of the fortnight. It was if, a broker quipped, Manmohan Sing was the matador leading the bull by t horns.

In the process, several shares, parti ularly cement reached new highs. But t rise was fairly broad-based in speculati stocks, covering steel, petrochemica and automotive stocks. In fact, 47 of t

Fertilisers: subsidy cut offset

Company	Price 27.7	Price 12.7	Per cent change
Deepak Fert.	33.00	26.50	24.
Guj. Narmada	48.00	38.50	24.
Guj. Fert.	250.00	210.00	19.
Indo Gulf	40.00	36.25	10.
Zuari Agro	90.00	72.50	24.

79 shares in the specified list in Bomba reached their highest levels of the yea during the fortnight, while 321 u specified shares peaked during the latt half of the fortnight. According to broker, the latter implied that the u swing had yet to spread to the enti market.

Technical analysts were also please that the boom had occurred in July. T 26 per cent jump in the Sensitive Inde this July was similar to, and, in fact, ou paced by the 29 per cent jump in Ju 1990. The bullish fervour continued kerb at the end of the fortnight, with ne peaks scaled in the subsequent days. To large extent, the sustainability of th boom depends on corporate perfo mance. Three large companies, Baj Auto, Larsen & Toubro and Telco, hav indicated turnover jumps of over 20 p cent in the first quarter.

The monsoon has begun well. If polit cal uncertainty does not upset market ca culations, then several more liberalisa tions are likely which could send the ma ket soaring higher.

■ RAFIQ DOSSA

ON-VOTING SHARES

A likely new instrument

With financial institutions owning 40 per cent of issued marketable securi-es, and with the proportion of funds ised through mutual funds crossing 40 er cent in 1990, many corporate man-gers are worried about institutional keovers. For example, Aditya Birla had one on record saying that the possibility f institutional control had deterred him the past from using institutional funds. he new industrial policy, by removing e asset definition of an MRTP firm, has dded the new threat of takeover by large ivate firms.

In this context, the concept of non-oting shares, ie, shares entitled to the rnings of a firm but without any voting ower, has been proposed by the Bombay ock Exchange (BSE) recently — an idea st mooted by a working group of the anning Commission headed by Abid ussain, and followed up by the Federa-on of Indian Chambers of Commerce d Industry (FICCI).

SE's initiative. A study group had been ppointed by the government following a resentation by the BSE in early July. .R. Mayya, executive director of the SE, said that the idea of non-voting ares was mooted by the BSE to the mmittee for the development of new se-urities, headed by M.J. Pherwani. ayya explains, "An ordinary voter is ot interested in voting powers. What re-lly matters is good dividend and contin-d capital appreciation. Besides, we ve recommended added sweeteners, e extra dividend, which will make this strument more attractive."

Merchant bankers feel that non-voting ares will enable companies to raise ore money. The concept of non-voting ares is expected to generate new invest-ent, particularly from non-resident dians. Vallabh Bhansali, a leading ockbroker, says, "It has proved to be a pular instrument abroad. Whatever e percentage of non-voting shares al-wed in the stocks of a company, it will finitely help ward off threats of take-ers. And non-voting shareholders do ve the right to fight for their dividends the company does not declare one dur-g the year."

"Let the market decide," says Heme-ra Kothari, president of the BSE, when estioned about the adverse effect of n-voting shares, in that they can help entrench inefficient management. "A shareholder always has the option not to buy non-voting shares."

Threat of removal. This perhaps misses the point. The only effective way to keep management on its toes is the threat of removal. Although individual small shareholders know that their shareholding does not count for much, larger shareholders can pick up smaller shareholdings in order to amass a significant stake. If, as the BSE proposes, up to 50 per cent of the equity can be non-voting and if, as is typical, promoters start off with 40 per cent of total equity, the accountability of management is greatly reduced.

The interests of the initial shareholders can also get jeopardised. Shareholders can, and do, determine the popularity and value of a particular scrip according to their interpretation of company prospects and management. But though they can bid down the prices of badly controlled and poorly performing companies by selling off their holding, that does not help the initial small shareholders (who bought at par in a new issue) or make for the possibility of a good but badly managed project ever being rehabilitated. In addition, with the convertibility cause having been removed under the current industrial policy, shareholders will lose the other source of protection that they earlier had.

The best protection for existing management ought to be performance. Tata Steel, for instance, was controlled by Tatas with only 8 per cent holding for several years. Even now the Tata management owns less than 20 per cent of the equity. Yet there has been no threat of a takeover.

Unexpected supporter. Securities and Exchange Board of India (SEBI) is an unexpected supporter of non-voting shares. Says SEBI chairman G.V. Ramakrishna, "We would like to restrict non-voting shares to 20 per cent of issued capital so that, while it does not completely remove the threat of takeover, it does provide some protection."

Given their popularity abroad, especially in Switzerland, and the broad support from stockbrokers, non-voting shares are likely to be soon issued. If the BSE board is right, their success will depend largely on whether companies deliver satisfactory dividends. On the other hand, the door for removing inefficient managements will close a bit tighter.

■ DEVENDRA TAK

MUTUAL FUND DISCOUNTS

Here to stay

Mutual funds have begun to offer incentives for early subscribers. The trend began with the Unit Trust last year offering fortnightly rather than monthly rates, with rates in the second half of the month being higher by about half per cent. Other mutual funds have similarly been offering discounts which work out to roughly one per cent per month.

These incentives make particular sense in the context of high interest rates which the fund can earn through the call money market (now averaging 25 per cent per annum) but which is not available to the individual small investor. From the investors' viewpoint, the one per cent extra (12 per cent per annum), is twice that offered by a normal savings account in a bank.

Special incentives. Indbank's latest schemes, Indsagar and Indjyoti for example, offer Rs.20 back on every Rs.1,000 to those investing in the first fortnight of the two-month open period. This is progressively reduced to Rs.15, Rs.10, Rs.5 in the subsequent fortnights, with no incentive for the last-fortnight investors.

Earlier, with a slight difference, SBI's Magnum Monthly Income scheme II which closed on 28 June, offered a uniform one per cent subscription amount to those investing before the last ten days of the two-month open period.

And investors do not lose out because of the funds' 25 per cent rate of return from the call money market. "Any surplus is passed on to investors in the form of dividends later," says N. Sriram, general manager, SBI Mutual Fund.

A. Reguramalingam, vice-president of Indian Bank Mutual Fund feels, however, that the incentives do not work. The rush to invest continues to be concentrated in the last fortnight. "Almost 50 per cent of subscribers still come in the last fortnight. Only the small segment shifting funds from savings deposits to the scheme invest earlier," he says.

Yet, incentives have come to stay because, as Sriram explains, "If two out of five similar schemes don't offer incentives, there might be some difference in response." So, it seems that the early birds will continue to be rewarded.

■ POONAM CHAWLA

For a long-term outlook

The budget announcements and the new industrial policy have affected stock prices favourably. The outlook, for the secondary market, seems good. It is however at a time, such as this, that it is most necessary to distinguish between the companies whose high multiples are justified by genuine fundamental/technical factors and companies whose multiples can be attributed, in main, to the current boom phase. So feels Shirish Dave, **one of the partners of the stockbroking firm Chimanlal Maneklal in his talk with** Business India's **Kalika Ghotgalkar and Alka Mukundan, on the market outlook in general**

In Dave's view, the next 2-3 years will be a period of adjustment for Indian industry, which will now be exposed to a more competitive environment. The Indian consumer too, who has until now, not been king, can look forward to better quality products and services.

The fertiliser industry, in spite of being a core sector, has been neglected, Dave feels. All that is now poised to change, with low analysis fertilisers (four of them) proposed to be freed from price and movement controls and an average increase of 40 per cent in the price of all other fertilisers. There will also be a ceiling on the subsidy per tonne payable to super single phosphate (SSP) producers so as to move towards total deregulation in the next few years. Dave feels that fertiliser shares should now rise owing to better future expectations of growth and earnings.

Top slot

Within fertilisers, Spic hogs Dave's top slot. As much as 65 per cent of sales for 1989-90 accrued from DAP and urea. The higher price realisations would not only offset the effect of removal of subsidy but would also suffice to prevent raw material (phosphoric acid) import costs from depressing margins. As compared to GSFC and Indo Gulf Fertilisers, Spic's equity is low at Rs.34 crore and thereby its EPS would most handsomely reflect a fatter bottomline. With an EPS of Rs.4.63 for March 1991, the scrip currently quotes at Rs.68.50 (30 July 1991). For the year ended March 1992, the EPS may range between Rs.12 and Rs.15 while the market price could appreciate 46 per cent within a year.

Punjab National Fertilisers & Chemicals (PNFC), is another scrip with potential. While soda ash and ammonium chloride (one of the four fertilisers which have been freed from price and movement controls), brought in 56 and 16 per cent respectively of the sales for March 1990, ammonium chloride's contribution to the product sales is scheduled to increase. It comprises a small yet essential portion of total fertiliser inputs and demand is thereby relatively price-inelastic and any increase in selling price would be absorbed by the consumer. For March 1990, PNFC earned a tiny net profit of Rs.86.78 lakh on an equity of Rs.14.79 crore. Carry forward deficit was Rs.25.56 crore which, in the light of improved

prospects, could be wiped out by March 1992. The scrip which was hovering at par in the pre-budget days now quotes at Rs.19 and could well cross Rs.30 in an year's time.

Among export units, ITC with forex earnings of Rs.248.26 crore (from tobacco, agri-products, hotels, etc) for March 1991, is slated to perform even better. Exports are projected to touch Rs.300 crore by March 1992. In the mestic market too, ITC has a compreh sive marketing set-up with a wide rea Rural areas too are covered street street and area by area spreading awa ness and giving the company's produc high visibility that is essential in its lin businesses. With an EPS beyond f value at Rs.11.69 for March 1991, scrip now quotes at Rs.253 and could, cording to Dave, go beyond the Rs. level within a year.

Worth tracking

Among the export units, Dave singles Eurotex Industries and Exports, a 100 cent EOU promoted by the Pato group (PBM Polytex & Patodia Synt as one that merits tracking. Makers cotton yarn for export, Eurotex's co mercial production commenced in A 1989. With an EPS of Rs.2.84 for Ma 1991, this could range between Rs.7 a Rs.10 for the year ended March 19 While it quotes at Rs.55 currently, market price could appreciate by 36 cent within a year.

In aluminium, Dave feels that Adi Birla's Hindalco holds out good prom Production of aluminium for 1991-9 anticipated at 165,000 tonnes agai 140,000 tonnes for 1990-91. An appli tion has also been made to raise prod tion capacity from 150,000 tonnes 300,000 tonnes per annum, with a co sponding increase in the capacity of a mina and semi-fabricated products. company scores in terms of cost of el tricity per unit which is around 56 paise against over a rupee for Indal and Nal While prices of the metal have fallen the international market from $2,500 tonne last September to around $1, per tonne now, the price is expected bottom out now. Net landed cost is marginally higher at around Rs.56 per as against the domestic price of arou Rs.52 per kg. With an EPS of Rs.18 for March 1991, the scrip quotes Rs.317.50. Dave forecasts EPS for Ma 1992 to range between Rs.25 and Rs and the price to go to Rs.400 before a y is out.

A fundamental analyst to the co Dave feels that the long-term outlook the market is excellent. Hopefully, la events will prove him to be a realist well.

UTUAL FUNDS

Time for private sector

rivate-sector mutual funds will have an important role to play in aiding ie growth of Indian capital market on healthy and mature lines

he concept of mutual funds is a fairly new one in the Indian economic scenario. A mutual fund could be defined as non-depository, non-banking financial termediary, which brings together the vestors who have surplus money to invest in corporate units who need the oney for their industrial projects.

The origin of mutual funds could be aced to the UK in the nineteenth century, which spread to the US in the beginng of the twentieth century. In India, e concept had its baptism in the form of e creation of Unit Trust of India (UTI) nder the UTI Act, 1964. Though the rst open-ended scheme was floated by TI in 1964, the mutual fund concept ught on only during the mid-eighties, nen the government allowed public-ctor banks and financial institutions to at their own mutual funds.

It has now been widely accepted as a werful vehicle through which the savgs of a large number of small investors pooled for deployment in various ock/money market securities, thereby ving the investors the benefit of high rerns coupled with safety of their investents. Most of the mutual fund schemes ated by UTI, bank subsidiaries, LIC, IC, etc, have met with overwhelming instor response, resulting in the mopping of over Rs.5,000 crore within a short riod of three years.

low comparable levels

espite all these strides made in the last w years, the conversion of household wings into investment in our country s remained much below comparable els in the western world. For instance, investor population in India is 16 million which compares quite unfavourably th Japan (25 million) and the US (50 llion). The percentage of house-hold wings that flowed into the capital mart in India is a poor 7 per cent, as against per cent in the US and 19 per cent in pan.

Perhaps this realisation has prompted government to throw the door open joint/private-sector mutual funds to plement the efforts to the public-tor mutual funds in converting household savings of investors, specially those from rural and semi-urban centres, into risk hedged investments and thereby spread the equity/stockmarket investment culture in those hitherto neglected areas.

Hitherto, the corporate sector had to look up to development financial institutions (DFIs) for their requirements of project finance and in turn, the DFIs were dependent on government grants and subsidised market borrowings. This route delayed the process of capital formation in our country, in addition to generating avoidable red tape. Through the process of economic liberalisation, the traditional dependence of the corporate sector on the DFIs is sought to be diluted, forcing it to access the capital market for its funding requirements. Realising that this is possible only if the capital market is well and truly developed, the government has permitted joint/private-sector mutual funds to not only augment the efforts of the public-sector mutual funds but also provide qualitative competition. This move is well in tune with the economic liberalisation measures being pursued by the government in its efforts to move towards a free market economy.

Sound framework

The new Industrial policy announced by the government seeks to pursue a sound policy framework encompassing abolition of industrial licensing, encouragement of entrepreneurship, development of the capital markets and increasing competitiveness for the benefit of the common man. These policies are intended to create a refreshing industrial environment devoid of stifling controls which limit growth and pave the way for rapid industrial growth.

Industrial development, triggered of by such policies of liberalisation, cannot be complete without a healthy and well developed capital market. Private-sector mutual funds will have an important role to play in aiding the growth of Indian capital market on healthy and mature lines.

Talking of competition, the recent economic history of India has shown that other things being equal, the private sector is more efficient than the public sector. This is because the public sector has failed to adapt itself to changing circumstances. The past has, however, shown that dynamism is not extinct in the public sector like when B. Ratnakar, the then chairman of Canara Bank envisaged the development of financial services and mutual funds in India well ahead of his contemporaries and transformed the organisations he headed into forces to be reckoned with.

The element of competition that private-sector mutual funds will provide to its private-sector counterparts should make interesting watching and as long as the competition is fair and there is no discrimination in favour of the public sector, the real beneficiary will be the investor.

The induction of private-sector mutual funds will aid the development of the capital market in the following ways:

- By acting as market-makers, they will provide more liquidity to the listed company's shares.
- They will provide stability to the market for a healthier capital market growth.
- They will help to spread the equity cult among rural/semi-urban savers, thereby transforming them from savers into investors.
- They will provide the much needed healthy competition to their public-sector counterparts, which may force the public sector also to perform more effectively in the long run.

It is the bounden duty of the government to ensure that there is level playing field for public/joint/private-sector mutual funds in the form of identical tax incentives so that private-sector mutual funds are not discriminated against.

L&T

Overall good performance; profit on sale of investments to the tune of Rs.17.06 crore; debenture and share quotations moving up on heavy speculation

Ever since Larsen & Toubro's (L&T) board of directors announced on 5 July that it would be calling for the remaining Rs.410 crore of its Rs.820 crore fully convertible debenture issue, the debenture price moved up to touch a new all-time high (*see chart*). Meanwhile, the share price stayed around Rs.112 for most of July but jumped to Rs.135 after the budget.

This speculation in the share overrode some strong selling pressure that brokers say was induced by the better prospects of the debenture vis-a-vis the share. In essence, arbitrageurs sold shares to buy debentures. Ashok Thakkar, a leading broker in L&T debentures, says that at Rs.320, the debenture is an excellent buy. This is because with the Rs.150 that remains to be announced per debenture, the total cost of each debenture (convertible to five shares) works out to Rs.470. This brings the cost per share to Rs.94, which is Rs.41 below the share price and thus an excellent deal even after adjusting for dividends lost till conversion.

The debenture price, Thakkar says, has firmed up since the Supreme Court directed L&T in April 1991 to go ahead with the rest of the issue schedule. L&T's board, after the removal of the Ambanis, had proposed cutting the issue by Rs.180 crore following a board decision to cancel the Rs.645 crore to suppliers to Reliance Industries. L&T at that time said it preferred to use the issue money to create assets of its own rather than for another company. The bulk of the issue receipts were targeted for cement instead.

Prior to the Supreme Court's decision, debentures in June 1990 traded as low as Rs.130 (shares traded at Rs.75) reflecting the possibility that each debenture might be converted into only four shares rather than five. Even now, the big difference between the share price and the value per share of the converted debenture rem a puzzle. With the first conversion due on December, broker R. Parikh pects this difference to narrow subs tially by that time.

Of equal interest to shareholders i new use of the funds. The Supreme C directed L&T to supply credit Reliance, but the latter has declined t cept credit now, perhaps because c have risen and the company is plan its own Rs.900 crore issue. This puts question L&T's participation as engi in the Hazira cracker project tempora off. However, the Ambanis might re and it could change. If that goes thro and if L&T gets shareholder approva its cement plants (about Rs.300 crore been used for drawing down debt lea enough funds for a 2 million to cement plant), both debenture and sh holders will probably have much to c about.

Higher exports coupled with relaxatio raw material prices boost profit marg dividend hiked by eight points; a Rs crore capital expenditure over the two years and emphasis on exports t more pronounced

Cotton (primary raw material for M fatlal's main product, cloth) produc peaked at 13.35 million bales in 1989 With a carry forward stock of 3.79 lion bales, prices were pegged at comf able levels till October 1990. Howe for the 1990-91 season ended Aug 1991, the crop estimate has been rev downwards from 12.2 million bale 11.5 million bales while exports of million bales were permitted by the g ernment. This was reflected in the grad hardening of cotton prices from Octo 1990 onwards. And from March 19 they have soared further upwards. carry forward stock also stands co spondingly reduced to 1.48 million ba It is expected that this will suffice to m demand upto mid-October. Further rection that cotton prices will move in pends on crop estimates for 1991-92.

For Mafatlal Industries, exports the year-ended March 1991 touche high of Rs.44.34 crore, up 28 per c The average cost per tonne of cotton fibre — the major raw materials for textile units, declined by approxima Rs.3,424. On the whole, raw mate

ditors qualifications: (1) Non-provision in accounts of ltiple shift allowance of Rs.6.70 crore in respect of the ancial years 1983-84 to 1986-87 which would have reduced reserves by Rs.5.12 crore had it been provided. Contingent liabilities of Rs.9.98 crore in respect of nands of Central Excise and for refund of excise duty.

sional grade connectors in technical collaboration with Siemens AG of Germany. The project, estimated to cost approximately Rs.26 crore, will go into commercial production by the last quarter of 1992. The next two years will also see about Rs.50 crore being invested in textile machinery as part of a modernisation effort aimed at boosting exports. While the exact means of financing for the above two projects is under finalisation, apart from internal accruals and borrowings, tapping the capital market is a possibility that cannot be ruled out.

Although higher cotton prices will exert pressure on margins in the first half of the current year, the management is confident of maintaining and even improving upon the 1991 performance. A good cotton crop for 1991-92 is naturally welcome. Exports are targeted at Rs.50 to Rs.55 crore and the thrust is on value-added processed fabrics.

A firm demand for cotton textiles, both domestic and international, leading to better realisations are some of the reasons behind this optimism.

Castrol India

Success of new product causes higher operating profits; higher taxes do not affect the bottom line; dividend increased from 36 per cent (annual) to 45 per cent

Castrol India, manufacturer of lubricating oils and greases, has announced phenomenal results for the year ended March 1991. Reasons for the improved performance have been attributed to a better product mix, gains in operational efficiency and better working capital management.

Castrol has introduced a new engine oil — the GTX2 — which is said to effectively deal with the auto engine's internal hazards. This product has been given the Donut Seal of Approval by the American Petroleum Institute. The company has performed well mainly due to the success of the GTX2. In fact, the turnover in automotive lubricating oils and greases has increased by 22 per cent.

The company has also increased its operational efficiency by decreasing its fixed costs in the form of higher capacity utilization. This figure has increased from an annualized 58 per cent to 65 per cent from the year 1989-90 to the current year.

The director's report also claims to have improved working capital techniques. However, the results are not yet visible as the current ratio has dropped from 4.42 to 3.61, while the quick ratio has plummeted from 1.26 to 0.90.

Castrol's imports as a percentage of total raw materials has increased from 1 to 5 cent in one year. The sudden 181 per cent (annualised) jump in the cost of imported raw material has caused the total cost for raw material to increase by 21 per cent (annualised). The company currently has a higher import content combined with a low export programme.

The sum total has resulted in swollen profits. Operating profits have jumped by 139 per cent (annualised). Net profits have skyrocketed by 251 per cent. Margins too foretell the same story. With the operating margins doubling from 10 per cent to 21 per cent, Castrol is riding on a high wave. Due to a 23 per cent fall in the annualised interest payments, the gross profit margin has shot up from 7 to 19 per cent. Even a 300 per cent higher contribution to the exchequer has not had a significant effect on the net margins, which have risen up from 4 to 11 per cent.

From the investor's point of view, Castrol has provided a good return. With 64 per cent of the shares in the hands of the

ts as a percentage of sales took a five nt drop (*see table*). Average price realiion of cloth — Mafatlal's money spin-, was also higher by 16 per cent. All se factors played their part in revving operational efficiency considerably. rofit margins perked up to 15.5 per lt (14.3 per cent) and 9.6 per cent (7.9 cent) at the operating and gross levels pectively. These margins, in actuality, ld have been higher at 18.8 and 12.9 cent respectively but for a provision Rs.5.56 crore — being the amount tten off in respect of Mafatlal Engiring. EPS has almost trebled to 61.49 (Rs.22.68) while Rs.30 per share .22) is to be paid out as dividend at a easier payout of 49 per cent (97 per t). The scrip which hovered at Rs.400 anuary 1990 had crossed Rs.1,000 by -1990 and touched a new high of l1,450 in 1991. It now quotes at l1,190, discounting earnings 19.4 es.

he company is setting up a project to nufacture 5 million per annum profes-

investors having come in the form of bonus issues (the latest 3:5 declared in January 1991), investors have not been overly concerned with the low payout ratio.

TRENDS

Britannia Industries

Engaged in the manufacture of bakery products and export of biscuits, cashew, computer software and general merchandise, Britannia Industries has clocked a 15 per cent higher turnover of Rs.362.13 crore. Sales of bakery products, the company's core business, rose by 24 per cent. Overall net profits, however, increased only slightly by 2.97 per cent to Rs.10.05 crore.

The company has recommended a final dividend of 17 per cent which, together with the interim paid in December 1990, totals to 29 per cent, hiking the payout by 20 per cent.

The company has been awarded star trading house status for their export performance, one of the four exporters to do so. Meanwhile, as already reported, the company has entered into an agreement to sell off its soya unit at Vidisha, MP to SM Dyechem.

For the six months ending March 1991, net profits, at Rs.4.86 crore, was lower by 1.42 per cent compared to the corresponding period last year. While sales increased by 27.7 per cent, raw material costs also rose by 32.25 per cent, leading to an increase in the raw material to sales ratio from 51.41 to 53.23. The operating profit to sales ratio, however, decreased from 6.27 to 5.72. Operating profits rose by 16.52 per cent and gross profit by 10.71 per cent over the corresponding period last year. But there were also sharp increases in depreciation and provision for taxes (increases of 33 per cent and 25 per cent respectively).

Gujarat Ambuja Cements

Gujarat Ambuja Cements, promoted as a joint sector company, is one of the large manufacturers of cement in the country. For the year ended June 1991, the company has scaled new peaks on all fronts, increasing dividend by 15 points to 40 per cent. Sales have zoomed by 31 per cent to Rs.153.24 crore. Production has gone up from 907,000 tonnes to 982,000 tonnes, achieving a capacity utilisation of 140 per cent. Also, the company has brought down the power consumption to 95 units per tonne. While, at gross level, the margin is placed at 32.01 per cent, the bottomline has more than doubled to Rs.39 crore (Rs.14.51 crore) yielding an EPS of Rs.19.50 (Rs.7.26).

RESULTS ANNOUNCED

Thomas Cook

Continues to perform well; declares dividend of 25 per cent on expanded capital

Thomas Cook, a name synonymous with travel, tours, foreign exchange and cargo, has recorded a growth of 15 per cent in its gross income to Rs.10.17 crore for the year ended March 1991. This is despite the volatile, economic and politica mate prevailing in the country and t vere impact of the Gulf War that to toll on the worldwide travel industr

After providing for depreciation taxation at net level, the profit work to Rs.1.87 crore — a 31 per cent hi yielding an EPS of Rs.17.80 (Rs.1 However, after taking into accoun bonus shares issued last year, the stands diluted at Rs.11.85.

Incidentally, the Thomas Cook g which holds 40 per cent in Thomas (India) celebrates its 150 anniversa July 1991.

Otis Elevator

Final dividend of 15 per cent decla expansion plans for a new facto Mysore going on

The largest manufacturer of eleva and escalators, with 52 per cent o equity held by Otis Elevator USA notched a 17 per cent higher turnov Rs.69.16 crore for the year ended M 1991. This is despite the curbs on go ment expenditure and the tight m market condition which had an ad impact on the construction industry

Nevertheless, on the exports front company crossed the Rs.3 crore m representing a growth of 63 per cen net level, the profit is up 7 per ce Rs.4.34 crore, pushing the EPS b paise to Rs.8.

While the competition in the eleva and escalators market is hotting up, is hopeful of increasing its turn through service income.

Mahindra & Mahindr

Turnover crosses the Rs.1,000 mark; offshore earnings fall as th remains idle for 160 days after co tion of its initial drilling contract ONGC

Although income for this tractor an lity vehicles manufacturer is up 1 cent to Rs.1037.90 crore, the net p has plummeted by 23 per cent to Rs. crore for the year ended March 199

With the growth in demand for tors continuing to increase, durin year under review M&M sold 2 tractors — up 24.4 per cent, thus inc ing its share from 17.8 to 19.3 per ce

tractor market. However, the company's automotive division took a beat- both in the domestic and overseas rket with sales down by 4,906 vehicles 3,732 vehicles to 30,057 and 1,307 ve- les respectively. The drop in exports s primarily on account of the Gulf r.

nnore Foundries

oduction down 5 per cent; dividend intained on annualised basis at 20 per nt

e drop in production has been attri- ed to the strained industrial relations ring the year. On an annualised basis, sales volume declined by 5 per cent to 878 tonnes; however, in value terms, turnover has increased by 6 per cent Rs.65.35 crore. After providing for de- ciation and financial charges the ofit is placed 24 per cent lower to 1.75 crore.

afatlal Dyes & nemicals

vidend maintained at 20 per cent; in- ase in the product line and addition of h value items to its marketing network s off

ile sales of synthetic resin dispersions volume terms has increased by 12 per t to 2,990 tonnes, the company's turn- r is placed 26 per cent higher at 63.58 crore. The growth in turnover is inly attributed to the increased nand from the textile sector.

With the profit after tax pegged at 1.37 crore, the EPS works out to 6.53 (Rs.5.40).

IN BRIEF

abuja Agro Industries expects to nplete its soya solvent extraction plant 0,000 tpa capacity by March 1992.

rocarbon & Chemicals, a Hin- than Development Corporation unit, utting up 150 tpd caustic soda plant d on the membrane cell technology at dia, West Bengal, at a project cost of und Rs.49 crore.

Rs.28 crore **Bhopal Sugar**'s current activities include the manufacture of sugar and soyabean crushing. The company plans to double its sugar cane crushing capacity to 2,500 tcd besides setting up another soyabean crushing unit of 200 tpd capacity.

Rathi Ispat has completed the expansion of its foundry division. It is in the process of increasing its melting capacity.

Engaged in the manufacturing of galvanised sheets, **Uttam Galva Steel** is implementing a backward integration programme by setting up a 50,000 tpa cold rolled (CR) steel strips plant at Donvat, Maharashtra. The CR mill is expected to go on stream by end 1991.

Dr. Reddy's Laboratories, leaders in the production of Norfloxacin and Ciprofloxacin, has declared a 1:2 bonus combined by a final dividend of 10 per cent, making it a total of 30 per cent for the year ended March 1991.

Jamna Auto Industries, engaged in the manufacture of leaf spring, has clocked a turnover of Rs.28.43 crore for the year ended March 1991. Of this exports accounts for Rs.4.30 crore.

Viewed against the adverse conditions in the cable industry, **INCAB**'s gross revenue of Rs.188.12 crore (Rs.163.44 crore) for the year ended March 1991 is remarkably good. On the export front, the company recorded an increase of over 68 per cent at Rs.13.84 crore.

Pennar Steels has completed the first stage of expansion, and is all set to retap the capital market with a rights equity issue at par.

GGT Kaypee has turned the corner notching a 43 per cent higher turnover of Rs.8.55 crore with net profit shooting up by 307 per cent. This is attributed to higher capacity utilisation of 75 per cent and better sales realisation of castings.

Bihar Sponge Iron has produced 160,300 tonnes of sponge iron achieving a 108 per cent capacity utilisation. The company has already started utilisation of iron ore fines in the modified kiln, which would raise the capacity to 180,000 tpa. Its second kiln is expected to be operational by mid 1992. The company's forward integration plans include putting up a 500,000 tpa steel mill.

Operating at over 120 per cent of capacity, **Kajaria Ceramics** has achieved a production of 25,167 tonnes and a turnover of Rs.25.15 crore (Rs.15.01 crore) with net profit pegged at Rs.2.56 crore (Rs.74 lakh).

The continuous modernisation and upgradation of **SWIL**'s plants has helped it notch a turnover of Rs.47.13 crore (Rs.40.34 crore) for the year ended March 1991. The company has taken up a modernisation cum expansion at Uttarpara and Nasik units at an estimated cost of Rs.30 crore.

Otoklin Plants and Equipment, a relief unit under the Bombay Relief Undertaking Act, has turned the corner posting a profit at net levels of Rs.7.17 lakh. Banks, after assessing the viability of the company, have provided a Rs.4.92 crore loan at a concessional rate of interest.

With the objective of expanding operations and further reducing dependence on outside sourcing of critical raw materials including imported items, **Hoganas India** plans to invest Rs.5 crore by 1992-93. The means of financing are being formalised.

With a view to improve productivity, **Pampasar Distillery** has embarked on a modernisation scheme. This is done by adding a continuous fermentation plant and a bottling line to increase production of value added brands of liquor. This project is estimated to cost Rs.4 crore. The company also plans for a Rs.45 crore petrochemicals project for the manufacture of monochlorobenzene and nitrochlorobenzene at Maharashtra.

The Pune-based leading manufacturer of diesel engines and bearings, **Kirloskar Oil Engines** has recorded a 11 per cent increase in the sales of engines for tractors. The company proposes to undertake the manufacture of gas turbines in the range of 3 to 10 MW in collaboration with Solar Turbine Inc USA.

Padam Industries has taken up an expansion programme involving an investment of Rs.4.10 crore. With this, the manufacturing capacity of texturised yarn will increase to 1,200 tpa and that of twisting yarn facility to 325 tpa. The company is also setting up a modern polyester nylon dyeing plant of 720 tpa capacity.

Madhusudan Industries has set up a new oil complex at Bundi, Rajasthan at a cost of Rs.6.03 crore, consisting of a 82,500 tpa solvent extraction plant and a 15,000 tpa oil refinery. At the Rakhail plant, Gujarat, the solvent extraction capacity is being increased to 75,000 tpa whilst the oil refinery capacity is being doubled to 15,000 tpa.

Deepak Nitrite's nitroaromatics project, with a capital outlay of about Rs.42 crore, is under implementation with trial runs for the manufacture of the intermediate product — monochlorobenzene — commencing in March 1991.

Cauvery Electronics

Incorporated in 1981, Cauvery Electronics is the first company in the Bombay-based Bush group (turnover Rs.170 crore) to go public. The company has its plant at Gandhinagar, Gujarat. During the 11 months ended February 1991, its total income was Rs.11.29 crore, on which it made a net profit of Rs.10.21 lakh.

The plant can make 100,000 black-and-white and colour TVs a year. The company is now planning to expand production — from around 35,000 TVs last year to at least 80,000 TVs this year.

The issue, mainly to raise working capital, is of 1.8 million equity shares of Rs.10 each to the public at a premium of Rs.5. An equity share from an existing profit making company of a well-known group at a premium of Rs.5 may appear to be quite attractive for investors. But given the slump in the TV market, Cauvery may not be the best buy.

Cauvery Electronics	
Issue opens	: 12 August 1991
Size of the issue	: Rs.2.88 crore
To Indian public	: Rs.2.73 crore
Instrument	: Equity shares of Rs.10 each at a premium of Rs.5 per share
Promoters	: The Mulchandani brothers
Objective of the issue	: Raise working capital
Project	: Manufacture 100,000 B&W and colour TVs
Listing	: Bombay and Ahmedabad

Cauvery's entire success hinges on its efforts to export colour TVs. Chairman Tirath Mulchandani claims that the company has already bagged an export order of 50,000 CTVs from a UK-based buyer and negotiations are on with other overseas buyers.

Several other large TV companies, however, hold the view that although it is not difficult to export CTVs, the price is certainly not remunerative. Mulchandani also partly admits this. According to him, since exports will cover the cost of sales, selling half the production (about 50,000 TVs) overseas will help the company utilise its capacity fully. The rest will be sold in the domestic market.

But even this will probably be a tall order. Demand for CTVs is falling due to high prices. Worse still, the budget has raised the excise duty on it. And above all, the four large companies together hold nearly 60 per cent of the CTV market.

After the issue, Cauvery's equity capital will go up to Rs.3.50 crore. The promoters will hold nearly 39 per cent while 61 per cent will be with the public.

Indana Spices & Food Industries

Indana Spices & Food Industries Limited (ISFIL), which manufactures pickles and spices under the Indana brand name, made its debut in 1986 with an equity issue which was nine times oversubscribed. Since then, its shareholders have consistently received a dividend of 16 per cent. For the year ended March 1990 ISFIL clocked a turnover of Rs.6.96 crore with a profit after tax of Rs.42 lakh yielding an EPS of Rs.3.18.

The company plans to increase its product range by diversifying into the blending, packaging and marketing of tea, refined groundnut, soya and mustard oil, besides setting up a flour mill. "The main products at the flour mill will be *maida, suji*, and wheat flour with bran as the by-product. The installed capacity of the mill is pegged at 150 tpd, of which about 60 per cent would meet the captive consumption of the group companies — Indana Foods for biscuits and Konark Udyog for bread consumption," explains H.S. Jalan, director of ISFIL.

The company's tea project will consist of a facility for blending and packaging 36 million kg tea a year while the refining oil facility will have a capacity of 100 tpd with a proposed product mix of 40 per cent of groundnut and 30 per cent each of soya and mustard. The flour mill pected to go on stream by Decembe year and the edible oil refining un June 1992.

Indana Spices & Food Industries	
Issue opens	: 8 August 1991
Size of the issue	: Rs.20 crore
To Indian public	: Rs.4.26 crore
Instrument	: 14 per cent convertible debentures of Rs.150 each
Promoter	: Hari Shankar Jalan
Object of the issue	: To undertake a diversification scheme
Cost of diversification	: Rs.24.60 crore
Listing	: Delhi, Bombay, Ahmedabad

Mahendra Suitings

After Blue Blends Petrochemicals, Industries and Jaybharat Fabric M one more Arya group company Mahendra Suitings Ltd (MSL) — is going public.

Engaged in the business of wea and marketing fancy design fabrics s 1987, MSL hopes to quadruple its w ing capacity with the present expansi

The prospectus does not divulge tures like supplier of the looms, insta weaving capacity, import content of materials and cost of impo components.

Apart from a small subsidy of R lakh, MSL is meeting its entire pro cost of Rs.5.16 crore from the equity i and a privately placed non-convert debenture issue of Rs.2 crore. The NC will increase its interest burden by Rs lakh. MSL's turnover has grown fr Rs.1.02 crore in March 1988 to Rs.1 crore in March 1991. For March 19 even though sales at Rs.7.64 cr showed a growth of 82 per cent over previous year's figure, it reported a loss of Rs.1.5 crore. Net profit Rs.35.22 lakh for March 1991, represe a mere 3.4 per cent of turnover, and cludes a depreciation writeback Rs.18.5 lakh.

Competition from the unorganised s tor and duties on MSL's major raw ma rials — polyester filament yarn a polyester viscose yarn — will play a ma role in the company's future profitabil

Mahendra Suitings	
Issue opens	: 12 August 1991
Size of the issue	: Rs.2.96 crore
To Indian public	: Rs.1.94 crore
Instrument	: Equity share of Rs.10 each at par
Promoter	: Mahendra K. Arya
Project	: Expansion by installin 24 rapier looms, warping machine, con winding machine
Cost of project	: Rs.5.16 crore
Plant location	: Mehsana, Gujarat
Listing	: Bombay, Ahmedabad

P/E: Market Price/Earning per share
Yield: Dividend as a percentage of market price
■ : Based on unaudited net profit. Dividend for such companies pertains to the previous accounting year.

Prize unclaimed

Unlike the rising index of scrips our winners are dwindling. For IC347, we have no winners.

Scrips	Prices as on Friday 17 June 1991 (Rs.)	Prices as on Monday 15 July 1991 (Rs.)	Ranks
Baroda Rayon	480.00	570.00	3
Castrol	293.00	352.50	1
Indogulf	34.00	37.00	5
Merind	115.00	135.00	4
Std Ind	93.00	111.00	2
Tata Tea	331.25	355.00	6

Given here is a new list of six scrips, and their closing prices on 26 July 1991. Pick the share that you think will rise the most in percentage terms by 26 August 1991 and rank it number one. Then choose the one that you expect will rise the second most and rank it number two. Then number three, and so on till rank six. It's as simple as that!

So, in this Investor Contest, you don't have to predict the price of shares; you merely have to rank the performance (in percentage terms) on the basis of the prices you expect each to reach on 26 August 1991. You don't have to tell us the prices nor even the percentage changes you expect — only fill in the ranks from one to six.

Please note that if you assign the same rank to two scrips, then the following one should be ranked the next consecutive number. For example, if you rank two shares at number three, the next will be number four (in which case, of course, your last rank will be five).

Rules:

1. There is no entry fee.

2. The price mentioned last in the official quotation list will be taken as correct for the purposes of calculation. If the stock exchange remains closed on the stated last day, the closing price on the prior day will be used.

3. Entries must be on the printed form given below. Any other entries will be disqualified.

4. Only one entry will be permitted per form.

5. Envelopes sent in should be marked Investor Contest. All entries should be sent to: Investor Contest, **Business India**, Wadia Building, 17/19 Dalal Street, Bombay 400 001, by 5 pm, 22 August, 1991.

6. Business India's decision on the winning entries is final and binding, and no correspondence in this regard will be entertained.

7. The contest is open only to resident India. No employee (or any direct rela of an employee) of the **Business In group of publications** is entitled to e the contest.

8. The prize of Rs.5,000 will not be car forward if there is no winner. In the e that there is more than one winner, the p will be shared equally.

Name of scrip	Prices as on Friday 26 July, 1991 (Rs.)	Rank as on Monday 26 August, 1991 (please fill in number)

MANAGEMENT DEVELOPMENT PROGRAMMES

To the great outdoors

According to the Rambo School, the great outdoors can be a more effective training ground than classrooms

Armed with torches and compasses, 20 executives from the Export Credit and Guarantee Corporation (ECGC) were recently taken to the Borivli National Park, located in suburban Bombay. The agenda included rock climbing and a night-time treasure hunt. "It was exhilarating," says participant Ambika Devi.

Which it must have been. The difference was, the fun came packaged with a management development programme devised jointly by Behavioural Science Centre (BSC), India and High Places (India), two Bombay-based private consultancy firms. The idea was to place the participants in a challenging risk-taking situation.

Says M.V. Deshpande, director of BSC, "Mountaineering is practised as a hobby; but as a managerial tool, it is being used for the first time." And Jerry D'Souza, HRD manager at Herbertsons, and one of the faculty members, says, "The experience is real, not simulated. It is not a simplistic classroom situation, nor a role-playing experience in a training game. People really shed their inhibitions."

Case studies, seminars and simulated classroom games are no longer the only methods to impart development education. Experiential learning becomes a vital component — a shift from the campus to the campfire. When confronted with the raw stark realities of the outdoors, a new look at leadership emerges. Different situations call for different types of leadership. None of the tasks assigned are familiar or comfortable; it is not easy to mask inadequacy with technical jargon or management *mantras*. The message is that the completion of tasks needs teams which, in turn, need leaders.

Outdoor settings for management training came into vogue in the seventies, in the US and Europe. A variety of outdoor experiences were used to push participants to the limits of their physical and mental endurance, in activities like mountain climbing, and canoeing. As was to be expected, such 'Rambo' type tests kicked off a spate of criticism that they were light on learning and exercised more muscle than mind. Since then, both course content and techniques have been refined radically — individuals need no longer prove their physical prowess repeatedly.

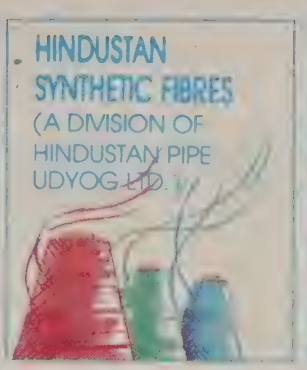
Rock climbing for executives: a new kind of experience

Indian companies are now beginning to try out this technique. In yet another outdoor session, 13 participants from a clutch of companies, including ONGC, Cadburys and Ceat, trekked to Malshej Ghat in Maharashtra. The five-day programme was crammed with a series of planned outdoor activities as well as review sessions. Programme conductor Vasant Limaye of High Places (India) says: "The objective was to provide a hands-on outdoor experience in which team spirit, leadership and communication skil would be tested." And participant J. M hajan, a systems manager at Cadbury says, "It was a totally new kind of exper ence. The spirit of competition and th adverse circumstances were akin to wh one faces in real life situations."

Post-exercise debriefing

The crucial part of the course was th post-exercise debriefing in which eac group's handling of the exercise was re viewed. This included the planning fo tackling the task, use of resources and most important, the contribution an role of each individual member of th group in the overa team performanc Says Limaye, "Th nature of the pro gramme encourage the acceptance of new skills, attitudes an approaches in a cha lenging atmosphere."

"Gone are th days," says Jame Bolt, in his definitiv work entitled *Execu tive Developmen* "when executives wer simply sent off to som company for a week o lectures. It is no longe enough to sponso nice-to-attend semi nars that are high o entertainment and lo on lasting impact." I the US, corporation have taken to th outdoors technique i a fairly big way; Bel South Services Corpo ration, for instance, has nicknamed it outdoor programme as the Rambo School.



The Americans are not a people known to spend time and money on useless edu cational pursuits; one could surmise the that Rambo training does manager good. Though it has nowhere near ever caught on here in India, it's a good sig that at least some companies are trying it And finding their managers so much th better off for it.

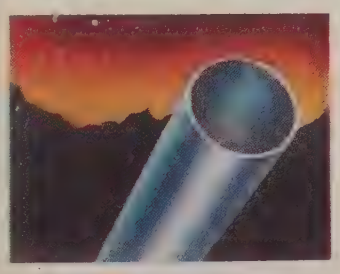
Established in 1952 with Jindal (India) Ltd., the Jindal Group of Industries today, with a turnover of Rs. 380 crores, is a corporate force to reckon with in the world of Indian Business & Industry.



The Jindal Group Welcomes Its Latest Corporate Member...

Maharashtra Seamless Ltd.

Today, for the youngest member of this dynamic Group, the slate is clean. But very soon it will be filled with a picture that will throb with the excitement of being involved with the sector that is the very lifeblood of industry — oil; a picture of health, a picture of profit, a picture of a company whose future is bright.

The product, Seamless Pipes and Tubes, is an import substitute which means the market is promising. The project is being set up in collaboration with world leader **MANNESMANN DEMAG HUTTENTECHNIK, GERMANY.**
And when people like ONGC, Oil India and other giants will join us, be a part of this scenario.

A future afloat on oil

The Empire strikes back

RECOLONIZATION: GATT, The Uruguay Round & The Third World
By Chakravarthi Raghavan
Third World Network, 1990
Distributed by the Other India Bookstore, Goa, pp.320, Rs.150

Patents and intellectual property have figured much in public debates, particularly over the question of whether we should join the Paris Convention. The convention, a hundred-year-old institution, seeks to protect patent rights, the principle underlying it being equality of patent rights which of course, is based on a fundamental inequality of technological development.

This inequality is apparent from the extraordinary statistics that the entire developing world possesses exactly one per cent of patent rights, whilst foreigners, principally multinationals, own 84 per cent of patent rights in developing countries. The convention thus seeks to preserve this iniquitous *status quo*. This issue is one of several, the others being the inclusion of services and investment rights which form the basis of the Uruguay rounds of the GATT talks.

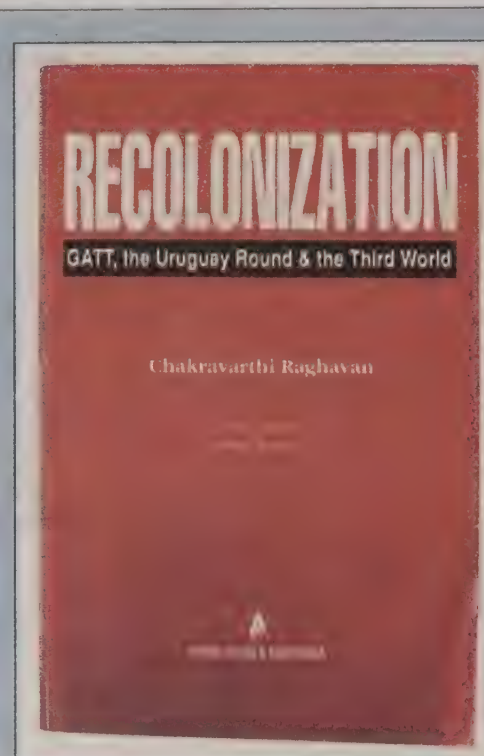
No room for doubt. The book under review examines the political and legal ramifications of the Uruguay round of GATT, the title of the book leaving no room for doubt on the standpoint of the author. It may, in normal circumstances, be dismissed as just a polemic for Third World interest, harping on the semi-obsolete concept of sovereignty. In this case, the argument is justified. The issue goes much deeper than whether we are compelled to join the Paris Convention and amend our Patents Act (which restricts the operation of patents in the public interest); it is concerned with the issue of equality among nations and their respective trading rights. The Uruguay round seeks to open up trading opportunities for wealthier countries vis-a-vis the Third World, without any concessions from the former.

The fact is that issue by issue the Third World is getting a very raw deal, there being hardly any reciprocity or equity in the changes envisaged in the Uruguay Round. The tenacity and aggressiveness with which the US has pursued the patents issue must be a source of acute embarrassment even to its apologists. But ironically at least one thing can be said in favour of the US: its policy-makers are acutely conscious of their own self interest. And that is more than can be said for some of ours.

Let us not mince words, what the US is attempting to do amounts to economic mugging. It wishes to reserve intellectual property rights without subjecting them to any form of competition legislation. This helps to provide their own companies with a *rentier* income indefinitely, without any relaxation or concession on the traditional business of GATT in respect of Third World export goods, such as tropical products and textiles. And by unilaterally putting India on Special 301 provision of its Trade Act, the US has made its opinion of multilateral negotiations process crystal clear: *pis aller*!

The strength of the book lies in the historical background to the Uruguay Round and the development of GATT. The Agreement was a product of the enlightened thinking which characterised the years after the Second World War. The author attempts to nail the falsehood that world trade expanded as a consequence of GATT. He reasons that, fact, expansion of world trade was an effect rather than the cause of world economic expansion.

Not very useful. At any rate, GATT w more significant for First World countries who were content to reduce the mutual tariff and non-tariff barriers b not those in respect of Third World countries. In fact, GATT has been pretty useless as a forum for development issue leading to the formation of UNCTAD an organ of the UN general assembl where wide issues of international economic relations could be discussed.



The US chose GATT as the best foru for implementing the structural chang in the rules of world trade, primarily b cause of GATT's compos tion. In theory, a contracting parties GATT are equal, but practice, the understandi is that views of those cou tries with the largest stal in the international tradi system should prevail. the Uruguay Round, fe example, it was explicit stated that the 'trad weight' of the US, EE Japan and the OEC countries should pr vail over the low trad weight of the few who op posed it.

This book is require reading for those wh mouth the usual inaniti such as globalisation an market forces. Not that these ideas are i herently wrong. Far from it. The point that the West, more particularly the U excels in chastising other countries for b ing protectionist and not opening up the economies to the discipline of the marke yet large areas of their own economies a protected — such as agriculture and te tiles, which they remain silent on.

Ultimately, what is being pushed is n the ideology of liberal capitalism (there nothing particularly capitalistic about rigid system of patents), but the self inte est of the country. This is what classic im perialism was all about; hence th appositeness of the term 'recolonisatio and the value of this book.

OLD CITIES, NEW PREDICAMENTS: A study of Hyderabad
By Ratna Naidu
Sage Publications
pp 178, Rs.190

a Naidu's urban sociological work takingly studies the quality of the acteristic walled city of Hyderabad. ublication is timed to coincide with uadricentennial of Hyderabad.
idu's study is at two levels. One as- s the extent to which the juxtaposi- of two sensitive communities, their ty patterns, urban congestion and of infrastructure, the out migration succession patterns, spatial fusion cultural fission, competition, multi- eprivators and the ethnic ghetto acter is acerbated by political articu- n that keeps the communal cauldron antly on the boil. The second level res the possibility of restoring wal- ties to a viable urban unit.
is work, born out of a research pro- — "Old (walled) cities in India", d by the Planning Commission and ted between 1984 and 1986 — is well ed in its methodology, approach, of reference and chapter heads. The interests not only social scientists, lso urban planners, historians and rvationists.
e post-independence analysis of the d city reveals an almost kalei- opic quality of out migration of ims immediately after partition. The itation of constituency boundaries 54, 1966 and 1976) has further po- d the electorates into near-equal unal halves, highly politicised eth- oups, each trying to establish social, al, political and spatial supremacy lensely congested concentric urban g.
idu has succeeded in highlighting ultiple deprivations of walled city nts. She makes two suggestions that improve conditions of residents in sensitive areas. The walled city d be declared a "protected area" be- "the core of the inner city is a treasure house of historical and cultural heritage". The second suggestion is a revitalisation of the economic ability of inner city residents.

The first solution is fraught with the danger of politicisation, manipulation for vested interests and the possibility of isolation of one community from the mainstream. The preception of a "protected status" for one community inevitably leads to resentment and ultimate retaliation by the other.

Any revitalisation programme should broadly be universally applicable to all economically deprived residents. What is needed is an open approach, not walls to preserve the *status quo*.

■ PADMA RAMNATH

Soft or synergistic?

WORK CULTURE IN THE INDIAN CONTEXT
By Jai BP Sinha
Sage Publications, 1990
pp 238, Rs.190.

The book studies the work culture prevailing in six organisations — two steel plants (one public and one private), two fertiliser factories (one public and one cooperative) and two nationalised banks. In the study, sponsored by the Indian Council of Social Science Research, 520 managers (from lower and middle levels) from these six organisations participate.

According to Sinha, the productivity and performance of an organisation depends on the work culture prevailing in that organisation. There are two kinds of work culture — soft and synergetic. The soft one grants priority to welfare and industrial relations. It prevails where management style is pliant and the work does not form the central part of the life of the employees. It is characterised by low motivation to work, high rate of indiscipline, inability of the management to take hard decisions and control militant trade unions and indifference to modernisation of plant and machinery. Work suffers in these organisations resulting in low productivity and performance.

By contrast, in a synergetic work culture, productivity leads to welfare. The management style is assertive and humane and the work forms a central part of the life of the employees. Hard work is appreciated here. The management is capable of taking tough decisions, it has control over militant trade unions and gives thought to upgradation of technology. The employees feel the synergy between their career and the growth and profitability of the organisation. Productivity and performance are, therefore, higher.

The author has enumerated the steps to be taken for a planned change from soft to synergetic work culture to improve the productivity of such organisations.

This book is an asset to management scholars and practising managers interested in improving the productivity of their organisations. But a more simple manner of presentation would have been welcome.

■ K.N. PILLAI

Handy travelogue

INTERNET WORLD: An International Travellers' Handbook to the World
Team Productivity Consultants, Bombay
pp 202

Yet another travel book, but with a difference — it doesn't waste your time. Put together concisely, *Internet World* is a storehouse of information relevant to the Indian traveller, be he a frequent one, a first timer, a tourist or even a harried secretary.

The book lists all the obvious data that one would expect on most major cities in the world — visa regulations, customs allowances, restaurants and hotels. There are also those little extras such as a painstaking listing of Indian restaurants and other various tips that give you a feel of the place without actually having to go through the usual lengthy reading. Thoughtfully included is a world weather calendar and a handy language guide for those brave enough to want to try.

One only wished that the choice of restaurants and hotels is not so conservative. The book is definitely a useful addition to an Indian traveller's list of 'must have's'.

Remuneration will be comparable to the best in industry.

Professionals matching the above requirements may send their detailed RESUME alongwith recent passport size photographs preferably through Courier within 10 days to :-

Sr. Personnel Manager (Corporate)
Dhillon Kool Drinks & Beverages Ltd.,
Dhillon Complex,
MANIMAJRA (CHANDIGARH)

VICE-PRESIDENT

LEADING 250 CRORE COMPANY

Our client is a progressive company in the steel processing industry manufacturing and marketing a range of products reputed for its excellent quality. The company has prestigious foreign collaborations, a consistently good track record and ambitious expansion and diversification plans. In a short span, the company has acquired a position of pre-eminence in the industry.

This is a senior opening reporting to the Board and entails overall responsibility for cost-effective functioning of the company's highly sophisticated manufacturing complex. Providing leadership and direction to the functional heads and managing the external and internal environment will be key result areas.

We are looking for an outstanding leader with proven commercial acumen and a solid reputation in man-management. He will be a CA/MBA/engineer or have a good university degree with over 20 years plant-level experience in the engineering/heavy process industry. Accent is on sound general management capabilities rather than a functional specialization. Some experience as a cost centre head in a manufacturing complex employing over 500 personnel is necessary. Age Group 40-50.

The position is based at plant located in a district headquarter town of Eastern Maharashtra which has reasonably good educational, medical and other facilities/infrastructure.

VICE PRESIDENT (DESIGNATE)

Air Conditioning and Refrigeration Division

Bombay

Excellent salary + housing + car with driver + top management perks

A large, established public limited company, with multi-divisional operations, wishes to recruit an outstanding professional to head its Air Conditioning and Refrigeration (ACR) division. The division, which is an independent profit centre, has had a consistent growth record. Its major areas of emphasis are central airconditioning plants including compressors, packaged units and allied equipment. The ACR business has been identified as a thrust area for the company.

The incumbent would be responsible for developing and implementing business plans for achieving sales and profit targets of the division. He would also be an important member of the top management team of the company.

Applicants must be engineering graduates, preferably with additional management qualifications, with substantial senior level experience in marketing of capital equipment/projects. Leadership skills and a strong commercial orientation are essential pre-requisites for the job. Those with airconditioning and refrigeration industry experience would be preferred. Preferred age: around 45 years.

The remuneration package is excellent and includes usual top management perquisites.

Please apply with (Ref. MS./5704) in strict confidence within 10 days to:

A. F. Ferguson Associates
Post Box 1786
Bombay 400 001.

RPG ENTERPRISES

GENERAL MANAGER — PRODUCTION — BULK DRUGS

BANGALORE **BEST TERMS**

A Senior Appointment reporting to the Managing Director

WE NEED A LEADER — THE BEST IN THE INDUSTRY

THE COMPANY:

We are a well established bulk drugs manufacturing unit with excellent manufacturing facilities. Our In-House standards are very high which enable us to manufacture products of high quality and high technology backed by the commitment of every individual in the organisation.

This unit belongs to a reputed progressive industrial group with well diversified activities. The group has an excellent financial base and is professionally managed. The opportunities for growth promotion within the group, is excellent. The group offers a congenial working environment.

THE OBJECTIVE:

To optimise the production with the existing plant infrastructure.

THE JOB:

You need to achieve the objective. You will be responsible to formulate comprehensive production plans and budget for a "Steady Growth" covering:

Overall responsibility on production.

Identify and Commission new product lines, with the existing plant infrastructure.

Independent decision, on major production policy matters.

In all these, you will be assisted and you can even ask for more.

THE ESSENTIALS:

An excellent practical track record in a Bulk Drug industry, in the manufacturing discipline.

A Ph.D. in Organic Chemistry (or) M.Tech in Chemical Technology with adequate experience, at a Senior level.

High motivator, with an exceptional coordination and communication ability.

Age 40-45 years.

Compensation offered will match the best in the industry, with perks including Car and furnished accommodation. You are welcome to define your terms.

Mail your curriculum vitae in strict confidence within 10 days with a Passport size photograph with atleast two references of persons from the Industry, to:

The Advertiser,
Box No. AA/350/CS/1,
Business India, Wadia Building
17/19 Dalal Street,
Fort, Bombay 400 001.

A professionally-managed Engineering Company based in a major city in South India, belonging to a large industrial house, is forging ahead in the Steel Construction business. They have openings for the following positions located at the Headquarters to be filled up immediately.

GENERAL MANAGER — CONTRACTS

He will be heading the Contracts department as a profit centre looking after structural, design, marketing and project execution. He would preferably be an M.Tech. having worked with leading contracting/consulting firms dealing with steel structures.

The position calls for high quality leadership, Man management and project management skills. The candidate should be mature and capable of operating under uncertain and high pressure situations.

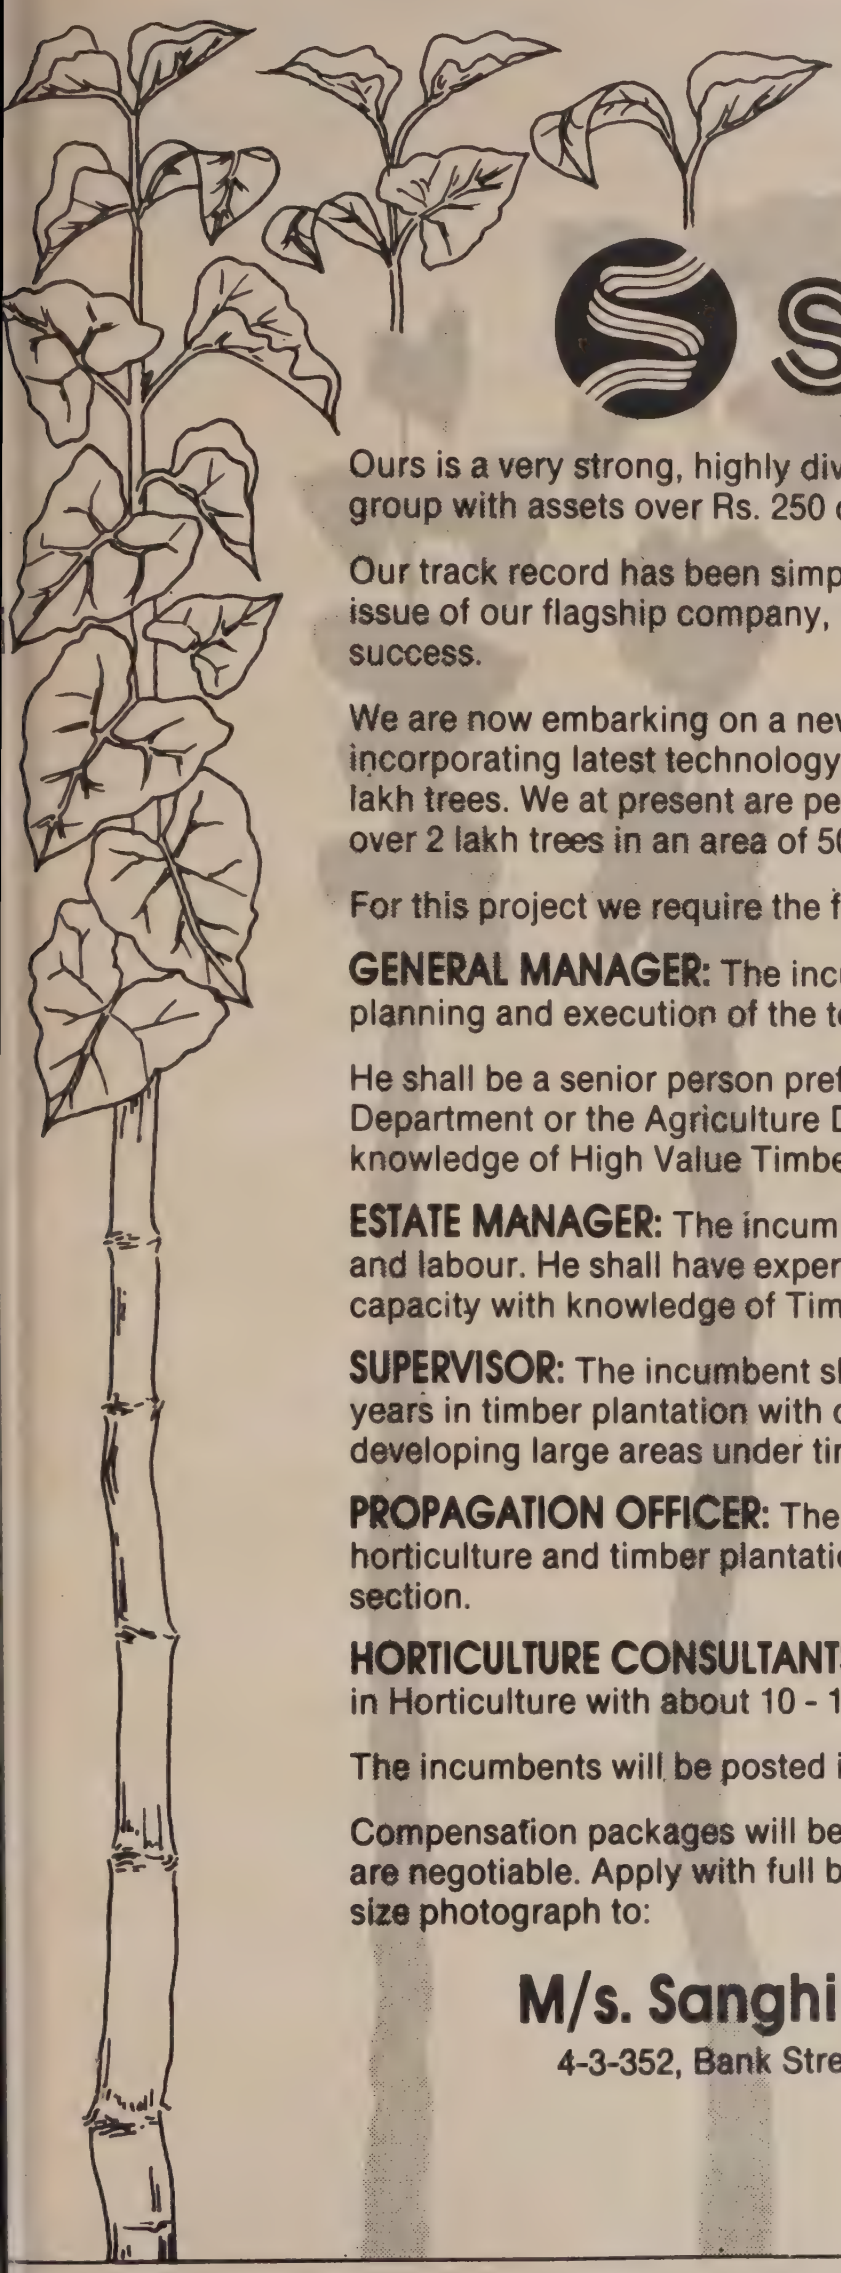
The position envisaged has high potential, leading to a divisional head in the near future.

For positions in the contracting department:

a) ASST. MANAGER — DESIGNS

He will look after the structural designs of the Contracts department, leading a team of design engineers. He has to guide and direct development of new applications and system designs in steel. The person should be extremely creative and should have a sound structural engineering knowledge. He should be a Post Graduate in structural engineering with 6-7 years' experience in structural designs with leading contracting/consulting firms dealing with steel structures. He should be familiar with computer aided designs and drafting.

b) ASST. MANAGER CONTRACTS — MARKETING



He will look after the marketing activities covering 3-4 regions in the country. The position envisages the identification of projects, quoting and overseeing the projects. He would preferably be a structural engineer with 6-8 years of experience in project marketing connected with steel structural projects.

All the above positions are considered key positions of the company and hence the company is looking for the best talent to meet the long-term requirements. High-growth profiles are envisaged for all the positions and the salary will not be a constraint for the right candidate.

Interested candidates may kindly send their resume within 10 days, to:

The Chairman,
Apex Management Consulting Group Private Limited,
C-1, Rams Square , 2 Village Road, MADRAS 600 034.

amcon

Sanghi

Ours is a very strong, highly diversified, professionally managed group with assets over Rs. 250 crores.

Our track record has been simply spectacular. The recent public issue of our flagship company, Sanghi Polyesters, met with great success.

Regional Managers and Marketing Professionals

The Ramco Group is a dynamic and rapidly growing Industrial House. The Group, with well-diversified interests, has an annual turnover of above Rs.200 crores. The Electronics Division of the Group has earned a reputation for the development and marketing of high-end software. The Division recently concluded agreements with international giants for exporting some of its high-end software products.

To assist in the Division's expanding operations, the following personnel are required.

Regional Managers (New Delhi, Bombay)

Exceptional initiative, leadership qualities and an ability to establish a network of contacts in corporate circles and develop them for marketing high-end, high-value software systems/products are imperative.

Aspirants should have at least 7-10 years' experience as business executives. Candidates with good presentation skills and an aggressive drive will have an advantage. Preference will be given to candidates with Industrial/Organisational sales experience.

The incumbent will be required to set up the branch and commence the Division's operations in the region. He will also build up a team that will meet the Company's objectives of selling software products of international quality.

Marketing Managers (Madras)

Candidates should be young engineers capable of selling high-end, high-value software products to leading organisations. A minimum of 4-7 years' experience in the sales and marketing of software is essential.

The incumbent will assist marketing and support product sales.

Sr. Marketing Executives (New Delhi, Bombay)

Applicants should have put in a minimum of 3-5 years' experience in sales or marketing, with potential to become Territory Managers. Candidates with exposure to software marketing will be preferred.

Marketing Executives (Madras)

Aspirants should be highly self-motivated individuals. A minimum of 1-3 years' experience in marketing and sale of software/hardware products is imperative. Candidates with good communication skills and experience in solution selling, based on concepts will be preferred. Fresh MBAs can also apply.

Market Researchers/Documentation Specialists (Madras)

Applicants should have good knowledge of the computer industry and software products. The incumbent will be required to scan markets to identify prospects. Good presentation skills and an excellent command over English is essential. Applicants with experience in writing pre-sale literature or handling communication will be preferred.

The ability of the candidate will be of primary consideration rather than age, qualification or experience.

Aspirants should send their resume with photograph and contact phone number, in strict confidence, within 10 days to:

Vice President (Electronics)
Ramco Industries Limited
Electronics Division
TMB Mansion, 739, Anna Salai, Madras 600 002.

Vadilal

EXECUTIVE ASSISTANT TO THE MD

Bombay

Excellent compensation + perks

Vadilal is best known for its ice cream in which it is the brand leader in all its territories. Recently the company has diversified, successfully, into other areas including exports. One reason for its success is that it has a very good team of experienced professional managers.

Right now we are looking for an **Executive Assistant to the Managing Director**. The job involves:

- Liaison with departmental heads for follow up action on management policies
- Assisting the MD in analysing new projects/diversification
- Analysing operating performance and highlight areas of action to improve efficiency and financial performance.

We are looking for an MBA in Finance or a CA, with around 4 years' experience in Corporate Finance, Corporate Planning, Internal Audit or Financial/Project Consultancy.

We are growing rapidly and interesting possibilities for development will come up for good managers (the previous EA to the MD is now Manager-Projects).

EXPORT MANAGER

Bombay

Excellent remuneration + perks

We have our own export processing unit, and in the very first year of operation we have achieved a turnover of approximately 2 crores, on exports of fruit pulp and canned vegetables, to Europe and the Middle East. We plan to expand the operation to cover merchant export of spices, rice, sea food, fresh fruits and vegetables to hard currency markets. We have targetted to achieve 10 crores in the next 2-3 years.

We are looking for an **Export Manager** who would be responsible for: business generation, co-ordination of procurement and shipment, overseeing proper documentation, and co-ordination with the concerned government bodies. Reporting will be to the General Manager – Exports.

We would like him to have a post graduate diploma from IIFT with 3-4 years' experience in a trading house or export division of a company handling similar products.

If you are interested, please write in 10 days to the Personnel Manager, **Vadilal Enterprises Ltd.** 'Shubhangan', 24 Gulmohar Road, JVPD, Bombay-400 049. Please mark the position applied for on the envelope.

ACHIEVE YOUR CAREER ASPIRATIONS !

In the Corporate cell of a blue chip Corporation, with a wide spectrum of world reputed Collaborations in premium products across the Group Companies.

TREASURY & PORTFOLIO MANAGEMENT

We are looking at Ten years of rich experience of Trading in Money markets Investments in short and long term instruments both in India and abroad and portfolio management.

This is a Department Head slot, which requires sound conceptual skills, ability to lead a team of professionals as an independent profit centre. The incumbent should have made a distinct mark in the market place.

STRATEGIC PLANNING

We are looking at ACAs/ MBAs/ MFC specialists with 3-5 yrs. of experience in strategic planning. The assignment involves studying the environment / technology, evolving specific business programmes based on structured analysis. We need analytical business managers, who are at home with large volumes of information gathering and structured analysis.

Remuneration is designed to be a strong motivator.

We invite professionals from Merchant Banking Departments of premium Nationalised and International Banks, Financial Institutions, Merchant Banking firms and the established corporate planning deparments in the Industry.

Please contact us at **011-692415/4625316** or apply within 7 days to:

A bluechip in the making!

राष्ट्रीय डेरी विकास बोर्ड
National Dairy Development Board

ANAND-388 001

The National Dairy Development Board has openings for talented people in Financial Management and Management Accounting.

The National Dairy Development Board is a growth and challenge oriented multi-sectoral and multi-locational institution involved in planning, implementing and financing farmer-owned and farmer-managed development projects including Operation Flood which is the largest dairy project of its kind in the world. In addition to dairying, it is also currently involved in oilseeds, fruit & vegetables, tree growing, salt and other related sectors. Over 200 projects are being implemented by it throughout the country. The investment in the projects and schemes in hand is likely to exceed Rs. 3,000 crores.

The openings are visualised to serve the following needs:

- to enhance effectiveness of managerial controls in existing operations;
- to set up positive, but flexible systems of project appraisal, financing and monitoring;
- to standardise the accounting systems in all assisted units to facilitate computerisation;
- to prepare annual financial plans and cash-flows consistent with approved long term objectives, which could be translated into overall corporate targets and Federation/Union plans and budgets;
- to manage financial flows to and from assisted units/projects on the basis of approved plans and budgets, through a decentralised structure;
- to formulate appropriate strategies for mobilising financial resources, and for parking unutilised funds in investments that would yield the best returns;
- to participate in discussions with international sources of financial/project assistance, and to help the Chief Executive in deciding the terms of assistance and in scheduling the inflows;
- to initiate and participate in inter-disciplinary Task Forces to rehabilitate Unions/Societies whose current performance is below the levels of viability.

People endowed with analytical minds and the ability to envision future scenario, with individual initiative for strategic thinking, and with inter-personal and communication skills needed for cultivating peer relationships, would find stimulating work experience, job satisfaction, and professional growth.

The minimum qualification would be full professional membership of the Institute of Chartered Accountants or Cost Accountants. Additional qualifications in Management Accounting, Financial Analysis, Business Management, Rural Development/Management, Corporate Planning, etc., and experience in portfolio management, entrepreneurial development, project planning/management, perspective planning, sick-industry turnaround, performance budgeting, higher management controls, etc., would be given due recognition in selection and placement.

It is important that the candidates are able to communicate well in English. They must essentially have:

- a strong orientation to rural economic development;
- flexibility in applying professional knowledge, skills and norms in an economic sector that is subject to varying socio-political pulls and pressures;
- aptitude to function in, and through a decentralised management structure;
- adequate computer literacy, and the vision to use an extensive computer network to its maximum effectiveness in all management systems.

The posts are available in three grades:

Grade	Pay Scale (Rs.)	Min. gross at Anand	Normal Age Limit
Manager	4500-150-6000	Rs. 6825	Below 45
Deputy Manager	3700-125/150-5600	Rs. 5925	Preferably below 40
Senior Executive	3300-100/125-5000	Rs. 5323	Below 40

The postings could initially be at ANAND (Gujarat State).

Besides salary, there would be other benefits like PF, SAS, Gratuity, LTC for self and family, group insurance, medical insurance, conveyance and house-building advance, etc. A well-equipped English medium school is also located adjacent to the NDDB Campus.

Other things being equal, preference will be given to applicants who belong to **SC/ST.** Applicants employed with the Central/State Government Departments, Cooperative organisations or Public Sector undertakings should forward their applications through proper channel.

Those called for interview would be reimbursed to and fro First Class/AC-Second Class train fare by the shortest route between their present place of posting and Anand.

Please send your application in confidence, with the CODE NUMBER NDDB:91:05 prominently marked on the envelope, so as to reach the **Sr. Executive (P&A), National Dairy Development Board, Post Box No. 40, Anand 388 001, within 15 days from the date of this advertisement.**

Please enclose descriptive highlights (not more than 500 words) of your special qualifications and experience, achievements which you consider important in the context of NDDB's requirements, indicating also the grade which you think is appropriate for you.

SECTOR PROFESSIONALS

CMC Limited, India's leading information technology company, provides high quality, cost-effective services and solutions connected with all aspects of computers and communications in a number of key economic areas such as coal, oil, steel, rail, sea and road transportation and service industries like banking, health and education. "Your vision can shape our future"

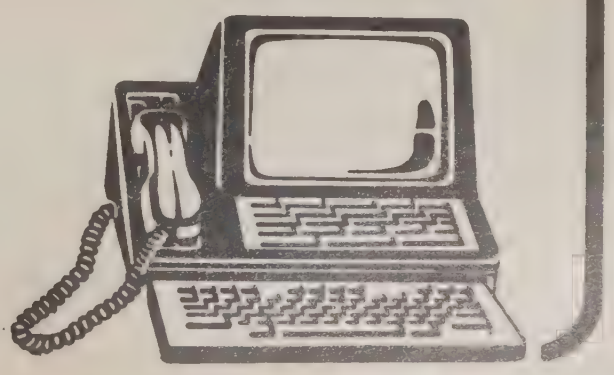
KANAZIA DIGITAL SYSTEMS is a pioneer in the Indian Telecommunications Industry, having professional relationships with leading international telecommunication Companies.

For the position of **SENIOR BUSINESS DEVELOPMENT MANAGER** we require an experienced techno-commercial professional with sound understanding of Computer/Communication technology & developments and experience in the marketing of such systems.



The ideal candidate would be a qualified electronics engineer preferably with MBA and with 10 to 12 years similar or related experience in India or abroad. He should also have good contacts with senior persons in Industry and in Government.

The selected Senior Manager will be based in Bombay and would have to travel extensively within India and overseas.

We offer a competitive salary package and an excellent environment conducive to professional growth. The position could be upgraded for a better qualified candidate.

Write in confidence to:

The Director
Kanazia Digital Systems Pvt. Ltd.

Executive Ladder

Charanjiv Taneja, earlier director (finance) McDowell & Co Ltd, is moving to Standard Chartered Bank as finance director. After almost two decades in manufacturing, Taneja looks forward to handling bank finance an area which he feels "is in for an exciting future".

C.D. Sipahimalan been appointed tor, Cyanamid Ltd. Since 1982, been director o crop protection c cals (CPC) div of this comp Sipahimalani is vice-chairman of the Association of Manufacturers of Pesticides.

Taking over as vice-president of Godavari Fertilisers and Chemicals Ltd, is **V. Subramanian**, previously general manager, finance, Fertilizers and Chemicals Travancore Ltd, a government undertaking.

The new managi rector at the Steel plant is **Su Ray**, formerly dir operations, Rash Ispat Nigam Ltd, akhapatnam Plant. He takes from S.K. Roy, tor, operations, Steel Authority of Ltd.

Taking over as chief manager, India, for Barclays Bank plc is **Stephen Barnes**. He will be responsible for the Bombay branch and also for the representative office soon to open in Delhi. Barnes was earlier based in London, as director, European corporate sector marketing.

Virendra Singh i new president, Pont Far East Singh has spent years abroad, of w 26 have been DuPont. He count a strong Asia Pa presence as the ke the company's growth.

D.K. Sinha, deputy general manager and private secretary to the managing director, State Bank of India, has been appointed deputy general manager (commercial banking) SBI, New York branch. Sinha's task is a challenging one as resource mobilisation is a problem at this time.

Shanti Ekambar former senior acc manager, Bank Nova Scotia, is no the other side of fence as senior m ager, corporate fin at Kotak Mahindr nance Ltd. She lo forward to the different perspective working in the financial services se will bring.

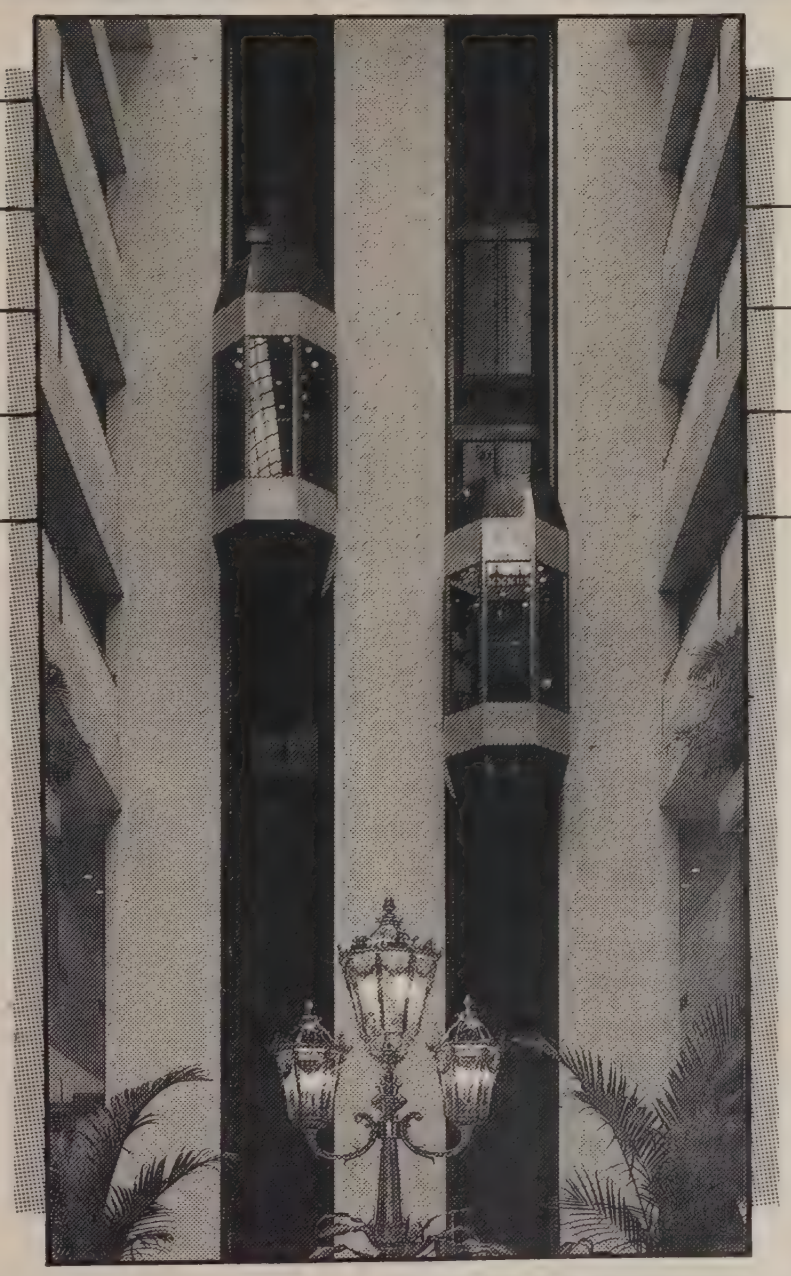
G.M. Rajashekar has been promoted to executive director, HMT (International) Ltd, Bangalore. He was formerly general manager, HMT (International).

P.L. Jalan, until senior president Modern Suitings has taken over as e utive director of company.

MOULDS

We have been designing and manufacturing moulds and dies since 1970 and have 250 employees including engineers, designers, machinists, tool makers and moulders. Our engineers have been trained in the best tool rooms in the U.S.A. and are fully conversant with the latest techniques of precision mould manufacture.

We have a fully air-conditioned computer controlled tool room which is equipped with the best EDM's from Switzerland, three dimensional die sinkers from W. Germany, inspection and quality control machines from Japan and all other precision back-up machines.



We hold large stocks of the best imported alloy steels which are heat treated in our modern heat treatment plant. We can case-harden, harden, nitride and stress relieve all steels.

We are specialists in moulding the whole range of thermoplastics and can ensure supply of moulded components to your requirements. Our moulding shop is equipped with ten Toshiba 150 ton fully automatic moulding machines, a Kautex blow moulding machine and a team of experts to run them. Contact us for further information.

- High quality moulds for plastics and die casting industries.
- Moulded plastic components for general purpose and engineering plastics.
- Precision and electric discharge machining (spark erosion).
- Complex jigs and fixtures.
- Heat treatment of steels.

A high quality range of suitings and a responsive market.....

– just the right blend for success.

PUBLIC ISSUE OF 20,44,000 EQUITY SHARES OF RS. 10 EACH FOR CASH AT PAR, AGGREGATING RS. 2,04,40,000

ISSUE HIGHLIGHTS

- An existing profit making Company
- Engaged in weaving and marketing of fancy design suitings
- Promoted by Mahendra Arya of the Arya family
- Expansion programme — Installation of 24 looms at the existing factory premises
- Book Value per share Rs. 26.14 and EPS Rs. 7.83 for 1990-91 as on 31-3-91
- 80L, 80M, 88A and Wealth Tax Benefits (subject to continuation of section 88 (A) of the Income Tax Act)
- Listing at Ahmedabad and Bombay

RISK FACTORS

- Competition from unorganised sector
- Government's taxation policy relating to synthetic fibre and yarn is likely to affect the cost of production
- Exchange rate fluctuation and its likely impact on the estimated cost of the project

Mahendra Suitings Limited (MSL), a venture by Mahendra Arya, has in a short span of about 3 years, established a reputation for quality.

Its fancy blended suitings cater to the large middle class segment. Consequently, these products have met with widespread acceptance, especially in the West Zone and South Zone.

Modern weaving facilities at the Company's factory, the promoters' experience in textiles as well as an established network of agents and wholesalers have helped to achieve a distinct brand image for MSL's products.

MSL is now expanding its capacity by installing 24 additional Shuttleless Rapier Looms, which will take the total installed capacity to 32 Shuttleless Rapier Looms. Through this expansion, the Company expects to reap the benefits of both economy and size — key factors for success. This expansion project will be fully implemented by 1992 end.

To part finance this project, MSL is entering the capital market with a Public Issue of 20,44,000 Equity Shares of Rs. 10/- each for cash at par aggregating Rs. 2,04,40,000/-.

Come, invest in the right blend for success.

If the Company does not receive the minimum subscription of 90% of the issued amount the entire subscription will be refunded to the applicants within 90 days of the closure of the issue. If there is a delay in refund of such amount by more than 10 days, the Company will pay interest at 15% per annum for the delayed period.

om molecules to money

hattacharya, *58, is managing director, Bank of Hyderabad*

y strategy and work philosophy are simple — scientific budgeting ood housekeeping," says Bhatya, the soft-spoken chemist--banker. A board outside his plush reads, "We should cross the 00 crore deposits by March 1991 each the golden threshold of 00 crore in the golden jubilee year -93."

first target has been achieved this Deposits have crossed Rs.2,500 The rate of growth in deposits, at er cent, is among the highest for led commercial banks. Net profit ped 46.7 per cent to Rs.8.5 crore. ntific budgeting meant giving the allenges to the right people. Budre based on environment and busitential. "I also ensured that books anced periodically. This helps pre- of frauds and tracking of perfor- in areas where the bank has nally been weak," says harya.

rets. His first love, however, was try. Bhattacharya holds an M.Sc. from Agra University and would ked to become a research scholar. nily considerations forced him to ob and he joined the State Bank of SBI) as a probationary officer in ix years later, while still working at the bank, he took his Ph.D. also from Agra University.

Bhattacharya has no regrets about the change in career. In a span of thirty one years, he has accumulated a wealth of experience, and risen through the ranks, first to become the chief general manager of SBI and then, three years ago, as managing director of SBH.

Several awards have come Bhattacharya's way in recognition of his services to Indian banking — the Indira Gandhi Memorial Award for Excellent Chief Executive (1990), Rotary Excellence Award (1990), Udyog Rattan Award (1989) and National Citizens' Award.

"My main problem, when I came to Hyderabad, was image building. People only spoke of SBI and Andhra Bank," Bhattacharya says. "SBH was perceived as a bank lower in the hierarchy of services and business development, keen on public-sector business rather than trade financing or forex financing."

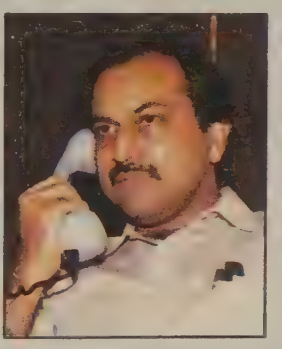
So he set about the task of developing customer service and business development side by side. Model banks were set up which worked towards high customer satisfaction. The results were spectacular. In his three years' tenure, deposits have doubled and profits trebled!

Bhattacharya has also revitalised the regional rural banks operating under him. All four SBH-run rural banks at Adilabad, Karimnagar, Nalgaonda and Ranga Reddy are now profit earners, with satisfactory loan recovery rates.

Long way to go. The banking sector in India has a long way to go, says Bhattacharya. "In the west, getting a loan from a bank is a 15-minute job. But in India, when a customer walks in, we bind him with documents, guarantees, papers and clauses. Banking seems to be based more on distrust rather than trust," he complains.

Bhattacharya is fond of travel and music. Hyderabad has given him the opportunity to indulge in both. He is looking forward to new challenges —a larger bank and greater heights.

■ MEERA SHENOY



FRONTRUNNERS

A science graduate from Loyola College, Madras, with an MBA from IIM, Bangalore, **G. Shabarinathan**, 31, is in charge of assessing loan applications from electronics and computer related companies at the Technical Development Information Co of India Ltd (TDICI), the first venture capital company in the country.

Shabarinathan had a brief stint with Industrial Credit and Investment Corporation of India (ICICI), the promoter of TDICI in 1982. When TDICI was founded in Bangalore in June 1988, he was among the first few assigned there from ICICI. "Venture capital is going to be very important source of capital in the coming years," he says, "and I am looking forward to some very exciting times ahead."

■ D.P.

At 32, **Rajesh Tiwari** is among the youngest deputy general managers at Mahanagar Telephone Nigam Ltd (MTNL), based in Delhi. After taking a degree in commerce from St. Xavier's College, Calcutta, he went to the UK and did his MBA from the University of Hull.

Beginning his career with Hindustan Lever in 1982, Tiwari soon shifted to the public-sector Telecommunication Consultants India Ltd. When MTNL was formed in 1986, he took over its marketing and communications.

A keen sports lover, Tiwari has been a national-level sports commentator for international hockey and soccer tournaments and Davis Cup matches for Doordarshan since 1979.

Tiwari's main interest today lies in creating a "different image for MTNL". Interaction with over 1.3 million consumers does not make it easy. "But we do try and concentrate on results," he says.

NAPATNA

oying with exports

vn famous for lacquered wooden toys extends its range for an eas market

y kilometres from Bangalore lies annapatna, Karnataka's toy town. sleepy area on the picturesque lore-Mysore highway despatches eds of tiny lacquered wooden 'am-lors' all over the world. Lately, it has een manufacturing other lacquer-tems for export. As many as 3,000 s in nearly 200 units craft a colour-nge of toys and accessories. The apatna taluk in Bangalore district of a Rs.2.5-crore lacquerware busi-Nearly 70 per cent of this is through s.

anufactured at Channapatna: largely a foreign market

923, a local educationist, Baba ushered in lacquerware technology apan. Till 1960, the artisans used nual technology. In 1961, the com-ner for handicrafts, Union ministry tiles, introduced hand-operated for turning the halewood (ivory a soft wood used for lacquerware. nits have since switched over to perated and even power lathes.

halewood is seasoned before the used for turning. The wood surface othened with sandpaper and bright are applied using a lacquer stick — ination of lithophone powder, lac-nd dye-stuff. The painted surface is lished with coconut oil and thorny ine leaves.

While the ministry of textiles updated the technology, enterprising exporters, mainly Gujarati, introduced new items such as necklaces, ear tops, hair pins, bangles, napkin rings and powder boxes. Export prospects were as bright as the wares. In fact, the overseas market is so lucrative that a dozen companies in Bombay and Bangalore are engaged in exports. And they are secretive about their markets, products and designs. Most units at Channapatna are tied up in some way with these overseas buyers, and their pickings are substantial with a mark-up of at least 30 per cent. Overseas demand is on the rise, according to a representative of a Bombay-based export unit who prefers anonymity. This company employs 500 artisans in Channapatna and exports 200,000 bangles and 400,000 pairs of earrings annually. Its turnover is Rs.3 crore.

Says P. Sundar Murthy, deputy director, regional design and technical development centre (technical wing), Union ministry of textiles: "One of the main reasons for the growing export market is that foreigners are fed up with synthetic material and prefer items with ethnic appeal." According to Nizam Ali, secretary, Channapatna Handicraft Manufacturers' Association: "Ours is largely a foreign market; the domestic market constitutes about 30 per cent of our sales. The units make, on an average, Rs.10 lakh to Rs.25 lakh per annum."

The exporters provide the specific designs and colour shades. At times, they also supply imported lacquer to get the desired effect. Generally, it takes 30 to 40 days to deliver the goods — either by road or courier services.

But exports are not necessarily continuous, mainly due to non-availability of halewood, which comes from B.R. Hills near Mysore. Adds Ali: "At times, Korea competes with India. During the Gulf war, we had no overseas orders for four months." Orders come from the US, Australia, Canada and Europe. While international orders are specific and deadline-oriented, items for the domestic market are made only when manufacturers find the time. Locally, they are sold through government emporia and at exhibitions.

Over the years, this cottage industry has become too dependent on exports and middlemen benefit the most. Artisans and entrepreneurs, meanwhile, have made little effort to upgrade technology, enhance output or explore the international market independently. Some even large local showrooms even pocket more on Channapatna lacquerware than the manufacturers themselves.

The Central and state governments have four training centres at Channapatna which turn out 100 students every year. A monthly stipend of Rs. 250 is awarded during the year-long course. Students then set up their own units with free tool kits. But the government, in addition, must help artisans and manufacturers to export directly, particularly with lacquerware toys having lost much of their lustre in a local market captivated by plastic and electronic toys.

The industry, which has brightened the childhood dreams of many generations, is today labelled environmentally hostile, since it uses precious wood. But considering that Channapatna lacquerware encapsules two centuries of tradition, it certainly deserves a better deal.

hat personal touch

d organisations concern themselves with employees' personal as?

r going through a divorce recently, otherwise bright and competent ive in a multinational phar- tical company started slipping up job. His performance was so lack- hat the company could have asked leave, and rightly so. But, it real- at it would lose a good man and that would demoralise other yees.

organisation ap- ned Hari Shiv- , a Bombay- organisational logist. After to the trau- d executive, Shiv- suggested a r to another divi- o force interac- ith a new set of and preoccupa- ith learning new kills. The execu- s moved out of l company flat, he had curious ours and memo- happier days. was given a club rship he was not ntitled to, so that somewhere to go in the evenings. nonths later, the executive, whose withheld on request, had recov- m his trauma and begun to per- ficiently again. Morale within the ation also got a boost, for em- realised that their company

fortunate

ar-old woman executive in a simi- ation was not so fortunate. The y-based company where she had for six years was not supportive ot surprisingly, she has moved to organisation which allows for timings.

ring for their employees, it is the nal family-run set up that scores professionally-managed counter- it as even these companies grow or turn professional, manage- nd it difficult to retain or cultivate a sense of belonging and identity in the workforce.

A.D. Joshi, personnel manager at Cadbury's, says that though most companies have begun to care, they shy away from intruding in personal problems and matters. He adds, "Most companies would rather wait till they are approached for help." In any case, he feels it would be more useful to get outside assistance because then a person would feel less inhibited about discussing his personal problems. Cadbury's, meanwhile, also has Alcoholics Anonymous meetings for its workers.

Bombay-based consultant C. Shridhar, who conducts personality development programmes for executives, adds, "There is a relationship between the tensions that a manager brings to the organisation and his performance. A tension-free, balanced executive works better."

A helping hand

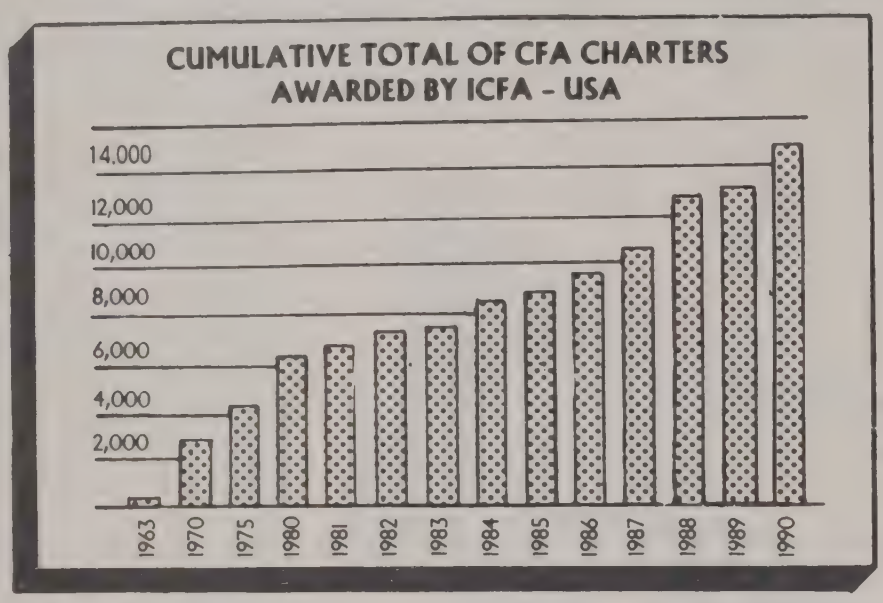
Though few Indian companies have a clearly defined policy on how to deal with their employees' personal traumas, they do, on occasion extend a helping hand. This is generally a result of personal empathy between manager and subordinate. Hindustan Lever Ltd (HLL) in fact has a system where each trainee relates to an older guide with whom he establishes rapport and trust. Says P.J. Kamath, head of human resource development at HLL: "If there is a decline in performance we would try and understand why that is so."

Help for illness-related stress is usually available, and executives are more willing to talk about this than emotional problems. Says a Bombay-based executive: "My job involves a great deal of travelling and I did not know how I would manage when my wife developed cancer." The company not only cut down his travel, but also gave him flexible work hours and financial help.

It seems reasonable that an organisation should involve itself with only those aspects of an executive's life connected with organisational work. However, says Shivdasani, "I feel that in the near future we will be seeing a major change in managerial styles," Richard Nehrbass, a professor of management at California State University, feels that, "The cultures of organisations are changing towards more acceptance of dealing with emotions."

The need for new managerial styles originates from the different expectations and aspirations of the new generation of managers. As regional manager S. Ramanathan at Bush says: "I am not only looking for a big paycheck, but also the work environment and general climate. After all, work takes up so much of my time."

While the line between work and personal life gets thinner, there is little doubt that it must remain. As Shivdasani points out, there is a difference between an affiliative system like the family, which is based on emotions, and an efficiency system, which exists for results. But the fact is that with good managers being scarce, companies which find them will have to do their bit to keep them.



■ MIRA SAVARA

THE INSTITUTE OF CHARTERED FINANCIAL ANALYSTS OF INDIA

(In collaboration with The Institute of Chartered Financial Analysts, Virginia, USA)

ADMISSION NOTICE

THE CFA PROGRAMME

The American Institute

The Institute of Chartered Financial Analysts, set up in 1959 at Virginia, USA is the only institution of its kind in the world. It offers a three year training programme leading to the designation Chartered Financial Analyst (CFA) which is a highly valued professional qualification. Since its inception it has awarded the CFA designation to about 12,500 candidates. Interested in advancing the cause of professionalism in the field of financial analysis, it is collaborating with the Institute of Chartered Financial Analysts of India, in offering the CFA Programme in India.

The Indian Institute

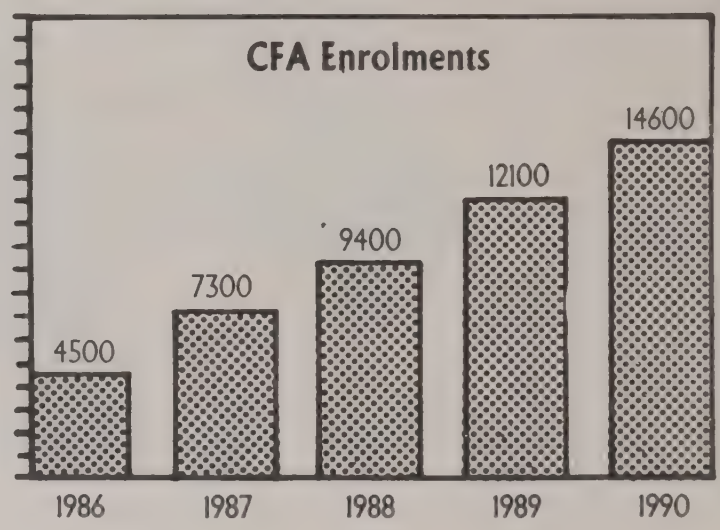
The Institute of Chartered Financial Analysts of India has been established in 1984 as a non-profit educational society. ICFAI is a member of Asian Securities Analysts Council, Japan. The Charter awarded by ICFAI is fast emerging as a symbol of professional excellence. Currently there are 59 CFAs, occupying senior positions in banking and corporate sectors. By 1991-92, the number of CFAs is likely to be around 100. Leading institutions such as RBI, IDBI, UTI, ICICI and IFCI reimburse the CFA Programme fee to their staff.

The CFA Programme

The CFA Programme is a three year training programme primarily focusing on financial analysis and its application in three broad areas: Corporate Financial Management, Investment Management and Financial Services.

The CFA Programme is divided into three levels :

Preliminary Level



Financial Accounting	Quantitative Methods
Financial Management	Economics

Inter Level

Economic Legislation	Security Evaluation
Management Accounting	Project Appraisal

Final Level

Adv. Financial Management	Investment Management
Financial Services	Indian Financial System/ International Financial Mngt.

Eligibility

Graduation (any discipline). Final year degree students can also apply. The applicants are required to qualify at the Admission Test (Date: Oct. 13, 1991) to be conducted at 25 centres. Certain categories of applicants such as CAs/CWAs/ACSs/MBAs/CAIIBs/First Class Graduates/First Class Post-Graduates are exempted from the Admission Test. Candidates with specified qualifications such as CA/CWA/ACS/MBA/CAIIB are directly admitted into the Preliminary Level. All others have to successfully complete the Foundation Course, to become eligible to take the examinations of the Preliminary Level.

rgery kept him away

from the Brabourne Stadium. Thousands of Bombayites thus missed what would have been an intelligent, lucid, forceful post-mortem of Manmohan Singh's handiwork. But then, like they say, there's always another time...

It runs in the family. While father Vijaypat made waves with his exploits in the air, son **Madhupati Singhania** prefers to exploit the air waves. Ever since a friend introduced him to the magic of radio, Madhupati has been a ham buff. Now he has sophisticated amateur radio equipment at home, a portable set in his car for local calls, and friends all over the world. When he's not glued to his set, Madhupati is busy with his other interests, cracking codes for software packages being one of them. "But I don't copy software, it's only for my own pleasure", he clarifies.

Flying single engine aircraft and shooting are other hobbies for the 34-year-old Madhupati who is involved in the family's cement and synthetics businesses. He got hooked on to his recent passion —pistol shooting — last year, and even won a gold medal in the novice class in the national championships.

Last month, the Pune-based Hingne Education Society inaugurated an engineering college exclusively for women, probably the first of its kind in India. And the credit for this goes to indutrialist **B.G. Shirke**, chairman of the society. Initially, three courses — in computer science, instrumentation and electronics — will be conducted. "This college will be specially beneficial to girls who secure high percentages in their HSC but are unable to get into technical courses due to stiff competition", says Shirke. The college has already awarded five scholarships for the first batch. A course in polymer engineering will also be started soon.

While the rest of his family is looking after the Garden Silk Mills empire, 65-year-old **Suresh Shah** is constantly spinning off in new directions. The lively gentleman has been running a nature cure clinic and health food restaurant in Surat. Now he has something new on his plate. In Amalsad, 60 km away from home, he has set up a Rs.3 crore EOU for freeze-drying fruits and vegetables. Tender coconut, bananas, *karela, chawli* and green chilli are among the products Shah will process, to be reconstituted with water in kitchens abroad. An 80 gm pack of dried chikoo — from two dozen of the fresh fruits — will sell for $5. Shah has other ambitions too — he dreams of setting up a health resort in five years. "Yes, I'm an idealist," he muses.

"Exports hold the key"

Avijit Mazumdar, president of the Associated Chambers of Commerce and Industry (Assocham), spoke to S. Swaminathan of *Business India* about the business and moral challenges facing the Indian businessman

How do you view the short-term scenario?
Industry will have to face the prospect of a demand recession that will be much more pronounced in the capital goods section than in the consumer goods sector. The next 12-18 months will be far more difficult than we have seen yet. There will be major problems in the areas of production, sales and finances, leading to industrial unrest and even possible closures.

However, it would be incorrect to say that this will be a consequence of recent changes. We will, instead, be paying the price for the policies we have been following all these years and for the way we have lived for the last three years.

But with the new initiatives announced, the period 18 months hence holds more hope today than if no measures had been announced.

Are you worried that there may be a reversal of the process, on account of the strains that may be visible in the economy in the short run?
I can see a lot of resistance. There will be plenty of problems which the government will find difficult to handle. Industry will be in a chaos.

Frankly, I do not see a reversal arising out of political compulsions, as the two main political parties seem to agree on economic matters.

How do you explain your optimism about the long term, when your short-term picture seems gloomy?
Exports hold the key. After the recent devaluation, our competitiveness in the world market has gone up significantly. We used to complain about bottlenecks, most of them have gone. The whole world is open to us now.

Has the Indian businessman been known to care about such things?
He will now, in the changed circumstances. For, it is his own survival that is now at stake. In the new set of rules, he has to behave. The scope for manipulation of the system has been considerably reduced. Consequently, he can devote his time to running his company and managing his business instead of managing the government, the bureaucracy, etc.

But what about moral values? Will he stop cheating on taxes?
The Indian businessman is not lily white. But morals change to cope with changes in the society. If society changes, morals will change all around. That takes time.

Do you see a large amount of foreign investment flowing in as a consequence of the changes?
It will take 2-3 years for things to happen in large measure. For that, we have to demonstrate our seriousness. The western world today prefers to concentrate on the Soviet Union and eastern Europe. The rest of the world will have to compete for what is left. India has to fight for technology as well as for funds. Companies that already have a presence in the country may seek to step up their investment in India.

There is one issue that we have not addressed, providing protection for intellectual property rights. We must appreciate the fact that companies which have pumped a lot of money into R&D will seek protection. It will be difficult to attract the latest technology if we fail to measure up to this score.

There is a fear that the dictates of comparative advantage may turn India into a primary commodity exporter. After all, our industrial set-up is not exactly the best in the world.

You must understand that we are making a clean break from the pa protection Indian business enjoye meant that we did not have to wo about competition. We did not pa attention to technology upgradati were scarcely worried about quali costs and delivery schedules. But we have to change our attitude to survive.

If we have been talking only ab vast reservoir of technical manpo with us, then, today we have an opportunity to utilise it and harne energies to make India the econor power it can be. Indian business h sufficient skills to achieve this transformation because Indian en are second to none.

To answer your question, India not have the best industrial set-up today. But give it five years and y not be able to recognise it.

Surely you agree that the ball is your court.
Absolutely. That is why I have be saying that these changes place a responsibility on us Indian busine The government has done its bit, to us to do our bit. We have to understand the new concept of qu and we have to think about international marketing. These ch have to come about quickly. So w to change more than anyone else.

From the Publisher

Mergers and acquisitions, an international phenomenon of the sixties and eighties, have often turned sour. As a consequence, corporate performance, as most studies indicate, has not, on average, improved. Yet, there are the Hansons and the KKRs who seem to have done well with mergers and acquisitions, especially of the larger kind, that the Ambanis are now proposing in India.

The Ambanis have come to represent the "can-do" aspect of Indian business, with their grand vision and the confidence that comes with the know-how they possess to implement that vision. Certainly, their foreign collaborators, the large public-sector financial institutions that finance them, and their shareholders seem to share the Ambanis' confidence. In the process, the Ambanis have added new dimensions to the economy.

This does not mean that their actions go unquestioned. On the contrary, the regime that hitherto strictly controlled India's growth led to the emergence of several wealthy entrepreneurs who were long on "contacts" and short on skills. Rather than tar their whole group — many with honourable credentials — with the same brush (as several critics seem to be doing), it is necessary to closely examine the Ambanis in the harsh light of the productive efficiency with which they run their operations.

There is another point to be made here. The likely merger of Reliance Industries with Reliance Petrochemicals and the proposed takeover of Larsen and Toubro will not raise objections from the MRTP Commission on the grounds of asset concentration, since this aspect has been done away with in the latest industrial policy. However, the issue of monopolistic practices remains. As the country's largest producer of several petrochemical-related items, the Ambanis will be in a market-dominant position that the MRTP Commission needs to first, examine, and, later, closely monitor.

Third, there are regulatory issues relevant to the capital markets. The Securities and Exchange Board ought to hold a view on whether investors, especially the smaller ones, are being fairly treated, even at this stage of proxy-gathering. This is a matter of an accurate revelation of the risks and rewards for investors. For example, if RPL has losses to be borne by shareholders of RIL as a result of the merger, the latter ought to be informed of the likely effect on the earnings and dividends of the merged company.

As in the past, the Ambanis' current actions are likely to have a fundamental impact on the manner in which Indian corporations are run and on the concept of corporate democracy.

Of what use is Motorola's cellular technology to a sarpanch whose primary concern is village improvement ?

In India, thousands of villages have yet to be connected to a telephone. The panchayats are doing their best. But the cost of providing a telephone goes up when the subscribers are few, far removed and dependent on land-based technology. Now Motorola has an alternative: the cellular technology. It works on the wireless principle. So there is no need to lay cables. Which means that the sarpanch and his people have a greater opportunity to install a phone for the village. At Motorola we have many such advanced solutions that can better the human experience. So that high-technology isn't just relevant to industry. But also to every Indian.

When to export cotton

considering the produc-nd consumption of cotton 991 (Special Report, 8 the carry forward stock of 3 million bales has not mentioned. Exports, on her hand, were of the or-1.3 million and not 13 n bales.

cotton advisory board lers reports of the cotton on in the cotton growing and based on this infor-n, estimates the crop. The at crop estimates are re-either downwards as in 91 or upwards as in 1989-90 fully vindicates the application of the collective wisdom of the members of the board. To suggest that the difference in earlier crop estimates and the later equals exports seems to suggest that the damage to the cotton crop by excessive rain or pests was ordered accordingly. This is a far-fetched assumption.

P.H. BHATT
Managing director, All India Co-operative Cotton Federation Ltd
Ahmedabad

Not all hunky-dory

In 'Life after merger' (Corporate Report, 8 July), the author has tried to present a very rosy picture of Parke Davis, its management and in particular, its amalgamation.

While the company gained some advantage from its amalgamation with its sister concern, as an erstwhile executive of the company, I know the price the company had to pay for it.

Warner Lambert Co of the US acquired a worldwide interest in Parke Davis in 1970 and therefore retaining the Parke Davis name (and not that of Warner Hindustan) after amalgamation invited bitter criticism within the company. Secondly, in the reshuffle of employees that followed after the amalgamation, senior employees were asked to report to juniors leading to a lot of frustration.

Among those who left the company were its president C.M. Hattangdi (vice president — marketing), B.R. Arora (vice president — human resources), S.S. Patil (group director) and V.R. Navalkar (resident director).

The article mentions that the company withdrew its anti-diarrhoea specific, chlorostrep, as it did not have the full effect it was meant to have. Actually its withdrawal from the market was due to a directive from the ministry of health which banned certain combination drugs.

S. BALASUBRAMANIAN
Delhi

Taking chances

The article on bank deposits (Business Notes, 8 July) points to a declining trend in bank deposits by 4 per cent in 1990-91, though there was an absolute increase in bank deposits to Rs.1,91,189 crore in 1990-91 against Rs.1,66,965 crore in 1989-90. You have also remarked about the Life Insurance Corporation's declining share in the savings market.

They indicate a new emerging pattern of household savings in India, ie, household investors' preference for discretionary savings over contractual savings, ie, more risky but high return instruments in the savings market. In fact, there has been a relative decline of contractual savings like the Life Insurance Fund, Provident Pension Funds, etc from 1970-71 to 1989-90. The share of these two instruments declined from 33 per cent in 1970-71 to 24.8 per cent in 1989-90, while the share of important discretionary savings like bank deposits, shares, debentures and units increased from 50.2 per cent to 61.4 per cent during the same period. This is because discretionary savings instruments (units, shares and debentures) are more attractive as they offer better rates of returns). But the share of these instruments in the household savings market was 7 per cent in 1989-90, while the same in industrially developed economies such as the US accounts for around 25 per cent.

H. SADHAK
Bombay

Using waste paper

It has been rightly pointed out that the present paper demand-supply gap of 628,000 tonnes will further widen to 1,000,000 tonnes by 1996, so all efforts must be exerted to increase production to meet the paper demand (Business Notes, 26 June). The new RBI policy too needs to be modified to import 480,000 tonnes of waste paper pulp. Moreover, where short fibred raw materials such as agricultural wastes or waste paper pulp are to be used, imported long fibred pulp has to be used in paper stock furnish to improve paper quality and strength.

Since there is a shortage of forest-based raw materials such as bamboo and hard wood, the government must give sufficient incentives to utilise maximum agricultural waste.

VIJAY KHAND
Lucknow

A slip-up?

A factual error appears in the Feature, 'The old faithfuls' (29 April): R.P. Poddar joined Birlas in 1936 and not Century Spinning and Weaving Mills Ltd.

B.L. ROONGTA
Jaipur

One error

There is no doubt that obtaining an ISO 9000 certification for any company is a pathway to success, 'Where quality is all', (Feature, 27 May). The exhaustive documentation needed for certification helps the companies to counter the problems of talented manpower turnover. However, there is one small mistake. The article uses the acronym BASIFA instead of BASEEFA ie British approval service for electrical equipment for flammable atmosphere.

S.V. NANDA
Bangalore

• We read with interest the feature article. The writer has mentioned that only two Indian companies have so far achieved the distinction of getting International Quality Assurance Certificate under ISO 9000 series. Please note that Ralliwolf Ltd, Bombay/Ahmednagar was the first Indian engineering company to receive BSI (British Standard Institution, UK) approval for having assessed quality capabilities conforming to BS 5750 Part II/ISO 9002 as early as April 1988.

D.I. KHUSHALANI

The Smart People's Computers

When you expect to use your computer for many years, day in and day out, what you look for is Performance, Quality and Service. Over the years you realise these are so much more important than the price you paid for your computers. High Performance translates as shorter response times, which means you have more of your valuable time for other important activities. This represents a lot of money over the years. Good Quality translates as fewer problems or breakdowns, and Good Service ensures that when problems or breakdowns do occur, their effects are kept to a minimum. This also represents a lot of money saved over the years.

Smart People know and appreciate the value of Performance, Quality and Service, and know that it represents much more money than a few percents "saved" on the purchase price of a computer.

Aurelec is in its 11th year of selling Smart Computers to Smart People.

Aurelec: Quietly building the best.

Fixing what isn't broken

In the current mood of liberalisation, big, even with a foreign tag attached, is considered beautiful. Thus, the MRTP asset limit has been done away with and foreign equity participation hiked to 51 per cent for all but 18 industries. Yet, these policies have left the small scale industries (SSI) untouched. (The SSI contributes over 30 per cent of GNP, 30 per cent of exports, and employs 4 million people in 1.9 million units — 17 per cent of which are sick or bankrupt.)

Has the four-decade old experiment of promoting SSIs by reserving employment-intensive industries for them and granting excise credits and interest subsidies to them been worth it?

The government has now come out with a lacklustre SSI policy. True, by raising asset limits and allowing 24 per cent equity participation by other industrial undertakings, the policy will help larger units in the small sector. But the majority will be unaffected, since 95 per cent of SSIs have below Rs.2 lakh worth of assets.

But the point is that the sector is neither short of funds nor sick (*see chart*). The 17 per cent sickness is due to two reasons. One because finance was given to intrinsically unviable units by nationalised banks seeking to fulfil their priority sector lending targets. Two, as benefits have, by definition, been reserved for low asset companies, it has forced several companies to remain small and vulnerable to market forces.

So if, as the data shows, the sector is healthy, doesn't it make sense to let it be — apart from fixing the cause of sickness by proper evaluation and monitoring of loans — a job that the Small Industries Development Board of India should do but has not?

The answer is no. There lies the fundamental problem of reservation that should have been addressed by the new policy. Currently, the SSI classification is given to 836 high-employment low-technology items. It has thus helped the growth of sectors which would in any case have remained small, such as boot polish and umbrellas. True, there would be marketing synergies in items like umbrellas, but these would have been exploited by large firms using small firms as contract suppliers, even if the sector had been dereserv

On the other hand, SSI benefits do not go to comp which commit large amounts to technology and capita remain small in employee size. These have a significant tribution to make to the economy and need to be encou with cheap credits and access to the best domestic an eign technology.

This strategy has paid off spectacularly in Japan. Fo ample, in the Tokyo industrial district of Ota-ku, known for its innovative small factories, 95 per cent o 9,000 companies have fewer than 30 employees. Over Japan, 75 per cent of industrial output comes from sm midsize companies. The experience of Germany and It similar.

Quite simply, the small scale sector does not need res tion of items. Where the technology is low and capital in ment small, as in paints and dyestuffs, natural econ forces will ensure that the bulk of production comes small companies even if there is no SSI reservation for items.

On the other hand, where technology is high and ca investment large, an item which could over time become ble needs encouragement with subsidies until it beco large enough to be on its own.

The most sensible policy would be to dereserve all it for the small scale sector and provide subsidies to any s unit with turnover below a certain level (say, Rs.1 crore) for a fixed number of years after start-up (say, three ye This would ensure that a small company gets the suppo needs until it reaches a viable level of sales. Thereafte would have to fend for itself with its increasing sales market share helping it to spread its fixed costs and ob higher margins.

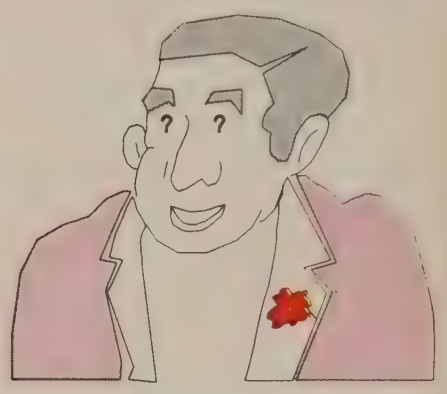
What has emerged is an SSI policy that makes for l change. This is a mistake in the context of the ra technology-inspired growth that the country needs. On pected much more from the new government after its b industrial policy and budget.

The institutional vote

Larsen & Toubro, a professionally-run company with 43 years of independent management, has been, for the last two years, under a takeover cloud. As one of the only independents in the big-league (1990-91 sales: Rs.1,404 crore), its takeover by the Ambanis in 1989 excited controversy a jealousy. Some of the controversy was justified: the Supre Court judgment on the transfer of 3.9 million shares of L&T a Reliance subsidiary cast doubt on the integrity of all

vernment institutions that were involved, including the ancial institutions (UTI, LIC, GIC and BOB Fiscal) and the Con-ller of Capital Issues.

How should the financial institutions (who own about 40 cent of the company) vote at the upcoming shareholders' eting on 26 August? Given the ongoing political problems he present minority government, one or more of the insti-ions could abstain as a face-saving measure. This, how-r, is equivalent to supporting the Ambanis, given the ter's 24 per cent holding of the company. Or, institutions ld do this directly via a yes vote.



A negative vote might rehabilitate the institutions' reputa-ns given their craven behaviour in the past, but this does recognise the reality of the Ambani stakeholding or of its sitive vision to take L&T places (*see Cover Feature*).

Of course, L&T's share price is currently at an all-time high, nks to speculator and other support for the proxy-hering exercise under way; this suggests an unduly in-flated share price. Hence, a perfectly reasonable approach for the financial institutions would be to sell their shares in the open market at these prices, thereby avoiding contro-versy while generating huge profits over Rs.1,000 crore.

Another appropriate approach for the financial institu-tions would be to support the Ambanis' proposal for a change of management subject to an open tender offer by the Ambanis (along with any other interested bidders) for a ma-jority stake of the company. This would right the real wrong that the Ambanis have committed in the past — managing a covert entry at too low a price.

The role of the institutions is obviously crucial, given the government's talk of non-interference in productive enter-prise while protecting the small investor. It is, therefore, im-portant that they do not repeat, in the words of Justice Ray, their behaviour during the earlier sale to the Ambanis which "cast doubt whether the deal was for public interest and was made on purely business principles".

lon-existent bank chairmen

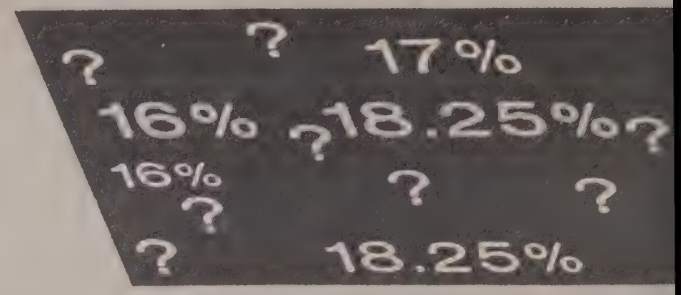
y September, four more banks will have their top posi-tions vacated — if the chairmen of Central Bank and ik of India finally retire after completing extended terms, if Canara Bank's N.D. Prabhu retires to be followed by .V. Mallya of Syndicate Bank. Add to this four other ks which have vacant top slots for several months now eight of the 20 nationalised banks are or will soon be dless. The guessing game on the new appointments is al-ly on and so is the usual (ultimately unproductive) efforts various contenders to push their own claims.

he general public, which is the real owner of the nation-ed banking system, deserves a better accounting for such aviour. The members on the committee for such appoint-nts would, of course, like to believe that no pushing for-d helps and that appointments are apolitical. But yet, can deny that in more than just one or two cases, profes-alism has been subverted and the banking scene vitiated?

he problem has arisen because there are no well-defined t least no publicly known criteria for selecting top offi-s of banks. Moreover, there is no one outside government ciated with the selection process.

he only clues about selection are provided by a review of ointments made in the past. These suggest either a desire e non-controversial in appointments or the getting rid of rticular executive to favour someone. While there has n the occasional internal promotion, there are only a cou-of cases of appointments based on performance.

he point is not that appointments have been largely non-roversial or that all outside appointees have had satis-ory tenures. The point is also not whether a bank with Rs.56,000 crore of deposits should be treated differently from one with Rs.10,000 crore.



The point is that there should be a clear-cut, well-defined, objective — and equally important — publicly-known policy for appointments at the top slots in banks.

The most contentious issue is the policy of internal promo-tions versus external appointments. The current arguments put forward through newspaper reports by State Bank in-siders is a pointer to the contentiousness but also misses the point. An "outside" appointment is still viewed as an ap-pointment from within the public sector banking system. Why should this be? Why can the public sector banks not be headed by a person from the private sector? If the goal is to choose the best person for the job, an appropriate system would recognize the advantages and disadvantages of inter-nal promotion — loyalty, commitment and a thorough knowledge of the system, but also inbreeding and a perpetua-tion of any inbuilt faults (particularly the lack of profes-sionalism and dynamism that plagues public sector banks). These should be compared with an external appointment (and not just from the banks' pool) before choices are made.

The second policy issue is sufficiency of tenure. Bank chairmen's terms are extended too often and occasionally cut short. This has obvious disadvantages and is also bad for succession planning.

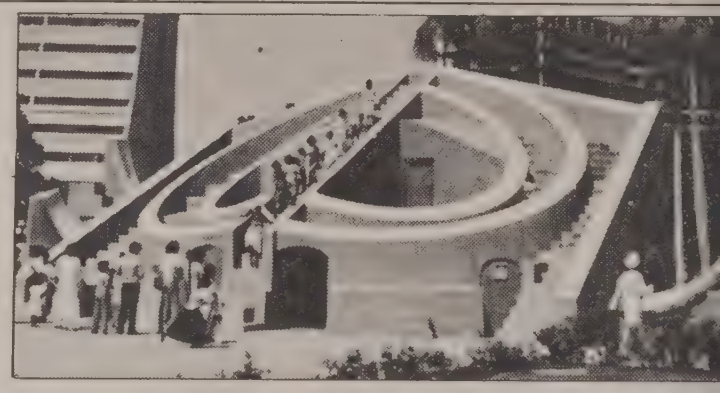
There are other issues including a control of the attendant possibilities for favouritism and corruption that accompany any centralised selection system. These need to be tackled if our nationalised banks are to establish a sound and progres-sive path.

Interest rate liberalisation

The recent freeing up of interest rates on debentures should be welcomed because it gives small investors, for the first time, the opportunity for safe returns that will be — at least partially — protected from inflation. Hitherto, the only safe short-term investment for small investors was a savings bank account that offered 5 per cent — small change in today's inflationary environment.

Nevertheless, the development of a secondary market for debentures will not automatically follow interest rate liberalisation. At present, an investor can buy debentures through stock exchanges at varying yields that reflect (though imperfectly) default risk. Yet volumes remain low and confined to a handful of scrips, with small investors largely disinvesting old holdings acquired in earlier capital issues (larger investors prefer to use the more active private placement market, though for a few securities only).

There are two requirements for developing the market: first, the risk and returns of investing in debentures needs to be understood by the investing public. To this end, an efficient semi-official agency for rating debt, CRISIL, already exists and a second rating agency, sponsored by IFCI, is to start by 1 September and others will undoubtedly follow.



The second requirement for market development is easy access to this market by both the small investor (seeking to reduce his risk by holding a diversified portfolio of debt) and the speculator (who is useful because of the liquidity th supplies). This will require, in turn, that money marke tual funds (MMMFs) be developed.

The MMMFs should either be redeemable at net asset v ie, open-ended, or be put in the forward list on the stoc changes. This would ensure that they have the liquidity ful to small investors. And, since their value would with general interest rates, their volatility would be lim

Clearly, much depends on the government's ongoing cies. It has not started off well. It speaks volumes fo government's inertia that a policy permitting MMMFs in this year has yet to be notified. In fact, even the committ determine the modalities of MMMFs has yet to be formed. ilarly the governments directive forcing companies t their proposed debentures rated will hurt the market as i remove the companies' incentive for seeking ratings issue. This is particularly crucial for secondary markets v companies are performing poorly. Ideally, the demand credit rating should initially come from companies eag get subscriptions and, later, from investors for alre issued debt. The only system which can satisy this is or unilateral rating by an impartial agency, which then sel information at a price.

The government now needs to move quickly to develop necessary complementary policies.

What's up, Delhi?

Delhi is pretty, Bombay is grimy. Yet Bombay is the city that works. Delhi's electricity supply utility, Delhi Electric Supply Undertaking, is more corrupt and inefficient than Bombay's Bombay Electricity and State Transport, as is Delhi Transport Corporation. Delhi's only public financial institution, the Industrial and Finance Corporation of India scores well below any of the Bombay based ones, such as the Industrial Development Bank of India, or the Industrial Credit and Investment Corporation of India. Even though the telephone system is run by the same company in both places (MTNL), the Delhi division works more inefficiently. And any businessman will tell you that the upcoming replacement of the Delhi-based office of the Controller of Capital Issues by the Bombay-based Securities and Exchange Board pleases him as it will probably lead to a clean set of operations for capital issues.

The list goes on. So, what's up, Delhi? Grimy within as Bombay is on the surface? And what has gone wrong wh Nothing wrong with the people, we are sure; Delhi-ites ar least as broad-shouldered as their counterparts anywh else in the country.

The corrupting influence, in our opinion, is the proxim to immense power. It is no secret that many Union minis routinely use the public sector organisations under their m istry as sources of privilege and patronage.

From the ministerial level, the rot that accompanies irresponsible exercise of power percolates down through bureaucratic maze till the very air of Delhi is thick with muck of patronage, be it a job for a favoured cousin c reserved parking space in Connaught Circus.

Perhaps the rest of India should consider itself fortun that the centre of politics is distant from the centre of co merce. Notwithstanding that, the city that is the most heav subsidised in the country owes the rest of us an explanati

T TOOK MORE THAN 400 YEARS TO MAKE
HIS CONFERENCE FACILITY AS ROYAL AS THIS

The famous 'Kohinoor' diamond of Golconda, now adorning the British Crown.

At the Krishna Oberoi,you get much more than an impeccable conference.
You get the blue-blooded legacy of a more than 400 years old city. Hyderabad, with its unchanging traditions is bound to leave you in awe.

When not conferencing,you can lose yourself in the romance of Hyderabad's famous Forts and Palaces. The Qutub Shahi Tombs, Golconda Fort and the Salarjung Museum are an experience in themselves. And of course no visit to Hyderabad is complete without a visit to the majestic Charminar.

Back at the Krishna Oberoi the facilities are in keeping with the stately traditions of Hyderabad. Luxurious rooms, Presidential suites with private swimming pools and speciality restaurants with a charm of their own.

The conference facilities themselves are rated amongst the best in India. Multiple conference rooms that can accommodate from a few to several hundred delegates. A conference co-ordinator who is always at hand and a Business Centre with specialised equipment.

It certainly takes several hundred proud years and unfailing expertise to build a perfect back-drop to a great conference.

The Krishna Oberoi

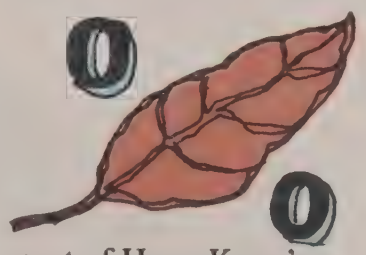
Wanted: strong medicine

Between 1985 and 1990 India's health care network has grown considerably. The number of doctors increased fivefold, nurses tenfold, hospital beds by 400 per cent, and primary health centres by over 20 times.

	1985/86	1989/90
Doctors	65,000	331,630
Nurses	18,500	219,300
Hospitals	4,000*	10,145
Primary health centres	725	16,535
Sub-centres	17,521**	110,275
Medical colleges	42	125

** 1960 ** 1967*
Source: Handbook of Health Information, Ministry of Health and Family Healthcare.

This may seem impressive but let's look closer at the ground realities. On an average, there is only one doctor per 2,600 people, 84,000 people are crowded into one hospital and each hospital bed has to cater to about 1,400 people.



Smokescreen

In spite of having the support of 70 international organisations, ferocious campaigning by the tobacco industry forced the Hong Kong government to revise its earlier 200 per cent tobacco tax increase downward to 100 per cent. This is the first time in Hong Kong that a budgetary measure has ever been changed and that too on a matter concerning public health.

How did the tobacco lobby swing it? Full page newspaper advertisements were issued criticising both the government and the financial secretary personally; trade unions were lobbied to sign up for a campaign stating that the tobacco tax increase was unfair (although independent surveys showed overwhelming support for such hikes); much was made of the effect upon inflation and the effect on lower-income smokers (from whom the tobacco industry makes maximum profit).

The lobbying extended all the way to legislative council members, many of whom turned out to have tobacco industry connections. The inflationary argument was fallacious since only 13 per

cent of Hong Kong's population smokes. Since the tax was first levied, the number of smokers had, in fact, decreased. But obviously clout and connections count for more — even if it is at the cost of a city's health. As there was a decrease in smokers, since tax was levied, in the long term the tax increase would have been deflationary.

A bridge no more

One of the most coveted and lucrative hoarding spots in Bombay, just outside the busy Churchgate station, will soon be no more. The bridge on which it used to be perched is being pulled down by the Bombay Municipal Corporation.

While most of the thousands of commuters streaming past did glance at it now and then — which is why it was a prized spot — few perhaps realised that the hoarding cost Rs.60,000 a week.

For its owners, Ashok Sharma Associates, it was a cash cow. They had bagged a three-year contract from the Bombay Municipal Corporation for Rs.13 lakh. The hoarding has earned them over six times the amount they had invested — Rs.86.4 lakh.

Diners' spread

Time was when only five star names and up-market stores and eateries figured in the member establishment directory of Diners Club, the credit card pioneer in India. But such are the pressures of competition that with the entry of banks in this business as well as other credit card brands, Diners has had to refocus its strategy — spread the net wider, get more members and different kinds of establishments too. So, the latest edition of the directory lists a beauty parlor in Thane, a fruit juice centre in south Bombay and a department store in little known Dibrugrh, Assam.

For the bookish types, *The Asian Wall Street Journal* and *Readers Digest* are on the list. And for the health conscious, there's the Bombay-based health club Talwalkars.

Hospitality stakes

Atlanta-based Holiday Inn Worldwide is the world's largest hotel chain according to *Hotels magazine*. Owned by Bass Plc of England, Holiday Inn controlled 320,599 rooms and 1,606 hotels as of 31 December 1990.

Of the top ten nine were US-based hoteliers. The magazine also ranked the world's largest hotel management companies and 25 largest hotel associations. Touman-Hundley Hotels ranked first among the management companies, with 137,104 rooms and 1,176 hotels. Utell, the giant reservations and marketing consortium, is the largest association with 1.3 million rooms and 6,500 hotels on its network.

Hotels were also ranked regionwise, and in the Asia Pacific region the Taj group of Hotels occupied eighth place.

Sky city

In the US, science fiction is at best turned into a celluloid fantasy, but for the Japanese it could well become a part of reality. The Taisei Corporation of Tokyo has announced its "X-Seed 4000" concept for a 4,000 metre high city of the future.

The city will have a circular base about six km in diameter constructed on the sea or a lake. The base will cover about 3,000 hectares, and the city will have a total effective space of between 5,000 and 7,000 hectares which can accommodate from 500,000 to 700,000 residents.

The design of this futuristic dwelling place will follow a 'space net structure' in the form of Mount Fuji. Below the 2,000 m level will be living space, with the outer frame containing the necessary city functions and commercial facilities, and the core frame, the administrative and international exchange facilities. Above the 2,000 m level there will be nature and space observation centers, energy plants and a panoramic sky resort.

It will take ten years to construct the first 1,000 m of the city, another ten years to build up to 2,500 m and a further ten years to top it off at 4,000 m.

V. RANGANATHAN
Bangalore

Good fellas

The goodwill factor is something which a company's balance sheet may not reflect, but it is none the less a hidden reserve that may go a long way. Enlightened organisations that look beyond returns and ratios know this well. Last month two Nagpur-based companies, DCL Polyesters Ltd, and Sunflag Iron & Steel Company, were doing their bit to bring solace to flood-affected victims in Mowad and its surrounding villages on the banks of the river Wardha.

The companies distributed clothes and blankets; besides, their employees' wives took it upon themselves to console the victims.

Banking rankings

For the first time in 50 years, American banks have slipped out of the rankings of the world's biggest banks. Citicorp, tenth in March 1990 and once the world's numero uno, ended last year languishing in the 21st place. Japanese banks today fill the top six positions and are ten of the top 15. And Europe's three biggest banks are all French. Germany and Britain have only one bank each in the top 15. The State Bank of India ranked 98th, with assets of $56,856 million, deposits of $32,929 million, loans of $24,444 million and profits of $70.5 million.

Bailing out

International Ceramics, a manafacturer of ceramic and wall tiles is having more than a spot of trouble. The company which went public in 1990, with a public issue of Rs.2.05 crore has a problem of a dispute amongst its main promoters. The company was promoted by I.C. Singhal (a chartered accountant, who became the managing director), S.I. Goel and V.K. Gupta. Apparently, Goel and Gupta have their differences with Singhal and have not been able to sort them out. They have now begun approaching other ceramic tile manufacturers to see whether they would be willing to buy their equity.

On the defensive

Last fortnight Priyadarshini Cements was forced to go to BIFR. The company went public in November 1985 and raised Rs.10.65 crore. The company set up a cement plant for the manufacture of 500,000 tonnes of cement in Nalgonda district in Andhra Pradesh. The company was promoted by a group of technocrats including D.K. Murthy, S. Veera Reddy and B. Pratap Reddy.The promoters are trying to hang on to the company but other companies are interested in taking it over. Two of these are apparently L&T and Gujrat Ambuja.

Political overtones

A committee chaired by the governor of the Reserve Bank has made suggestions for certain appointments. They still have to be approved by the Appointments Committee of the cabinet headed by the prime minister. The appointments include that of J.B. Shetty, currently chairman of United Bank, as chairman of Canara Bank, of P.S. Gopalakrishna, currently chairman and managing director of Indian Overseas Bank, as chairman of Bank of India, and of R.L. Wadhwa, CMD of Allahabad Bank, as CMD of Central Bank. Some of these worthies are known to have strong political connections.

A reprieve?

BCCI India's depositors need not worry about losing their money, unlike their counterparts in Hong Kong and England. According to an early estimate made by the court-appointed provisional liquidator S.M. Parande, the bank might actually end up with a surplus once every one is paid off. Of the bank's assets of Rs.521 crore, more than half is held by the Reserve Bank under statutory provisions. A large portion of the balance was lent out in the short-term market, about Rs.100 crore of which have already been recalled.

Parande says that the seemingly sticky accounts might be few, and anyway the bank's office premises in Bombay which has been valued in the books at less than Rs.5 crore is actually worth more than Rs.40 crore at today's market rates. And as for those who have been complaining that they can't pay his staff salaries because of the money held up in the Bank, there seems to be a way out.

At least in the case of two small businesses who were in dire need of cash, Parande helped to provide overdraft facilities from his own bank, the State Bank of India. But it looks like it will be months before the depositors get their money back from BCCI officially, unless of course, the RBI and the government allows the bank to be merged with some other bank.

BCCI: surplus after paying depositors?

Restrictions galore

While the brokers are clamouring re-entry in the call market, the Re Bank of India has made their lives more difficult. In a secret circular (whatever that means) signed by the uty governor Amitava Ghosh and is to a select few banks (read bank dulged in the issue addressed by the ter), the RBI has clamped se restrictions on the securities bro such as:

- banks should have no short positio securities,
- outright ready forwards or secur general ledger entries should be refle

Ghosh: clampdown on brokers

on the same day in the investments count of banks
- transactions between two banks sho not be routed through banks
- if it is through brokers it should clea reflect in the bank receipt
- no bank receipts should be issued wi out securities
- the bank receipts should be issued the format devised by the Indian Ban Association
- no bank receipt should be issued in vour of bank constituents (clients) or b kers, and
- any bouncing of delivery order of se rities should be reported immediately the RBI.

Bankers unaffected by this circular s the control is fine as malpractice in the s curities market was prevalent. What t RBI has ignored however is that in un and public sector bonds markets too, t goes on. But then these investments not form a part of the banks' s requirements.

INDIAN ACRYLICS ANNOUNCES A COLLABORATION WITH THE PEOPLE WHO HELPED THIS MAN ENTER ANOTHER WORLD

A technical collaboration with Du Pont (USA)

— one of the world's largest chemical companies and the inventor of Nylon and Teflon.®

As Neil Armstrong strolled the moon, he had the backing of thousands of scientists and engineers, and a substantial amount spent on research and development by Du Pont, USA. The company that invented "Teflon". So critical to parts in his space vehicle. And also an integral part of our everyday lives. Being used even in frying pans. Giving them that special non-stick property, so that our eggs are perfectly fried even as someone strolls in space.

DU PONT

DISCOVERIES BEYOND ONE'S IMAGINATION

"Teflon" is just one in a wide range of revolutionary products invented by Du Pont. The others being like Nylon. In fact, of the 50 major polymer groups known to science more than half are commercially produced by Du Pont. Today Du Pont has 16 separate businesses based on polymers, with manufacturing/processing facilities in 40 countries across the globe.

A FAR REACHING COLLABORATION

Indian Acrylics has a technical collaboration with Du Pont, USA, to produce Acrylic Fibre — "Indlon"★ Du Pont is amongst the world's large chemical companies. With sales to the tune of US $ 35,534 million (1989). The company has sold its technology in various countires worldwide. And will now provide Indian Acrylics with the complete technical know-how and engineering assistance for the development of "Indlon".

FINANCING THE TAKE-OFF

The Asian Development Bank which is monetarily assisting the country with various developmental projects, will also finance Indian Acrylics with a loan of US $ 5.9 million. And an equity participation of Rs. 325 lacs.

SAFE LANDING

With its rising demand, Acrylic Fibre is now being used in almost everything, from knitwear, woven and non-woven blankets, blended fabrics, sweaters and T-shirts to carpets and upholstery. In India, however, the industry is in a nascent stage. Against an estimated production of 40,000 tonnes per annum in 1990, demand was projected at 60,000 tonnes per annum. By 1995 this demand is expected to rise upto 94,000 tonn per annum and further to 1,31,000 tonnes per annum by the turn of the century. "Indlon" intends to fill this space to the extent of 20,000 tonnes annum. For success to all associated with the venture.

The countdown has begun...

tas buy in

Tatas have entered the portals of co Electronics and Electricals Ltd *Business India*, 18 February 1991). cquisition has now been formalised he Tatas acquiring an equity stake 4 per cent through a firm allotment 5 million fully convertible deben- of Rs.25 each from Peico. The total of 11.31 million debentures would vided among the existing share- rs (the employees, the Tatas and 's parent N.V. Philips Gloeilampen- fabrieken of the Netherlands) in the proportion of one debenture for every 10 shares.

The debentures will be automatically converted into one share of Rs.10 at a premium of Rs.15. While the issue has been proposed by the , it still has to receive the approval shareholders as well as the Control- Capital Issues.

Bergvelt, managing director of points out that the Tatas have not given any special consideration and ne pricing has been worked out ac- ng to a formula suggested by the oller of Capital Issues. "We would been happy if the premium was fixed gher level. That would have meant both the Tatas and Philips N.V. have to pay more," says he.

egic alliance. Peico had explored ossibility of acquiring shares from ancial institutions, who hold 25 per of the shareholding for the Tatas. ey were not divesting. And picking ares from the market would have rohibitively expensive.

logic of a strategic alliance with the remains unchallengeable. A feeling certainty had prevailed ever since egulations forced Philips N.V. to di- s equity to 40 per cent, 10 years ago. could happen to Peico in case the ial institutions' loyalties shift (as in se of L&T), was a matter of concern parent company.

o, the advantages of a tie-up with atas were numerous because of the atible business areas they were in — iving of the computer and telecom on to Nelco. Now, uncertainty pre- vails only regarding the identity of the Tata company that will acquire the share- holding in Peico. In all likelihood, it will be Tata Sons or Tata Industries.

KERALA'S LITERACY PROGRAMME

Paternity squabbles

The thousands who cheered Kerala on its achievement of total literacy (see *Business India*, 13 May 1991), are quiet now. The new Congress(I) led United Democratic Front (UDF) government displayed a distinct aloofness which prompted local papers to report that the new government was winding up the literacy programme.

Naturally, the UDF government had to allay fears fast. Education minister E.T. Muhammed Basheer declared in the state's legislative assembly on 26 July that the government had no intention of axing the programme. All it had done, he explained, was to end the activities of the Kerala Saksharatha Samithi (KSS), to depoliticise the project, the success of which was due to the widespread participation of diverse sections of the state's populace.

But during the total literacy programme, the rival Left Democratic Front (LDF) had tried to spread its influence via the pro-CPM Kerala Sashtra Sahitya Parishad. And in the run-up to the assembly elections, the LDF had projected the programme as its own baby. So, now, it was time for revenge.

Missing the essence. Already those who had been deputed by the LDF government to work in the KSS have been reverted to their original departments, and the KSS staff strength pruned to the minimum. Though these actions, as one official who toiled for the programme admitted, are "technically correct", as even a cursory observer of the literacy programme will assert, quibbling over technicalities is to miss the very essence of a mission which generated such enthusiasm.

Many of those who had missed out the first time round — tribals, coastal fisherfolk, Tamil-speaking residents — had already been primed for the second phase of the literacy programme and it will be unfair to rob them of that enthusiasm.

A literacy class in progress: danger of a lapse

Further, with no follow-up, there is the more immediate danger of neoliterates lapsing into illiteracy.

The UDF government wants the literacy programme to be its own baby now, just as the LDF once went around proudly proclaiming its parentage. And now, the parents are fighting for the possession of the child. Will the baby be finally orphaned?

■ K.G. KUMAR

Words, words

At a press conference in Lucknow, civil aviation and tourism minister, Madhav Rao Scindia, incurred the wrath of the Bharatiya Janata Party when he accused its members of being **"traitors"** by inciting communal passions. The ensuing fracas brought parliamentary proceedings to a virtual halt on all other matters for almost a week.

Just as the IMF and World Bank teams flew into the capital to talk tough with the government on the loan issue, prime minister Narasimha Rao

asserted that India would **never "buckle"** under pressure while negotiating any foreign assistance. He reiterated that the thrust of the industrial policy is "growth, technology upgradation, ability to survive in a competitive world and showing no mercy for inefficiency".

High fliers

The A320s are flying high and logging in those airmiles. Twelve out of the fleet of 16 are airborne on any given day on Indian Airlines' scheduled routes.

In Parliament, even as former finance minister Yashwant Sinha described the new industrial policy as a document of 'retreat' and a 'total drift' from the socialistic pattern, Mentay Padmanabham, the Telugu Desam leader, asked the government to find out how T.N. Seshan, the chief election commmisioner had been allowed to use a cellular phone. Congress-I member Jayanthi Natarajan, supported by other colleagues, objected to any discussion on the CEC on the ground that he was a constitutional figure.

Videocon Appliances Ltd obviously feels that white goods are the great marketing hope. It is planning a Rs.148-crore expansion and diversification programme for manufacturing refrigerators, airconditioners, vacuum cleaners, breadmaking machines and the like. Technical designs and drawings have been obtained from Matsushita Electric Company, owners of the "National" brandname. The financing plan is mainly through secured debentures (both convertible and non-convertible) on a private placement basis.

Clamp-down

The once-exiled telecom czar, Sam Pitroda, is putting the finishing touches to a new policy that will enable clandestine cable television network operators to turn legitimate. Pitroda, now secretary in the Telecom Department and chairman of the Telecom Commission, has suggested amending the archaic Indian Telegraph Act and the setting up of a **National Cable Authority** to issue licences to cable operators.

Small-scale drug units may no longer be permitted to set their own prices. This move, however, is as yet unconfirmed by the department of chemicals and petrochemicals.

The import of **coking coal** for steel plants is to be reduced and indigenous production increased to compensate the difference. The year's target of 28 million tonnes of coal which includes 11 million tonnes of coking coal, will be met by Bharat Coke and Coal Ltd.

Setbacks

At 10.7 per cent, the growth rate of the **electronics industry** during 1990 was the lowest ever in five years according to the annual report of the Department of Electronics (1990-91). Nonetheless the DoE has projected an optimistic production target of Rs.30,000 crore and exports of Rs.6,500 crore by 1994-95.

The deal between **Wimco** and the Delhi-based **Flex Industries** struck last July has been called off. Swedish Match, Wimco's parent, lost patience when the Reserve Bank dithered on approving the match. SM will continue to support the Indian subsidiary until it finds another buyer.

Bare fare

Come September, and **up-market restaurants** in the country are expected to shut shop indefinitely. Their protest relates to the new 15 per cent

unts and increased credit
tes for the export sector.
es, the ceiling on OGL
rts has been raised from
5 crore to Rs.5 crore.

The commerce ministry has issued a list of companies that haven't fulfilled their export obligations. Amongst **the defaulters** are multinationals (Siemens, Goodyear), Indian business houses (Ranbaxy, Modi Rubbers, Jindal Pipes) and even public sector corporations (STC, MMTC, BHEL).

Power play

For the first time, a transnational company, **British Gas**, has made an open ended offer to the government to set up and run power projects anywhere and under any terms (from under 40 per cent to even 100 per cent ownership) in the country. In fact, the company has already submitted a bid for the 817 MW gas-based power project of the Delhi Electric Supply Undertaking, at Bawana.

Rolls Royce plc, UK, too is seriously considering participation in power generation projects. The company is already negotiating with Indian companies as well as NRIs for a joint venture deal. The offer is for small 25 MW gas-based power stations which can supply uninterrupted power to industrial conglomerates. The cost per station is $10 million.

A **Norwegian consortium**, Nordic Investment, is also keen on a piece of the action in the power sector. But it has not yet spelt out its terms.

Teaming up

Never-say-die **DuPont**, which has been shunted around considerably over its proposed Nylon 66 project, is considering a technical collaboration with Indian Acrylics Ltd. The latter is a joint venture between the Punjab State Industrial Development Corporation and Chandigarh-based Steel Strips Limited.

The public sector petrochemical giant Indian Petrochemicals Corporation Ltd and General Electric Plastic (a subsidiary of international behemoth General Electric US) are now a cosy twosome. The newly established **General Electric Plastics India Ltd**, has an equity base of Rs.50 crore contributed equally by the two collaborators. They will set up plants costing a total of Rs.700 crore to manufacture advanced engineering plastics.

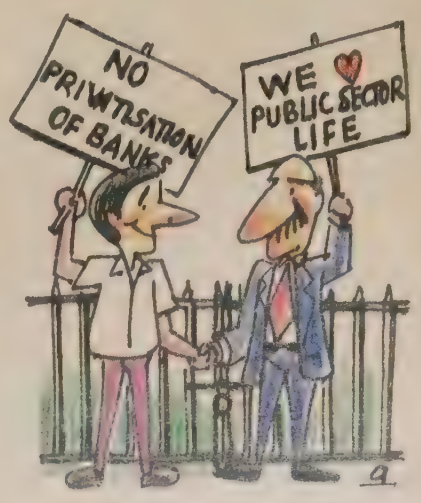
Small mercies

The recently announced policy for the **small-scale sector** was a mixture of the old and the new. Existing reservations for small units will stay.

Locational restrictions will go. Moreover, the larger units will be allowed to pick up a 24 per cent stake in the smaller ones, provided they do not use that as a ploy to trespass on "reserved" territory.

The World Bank thinks that India's resource-starved development **financial institutions** should raise their lending rates to a level at least on par with, if not higher than, that of commercial banks. The average lending rates of the latter for short-term funds is 18.5 per cent; a longer term loan means a longer term risk too. If the institutions were to charge a rate of say, 20 per cent, that would bolster their bottomlines as well as prevent the misuse of funds as working capital.

On stream



The country's first di-methyl formadide (DMF) plant put up by **Rashtriya Chemicals & Fertilizers Ltd** (RCF) has gone on stream. The Rs.10 crore project at Thal in Raigad district, Maharashtra, has a 2,500 tonne per annum capacity, which roughly matches the existing domestic demand. Currently the chemical is being imported.

India's largest breadspread plant with a 6,000 tonne per annum capacity is being put up by L&T for the Kaira Co-operative District Milk Producers Union. This Rs.5-crore facility under order from the **National Dairy Development Board** (NDDB) is located near Anand in Gujarat and should go on stream in 1992.

Public fears

The recent excise exemption on refined groundnut oil has spurred **vanaspati manufacturers** to demand a similar concession. They feel unfairly singled out, especially since their own raw materials (such as, minor oils) are excise free. Production of vanaspati has been declining of late and they fear it could plummet further if their product is priced out.

Five major trade unions, representing bank officers and employees, will abstain from work on 6 September to protest against the alleged

move towards the **privatisation** of public sector banks. The strike call covers all scheduled commerical banks and foreign banks as well.

Across the border, the **Pakistani government** has decided to sell a 26 per cent stake in Allied Bank (ABL), the country's smallest public sector bank, to its employees for Rs.490 million. The deal marks an important step in the government's attempts to allay union fears that the privatisation programme will lead to large-scale retrenchment.

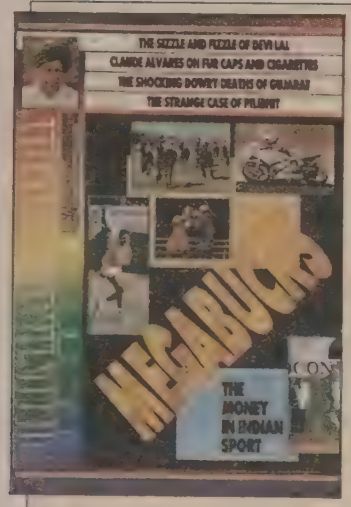
The **Indian Television Manufacturers Association** says that about 1 million black and white TV sets manufactured every year are spurious. This results in a tax evasion of nearly Rs.100 crore. Delhi, apparently, is the main centre for such imitations.

Helping hand

The Union civil aviation ministry has requested Air-India and Indian Airlines to write off **Vayudoot**'s dues.

While Air-India has generously agreed to absorb Rs.14 crore, Indian Airlines has refused to do so. The domestic carrier says that considering its own losses of Rs.69 crore it can not afford to show such largesse. Vayudoot's total debt load amounts to Rs.130 crore and pruning it would make the ailing feeder airline an attractive takeover proposition for a private tycoon.

A division bench of the Madras High Court has asked the **Binny** union for a concrete proposal to make the 117-year-old Buckingham and Carnatic (B&C) Mills viable at its existing location in Perambur without shifting the process house to Bhavanagiri in South Arcot. The union is likely to seek the advice of an independent technical expert for this.



Trade winds

Export and flourish. That in essence was the theme of the **trade policy** declared last fortnight,which containe host of incentives for exporters. Chief among permission to maintain f currency accounts, decanalising 16 export it and granting eximscrips service exports. The direc general of international t the new avatar of the chi controller of imports and exports. Announcing this Chidambaram, union mi of state for commerce, re acknowledged that the measures wouldn't be hal effective if the import cur imposed by the Reserve B of India were not lifted forthwith.

Meanwhile, the second quarter's trade figures rev a six per cent **decline** in exports in dollar terms. T puts the 11 per cent growt target for this year further of reach.

What's been touching an a time high is the export of **shrimps.** Since 1986, yearl shipments of the crustacea have swelled from Rs 378 to Rs 663 crore in 1990-91

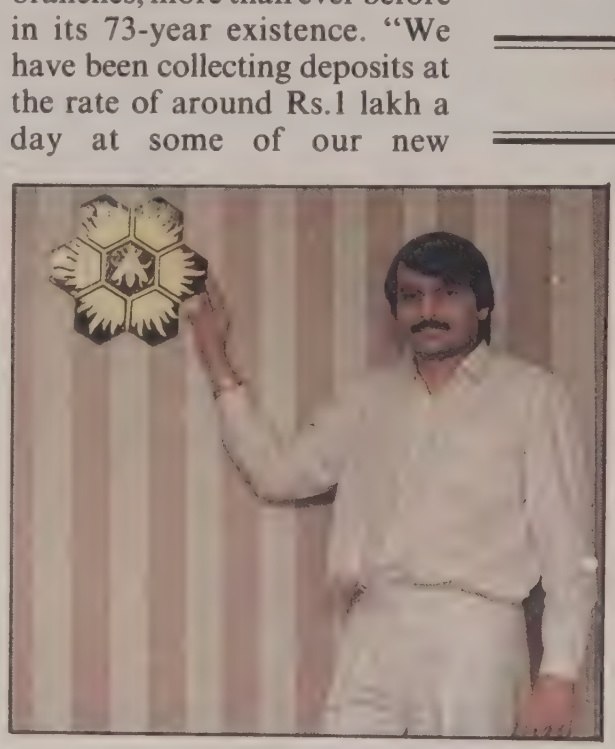
GAURAV DALMIA



He returned to India last year after taking an MBA from New York's Columbia University. Since then, the heir to the Rs.180-crore Orissa Synthetics empire has worked hard to set up a computer graphics and software division for the company called Digital Centre which now employs around 20 professionals.

Last fortnight, Gaurav Dalmia, 24, bought over a Delhi company, called Showtime Communications, a supplier of programmes to nearly 700 cable TV operators in the country. He also signed a deal with Cable Video India, a consortium of six Bombay video library owners who, among them, control the rights for nearly three-fourths of the Hindi films produced in the country as well as around 4,000 English language films. This will place the exclusive rights for the use of these films with his company. "We estimate a viewership running into several millions," Dalmia says, "and we will be the first national company that will supply cable TV operators quality programmes on a sustained basis."

SURESH PRABHU

At 35 Suresh Prabhu, a chartered accountant, is the chairman of India's second largest urban co-operative bank, the Saraswat Co-operative Bank. Next fortnight he will realise a dream that his bank has held for over 25 years — open a branch in Goa, which coincidentaly will also be the bank's fiftieth branch.

RBI regulations had till recently prevented urban co-operative banks from opening branches outside their area of operation, meaning the city in which they were set up. But since that rule was relaxed last year the Bombay-based Saraswat has opened as many as six new branches, more than ever before in its 73-year existence. "We have been collecting deposits at the rate of around Rs.1 lakh a day at some of our new

branches and I am sure Goa will not disappoint us," says Prabhu.

ANIL MADHOK

Not many middle-aged executives abandon successful careers to start something on their own. Anil Madhok, vice-president of East India Hotels, owners of the prestigious Oberoi hotel chain, is an exception. Madhok, who was tipped to take over as the managing director of the company, is leaving a cushy job to become a consultant. He is setting up two companies — one for hotel consultancy and the other for executive placement services (names not yet finalised). "I found a tremendous shortage of professional expert advice in both these areas," says Madhok. "I am sure I'll have enough work to keep me busy."

V.P. AGARWAL

Sponge iron is suddenly the new sunrise industry and Prakash Industries Ltd, the latest entrant. The Rs.108-crore turnover company has been manufacturing PVC pipes, black and white TV picture tubes, video tapes and cassettes. In a major diversification move, this north Indian producer of PVC pipes is setting up a 150,000 tpa coal-based sponge iron project at Champa in Madhya Pradesh at a cost of Rs.144 crore.

According to V.P. Agarwal, the managing director of the company, there is bound to be an enhanced demand from mini steel units especially after the

announcement of a new g line for the steel sector. policy stipulates the mini use of sponge iron, 50 per in existing electric iron furn and 70 per cent in the new o Plans for further diversi tions into mining and the se up of an integrated steel c plex are also being finalised

SANJIV DUTTA

Having spread their net acr various cities of north India, Intercard people are now all to storm Bombay. "The c cept is based on increasing cardholders' value for mo by offering attractive discou on dining, entertainment, sh ping and travel expenses," s Sanjiv Dutta, managing dir tor of the Delhi-based Dutta Dutta advertising agency (b ing: Rs.5 crore). Unlike cre cards, Intercard members have to pay cash at the 4,0 member establishments in cities. Additional benefit to cardholders includes a perso accident insurance cover Rs.1 lakh.

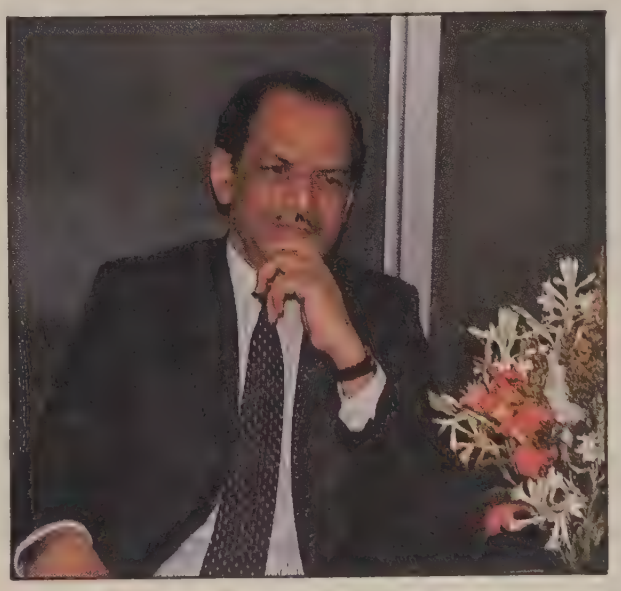
ed will include brake lin-
tie rod ends, etc.

S.G. GUHAGARKAR

Life Insurance Corpora-
's (LIC) zonal manager,
Guhagarkar, in charge of
central zone (covering im-
ant centres in Madhya
desh and Uttar Pradesh) is
ud of his zone's achieve-
t. In 1989-90, his zone
eved the quickest growth in
s assured. The performance
repeated again this year
n the zone stood first again
at Rs.5,207.60 crore, the
assured had grown by 36.5
cent over the previous year.

"What is significant here is that the results were achieved in very difficult circumstances," says Guhagarkar. Given the Mandal and Ram Janmabhoomi agitations which swept over most of north India, this growth is indeed laudable. In the number of policies and first income premia too, the central zone came a clear winner.

S.K. BHATTACHARYA



A professor of manufacturing systems at the department of engineering, University of Warwick, UK, S.K. Bhattacharya is an internationally renowned techno-economic strategist. Apart from being a non-executive director of technology on the board of the Rover Group, he has established the Warwick Manufacturing group, a leading company advisory board with an annual turnover exceeding £15 million which has played a stellar role in turning the fortunes of more than 50 large loss-making companies.

His Indian connection is borne out by his role in bailing out the loss-making TVS Suzuki. Bhattacharya set up various task forces and altered the entire decision-making process at the south-based two-wheeler manufacturing company. "We cut fixed costs by 50 per cent. Productivity of the systems were increased without any additional investments by tuning them," says Bhattacharya. Within nine months, the company has shown reasonable profits.

S.S.PATIL

As vice-president (automotive) at Kirloskar Cummins, S.S. Patil is involved in setting up a Rs.30-crore automobile project for his company. But in spite of his busy schedule, he has just finished his second book, *Non-Financial Audits*. "Several times the financial audit of a company might show it to be in good health but danger might be lurking in other areas," says Patil. So his book reviews eight major operational areas of a company like energy, human resources, marketing and technology. Patil, who is also a director of the Pune-based engine giant, gives the example of how American car makers were financially strong on paper and their sales were going up but the market share was slipping because people wanted a small car. The Japanese realised this while the Americans continued to produce luxury gas-guzzlers and eventually lost out to the Japanese. "Had the Americans carried out effective marketing audits, they would not have lost out their premier positions," says Patil.

K.P. KEDIA

The Kedia group of companies with a landmark turnover of Rs.100 crore to its credit, is now implementing plans for further expansions. Says chairman K.P. Kedia, "We are investing in cement and cotton." Already, one of the largest liquor manufacturers in north India, with many well known brands of whisky, rum, vodka and brandy to boast of, the diversifications have been planned meticulously. The one million cement unit will be located in Madhya Pradesh, near the limestone deposits which is a basic input and will cater to the Uttar Pradesh and Himachal Pradesh markets. The cotton unit will also be located in Madhya Pradesh, a cotton growing region.

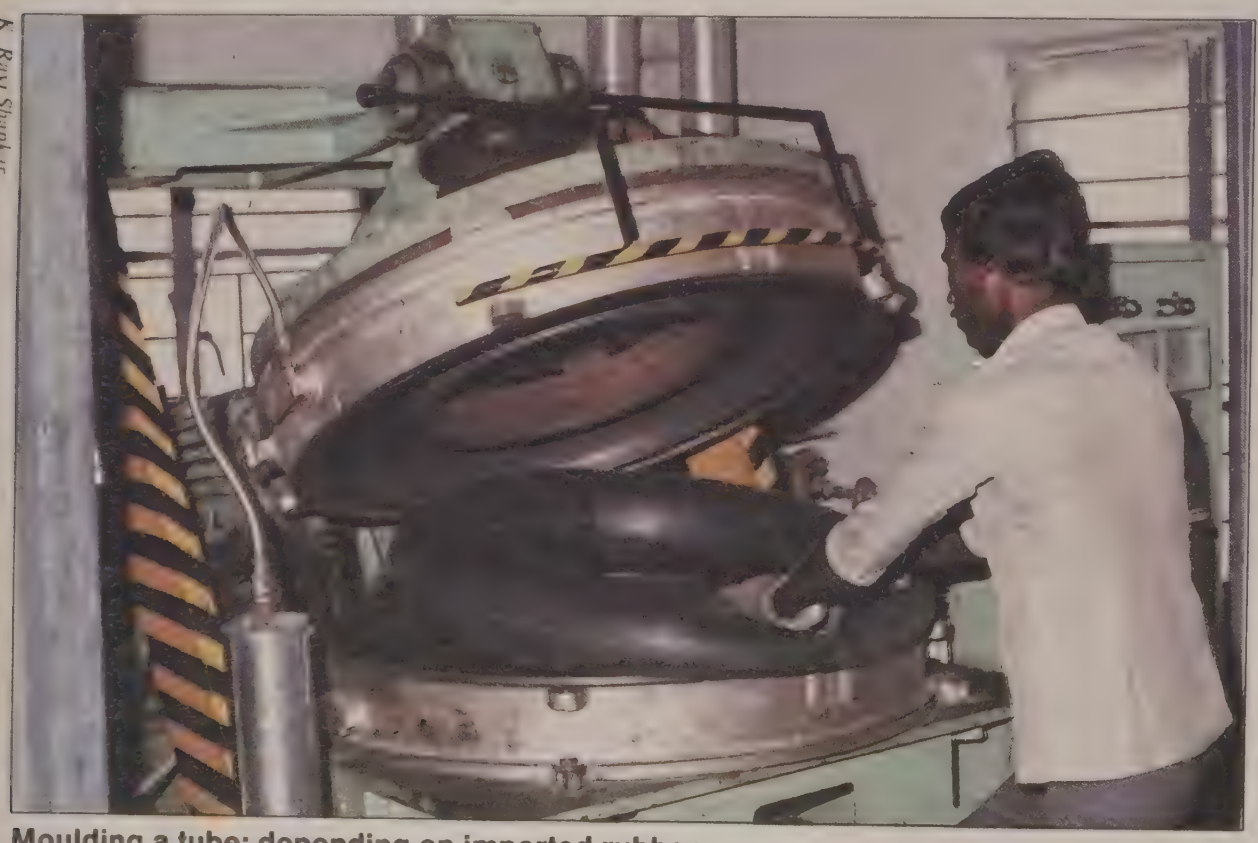
TUBES

Pressure builds up

The manufacture of tubes (which go inside automobile tyres) is largely dependent on the import of synthetic butyl rubber. Tube industry sources claim that the new import policy is wiping them out.

Under the present import policy, the tube manufacturers have to provide 200 per cent margin money for opening a letter of credit for the import of butyl rubber. Says Raj Sekaran, secretary, Indian Automobile Tube Manufacturers Association (IATMA), "About 25 manufacturers have been forced to close down their units in the recent past as they are not in a position to import butyl rubber, consequent to the imposition of this steep cash margin".

The industry, at present, imports approximately 16,500 tonnes per annum of butyl rubber at an estimated cost of about Rs.50 crore. Most of the tyre companies manufacture their own tubes, however, about 40 small and medium scale tube companies have sprung up to cater to the low price end of the market and the replacement market.



These units employ around 10,000 workers as direct labour and provide employment to another 15,000 agents and sub-agents. Their total sales turnover is around Rs.1,000 crore of which taxes and duties alone are of the order of around Rs.450 crore.

One way out could be the use of natural rubber which is available in the country. But tube manufacturers point out that butyl rubber has superior properties. Besides, natural rubber is also in short supply in India. In 1990-91, the State Trading Corporation, which was the canalising agent, imported 30,000 tonnes of the material.

Raw material shortage. There is no indigenous manufacturer of butyl rubber and the tube industry has to depend solely on imports. A Rs.300-crore project to manufacture butyl rubber, promoted by the UB group, is under implementation at Vishakhapatnam. But the project has been delayed due to difficulty in importing capital goods. Two other projects — promoted by Modi Rubber Ltd and Reliance Industries Ltd — are also only at the conceptual stage. Hence, the reliance on import is complete. Says Raj Sekaran, "The plight of small-scale tube manufacturers can be well estimated as they have to compete with tyre manufacturers who have the infrastructure and large working capital".

IATMA has already made a representation to the government of India requesting to canalise imports of butyl rubber through STC and to waive off the 200 per cent margin. So far, there has been no response. Perhaps, the precarious forex position may sta the way of any good news coming t sociation's way.

■ A.S. PANNEERSE

K. Ravi Shankar

Moulding a tube: depending on imported rubber

MOLASSES

Problems of plenty

The ban on cheap liquor introduc Tamil Nadu, with effect from 16 has brought into the open, the disa ment between the sugar industry an distilleries regarding the export of su molasses. The basic raw material fo production of industrial alcohol, the age of molasses, a by-product of the s industry, presents a serious proble sugar mills. Production of molasse Tamil Nadu during 1990-91 was an mated 579,000 tonnes.

Further, the factories commenced season with an opening stock of 106 tonnes thereby increasing availabilit 685,000 tonnes of molasses. Accordin estimates of the South India Sugar M Association (SISMA), the total mola requirement in the state is 454,000 ton leaving a surplus of 231,000 tonnes.

Short supply. Intense lobbying by sugar industry resulted in a represe tion by the state government to the mi try of petroleum and chemicals for export of 70,000 tonnes. This has sent distilleries in the state into a dit "While the export of molasses on a c time basis is acceptable, further exp could result in a situation of short sup for the distilleries," explains V.T. So sundaram, president, Tamilnadu D tillers Association. The Chemi Manufacturers Association corrobora this stance. The sugar industry feels o erwise. "The distilleries in the state h been functioning at a capacity utilisat of 40 to 70 per cent. Given this situati particularly with the ban on the manuf ture of country liquor, there is scope export at least an additional 60,0 tonnes of molasses," maintain sugar dustry sources.

Exports are certainly more remune tive to the sugar industry. Currently, t price of a tonne of molasses in t

asses overflowing from storage tanks: higher exportable surplus

rnational market is $55. In the domes- market, prices are pegged at Rs.120 tonne, molasses being a controlled nmodity.

While the question of "to export or not xport" is being discussed, stocks of asses have been piling up. Most sugar ories have installed storage capacities p to 50 per cent of the production of asses. "The onus of holding the ks should be placed on the consuming ustry, not on the producer," maintain ar industry sources.

It has been a vicious cycle. The distill- s have not lifted the molasses because hol was not lifted in time, during 0-91," explains Somasundaram. This e was set in motion in March 1990 n the DMK banned interstate move- t of alcohol from Tamil Nadu in or- to cater to the 13 cheap liquor units up in the state.

ere shortage. However, it was not 1 January 1991 that the last of these s became fully operational. In the ntime, the industrial alcohol re- ned stored in the distilleries hamper- further production.

ven when the lifting of alcohol by the ap liquor units commenced, it was not o expectations. Against an anti- ted offtake of 650,000 litres of rec- d spirits per month, the average ake was only 300,000 litres. Despite , distilleries are apprehensive and re- the situation in 1983-84 when 70,000 nes of molasses were exported result- in a severe shortage.

owever it is clear that unless the ban on the interstate movement of alcohol is lifted soon, or additional distillery capacity is created, the molasses problem will continue. Existing distilleries including Sakthi, Coimbatore Alcohol, EID Parry Ltd, Trichy Distilleries and Chemicals Limited, Vorion and Chemplast have applied for permission to increase capacity. "If permission is granted, these projects will become operational within a year," says Somasundaram hopefully.

The sugar mills on their part, maintain that their claims to setting up distilleries should be accorded priority. "The time has come to think in terms of integrated units. Sugar mills should integrate forwards. Let the distilleries think in terms of integrating backwards," maintain sugar industry sources.

They have a point. If production increases by 10 per cent as scheduled, during 1992-93 the industry will only have a bigger problem on hand.

■ DHARANI K. PANI

KARNATAKA'S INDUSTRIAL POLICY

Reviving the tempo

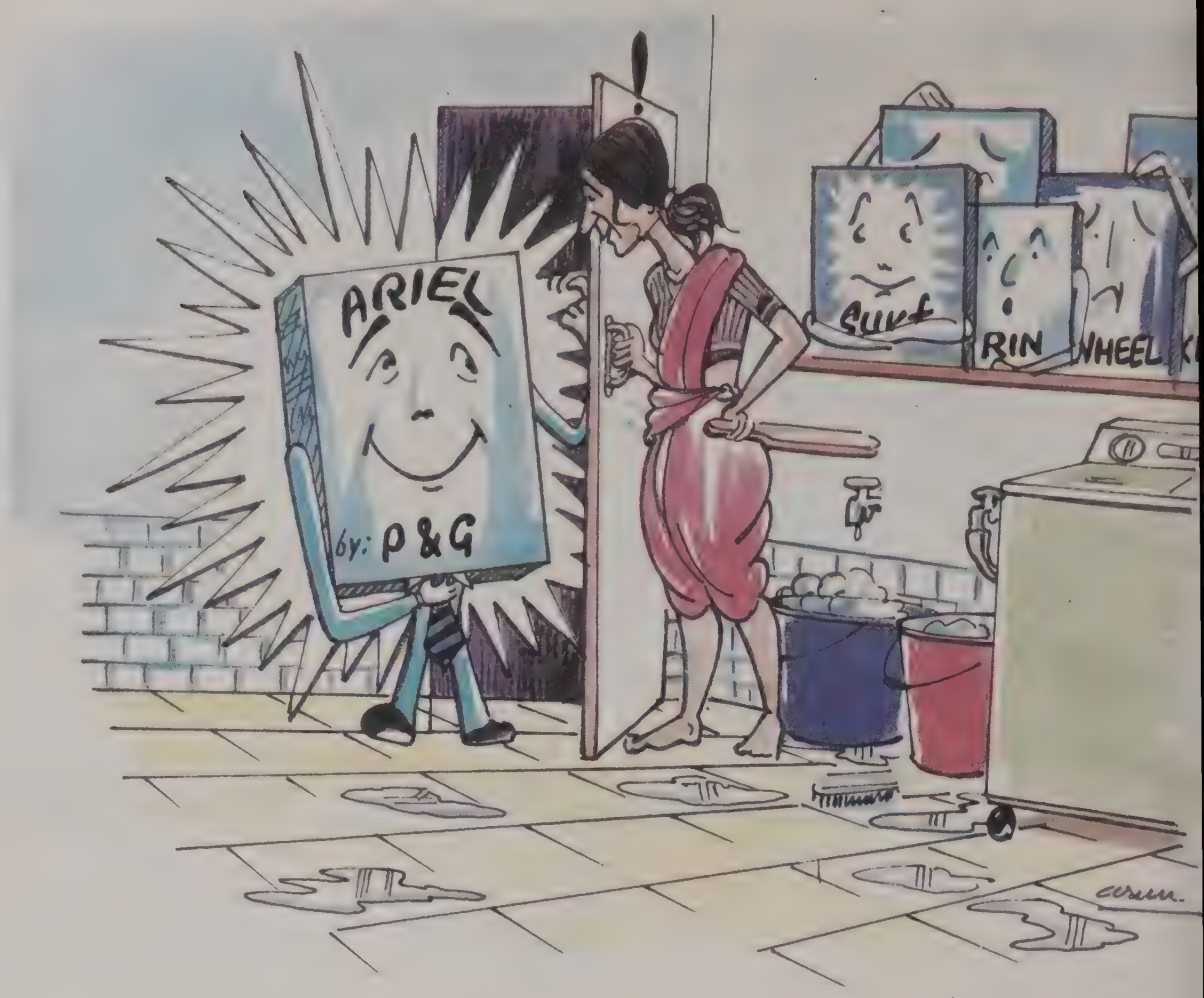
The industrial policy of Karnataka is the result of a prolonged interaction between the state government and industry. The details of the policy are to be announced on 26 August and 4 September.

According to Karnataka chief minister S. Bangarappa, the government has decided not only to remove bottlenecks but also provide an impetus to the further development of industries. According to him, the thrust of the policy will be on privatisation in the power sector; infrastructure development (including power, road, housing and water) in industrial areas and growth centres; and road transportation. The government will welcome direct foreign investment from NRIs. Bangarappa also adds that the necessary amendments will be made to enable industrialists to buy agricultural land for setting up industries.

Acts to be streamlined. By 1992, the Export Oriented Industrial Zone at Whitefield, near Bangalore will be operational, and an international exhibition and convention centre will be set up on a 200-acre site near Bangalore. Bangarappa also says that the state government will provide fiscal support for capital power generation. The Factories Act, Labour Act, and Environmental Protection Act will be liberalised and streamlined. The government has decided to set up a single window for appropriate clearances. Finally, chronically sick units will be disposed off.

A factory : impetus for development

Bangarappa's major industrial package has been welcomed by the leaders of industry in Karnataka. Says S.K. Sharma, president of the Greater Mysore Chamber of Industry, "The state government realised that industrial growth is on the decline and it wants to bring it back to its former position." N. Venkateshiah,



president of the Federation of Karnataka Chambers of Commerce and Industry has welcomed the proposed single window system which will "go a long way in removing the obstacles of industrial growth in the state".

Local industrialists hope that the state government simplifies the tax structure. "Our suggestion is to put all taxes like entry tax, sales tax and turnover tax into one basket and allow us to live in peace." Says another industrialist, "There must be a co-ordinated effort in providing the facilities towards power, communication, hospital, housing, school, etc."

While it is expected that Bangarappa's industrial policy will go a long way in improving conditions for industry in the state, there are some apprehensions about implementation. Says Venkateshiah, "The proposals must be implemented soon." Adds Sharma, "We should do well if the state government has an action plan with a set time."

Karnataka has a good reservoir of skilled labour, a favourable environment and great potential. If the state government interacts often and works with industry there is no reason why the new policy shouldn't achieve its objectives.

■ DEVAPRASAD PUROKAYASTHA

DETERGENTS

All frothed up

The dirtbusters are at it again. After slugging it out in the low end of the market in the eighties, detergent manufacturers have set their sights on the pricier segment. The new buzzword in washing powders is detergent concentrates. These compact, high active formulations promise to free the Indian housewife from the drudgery of scrubbing those stubborn stains. Just a spoonful of concentrate is enough, or so they say, to do the trick.

Leading the concentrates pack is Hindustan Lever Ltd (HLL) which recently launched Rin concentrate nationally. Others who have concocted formulations include Nirma, and Tomco with its 501 concentrate. But the debut that has stirred up a lot of froth in the 2.25 million tonnes per annum detergents market is that of multinational Procter & Gamble's (P&G) Ariel detergent.

Successful test marketing. Ariel, which took five long years to reach the Indian consumer, was test launched successfully in Vishakhapatnam. P&G claims that within six months it has managed to scoop out a 10 per cent market share in the region.

The enzyme-based formulation has a high price tag, too high say some marketmen for the Indian market. At Rs.74 a kilo, Ariel is almost twice as expensive as Rin concentrate, which sells for Rs.44. But P&G's aggressive marketing pitch is aimed at establishing that the extra cost is worth it. Company salesmen do a demonstration with a spinach stained garment to prove that the cleaning power of one scoop of Ariel is equal to four scoops of Nirma, three of Surf, or two of Rin concentrate.

Ariel is slotted as a bucket wash product, formulated like a washing machine detergent, and priced like a premium brand. How is P&G tackling these apparent contradictions? Says P&G's chief executive Gurcharan Das, "Ariel is not specifically designed for washing machines. With superior technology, Ariel turns the bucket into a washing machine."

Doubts, however, are surfacing about the acceptability of enzyme-based formulations. Says P.K. Bharda, Tomco's vice-president for sales and marketing, "I have certain reservations about whether the Indian market is ready for an enzyme-based product like Ariel."

The enzyme formulation of Aerial has also raised some issues about its d matological safety. Some years ago, launch of Swastik's enzyme-based pr uct was a failure as it was not us friendly. The enzyme's subcutaneous try into skin is considered potentially h ardous. "But," as Adi Godrej, chairm of Godrej Soaps, also points out, "the zymes used today are encapsulated, s and far superior."

Laborious system. Thus far the Ind housewife has been using a system wh is a combination of detergent powc cake and *neel* (whitener). According HLL's market survey, this system's c works out to about 0.92 paise per wash an average 15 to 16 garments. One sco of the new Rin concentrate, HLL clai will cost only 0.60 paise per wash and housewife could discard the laborio three-stage system.

The economical one scoop use is su posed to actually bring down the hou wife's monthly outlay on washi powders. But everyone knows that ev in the most advanced countries, di areas like collars, cuffs and borders ha to be first "treated" or "scrubbed" befo the garment is put into the machi Therefore, it is doubtful whether the c system contention holds good.

Indeed, what does the average hou wife look for in a detergent? She wants economical, efficient, user-friendly a safe product that will alleviate her da

gery. She will have neither the time the patience to work out "scoop" omics. Her basic question would be ill this product, at this cost, give me kind of wash I want? The fate of these detergent concentrates rests on how factorily this question is answered. ed on that, either the housewives will h their hands off these new concen- es or increasingly reach out to use n.

L MARKET

ho needs iddlemen?

st fortnight, the Investors' Club — an nformal body of funds managers of ks — once again considered the ques- of brokers being allowed to re-enter call market. Reportedly, the nation- ed banks vehemently opposed any move at this meeting. But the very that bankers have considered the e is enough for the brokers who im- iately started a campaign to clamour re-entry into the arena.

he brokers are much more confident time of regaining their earlier status he banking industry. Says one of n, "The Reserve Bank of India may e dragged its feet on this issue all g, but this time they will have to take cision." The confidence is a bit sur- ing. For, as far as the RBI is con- ed, the brokers continue to remain *sona non grata*. If at all, the country's king watchdog has only become more se to the brokers' re-entry now, than as then.

h payouts. The main reasons for the in the early seventies were high pay- s of brokerage and malpractices by kers by holding the rates unduly up so they could earn higher brokerage. ce then, banks have been managing r money at call without brokers for r 20 years now — at least officially. y should have gained expertise by v, RBI would like to think. Besides, ceiling on the call rates no longer ex- which means that there is no need to d the rates at a particular level. More- r, there is the Discount and Finance use of India (DFHI) on the scene which created by the RBI to act as a broker he call market. In other words, from

Shut officially, but confident of revival

the RBI's point of view, the brokers may as well forget their call market expertise.

Yet, the brokers have not given up. For the past two decades, they have managed to survive somehow. Most have moved into other markets such as securities and shares, units and bonds. The call market, for such brokers is, as a well established broker puts it, "an area to earn goodwill". No banker would pay a broker his commission to buy or sell his funds on account of RBI's ban. But, admits a senior banker, "If a broker is regularly helping you out, you are bound to develop a soft corner for him." And this soft corner earns the broker a good deal on his other business in securities.

Then why do bankers still depend on these middlemen? Says a funds manager, "It is impractical to approach 20 banks and still not be able to get the full amount required. We would rather have someone else do the first round." Another advantage is that bankers are able to hide their identities by operating through brokers. For instance, if the market knows that SBI is a borrower, the rates shoot up immediately. The DFHI, the 'monopolistic broker in the call market', has not been very effective too, complain bankers, besides favouring lenders and profiteering.

Better deal. Most important, the brokers claim to have gained professionalism in their job. Instead of the earlier one desk, one telephone outfit, today, a good number of brokers have well appointed offices and qualified personnel who are eager to give better service to banks. Says an established money broking firm's chief, "If allowed to operate officially, we can offer many new call market products to banks." Future deals, structured products or two-way quotes — all point to a sophisticated money market.

Bankers are, however, not enamoured of this suggestion. "Such deals already exist, although maybe there is no sophisticated name for them as yet," claims a senior banker. He also warns that two-way quotes will be feasible only when the brokers themselves take positions. In other words, banks will be at the mercy of brokers. And RBI will not allow this.

If at all RBI relents, the re-entry of brokers in the call market will only formalise a practice that is prevalent informally. The RBI, however, is not known to be of the relenting kind.

WEST BENGAL BUDGET

Rhetoric and shibboleths

The Rs.19,051 crore West Bengal state budget was presented in Calcutta on 26th July by the CPI(M) led Left Front government. The state finance minister, Asim Dasgupta, offered no new ideas and the budget preferred to retain the features of *bhadralok* communism.

Since 72 per cent of the budget was tied up with meeting day to day expenditure,

QUALITY CENTRE
ENGINEERING & MANAGEMENT

QUALITY CENTRE is a premier Consultancy Organisation in the field of Quality Management System as per ISO: 9000 Series of Standards. The Projects on QMS, including in-house training programmes, they have handled so far relate to Consumer Durables, Computer Software and Railway Safety Equipment.

Having successfully organised the Second **Executive Programme** on QMS in Bangalore, the Centre is organising two more Programmes in:

NEW DELHI
(28-30 Nov. 91)

MADRAS
(23-25 Jan 92)

QMS can be easily introduced by suitable modifications to the existing Quality Assurance practices & introducing additional features as found meaningful to particular units. Enabling the participants to know the intricacies of this exercise—so that they could lead the in house team for upgrading Quality related activities to match the requirements of ISO: 9000—is the main objective of this Programme, which will be coordinated by Sri S.R. Kuppanna, Chairman of the Centre and formerly Deputy Director General (Certification & Central Lab.) Bureau of Indian Standards, New Delhi.

Management Executives; Managers from various functional areas such as Design, Materials Management, Production, Quality Assurance, Marketing; Inspection Engineers of Official Agencies; and Consultants in the field are welcome to participate.

Further details regarding participation in the Executive Programmes and Consultancy Services could be had from:

QUALITY CENTRE
1157, Vikas Kunj, Outer Ring Road,
Vikas Puri, NEW DELHI-110018
Tel.: 5502721 Tlx.: 031-65099 ABP-IN

Dasgupta found he could do very little to break new ground. According to available figures, the budget will be funded up to Rs.4,932 crore (25 per cent) from revenue receipts, up to Rs.11,646 crore (50 per cent) from the public account and contingency fund and Rs.2,468 crore will come from debt heads.

Warning bell. Dasgupta however, struck a note of caution when he said that if the Centre defaulted in its transfer of funds to the state, this could send the entire zero deficit state budget tumbling down. The Centre rakes in about Rs.2,000 crore in transferred taxes and grants in aid and Rs.1,800 crore on the capital account.

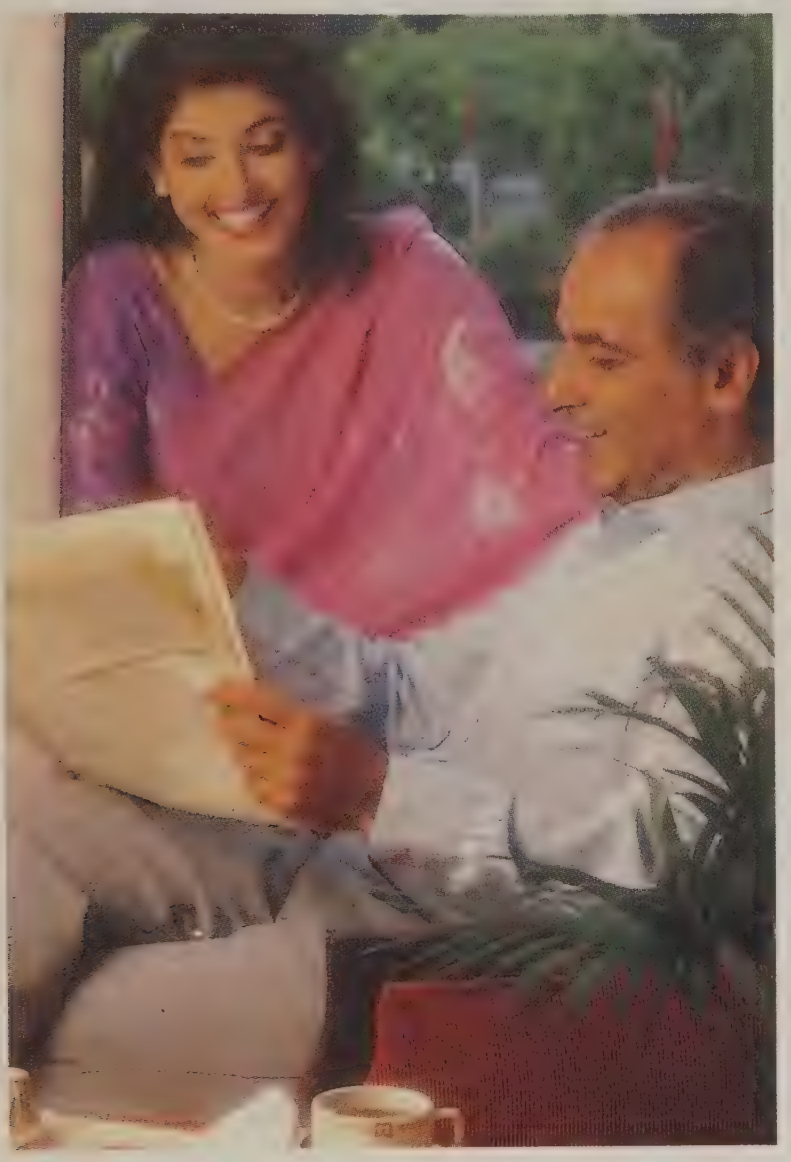
The leader of the opposition, S.S. K called the budget a "political statem full of old-fashioned Marxist clich According to him the budget did not c sider the new directions emphasised in Union budget, the new industrial po or the precarious foreign exchange p tion. "There has been no effort to prove the investment climate in state."

The state government's over emph on land reforms was also severely c icised, "It is a laudable step but it never worked. Even in eastern Eur and China this has only led to social rest and a fall in food production. Her

Asim Dasgupta and Jyoti Basu: could do very little

Asked whether the presentation of the fifth zero deficit budget was a gimmick, Dasgupta said, "There is no question of it being a gimmick. The Reserve Bank of India allows an overdraft only for seven days. Either we balance our account at the end of the period or go bust. There can be no question of a deficit budget under such circumstances."

Dasgupta maintains that the proposals emphasise better tax realisations and, in this regard, the state had been placed first in the ninth Finance Commission report. All new taxes were levied on luxury goods and the 1.2 per cent increase in sales tax is the main revenue earner for the state. Rates of agricultural income tax on tea plantations were increased by 10 per cent across the board. But this will net only Rs.4 crore to the state exchequer. The new budget proposals will yield an additional Rs.67 crore.



Bengal, we have redistributed land such a manner that the new land own does not find it worth his while to fa the land."

Practical approach. In the circu stances, the finance minister feels th given the reality of the national econom scene, a more pragmatic approach needed and a supplementary budget is i evitable. The industrial scenario is, ho ever, bleak. Work on the state Bakreswar super thermal power proje has been stalled after the credit channe dried up. The Haldia petrochemical co plex has similarly been stalled in the fa changing situation.

The new budget only tactly recognis these shortcomimgs by offering to i crease employment by giving minor ir gation and road repair contracts to loc unemployed youth and landless labour

■ SUDIPT DUTT

This week-end on business,
make memories together.
At the Executive Club.

*We'll fly your wife out to join you.**

When you jet out to the Executive Club at Delhi,
Bombay, Bangalore or Madras, we'll fly your wife out to join you.
For the week-end. At our cost.* So, now the two of you can
make memories... Together. At the Executive Club.
The finest business address in town.

WELCOMGROUP

*We'll reimburse her actual travel fares to a maximum of Rs. 2000/- (depending on the length of week-end stay, and the city of visit.) This privilege is also available to husbands of travelling women executives.

Welcomgroup's special privilege for the discerning business traveller.

* For details and reservations, call Welcomnet, Welcomgroup Hotels' Instant Reservation Network :

Q

How to secure overall protection ?

R I N G . A N O R I E N T A L T R A D I T I O N .

A

UNDERSTANDING TODAY AND TOMORROW'S NEEDS. NOW !

surance. Everybody agrees it is a
ssity. Yet most of us face problems.

et's start at the beginning.

***t is the need for an insurance
cy?***

ll your assets are a result of your
t, time and money. This makes them
mense value to you and, hence,
should be protected.

do you protect them?

he simplest way is to get them
ed. But to do this properly you have
st understand the nature of the risks
ved. These you have to discuss in
l with your Oriental representative,
ng sure both of you understand
fully. Only get insured when every
risk is covered.

t about exclusions?

there are any exclusions, discuss
with your Oriental representative.

He will advice you on what can be covered for an additional premium.

What are the disadvantages of being under-insured?

You must always take care against being under-insured. Total protection may mean additional premiums, but when it comes to making a claim you will recover your loss, adequately.

What is the most important factor to remember?

Remember to pay all premiums in advance. This, in fact, is a statutory requirement. Only then will your policy be valid to give you the protection you need.

In case you have any problem, get in touch with any one of our 1000 offices. Each is a HELPLINE Centre created to assist you.

Let us come closer through care and co-operation.

ORIENTAL INSURANCE

**Customer-friendly.
An Oriental tradition.**

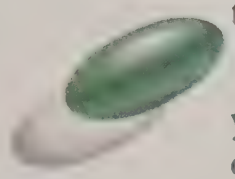
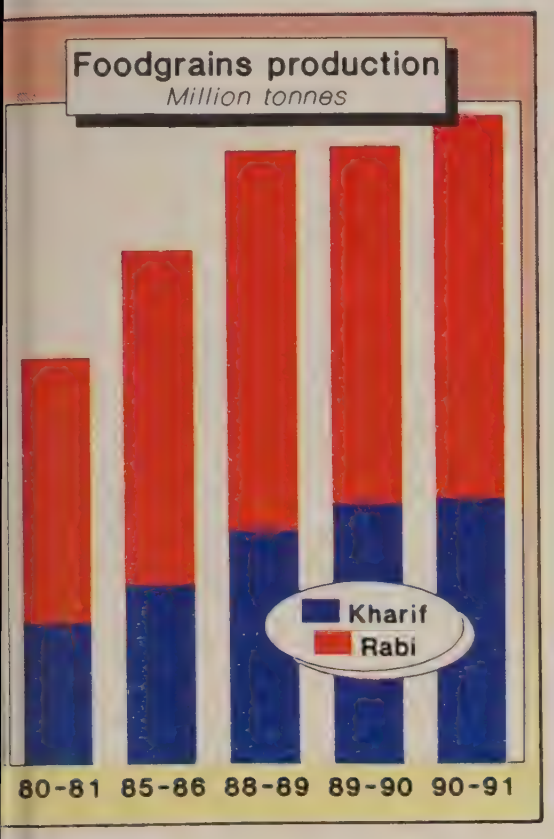
Does the price of success have to be your health?



Success is no doubt rewarding and gratifying. But, is that all success brings in? It also introduces a new lifestyle. Too many late nights, meals on the run, the cocktail circuit, the inevitable rich food... Not to mention the challenges of work. Pressures, deadlines, anxiety, travel, tension and so on.

As steadily as you are building up your career and business, you're also building up your cholesterol and triglyceride levels. And you know, this is bad for your health and you have to shed them off. But do you have the time? What with your job needing all your time and your family also clamouring for the same. And at the end of a tiring day, you wonder if it might all tell on your health one day. The health on which your continuing success and the future of your beloved family depend upon. Does the price of success have to be your health?

Take heart. Nature has the right prescription for you – Allium Sativum and Shorea Robusta, two safe and effective natural lipid regulators. Brought to you as TAKE CARE, a health capsule, by Natura. Starting today, take one TAKE CARE everyday. At Rs. 57.90 for one full month, it's a small price to pay for your success. And of course, your health.



INTRODUCING

Nature's very own prescription

TAKE Natura CARE

Available with your neighbourhood chemist.

Farmer goes to town

The new industrial policy and the policy for small-scale industry are both heartening as they give the country a sense of renewed confidence. But amidst the euphoria of industrial growth, one is tempted to forget the agricultural sector which in many ways is still the backbone of the Indian economy. Granted that the nexus between industry and agriculture is not as strong as it was a decade ago, but still there is synergy between the two sectors. There is a growing demand for consumer durables in the rural sector albeit on a smaller scale because purchasing power is still limited. But with increasing awareness and higher incomes due to good harvests (three in a row) the farmer now looks beyond his basic necessities.

Agricultural growth, especially foodgrains production, has increased substantially over the last thirty years. Much of this is the result of the green revolution initiated in the mid-sixties. The green revolution was the outcome of high-yielding varieties of seeds, improved irrigation facilities, and increased use of fertilisers and pesticides.

Even after the green revolution was launched, the agricultural sector continued to account for less than a quarter of the total plan outlay. Total institutional outstandings for direct finances to agriculture and allied activities increased from Rs.14.30 crore in 1968 to Rs.24,000 crore in 1989. The growth in institution finance helped in boosting yields by encouraging modern methods of farming.

Increased production

Despite land area being more or less the same, foodgrains production — especially rice and wheat — in the post green revolution period increased considerably. One of the reasons for the breakthrough in rice production is the special attention given to the eastern region.

However, the success story of rice and wheat could not be grafted on to coarse grains and pulses. Coarse grains production has been stagnating at around 31 to 32 million tonnes now for over a decade. Pulses production has also been stagnating at around 12-13 million tonnes. This has resulted in the per capita availability declining over the years.

Irrigation contributes significantly to improving yields, but the larger irrigation projects have proven to be largely white elephants because they have not been fully utilised. The cumulative gap in the utilisation of this potential till the end of the Seventh Plan works out to about 8.3 million hectares. However, the focus in the Seventh Plan was on ground water development and minor irrigation projects.

Besides irrigation the use of high-yielding variety (HYV) of seeds and fertilisers have boosted yields. The distribution of certified/quality seeds has increased substantially from 2.5 million quintals in 1980-81 to about 5.7 million quintals in 1989-90, paddy and wheat being the main beneficiaries.

Also, consumption of fertilisers which was only 5.5 million tonnes in 1980-81, has more than doubled to an estimated 12.7 million tonnes by 1990-91. However, fertiliser prices have been increased for the first time in ten years. This will curb consumption.

Given the fact that the Indian population by the year 2000 will be in excess of 1,000 million, the country will have to produce at least 240 million tonnes of foodgrains. This means that on an average, foodgrains production has to increase by nearly 7 million tonnes per annum for the next ten years. With the production of foodgrains in Punjab stagnating and the country's wheat output decelerating in the eighties, the task ahead is daunting. Any strategy to improve production will have to focus on more irrigation facilities for agricultural land as up to now irrigation covers only about 30 per cent of the total cultivated land. One reason for low yields in pulses is that a mere nine per cent of the area under pulses cultivation is irrigated. Increasing yields is not easy but given the limited options all efforts will have to be made in this direction.
